There are many instances of ambush sites being defoliated for better aerial observation and improved visibility along roads and trails. In 1967 there were also many requests for defoliation of VC tax collection points. In otherwise friendly territory there were points along well-traveled routes where the enemy could hide under cover and intercept travelers to demands taxes. Defoliation along these roads was very effective in opening these areas so that they can be seen from observation aircraft, and with few exceptions these roads were opened to free travel. The use of aircraft to spray alongside lines of communication proved valuable in clearing these areas and preventing costly ambush of army convoys with resulting friendly casualties.

3. Defoliation of infiltration routes

Areas used by the enemy for routes of approach, resupply or movement are targets for herbicide spray. Probably the most valuable use of herbicides for defoliation is to permit aerial observation in such areas. This is particularly true in areas near the border so that we can detect movement of enemy units and their resupply.

4. Defoliation of enemy base camps

We know from prisoners of war and from observation that the enemy will move from areas that have been sprayed. Therefore, enemy base camps or unit headquarters are sprayed in order to make him move to avoid exposing himself to aerial observation. If he does move back in while the area is still defoliated, he will be observed and can be engaged.

5. Crop destruction

Crops in areas remote from the friendly population and known to belong to the enemy and which cannot be captured by ground operations are sometimes sprayed. Such targets are carefully selected so as to attack only those crops known to be grown by or from the VC or NVA. The authorization to attack crops in specific areas has been made by the U.S. Embassy, Saigon, MACV and South Vietnamese Government.

Frequently reviews have been conducted of the herbicide program. The most recent one was personally directed and reviewed by COMUSMACV in October 1968 to assure himself that the program was militarily effective. Prior to that, the U.S. Ambassador had directed a review which looked at the political and economic aspects of the program. The Embassy report was released in August 1968. The crop destruction program was also reviewed by the CINCPAC scientific adviser in December 1967. Each of these reports concluded that the program should be continued.

(SOURCE.—Rear Adm. William E. Lemos, Director of Policy Plans and National Security Council Affairs, Office, Assistant Secretary of Defense for International Security Affairs, Statement before House Subcommittee on National Security Policy and Scientific Developments, Hearings on Friday, December 19, 1969, pp. 229–230.)

ANTIPLANT CHEMICALS: DOD ASSESSMENT OF WAR USE

According to the Defense Department, the following examples should indicate the success of the defoliation effort in Vietnam:

In the final analysis the sole purpose of the herbicide program is to protect friendly forces and conserve manpower. The following examples should demonstrate the success of the defoliation effort in Vietnam:

1. Major defoliation has been accomplished in war zone C. Prior to defoliation, seven brigades were necessary to maintain U.S./GVN presence. During 1967, after defoliation only three brigades were required.

2. The commander of naval forces in Vietnam in a report to General Abrams stated—

As you know, a major concern is the vegetation along the main shipping channel. Your continuing efforts under difficult and hazardous flying conditions, in keeping this area and by the adjacent inland areas devoid of vegetation have contributed considerably in denying the protective cover from which to ambush the slow-moving merchant ships and U.S. Navy craft.

3. In 1968, the commanding general of the 1st Field Force reported—

Defoliation has been effective in enhancing the success of allied combat operations. Herbicide operations using C–123 aircraft, helicopters, truck mounted and hand sprayers have become an integral part of the II CTZ operations against VC/NVA. The operations are normally limited to areas under VC/NVA control remote from population centers. The defoliation program has resulted in the reduction of enemy concealment and permitted increased use of supply routes by friendly units. Aerial surveillance of enemy areas has improved and less security forces are required to control areas of responsibility. An overall result of the herbicide program has been to increase friendly security and to assist in returning civilian to GVN control.

4. The U.S. commander in the III CTZ related:

Herbicide operations have contributed significantly to allied combat operations in the III Corps. Defoliation is an important adjunct to target acquisition. Aerial photographs can often be taken from which interpreters can "see the ground" in areas that previously were obscured. Defoliation also aids visual reconnaissance. U.S. Air Force FAC's (forward air controllers) and U.S. Army aerial observers have discovered entire VC base camps in defoliated areas that had previously been overlooked.

5. In the south in the IV CTZ, C–123 herbicide operations are limited. This is because of the vast areas of valuable crops which are not to be destroyed, even though they may be in enemy hands. Therefore, the commander of the IV Corps area in presenting his evaluation cited the value of helicopter operations as follows—

A significant helicopter defoliation mission was conducted in the vicinity of SADEC in August 1968. The target area consisted of three main canals which converged and formed a strong VC base. The dense vegetation permitted visibility of only 10–15 meters horizontally and nil vertically. The area was sprayed with approximately 735 gallons of herbicide white and over 90 percent of the area was defoliated. As the result of the defoliation, an ARVN battalion was able to remain overnight in the area for the first time in 5 years. Many enemy bunkers were open to observation. Since the defoliation, the VC presence has decreased to the point that only RF/PF forces are now necessary for local security.

6. As a part of the 1968 evaluation report of herbicide operations, the U.S. senior adviser in the IV Corps tactical zone area reported—

A section of National Highway 4 in Phong Dinh Province was the site for a defoliation operation on June 24, 1968. Since January 1968, a series of ambushes was conducted against SVN convoys and troop movements. Because of the total inability of ground troops to keep the area clear of VC, this area was sprayed using 685 gallons of herbicide white. The target area was primarily coconut palm and banana trees that had been abandoned by their owners for several years. During the period of abandonment the vegetation had become so dense that convoy security elements were not able to see more than 5 meters into the underbush and had to rely on reconnaissance by fire to discover the

hidden enemy. This method of protection had proven ineffective. Three RF/PF companies with U.S. advisers were used to secure the target for the helicopter operation in addition to an armored cavalry troop. Since the defoliation mission was completed, convoys have used the highway two or three times a week without attack or harassment. Only one RF platoon has remained in the area to provide local security to the hamlet and highway.

7. In certain instances, we know the VC have been forced to divert tactical units from combat missions to food-procurement operations and food-transportation tasks, attesting to the effectiveness of the crop destruction program. In local areas where extensive crop destruction missions were conducted, VC/NVA defections to GVN increased as a result of low morale resulting principally from food shortages.

The most highly valued item of equipment to field commanders in Vietnam is the helicopter. There was some question when the helicopter spray equipment was first procured whether field commanders would divert the use of helicopters from combat operations for herbicide spray operations. The very fact that the commanders have used their helicopter spray equipment to the fullest and have asked for more is certainly proof that herbicide operations have been helpful in protecting the American soldier and contributing to successful accomplishment of the ground combat mission.

CONCLUSION

. . ., we have presented to you in as complete and candid a manner as possible the lifesaving usage that we have made of riot control agents and herbicides in South Vietnam and the policies under which this usage has taken place. We believe this usage has been wise and has been accomplished with restraint. The result is that our forces have been better able to accomplish their mission with significantly reduced U.S. and Vietnamese casualties.

(SOURCE.—Rear Adm. William E. Lemos, Director of Policy Plans and National Security Council Affairs, Office, Assistant Secretary of Defense for International Security Affairs, Statement before House Subcommittee on National Security Policy and Scientific Developments, Hearings on Friday, December 19, 1969, pp. 231–232.)

ANTIPLANT CHEMICALS: CURRENT WAR USE

This April, following the "suspension" and "cancellation" orders by the U.S. Department of Agriculture on certain registered use of 2,4,5-T for domestic civilian applications because of hazards to public health, the Defense Department announced that it would ban the use of its primary chemical herbicide, orange in the defoliation program in Vietnam.

This decision provides an appropriate opportunity to review the basic question of whether an antiplant chemical warfare arsenal is really needed and whether the negative side effects of the U.S. "first-use" of these chemicals in Vietnam outweigh the value of defoliation and crop destruction as tactics of war.

White and blue are the herbicide chemicals now authorized by the Defense Department for use in the remaining defoliation program in Vietnam.

MILITARY DEFOLIATION VICTIMS: PLANTS AND CIVILIAN PEOPLE

It has been said by some that antiplant chemicals merely kill or injure plants, not people; therefore, they ought not to be condemned for use in warfare.

I cannot accept this logic or conclusion for several reasons.

First, there is the assumption that the chemical products and the practices in military application of herbicide chemicals present no health hazard to humans.

This assumption is sorely strained in view of the results of tests done this year by the National Institute of Environmental Health Sciences on the teratogenic, or fetus-deforming effects of 2,4,5-T registered for use in domestic civilian application.

The chemical 2,4,5-T is a polychlorinated phenolic compound that contains dioxin contaminants or impurities. When a chlorophenol is heated sufficiently, it is likely that some dioxin will result. Dioxin is considered a toxic agent.

Last year the Bionetics Research Laboratories in Bethesda, Md., under contract to the National Cancer Institute, reported that its studies on 2,4,5-T showed deformities in the offspring of pregnant mice and rats. It recommended that the Government take actions to restrict the use of 2,4,5-T in both domestic civilian applications and military herbicidal operations. Critics of the bionetics report, both in the administration and in industry, claimed that the 2,4,5-T marketed and registered for use as a pesticide chemical was of "greater purity" than the test material of 2,4,5-T used in the bionetics study. That test material, they claimed, contained substantial concentrations of dioxin chemical impurities.

In light of these claims and counterclaims on the hazard to public health of registered 2,4,5-T, the Senator from Michigan (Mr. HART) initiated hearings before the Subcommittee on Energy, Natural Resources, and the Environment.

It was on April 15 during one of these hearings that Dr. Jesse Steinfeld, Surgeon General, USPHS announced the conclusions of additional studies conducted by the National Institute of Environmental Health Sciences on the fetus-deforming effects of 2,4,5-T. The conclusion was that "the dioxin impurities and the 2,4,5-T as it is now manufactured, separately produced birth abnormalities in the experimental mice." Although there is consensus as to the "extreme potency of the impurities as toxic agents," Dr. Steinfeld emphasized that the studies "do not clarify the uncertainties as to significance to man." Indeed, Dr. Steinfeld said, "No data on humans are available."

It should be noted here that Dr. Steinfeld's assessment of no data on the effects of 2,4,5-T or its impurity dioxin on humans has been questioned. Dioxin could have a teratogenic, or fetus-deforming effect on pregnant women and/or a toxic or body poisoning effect on humans. While there is no confirmed evidence of the former, there is evidence of the toxic effects of dioxin on humans. It has been reported that in the mid-sixties, Dow was obliged to close down part of a 2,4,5-T plant in Midland, Mich., for some time because about 60 workers contracted "chloracne" as a result of contact with dioxin. The symptoms of this disease include skin disruptions, disorders of the central nervous system and chronic fatigue.

As a result of the conclusions of the studies by the National Institute of Environmental Health Sciences, the Secretary of Agriculture found that in order to prevent an "imminent hazard" to the public health, it was necessary "to suspend" registration for products containing 2,4,5-T and to require relabels for use as follows:

First. Suspension of liquid formulations of 2,4,5-T for use around homes, and recreation areas;

Second. Suspend all formulations of 2,4,5-T in aquatic areas, that is, in lakes, ponds, or on ditch banks.

The "suspension" order carries with it immediate halt to interstate shipments.

The Secretary of Agriculture also found that in order to prevent a "hazard" to public health, it was necessary "to cancel" registration for products containing 2,4,5-T and bearing directions for use as follows:

First. All granular 2,4,5-T formulations for use around the home, recreation areas, and similar sites.

Second. All 2,4,5-T uses on food crops intended for human consumption, such as apples, blueberries, barley, corn, oats, rice, rye, and sugarcane.

Dr. Lee DuBridge, formerly President Nixon's science adviser, has said that—

If the effects on experimental animals are applicable to people it's a very sad and serious situation.

Does the Defense Department think the military application of its primary defoliant orange, a mixture of 2,4,5-T and 2,4-D could be affecting the public health of Vietnam? According to the Defense Department, the answer is "No." When asked: Why not? the Department simply responds that there is no confirmed evidence that illness is directly the result of defoliant spraying.

Nevertheless, following the "suspension" and "cancellation" orders on registered use of 2,4,5-T for domestic civilian applications—orders affecting only about 10 percent of 2,4,5-T use in this country—the Defense Department announced that it would ban use of orange henceforth in the defoliation program in Vietnam.

It has been estimated that 50,000 tons of antiplant chemicals have been sprayed on Vietnam land, including forests, crops, ditch banks and along shipping canals and communications lines. Of the 50,000 tons, it is estimated that 20,000 tons of oranges have been sprayed.

Now let us consider again the notion by some that antiplant chemicals merely kill or injure plants not people; and that they ought not to be condemned for use in warfare.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOODELL. May I have 5 additional minutes?

Mr. NELSON. Mr. President, I yield the Senator 5 minutes.

Mr. GOODELL. I have said previously that I cannot accept this logic or conclusion for several reasons. The first is the questionable assumption that the formulations of antiplant chemicals for military purposes as well as the practices in military application of such chemicals present no health hazard to humans. In

addition to the fetus-deforming effects and toxic effects of 2,4,5–T shown in laboratory studies, there is the question of whether or not 2,4,5-T is biologically degradable, that is, the question of whether it persists in the environment or accumulates in animal tissue. Although some claim that 2,4,5-T is readily decomposable in soil and by the action of sunlight after it has been applied, there have been no thorough studies to show that 2,4,5-T's dioxin contaminant is biologically degradable, that is that it does not persist in the environment or accumulate in animal tissue.

Consider antiplant chemicals used in war as part of a program to deny an enemy concealment. Now think of the animals in the forest. Consider whether any of these animals are destined for food and having been exposed to the dioxin contaminant, contain residues of dioxin in their systems. Suppose that there are no food inspection teams to detect harmful levels of 2,4,5-T residue and to protect people from contaminated food.

Consider antiplant chemicals used in war to destroy forests near streams and canals. Think of the fish in the streams as another possible food supply. Think of the water as being used for irrigating food crops. Now recall the USDA suspension order for 2,4,5-T banning use in aquatic sites because it presented an imminent hazard to public health. Recall the USDA warnings and limitations for domestic use of picloram and cacodylic acid: "do not contaminate water used for domestic or irrigation purposes."

Consider drift from antiplant chemical operations to water supplies for drinking purposes.

Consider antiplant chemicals used in war to destroy crops, that is part of any enemy food denial program. Then consider the history of warfare which shows that it has always been the fighting men who have had the first claim to the available food supply; civilians always have been the ones to suffer the shortages.

Many of us were very concerned during the recent Nigerian civil war about starvation in Biafra. Allegations were made that at least some officials of Nigeria were using food and starvation as a weapon of war. Many of us stood up and called upon the international community and the Nigerians and the Biafrans to agree on ways to get food in there so that women and children would not be the primary sufferers of the civil war in Nigeria.

Many of us are equally concerned with the effects of the present food denial program in Vietnam; many of us are concerned with the effects of the entire military defoliation operation in Vietnam.

Considering all the links between man and environment, it seems clear to me that the massive spraying of antiplant chemicals in Vietnam constitutes a dangerous hazard to public health in Vietnam and warrants a total ban on this country's engagements in military defoliation operations.

Looking beyond the links in the ecosystem and the food chain, there can be no doubt that massive application of antiplant chemicals is having an adverse effect on the people of Vietnam. What effect it is having on what effects show up in the future, may be one of the saddest chapters in the epilogue of the war.

Those who defend the use of herbicide chemicals and the use of chemicals against crops in Vietnam, do so by claiming that such use saves lives of our troops. Obviously, we want to do everything possible to protect the lives of our men fighting in Vietnam.

The claim, however, that defoliation operations are "life saving" is open to question.

Regarding the military value of defoliation, several drawbacks can be considered. These drawbacks raise the possibility of "risk to life" for our men fighting in Vietnam. Drawbacks are based on the following considerations:

After spraying, several days pass before leaves fall off trees; dying leaves can "alert" the enemy to impending United States-Vietnamese operations;

After spraying along lines of communication, ambushes may still take place behind curves in the road as well as create a broader enemy fire on United States-Vietnamese troops;

Defoliation of base perimeters has often led to deemphasis of saturation patrolling which may be false economy;

There may be a trade-off between vertical and horizontal visibility; that is, defoliation of a double or triple canopy jungle increases the amount of sunlight that reaches ground level; in time this greatly stimulates growth of vines and bamboo which could impede movement of United States-Vietnamese ground troops. While United States-Vietnamese pilots may increase their visibility; ground troops may find it more difficult to move on foot. According to the report made by Dr. Fred Tschirley, Agricultural Research Service, USDA, after his investigation in 1968 of environmental effects of defoliation in Vietnam; "repeated treatments will result in invasion of many sites by bamboo. Presence of dense bamboo will then retard regeneration of the forest." It may also retard the mobility of our ground combat troops.

By all reasonable standards, crop destruction in Vietnam is a military failure. It is cursed by the locally affected Vietnamese, most of which are rural subsistence farmers. It is exploited by the VC. It is counterproductive to Vietnamization. An indicator of ill-will may be the damage claims, both valid and trumped-up. Since 1968, over 10,000 claims have been validated at a cost of over $3 million. Invalidated claims are unrecorded. Rather than save lives of U.S. troops, crop destruction could contribute to the risk of life by decreasing the cooperation we need from the Vietnamese themselves. The less cooperation we get, both in intelligence gathering and fighting, the more our troops must fight and along with this goes greater risk to the lives of our troops.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOODELL. May I have 5 additional minutes?

Mr. NELSON. Mr. President, I yield 5 additional minutes to the Senator from New York.

Mr. GOODELL. In Vietnam, we are fighting, supposedly, for the hearts and minds of the people.

One of the greatest problems we have in the so-called Vietnamization program is the psychological impact and the direct impact of crop destruction on the people and the small farmers. It is a very unpopular program.

It is a program which turns many of the rural people against us in South Vietnam. It is a program of marginal military significance. The end result may, on occasion, save a few lives of American soldiers, but then later lead to the deaths of many more American soldiers.

Mr. President, I believe our amendment deals directly, and precisely with the issue at hand. It would bar future military use of chemical herbicides by this country. It would bar use by proxy. It would dismantle this country's chemical herbicide arsenal. Such a measure is long overdue.

Mr. President, there are many aspects of our military defoliation operations that cannot be discussed openly here. I do not wish to make specific references to studies that have been made available, but are considered confidential and secret. But I think there is ample evidence available to all of us in the U.S. Senate that indicates that the use of chemicals for crop destruction in Vietnam has been counterproductive. We are cutting off our nose to spite our face with the continued use of these defoliants, whether we talk about it simply in a military sense or in terms of the environment of Vietnam.

I hope that the Senate will act today to let the world know that we are going to prohibit the use of antiplant chemicals in war; that we will prevent the future use of those chemicals which have, for the past 9 years, been used in Vietnam.

Mr. STENNIS. Mr. President, I ask unanimous consent that when the Senator from Mississippi happens not to be present in the Chamber, the time in opposition to the amendment may be allotted by the Senator from New Hampshire.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. NELSON. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Wisconsin has 22 minutes, the Senator from Mississippi 55 minutes.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum, on my time.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOMINICK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I yield the Senator from Colorado 20 minutes.

Mr. DOMINICK. Mr. President, I have a prepared speech here, which I am going to make, but before I do that, I wish to say that I know how sincere the Sen-

ator from Wisconsin is. He has been against our involvement in Southeast Asia from the very beginning. He has voted against every appropriation, every authorization, and everything else I can think of. So I am not a bit concerned over the heat with which he debates this particular amendment, because he does not think we ought to be there at all.

That is perfectly proper, and it is his right, obviously, but it is not the policy of the last three Presidents. We are there, and we have to recognize the fact that we have people there who are fighting a war, and who must have the ability to do so both efficiently and successfully.

I also wish to say, before I go any farther, that the committee has in fact not only eliminated authorization for the use of the so-called orange herbicide, which was referred to in the debate, and we do not have any money in the bill for that at all. We have also reduced the new authorization from $2 million to $1 million, and the balance of the money that has come in is money that had previously been authorized but not spent in connection with the procurement of orange, which has been reslated in order to provide the funds for the defoliants in connection with both crops, trees, brush, and lines of communication, but not with the poisonous type Orange that has been referred to heretofore.

One of the most difficult problems faced by the military in South Vietnam is the inability to observe the enemy in the dense forest and jungle. As one method to help overcome this problem, defoliating herbicides were introduced in 1962, and since that time have been employed on an increased basis.

Defoliants are capable of producing a tremendous improvement in vertical and horizontal visibility in the type of jungle found in South Vietnam. As viewed by an aerial observer, it may be impossible to see through the jungle canopy at the time of spraying. After spraying, defoliation will begin in 2 to 3 weeks and in 6 to 8 weeks, the observer will have almost complete observation through the canopy. After 8 to 12 months, he will have only limited visibility due to regrowth. For ground observation, defoliation is capable of improving vertical visibility 70 to 90 percent and horizontal visibility 40 to 60 percent.

It has been claimed that defoliation along lines of communication permits the enemy to attack with heavier weapons and provides allied soldiers little cover if they are attacked. Such statements ignore the purpose of the defoliation which is to provide observation out to 200 or 300 meters on either side of a road or canal and deny the enemy a close-in, concealed ambush position.

Any soldier will tell you that it is easy to hit a target up to 100 feet away with a rifle or machinegun but it becomes increasingly difficult to hit one at 600 to 1,000 feet. Heavier weapons are effective at these greater ranges but they require open fields of fire or cleared firing positions.

The critical period in an ambush is the first 10 to 15 seconds. After this, evasive action and counterambush fires will reduce the effectiveness of the ambush. The inaccuracy resulting from distant fires gives our troops a better chance to survive the first few critical moments and then overcome or evade the enemy forces.

There is considerable evidence supporting the military effectiveness of defoliation operations. The most recent study was conducted in October of 1968 at the request of General Abrams, COMUSMACV. That study produced overwhelming evidence from both intelligence sources and afteraction reports on the effectiveness of herbicides. The following examples demonstrate the value of the defoliation effort in Vietnam:

First. According to the commander, U.S. Naval Forces Vietnam, the defoliation along the main shipping channel between the ocean and Saigon contributed considerably to denying protective cover to the enemy for ambush of the slow-moving merchant ships and U.S. naval vessels.

Second. The commanding general of I Field Force reported that the defoliation program reduced enemy concealment and permitted increased use of the lines of communication by friendly units. Aerial surveillance of enemy areas improved and less security forces were required to control friendly areas.

Third. Defoliation aids visual reconnaissance. Air Force forward air controllers and Army aerial observers have discovered VC base camps in defoliated areas that had previously been undetected.

Fourth. Helicopter defoliation operations were conducted in 1968 against infiltration routes and mortar and rocket sites in the vicinity of Pleiku City. Aerial observation of the area is now possible and Pleiku has not experienced mortar or rocket attacks since the area was defoliated.

Fifth. A portion of National Highway 4 in Phong Dinh Province was defoliated in June 1968. This mission was conducted after a series of missions against GVN convoys and troop movements. The target area consisted primarily of coconut palms and banana trees that had been abandoned for several years. The vegetation had become so dense that convoy security elements were unable to see more than 5 meters into the underbrush. It required three companies of regional and popular forces and an armored cavalry troop to secure the target during the helicopter spraying. Since defoliation, convoys have used the highway two to three times a week without attack or harassment. Only one platoon of popular forces is now required to provide local security to the nearby hamlet and the highway.

Sixth. The most important piece of military equipment in Vietnam is the helicopter. The fact that commanders use their helicopters in spray missions on a priority basis is further evidence that herbicide operations are considered valuable for protecting American soldiers and contributing to the successful accomplishment of the ground combat mission.

To determine the effectiveness of herbicides in Vietnam a number of additional tests over and above the data previously existing in the United States were conducted. Five years were spent studying the effects of herbicides in areas of Puerto Rico and Texas—by the Department of Agriculture—areas similar to portions of South Vietnam. A year's study was also made on experimental plots in South Vietnam; a botanical survey of South Vietnam was compiled and on several occasions Department of Defense and Department of Agriculture scientists went to Vietnam to search for evidence of adverse ecological change. The Agency for International Development of the Department of State also made such surveys utilizing consultants from universities, the Department of Agriculture and the U.S. Forest Service. Several years have also been spent on studying the effects of herbicides on experimental plots in Thailand. These studies have been published in the open literature. Additionally, the United States reviewed the experience of other nations, since almost all of the developed nations of the world employ herbicides domestically. For example, herbicides have been used extensively in rubber and oil-palm plantations in Malaysia for over 20 years at an application rate 5 to 6 times those used in Vietnam. The herbicide operations in Malaysia were conducted to kill old nonproductive trees and jungle vegetation in preparation for planting new trees. As the program of herbicide usage has continued in Vietnam, nearly continuous review has been made of the resulting effects. All of the information available indicates that it is not concentrated in soil or water, nor concentrated to any appreciable degree in plants.

There have been many claims of possible long-term ecological dangers from the use of chemical defoliants. These include laterization—conversion of certain soil to hardened, infertile form—permanent destruction of mangrove swamp forest and poisoning of aquatic life. The ecological investigation conducted by Dr. Fred H. Tschirley from the Department of Agriculture does not substantiate these claims. He found that laterite soil was not being produced because bare soil does not result from defoliation. Although the trees and brush may be killed, the grassy ground cover survives and grows rapidly when exposed to the sunlight as a result of the defoliation. Tschirley also found that the mangrove forest would not be permanently eliminated. He estimated it would take 20 years for the reestablishment of a mangrove forest. Surveys of defoliated mangrove areas have shown definite regrowth after 6 or 7 years. The increased fish catch in the mangrove areas indicates that the aquatic food chain has not been seriously damaged. In fact, the total fresh water fish catch in Vietnam has increased during the last few years. In addition, all of the mangrove in any particular area has not been destroyed, thereby permitting germination of seed from the established forest.

Recent test reports have indicated that 2,4,5-T caused abnormal fetuses in mice, rats, and chicken embryos. It is recognized that animal data cannot be directly extrapolated to humans. To create a comparable situation wherein a Vietnamese woman could probably have an abnormal child as a result of drinking

2,4,5-T would require that she consume large quantities of contaminated water each day for about 3 months during the middle of her pregnancy period. If one assumes an extensive rain water collection system, the necessary concentration of 2,4,5-T in the water would require that the area be sprayed every few weeks. Since an area is normally sprayed only once during any 6- to 9-month period, this postulated condition would be virtually impossible to attain. No incidents of verified malformed births resulting from herbicide operations are known.

An examination in December 1969, of the hospital records in Mimot, Cambodia, for 1968 and 1969 by Dr. A. Westing of the American Association for the Advancement of Science showed no increase in birth defects as a result of herbicide spraying of rubber plantations that occurred in April 1969.

An examination of hospital records in Vietnam has been initiated, but the results are not yet completely collated. Indications are that the birth defect rate remains essentially unchanged from the predefoliation era.

Although it appears that there are no confirmed public health hazards associated with the use of the 2,4,5-T contained in herbicide orange in Vietnam, the Department of Defense deemed it prudent to suspend all operations using orange until the problem could be resolved. In the meantime, operations continue using defoliants white and blue.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield.

Mr. NELSON. Why did the Department of Defense decide to suspend the use of 2,4,5-T in Vietnam? What was their concern?

Mr. DOMINICK. I think the concern originated, as I said earlier in the prepared statement, from the findings that this did create problems with fetuses of mice, rats, and chickens. As a result, since we do not yet know fully what the immediate results will be, they just decided that, since the others would work, they would stop this.

Mr. NELSON. Would not the Senator consider it rather a dramatic situation and would not he consider it a very serious matter that we have been spraying million of pounds of 2,4,5-T, which Dr. Verrett and other scientists have found deforms the fetus of certain creatures? Would not that alarm the Senator, since it has demonstrated its teratogenic capacity? We have been spraying vast amounts of it, and, in fact, 2,4-D has also been shown to be teratogenic and we are continuing to use that.

Mr. DOMINICK. I say to the Senator that if all things were fair in a perfect world, I would wish that we were not using any of these, so far as I personally am concerned. But as long as we are engaged in an effort to try successfully to assist the South Vietnamese against the attacks by both the Vietcong and the North Vietnamese, I think we will have to take such action as is necessary to make that effort successful.

Mr. President, earlier this year there was a great deal of national publicity concerning deformed animals that resulted from the use of herbicides in Globe, Ariz. A lame goat and a deformed duck were shown on television to support the claims of damage caused by the herbicides. When scientists evaluated the claims, it developed that there was no causal relationship between the spray operation and the alleged damage. Nine doctors serving the Globe area stated that there had been no significant increase in human illness related to the spraying. Reports from wildlife specialists indicated no significant effects on birds, deer, and other wildlife. The team of scientists reported:

> It is doubtful that the spraying of the herbicides or dioxin caused the affliction in the goat or duck because the goat was born before the treatment and the duck was hatched about four miles away from the treated area.

The amendment proposed by Senator NELSON and Senator GOODELL would prohibit the U.S. military use of antiplant chemicals. There are over 100 antiplant chemicals available on the commercial market. Many of these chemicals are used by the military to clear rights-of-way, fence lines, and to remove undesired vegetation on posts, camps, and stations both here and abroad. This amendment would prohibit the use of these chemicals for grounds maintenance without affecting the use by other Government agencies. In addition, large quantities of herbicides are furnished the Vietnamese under the AID program in order to improve their agricultural output.

I would ask, as a rhetorical question, why we should prohibit the use of defoliants by the military and preclude any ability to support some of the Vietnamese agricultural output.

Is it the intent of Senator GOODELL and Senator NELSON to prohibit the use of all herbicides by the military and to preclude our supporting the Vietnamese agriculture?

On July 16, the Senator from Wisconsin introduced into the RECORD an article by Drs. Pfeiffer and Orians. This article was based on a visit to Vietnam by these two gentlemen and questioned the value of the defoliation program in light of the ecological consequences. It should be noted that in a press interview in New York upon his return, Professor Pfeiffer expanded somewhat on his report. I do not believe this was in the message the Senator from Wisconsin put in. He observed that it was "completely unrealistic" to expect military commanders to abstain from defoliation actions. He said:

> There is no question about it, they save American lives. On a sixty-five mile journey by armed boat from Saigon to the sea, we scarcely saw a living plant.

However, he added that had the vegetation not been destroyed, he and his companion would probably not have returned alive.

I would add, as a matter of fact, they would not even have been allowed to go down there. So that is some indication of the value of defoliants from the point of view of the preservation of American lives.

In the Republic of Vietnam, we have treated approximately 5.5 million acres since 1962. Of this total, a few areas such as war zones C and D have been resprayed, thus the actual area sprayed is closer to 4.5 million acres—in other words, we have resprayed two war zones, therefore the total acreage is only 4½ million. This represents approximately 11 percent of the land area of Vietnam. The defoliants used in Vietnam are not sprayed at random but are used only on important targets.

Under policy guidance provided by State and Defense Departments, the U.S. Ambassador in Saigon and COMUSMACV are empowered jointly to authorize U.S. support of GVN requests for herbicide operations. All requests for defoliation and crop destruction must originate with the province chief at the province level.

I repeat that, Mr. President: All requests for defoliation and crop destruction must originate with the province chief at the province level. These are the South Vietnamese province chiefs.

Requests must contain a detailed justification for the operation and include a civil affairs annex to insure that any impact on the civilian population has been considered. Authority to approve small-scale defoliation projects has been delegated to the ARVN Corps commander and the U.S. Corps senior adviser.

All requests for large-scale defoliation by fixed-wing aircraft and all crop destruction missions must be approved by the Chief of the Vietnamese Joint General Staff. When the Vietnamese request for support is received at Headquarters MACV it is staffed along with a parallel request submitted through U.S. advisory channels to MACV. During staffing, the project is reviewed by Civil Operations and Revolutionary Development Support—CORDS—that is an American agency, U.S. Agency for International Development—USAID—Joint U.S. Public Affairs Office, American Embassy, and MACV.

A final opportunity is given the province chief to approve or reject each spray mission 24 to 48 hours before the scheduled time of execution. All planes using defoliants are provided with a navigator, so that they know for sure where they are going. I think this is a good reply to the concept that some believe, that Americans have been kind of broadcasting these defoliants around on their own, indiscriminately, around the country. They have not done so. It must originate with the province chief in that area.

Some specific uses of defoliants are:

Perimeter defoliation: Herbicides are used to restrict growth of high jungle grass, bushes, and weeds around base camps and fire bases. This provides fields of fire and affords observation to prevent surprise attack.

Mr. President, I was in Vietnam twice, and I have been to the fire bases and have seen the areas, and I can assure Senators that if we did not have some method to clear this out to see what we are doing, surprise attacks around that area would be very heavy now.

The PRESIDING OFFICER (Mr. HOLLINGS). The time of the Senator has expired.

Mr. BYRD of West Virginia. Mr. Pres-

ident, on behalf of the Senator from Mississippi, I yield 5 additional minutes to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 5 additional minutes.

Mr. DOMINICK. Mr. President, on defoliation of lines of communication, defoliation along roads and canals has been successfully used to permit aerial observation and minimize concealment which could be used by the enemy for ambushes.

Defoliation of infiltration routes: Areas used by the enemy for routes of approach, resupply or movement are important targets for herbicide spray. Defoliation of these routes permits aerial observation and allows better detection of enemy units and their resupply activities.

Defoliation of enemy base camps: Spraying of enemy base camps is used to expose them to aerial observation. Even if he does move out before the defoliation is complete, his bunkers, living quarters, and other facilities can be destroyed.

The effectiveness of defoliation has been questioned on the grounds that it produces no military contact. However, this in itself can be a measure of its effectiveness. For example, in Sa Dec Province a major VC base was defoliated in August 1968. After defoliation, an ARVN battalion was able to remain overnight in the area for the first time in 5 years. Many enemy bunkers were opened to observation and destruction. Since the defoliation, the VC presence has decreased to the point that only regional and popular forces are now necessary for local security.

The American Embassy in Saigon sponsored a detailed review of the herbicide program in 1968, with particular emphasis on economic and sociopolitical aspects. To assist in the review, Dr. Fred Tschirley of the U.S. Department of Agriculture visited Vietnam to assess the ecological consequences of the defoliation program. The Embassy report indicated that the defoliation program was worthwhile and that the military value far outweighed any adverse economic effects. However, as a result of the study, improved controls were instituted to minimize the probability of inadvertent spraying of rubber trees and other crops.

The improved controls reduced South Vietnamese civilian complaints of damage to friendly crops from some 30 a month to three a month by early 1969. For comparison, it is interesting to note that in 1965 there were 259 cases of herbicide drift damage to crops in North Carolina. There was less damage in South Vietnam in terms of complaints than there were there.

The use of defoliants has created some problems but detailed reviews have shown that benefits outweigh adverse effects. Not only have herbicides assisted the military effort but they have also had a beneficial impact on the local economy in many areas by permitting the opening of roads and canals which had been under enemy control. The farmer is now able to take his produce to market without paying a tax to the VC or worrying about ambushes. In many sections, the defoliated area along roads has been cleared and is now used for farming. Rather than hindering the small farmer in his attempts to improve his lot, defoliation in conjunction with road clearing and road building operations has opened up new markets and new opportunities for him. In the light of all these factors, I urge that the pending amendments be rejected.

I ask unanimous consent at this point to have printed in the RECORD as part of my remarks a brief statement which I have made in connection with the President's actions in limiting the use of chemical warfare agents and in cutting out totally biological warfare. This is the first time, I point out, that this has been done. I think it shows the understanding the President had on the economic, emotional, and biological problems that these particular agents create.

There being no objection, the statement of Senator DOMINICK was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR DOMINICK

Mr. DOMINICK. Mr. President. In the current controversy over the Army's disposal of nerve gas, I think we are forgetting the fact that President Nixon has long since taken the lead in renouncing the use of chemical and biological weapons.

On November 25, 1969, President Nixon announced that, as the result of an exhaustive review led by the National Security Council, the U.S. reaffirmed that this country would never be the first to use lethal chemical weapons and that he would extend that renunciation to include the use of chemical weapons that incapacitate.

At that time, the President also announced that in regard to biological weapons the United States would renounce the use of lethal biological agents and weapons, and all other methods of biological warfare; that the United States would confine its biological research to defensive measures such as immunization and safety; and that he had asked the Department of Defense to make recommendations as to the disposal of existing stocks of bacteriological weapons.

In his November statement the President also promised that he would submit to the Senate, for its advice and consent to ratification, the Geneva Protocol of 1925 which prohibits the first use in war of "asphyxiating, poisonous or other Gases and of Bacteriological Weapons of Warfare". That promise has been kept. On August 19th, the President formally asked the Senate to approve the 1925 Geneva agreement.

I would submit that the record of the Nixon Administration in regard to chemical and biological warfare is both commendable and unassailable. The President has clearly taken the lead in the renunciations of these terrifying weapons. I would particularly commend the President's action on the Geneva Protocol, which was never approved by the Senate although it was the United States in 1925 which sought this ban on chemical and biological weapons. In 1947 this Protocol was returned to the White House and still there was no action by the Executive Branch or the Senate.

It remained for this President to finally—after 45 years—take the humane action which I hope will result in approval of the Geneva Protocol by the Senate.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 3 minutes.

Mr. NELSON. Mr. President, would the Senator give me his view about the implications of the use of herbicides for food denial? We say that we use it for the purpose of denying the enemy food raised by the Vietcong themselves or food that might be raised by someone else for the Vietcong. If we validate the theory that it is acceptable military practice to deny food to the enemy, how about conditions in the future when another country can say, "We are spraying all crops in country 'X' because we are at war with that country and the dictatorship in that country will take whatever food there is and give it to the military. Since we have to deny food to the military, we have to spray it all because the dictatorship controls all crops."

Is that not what is likely to happen and are we not really then endorsing the use of an instrument of warfare which is applied with very little sophistication but which will proliferate in the hands of the enemy and would put us in the position of endorsing starvation warfare?

Mr. DOMINICK. Mr. President, let me say to the Senator that he is building one of his great parades of horrors—and I have seen him do it before and I admire him—on hypotheses that have not happened.

I would say that in any war that I can remember, since Atilla the Hun, the scorched earth policy has been followed. Countries have used it. We are not doing this. We are being very careful to do this only in areas which will give us the ability to protect ourselves from ambushes and to deny the use of crops to the enemy in areas we know are controlled by the Vietcong or are used by them for their crops. It is a very limited use.

As an example of what we have been trying to do, we have introduced the new wheat and the new rice grains in there and have increased the production throughout Vietnam as a result in areas that we can control.

Mr. NELSON. Mr. President, is the Senator aware of the fact that we have sprayed 500,000 acres of crops and are procuring enough Agent Blue—which includes 54-percent arsenic—this year that could be used to spray an additional 200,000 acres of crops? Some of the statistics are classified on the question of how careful we are. The Senator knows that I cannot use them. But the Senator will concede that the vast majority of croplands sprayed up until 1967 were for crops raised by civilians for use by civilians.

The PRESIDING OFFICER. The time of the Senator has expired. Who yields time?

Mr. NELSON. Mr. President, I yield the Senator 3 minutes in which to answer the question.

The PRESIDING OFFICER. The Senator from Colorado is recognized for an additional 3 minutes.

Mr. DOMINICK. Mr. President, I will concede that we have used herbicides to destroy crops that would be used by the enemy who attack the South Vietnamese

in the villages and cities and the American soldiers as well.

It seems to me that if we are fighting a war, we have to do that.

The position of the Senator is that he does not want to fight a war. I do not blame him for taking that position. I do not want to fight it either. However, if we are fighting a war, let us do something about protecting our boys.

Mr. NELSON. I think the Senator has changed the question a little bit. I would be willing to debate that matter later. However, are we not putting ourselves in the position of being the only nation in the world—except Australia and Portugal—that says that herbicidal warfare ought to be used? Eighty nations have voted that they are against it. Italy abstained on the grounds that it is against it but it did not think that the General Assembly had the authority to make legal interpretations of treaty policies.

Mr. DOMINICK. Mr. President, I assume the Senator is talking about the U.N. debate on the use of chemical warfare.

Mr. NELSON. Where does this leave us vis-a-vis all of the rest of humanity?

Mr. DOMINICK. Where does it leave us?

Mr. NELSON. That is correct.

Mr. DOMINICK. It leaves us in the position of saying that if we are going to be engaged in an area with our troops we are going to defend our troops. Unless we do that, there is no point in being there. I am not going to send my boy over to Vietnam and say, we are not going to use herbicides because they will kill trees," knowing that the enemy can get behind those trees and kill my boy. I am not going to do that and neither is the Senator from Wisconsin.

Mr. NELSON. If the justification is that it is effective, why do we not drop a nuclear bomb?

Mr. DOMINICK. There the Senator goes with his parade of horrors. I have great admiration for the Senator, but his statement does not convince me.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. NELSON. Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for 3 minutes.

Mr. NELSON. Mr. President, every time the Senator is asked a question that the Senator cannot answer, he says that the Senator is blowing up the matter and creating a parade of horrors.

I think the Senator does not see the ecological implications of the use of these materials.

No one can tell, in our country or in any other country, the consequences of the use of this 100,000,000 pounds of herbicides in Vietnam. The only answer one can give is that he does not know.

That is the answer we got from DDT for 30 years in this country, even though the scientists were predicting that DDT was a persistent, long-lasting chemical compound that would have disastrous effects worldwide.

In 1962, the biologists and botanists and others who did not agree with Rachel Carson made the same criticism of her that the Senator just made of me, that she was parading the horrors. They said that she was not qualified to make these judgments. However, she was absolutely right. Everyone knows it now.

The Senator knows that we are proceeding again with the continued introduction of pidoram into the atmosphere, the soil, the water, and the air all over the world, which is a very slow degrading herbicide.

Because we do not know what it will do we deny there is any danger to it, despite the fact we now do know of the effects it has.

Mr. DOMINICK. Mr. President, will the Senator yield for a question?

Mr. NELSON. I would like to finish my thought first. The situation is alarming. We know that picloram in tests in some soils only 3.5 percent disappears in over a year. That is very slow degrading. We do not know what happens to the absorption of these herbicides by plankton in the water or by other marine life. Certainly, the study by Dr. Tschirley, as fine a man as he is, does not answer even one-millionth of the consequences. The evidence with respect to massive usage of slow degrading pesticides is correct, horror stories. How can we proceed with this program when no other nation in the world agrees to it, except Australia and Portugal—who do not defend their position. Yet, we are willing to risk the environment of Vietnam.

The PRESIDING OFFICER. The time of the Senator is expired.

Mr. NELSON. I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. I yield 7 minutes to the Senator from Virginia.

Mr. BYRD of Virginia. Mr. President, the purpose of the pending amendment is to end the use of herbicides as defoliants of the jungles of South Vietnam. Defoliation is the result of the elimination of plant chemistry and plant growth.

Defoliation has been adopted by the Department of Defense as a tactic of war to deny the enemy food and concealment. The American forces in Vietnam have been using herbicides for this purpose for 7 years.

I would like to see the use of herbicides ended; I would like to see the bombing ended; I would like to see the shelling ended; I would like to see the killing ended; I would like to see the war ended.

But the war has not been ended; and we still have many Americans fighting every day in Vietnam.

From the beginning I have taken a consistent view in regard to Vietnam.

From the begining I have stated on the floor of the Senate and throughout Virginia that it was a grave error of judgment to become involved in a ground war in Asia.

But I submit that so long as we continue to send Americans to Vietnam and so long as we continue to have Americans fighting in Vietnam we must give our men every protection possible.

We have tied the hands of the military commanders to an unreasonable extent ever since this war has been in progress. This measure would further tie the hands of those who are trying to protect American troops in Vietnam.

It seems to me that 7 years after the use of herbicides began for the purpose of trying to protect our troops, it is not very logical to pass an amendment at this stage ending the use of herbicides.

As I mentioned earlier, the purpose is to defoliate the jungles in order to protect our men. We send B–52's loaded with bombs over these jungles to clear away the triple canopy, so that our military men, our personnel, our troops can have better vision and view of the enemy and protect themselves. So if we are going to send these B–52's loaded with bombs to defoliate the jungle, why should the Senate outlaw the use of herbicides to accomplish that purpose?

It has been stated that the use of herbicides is immoral. I think war itself is immoral. General Sherman said "war is hell," and so it is.

I would like to see this war ended, but the war is not over. American men are still fighting there.

They are still being killed there every day and they are still being wounded there every day.

I do not like to see this war "run out" of the city of Washington. That is why we still have the war in progress now—because a former President of the United States and a former Secretary of Defense were determined to run the war from Washington and prevent the military leaders from taking responsible steps to bring the war to an end.

I am convinced the war could have been ended several years ago.

I think it is a mistake to agree to this amendment.

I think the foremost consideration should be the protection and welfare of American troops in Vietnam. This amendment, in my judgment, could only be harmful to our troops. I shall vote against it.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 5 minutes to the Senator from South Carolina. I regret I do not have more time available.

Mr. THURMOND. Mr. President, I rise in opposition to the pending amendment to H.R. 17123 which would prohibit the use of antiplant chemicals or herbicides by military forces in Vietnam.

My opposition to this amendment rests on two points.

First. There is absolutely no question that the use of defoliation type chemicals in Vietnam has saved the lives of many United States, South Vietnamese, and allied fighting men in South Vietnam. More important, its use will save lives in the future.

Second. Investigations by the Defense Department, State Department, and the Agriculture Department at various times in the past few years have revealed no serious ecological disturbances resulting from the use of antiplant chemicals.

Mr. President, I now wish to discuss in somewhat more detail the two points I have mentioned as a basis for my opposition to the pending amendment.

Point 1 related to the fact that many lives have been saved in Vietnam be-

cause of the use of antiplant chemicals. It does not take a military man to recognize this fact. In many tactical situations outposts, small villages, communications units, or base camps are effectively protected by defoliating the vegetation several hundred yards out from these installations. Thus the movement of enemy forces, infiltrators, and others may easily be detected due to the increased visibility resulting from this defoliation. Around some of our fire support bases in Vietnam adequate defense would be difficult if not impossible without the use of antiplant chemicals.

Further, movement of enemy forces and supplies along infiltration routes may now be detected and dealt with due to effective use of antiplant chemicals. Enemy prisoners have attested to the effectiveness of this technique and further evidence has been obtained from direct observation.

On point 2, the Defense Department has conducted repeated investigations in South Vietnam as to the aftereffects of the use of antiplant chemicals. These investigations have revealed that no serious ecological disturbances have taken place. Despite the claims by supporters of this amendment, these investigations have been unable to reveal any evidence of an increase in stillborn births among South Vietnamese women or of widespread nutritional deficiencies among the people there.

Mr. BYRD of West Virginia. Mr. President, may we have order? I ask that Senators' aides take their seats in the rear of the Chamber.

The PRESIDING OFFICER. That order will be followed.

The Senator from South Carolina.

Mr. THURMOND. Mr. President, the most comprehensive study regarding the effects of antiplant chemicals was performed by Dr. Fred H. Tschirley in 1968. Dr. Tschirley is an official of the U.S. Department of Agriculture. He made the study at the invitation of the Departments of Defense and State. Certain recommendations on defoliation procedures made by Dr. Tschirley are being followed.

Mr. President, there is no doubt that the use of antiplant chemicals does have some effect on our environment, but the point is that competent investigative forces have found these effects generally harmless over a period of time. It is true that an antiplant chemical known as "Orange," which contains a chemical identified as 2,4,5-T, was discontinued from use in this country and South Vietnam. This resulted from findings by the Department of Health, Education, and Welfare that it caused malformed births in certain strains of rats and mice. The main benefit of the "Orange" chemical that it was fast acting in accomplishing the defoliation mission. "Orange" was was being used in this country for range and brush control prior to its discontinuance.

The Defense Department has advised all of the antiplant chemicals now being used in Vietnam are being used in this country and in other agricultural countries of the world for the control of weeds and unwanted vegetation. These chemicals are used by homeowners and farmers with little or no technical expertise, yet they can be used safely and without any incidents of harmful effects to humans.

The principal chemicals being used for weed and plant control include 2,4-D, which all of us use each summer to kill dandelions on our lawns. Other chemicals receiving wide use for control of weeds and unwanted vegetation include Tordon, manufactured by Dow Chemical, and cacodylic acid, a product of Ansul Chemical Corp.

Mr. President, it is ironic that the questions now being raised about the use of antiplant chemicals come at a time when their deployment has greatly declined. The fact is that usage of these chemicals had rapidly dropped because of the change in the nature of the conflict in South Vietnam. In the past, they were widely disseminated over huge areas of land because early in the war allied forces were conducting large search-and-destroy missions. Pacification is the big thing in Vietnam now and there has been a sharp reduction in large scale search-and-destroy missions. It should also be noted that the chemicals being used in South Vietnam can be bought in this country in carload lots by any citizen. Further, they are widely used by our agricultural community. In other words, the antiplant chemicals we are talking about are not some secret mixture which the military scientists have concocted in some hideaway laboratory. There is no Dr. Jekyll or Mr. Hyde in the military.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. THURMOND. Mr. President, will the Senator yield me 1 minute?

Mr. STENNIS. I am glad to yield the Senator 1 minute.

Mr. THURMOND. Mr. President, another effective use of antiplant chemicals by the military involves carefully evaluated and precisely controlled attacks on Vietcong and North Vietnam Army food crops with antiplant chemicals. This technique has caused significant increases in defection rates and caused the enemy to divert a large fraction of his forces to food supply. Many crop fields in Vietnam are being used entirely by the enemy. Other fields are more or less under the control of the enemy although cultivated by civilians. Despite this fine line of distinction, the Defense Department estimates that only about 1 percent of the food supply of South Vietnam has been adversely affected by our defoliation campaign.

Finally, Mr. President, it seems to me this amendment is much like some other amendments we have debated in the Senate during recent days. It is similar in that it would in effect tell our field commanders in Vietnam how they should conduct the war. In other words, you would be telling some colonel who has the responsibility of defending a combat outpost that he cannot effectively clear vegetation around his outpost so that fields of fire may be established to protect the men under his command.

We would be taking away from our fighting men in Vietnam a useful tool in the conduct of the war, a tool which is not harmful to our allies and in fact a tool which the South Vietnamese value very high.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I understand the Senator from Wisconsin is ready to yield some time now.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President——

The PRESIDING OFFICER. How much time does the Senator yield himself?

Mr. NELSON. Mr. President, how much time does the Senator from Wisconsin have left?

The PRESIDING OFFICER. Fifteen minutes.

Mr. NELSON. I yield myself 15 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. NELSON. Mr. President, the justification for the use of herbicides is a military justification which says that it is so important to us militarily that we find it necessary to spray herbicides for perimeter defense, herbicides to clear the supply and infiltration routes, herbicides to defoliate forests, and herbicides to spray the food that we think may get into the hands of the enemy.

Of course, a military justification can be made for almost any conceivable weapon if it does some damage or is of some inconvenience to the enemy. The reason why we do not drop the nuclear bomb among others, I guess, is that the devastation caused by it is immediately and shockingly apparent, and everybody shys away from the horror of the utilization of nuclear weapons.

We do not use poison gases because, out of the First World War, people became terribly disturbed about the effects of mustard gas on soldiers. So we do not use that, and all nations have declared that they would not use poison gases.

However, I think because we are ignorant—just plain ignorant—about the environmental implications and the disaster that could occur from introduction into the environment of a wave of herbicides that affect the flora and the fauna—and all creatures live in the soil and in water one way or another. We do not know what the result will be, and cannot know for a long time, and still we do not shy away from their use.

Yes, it is true that it takes 2 or 3 or 4 weeks for the leaves to fall off, and by the time they fall the base camp is gone, but we have made the guerrilla move. We can spray the trail so they cannot use it in the daytime or have to abandon it. We spray food crops under the ridiculous assumption that the Vietcong are going to be denied food.

They have been supplied all through this war with whatever supplies they needed, at times when our military said it could not be done.

I sat arguing in 1965 with one of our most distinguished generals in Senator MUSKIE'S office. He argued that we needed a ratio of at least 5 to 1 in warfare like this.

I said:

The infiltration is 1,500 a month from the North, according to our intelligence; that means we will need 7,500 troops.

He said:

Your mathematics is good, but if I were the adviser of the North Vietnamese, I would advise them to withdraw some of their troops, because logistically they cannot support them.

That general was one of the best logisticians in our Military Establishment. Six months later, 7,500 men a month were infiltrating. What about the argument that we are preventing the Vietcong from raising their food? The Vietcong will simply take food from the civilians when they need it. So it is the noncombatant civilians that are the losers.

I believe this argument raises a very grave military and moral question. The military admits that most of the food that we sprayed up to 1967—and I cannot state the amount, the figures are classified—was food raised by civilians.

Even if we could do what we say we intend to do—just spray food that is to go to the Vietcong—that spray, incidentally, is 54 percent arsenic—what really is the implication? If we validate that kind of warfare, contrary to the viewpoint of all the rest of the nations of the world save three—ourselves, Australia, and Portugal—then, under that theory, what is to stop any country from saying, "We are at war with country X; we know that food raised in that country is going to go to the military first, therefore, we are going to spray all the crops in that country?"

Do not think that will not happen, especially with some of the underdeveloped countries of the world. Anticrop chemicals are a cheap weapon. Underdeveloped countries are monocultures in the main, or at least cultures with a very limited variety of foods that are easy to destroy, and thus it is easy to bring them to their knees.

We are endorsing the concept that you can spray all the food in a country. That is the effect of what we are doing.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. DOMINICK. Is it not a fact that we are now producing more rice and more agricultural products in Vietnam, through new hybrid strains we have introduced, than they had before?

Mr. NELSON. Yes, I believe we are. Is it not also a fact that the Senator's question has nothing to do with what I am talking about?

Mr. DOMINICK. I do not think so.

Mr. NELSON. I am talking about the question of the policy of endorsing the concept of using herbicides against food crops, in a food denial program. I am simply saying that if we can do it, any country in the world can do it. We are the only country now which says it wants to do it. We are the most peace-loving country in the world. We stand for peace. We do not stand for using horrible weapons and, yet, we are the only one engaging in anticrop warfare.

We have the chance, right here and now, at 12 o'clock today, to vote to endorse the position of almost all of the rest of the countries of the world. Why should we not do so?

Is it because it is a convenient, handy weapon? Surely it is; so are all kinds of things.

Or is it that, as soon as we get out of Vietnam, we will join the others in condemning it? Is that our answer? Or are we going to use it any time we find it convenient, thus setting a dangerous precedent for every other country in the world to follow?

I say we have sprayed 500,000 acres of crops in 8 years.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. NELSON. I yield myself another 5 minutes.

We are now authorizing procurement of enough agent blue to spray another 200,000 acres for this year.

I think this raises a question that no one here has answered yet—none of the opponents of the amendment. That is the question: Do we intend to be the only country in the world that defends the use of these herbicides as valid military weapons? Are we going to be the only country in the world that does that? By our continued use of them, are we saying to the rest of the world that we put our stamp of legality on chemical warfare which involves risks of disruptions of the environment and life systems that no one in the world can predict? No one. Yet, every thoughtful scientist who looks at the matter is concerned, if not alarmed. Are we going to be the country that validates it?

Suppose that in World War II we had had these chemicals, which we did not. Let us assume that every other country in World War II had taken the position we take now, and had decided to spray the same amount we have sprayed in Vietnam, 6 pounds per capita. In that war about 700 million people were involved. At 6 pounds, the amount used would have been 4,200,000,000 pounds of herbicides, if everyone had taken the position we now take.

Is this what we endorse and validate as a peace-loving nation?

Mr. President, I think it is time for Congress to make a declaration that we join all the rest of the nations in the world in proscribing chemical herbicides as a valid instrument of war. If we do not do that, I think our standing as a country that has been arguing against the proliferation of nuclear weapons is suspect, from the standpoint of sincerity, when we are willing to use and see the proliferation of these weapons.

The Senator from Colorado referred to the horror stories that the Senator from Wisconsin builds up. Well, I ask any advocate of the use of these chemicals: Is the environmental deterioration around the world a horror story, or is it not? If it is not a horror story, I do not know what is. And this is just an additional facet of man's irrational introduction into the environment of chemicals that are having environmental eruptions and consequences in deteriorating the quality and the livability of the environment and affecting the life systems all over this planet.

This is just one more aspect of it. The answer always is, well, this little bit does not do too much damage, except when you add it all together. When you add it all together, we know what we are looking at environmentally. We know we are looking at a planet in which the whole envelope of air around it is becoming disastrously polluted. We know the oceans are going to lose all their productivity, if we continue what we are doing, in another 50 years.

That is the largest single asset on the globe. We know that we will wipe out most of the living species in the next 50 to 75 years, if we continue what we are doing.

I say that, not only as a matter of principle but also as a matter of practicality, we ought to tackle the question of the broadspread usage all over the world of the herbicides and pesticides in our country and in all other countries, too; and we ought to start in Vietnam, since we have almost all the other countries of the world agreeing with that position now. So we ought to start there and move to try to bring under control the indiscriminate use of all these herbicides and pesticides which are intruding upon and upsetting the plans of nature and having disastrous effects on the environment, which we can see now, and with further effects to come which nobody can predict.

Mr. STENNIS. How much time do I have remaining?

The PRESIDING OFFICER. Twelve minutes.

Mr. STENNIS. I do not intend to use more than half that time, and then I will ask the chairman of the subcommittee, the Senator from New Hampshire, to use the remainder.

Mr. President, I appreciate very much, and I am sure that the Senate as a whole does, the splendid work of the Senator from Wisconsin and the Senator from New York. I am frank to say that they have made a very impressive argument. There is one flaw in it, however.

I am ready to start anywhere with the Senator from Wisconsin except the very vital part we are talking about here, with respect to our boys who are being sent to Vietnam. Some of them are losing their lives. I am satisfied that the herbicides we are using now, which amount to approximately 25 percent of what we had been using, are saving the lives of some of them. I am satisfied, too, that the use of the herbicides is making the enemy's problems much more difficult and is making it more difficult for the enemy to accomplish results.

Major defoliation has been accomplished in war zone C. Prior to defoliation, seven brigades were necessary to maintain the superiority of the U.S. military forces and those of South Vietnam. During 1967, after defoliation, only three brigades were required.

The Commander of Naval Forces in Vietnam, in a report to General Abrams, stated:

As you know, a major concern is the vegetation along the main shipping channel. Your continuing efforts under difficult and hazardous flying conditions; in keeping this area and the adjacent inland areas devoid of vegetation have contributed considerably in denying the protective cover from which to ambush the slow-moving merchant ships and US Navy craft.

That is another classical illustration of its valued use in our shipping and keeping down the ambushing of men in those ships.

This amendment goes all the way; there is no middle ground to it. It provides:

No part of any amount authorized or appropriated pursuant to this act or any other law—

That is the appropriation bill that will be coming—

shall be expended for the purpose of—

(1) Engaging directly in the military application of antiplant chemicals.

It says all or nothing. This is the end, if this amendment is agreed to.

This is a matter of utmost attention and deepest concern on the part of our committee. Extensive and valuable hearings have been held by Senator McINTYRE and his valued committee, which includes Senators YOUNG, BYRD of Virginia, MURPHY, and BROOKE. They have come forth with certain facts and certain protective devices that we know will continue to be helpful. But this amendment now, going all out as it does, is premature and, if adopted, could and would seriously handicap our troops in the field.

The issue is very simple. Shall we take away one way of saving the lives of our men in Vietnam? There can be only one answer to this question—a categorical "no." So long as there is any possibility that the lives of American boys, as well as those of our allies, can be saved by using herbicides, there can be no justification for arbitrarily depriving our military commanders of the option for selective application of this material.

Reports from our field commanders, in case after case, dramatically illustrate how effective herbicides have been in depriving the enemy of protective cover. Defoliation permits enemy bases, equipment and supplies to be spotted and destroyed. Restricting the growth of vegetation around our bases prevents surprise attacks from these areas of concealment and permits our troops to fire more effectively. Defoliation along roads and waterways dramatically reduces ambushes. Defoliation of infiltration routes permits aerial observation of enemy movement and attacks by our forces on troops, trucks, weapons and supplies which traverse these trails. Herbicides also have been effective in destroying enemy food crops and inhibiting his combat capability.

Let me recite just a few examples of the advantages we have gained by using herbicides, as reported by our troops in Vietnam.

USE FOR DEFOLIATION

The banks along two rivers in An Xuyen Province were defoliated in February 1964. In the year prior to the spraying there had been five attacks of boats but none in the year following. Overall, Vietcong actions showed a change from attacks of boats, military and civilian facilities to harassment, accompanied by a decrease in the intensity of the actions.

Along a major highway in Kien Hoa Province, an area 14 kilometers long and 3 kilometers wide was defoliated in October to December 1965. In the year prior to defoliation there had been 145 Vietcong initiated actions. In the 12 months following defoliation there were only 46, a decrease of 68 percent in the number of incidents. After defoliation there was an abrupt shift in Vietcong targeting toward military facilities and away from civilian objectives.

Defoliation aids visual reconnaissance. Air Force forward air controllers and Army aerial observers have discovered Vietcong base camps and major supply routes in defoliated areas that had previously been undetected. A significant helicopter defoliation mission was conducted in the vicinity of Sa Dec in August 1968. The target area consisted of three main canals which converged and formed a strong Vietcong base. The dense vegetation permitted visibility of only 10 to 15 meters horizontally and none vertically. The area was sprayed with approximately 735 gallons of herbicide white and over 90 percent of the area was defoliated. As the result of the defoliation, a South Vietnamese battalion was able to remain overnight in the area for the first time in 5 years. Many enemy bunkers were open to observation. Since the defoliation, the Vietcong presence has decreased to the point that only regional and popular forces are now necessary for local security.

Foliage was removed within 300 meters on both sides of a road between two major fire-support bases of the 101st Airborne Division. This road was bounded by vegetation consisting of small trees and thick undergrowth approximately 6 feet tall. Prior to defoliation, troops were frequently subjected to enemy ambush. After defoliation, even though there had been indications of enemy activity in the surrounding areas, no major difficulty was encountered in keeping the road open to traffic.

The removal of double and triple jungle canopy in the Ashau Valley area has significantly contributed to the gathering of intelligence. This removal of foliage has exposed and permitted the destruction of base areas and storage sites, and has impeded enemy infiltration into areas adjacent to friendly populations.

Defoliation operations have strengthened the defensive posture of most of the fire-support bases in Vietnam by removing available concealment for sappers—troops carrying demolition charges.

During the period November 1969 to March 1970, large area defoliation operations along major infiltration routes in western Kontum Province have significantly improved visual reconnaissance and target acquisition, aerial photography and artillery fire adjustment effectiveness. This has considerably enhanced the security posture within the 24th special tactical zone.

USE FOR CROP DESTRUCTION

Crop destruction is a small but important element of the herbicide program. Crops in areas remote from population centers, under control of the Vietcong and North Vietnamese, which cannot be captured by ground operations are considered for spraying. Crop destruction targets are carefully selected in food-scarce areas so as to attack only those crops known to be grown by or for the Vietcong or North Vietnamese.

Captured enemy documents have revealed that some Vietcong and North Vietnamese units have been put on reduced rations and forced to divert tactical units from combat missions to food-growing and food-transportation operations, attesting to the effectiveness of the crop destruction program. In areas where extensive crop destruction missions have been conducted, increased Vietcong and North Vietnamese defections to South Vietnam have been attributed to the low morale resulting from food shortages. Here are several examples of reports from Vietnam involving the effectiveness of crop destruction.

The 120th Farm Production Company, 20th Montagnard Communist Battalion, was deployed to central Quang Ngai Province in December 1969 to set up operations in a 36,000 square meter rice field. After the farm was heavily damaged by herbicides, the unit only produced enough food for its own personnel. The unit has since relocated.

In four of the five provinces in I Corps tactical zone, helicopter crop destruction operations have been effectively employed to destroy small garden plots and rice plots in areas solidly controlled by the Vietcong or North Vietnamese. During a recent 3-month period in one province, 237 garden plots were located. These are being destroyed as assets become available. Hoi Chanhs—defectors—have rallied from these areas because of food shortages. The Hoi Chanhs also report on low morale in their units because of food shortages.

COMMENTS ON THE USE OF HERBICIDES

Mr. President, I am very mindful and fully aware of the issue involving the possible ecological and physiological effects of the use of herbicides in Vietnam.

The amendment No. 784, cosponsored by the Senator from Wisconsin (Mr. NELSON) and the Senator from New York (Mr. GOODELL) provides that no funds authorized under this bill will be used to procure, maintain, or use herbicides, including delivery or dissemination equipment.

In my view this proposed amendment is premature and could, if adopted, seriously handicap our troops in the field. It would remove the option of employment of materials which are widely used by all agricultural nations for control of weeds and unwanted vegetation. More importantly, such denial could increase manpower requirements, encourage increased enemy activity, and result in large numbers of casualties among our military and civilian population in Vietnam. Those are carefully used words, Mr. President, based upon the facts of life. I, for one, would not wish to share the responsibility for these consequences.

PROPOSED LANGUAGE CALLS FOR STUDY BY NATIONAL ACADEMY OF SCIENCES

The committee has proposed language in the bill, section 506(c), which fully recognizes the problem of the use of herbicides. It calls for a study by the National Academy of Sciences into the ecological and physiological consequences inherent in the use of herbicides, to be financed from the fiscal year 1971

chemical and biological warfare program. The results of this study are required to be submitted by the Secretary of Defense with appropriate comments and recommendations by March 1, 1972. This committee will give due consideration to the report and recommendations, and will report its findings and any necessary recommendations to the Senate.

The committee believes that such a study is essential, and commends the recent decision of the Defense Department to suspend further use in Southeast Asia of herbicides containing 2,4,5-T.

The evidence which has been presented to date by our scientists does not prove conclusively that the effects of the use of herbicides are such as to preclude their use by military forces in Vietnam in certain situations. While there may be some risk even in the selective use of herbicides, the risks of our fighting men are even greater in their life and death struggle. I would not wish to increase those risks.

AUTHORIZATION FOR USE OF HERBICIDES

Let me explain the very clear lines of responsibility and the procedures which have been established for the use of herbicides to insure that their use is controlled.

Under policy guidance provided by State and Defense Departments, the U.S. Ambassador in Saigon and the commander of the Military Assistance Command in Vietnam, are empowered jointly to authorize U.S. support of South Vietnamese Government requests for herbicide operations. All requests for defoliation and crop destruction must originate with the province chief at the province level. These requests must contain a detailed justification for the operation and include a civil affairs annex to insure that any impact on the civilian population has been considered. So there is no reckless calculation in haste that possibly could creep in. Authority to approve small scale defoliation such as helicopter spray projects has been delegated to the South Vietnamese corps commander and the U.S. corps senior adviser.

All requests for large-scale defoliation by fixed wing aircraft and all crop destruction missions must be approved by the Chief of the Vietnamese Joint General Staff. When the Vietnamese request for support is received at MACV—Military Assistance Command, Vietnam—it is staffed, along with a parallel request submitted through U.S. advisory channels, to MACV. During staffing at the Saigon level, the project also is reviewed by the U.S. Agency for International Development, Joint U.S. Public Affairs Office, American Embassy, and MACV. A final opportunity is given the province chief to approve or reject each spray mission 24 to 48 hours before the scheduled time of execution.

ALLEGATIONS OF HARMFUL EFFECTS OF CERTAIN HERBICIDES

The American Embassy in Saigon sponsored a detailed review of the herbicide program in 1968, with particular emphasis on economic and socio-political aspects. To assist in the review, Dr. Fred Tschirley of the U.S. Department of Agriculture visited Vietnam to assess the ecological consequences of the defoliation program. The Embassy report indicated that the defoliation program was worthwhile and that the military value far outweighed any adverse economic effects. However, as a result of the study, improved controls were instituted to minimize the probability of inadvertent spraying of rubber trees and other friendly crops. These controls preclude destruction of any crops in populated areas or which might be grown for civilian use.

Recent test reports have indicated that 2,4,5-T caused abnormal fetuses in mice, rats, and chicken embryos. It is recognized that animal data cannot be directly extrapolated to humans. Investigations have been made to identify possible effects on humans resulting from the use of this chemical. No incidents of verified malformed births resulting from herbicide operations are known.

An examination in December 1969, of the hospital records in Mimot, Cambodia, by Dr. A. Westing of the American Association for the Advancement of Science showed no increase in birth defects as a result of herbicide spraying of rubber plantations that occurred in April 1969.

Although there are no confirmed public health hazards associated with the use of the 2,4,5-T contained in herbicide orange in Vietnam, the Department of Defense deemed it prudent to suspend all operations using orange until the problem could be resolved. In the meantime, operations continue using defoliants white and blue.

The proposed amendment would prohibit the U.S. military use of antiplant chemicals. There are over 100 antiplant chemicals available on the commercial market. Many of these chemicals are used by the military to clear rights-of-way, fence lines, and to remove undesired vegetation on posts, camps, and stations both here and abroad. This amendment would prohibit the use of these chemicals for grounds maintenance without affecting the use by other Government agencies. In addition, large quantities of herbicides are furnished the Vietnamese under the AID program in order to improve their agricultural output. Is it the intent of the amendment to prohibit the use of all herbicides by our military and to preclude our supporting the Vietnamese agriculture?

SUMMARY

To sum up, Mr. President, the case before us is crystal clear. Based on the detailed facts which I have presented, I must again emphasize the importance of providing our military commanders in Vietnam with selective and discretionary authority to employ herbicides to help shorten the war, save the lives of our men, and contribute to the successful conclusion of the Vietnamese conflict. This can best be accomplished by defeating the proposed amendment.

I cite these things to show that this is a matter of vast concern at every level of our Government, by the committee, and by individual Senators. We have worked on it, and we have gotten far along, as has the military, to the practical side of the problem and the only practical remedy. We are fighting there and are sending these boys into these places, and their lives are in jeopardy. The practical use of these herbicides lessens the probability of loss of life.

Mr. President, how much time do I have remaining? I meant to limit myself to 6 minutes.

Mr. BROOKE. Mr. President, our experience in Vietnam in recent years has served to focus national attention on the employment of chemical and biological warfare. No one can deny that its unregulated utilization could possibly lead to an unwanted and possibly uncontrollable proliferation of lethal CBW agents by countries who presently cannot afford the deployment of more sophisticated nuclear weaponry.

As we all know, President Nixon adopted a forward-looking position of leadership in this area last November when he announced the policy that the United States will not employ biological weapons under any circumstances and that our existing stockpiles of germ weapons are to be destroyed. He is hopeful, as we all are, that all nations will take heed and adopt a similar course of responsible action.

Herbicides, not included in this category, have been the cause for additional concern by many who question their strategic value in light of evidence suggesting long-range effects on the environment. However, the concern over possible ecological consequences of herbicides in recent months has given way to a concern over the teratogenic, or fetus-deforming, properties of 2,4,5-T, a compound present in a number of herbicides. From the studies that have been completed, it is not conclusive, in my view, that the results on experimental animals can be effectively extrapolated into the human experience. More important, on April 15 of this year, Secretary Packard announced that the use of 2,4,5-T for military operations had been suspended. This action has, in my opinion, rendered the debates over this compound moot.

On the other hand, evidence gathered from field commanders in Vietnam suggests strongly that the herbicide program is strategically valuable and is saving American lives. Their reported use includes defoliation for purposes of improved aerial reconnaissance, defoliation of enemy base camps for purposes of air strikes, defoliation around lines of communication, and around the perimeters of isolated base camps and, most important, defoliation along key roadways for the purpose of minimizing ambushes.

The Department, equally concerned over the environmental impact of their herbicide program has imposed a number of restrictions. The result has been a 75-percent reduction in use level in this area over the past 2 years.

The Armed Services Committee, under the able leadership of our Chairman, has authorized a study to be conducted by the National Academy of Sciences for the purposes of ascertaining the ecological and physiological consequences that follow the use of herbicides. This, hopefully, will clarify the effects of the various compounds presently in use.

In my view, the Department of Defense has adopted a responsible course of action by limiting the use of herbicides while seeking to achieve specific military objectives. Accordingly, I will vote against the amendment offered by my distinguished colleague from Wisconsin.

Mr. McINTYRE. Mr. President, I cannot accept the conclusions to which the proponents of the pending amendment are drawn, that the herbicide program should be immediately discontinued. Whatever the possible side effects of the program, there can be no dispute as to the primary contribution it has made to the war effort. It has saved the lives of Americans in Vietnam.

Mr. President, I think the best way to sum it up, with all due deference to the Senator from Wisconsin and his good ally the Senator from New York (Mr. GOODELL) in their serious concern for the ecological and physiological consequences of our herbicide program is as follows: I should like to ask of every Senator:

Suppose that you were an infantryman, riding in a jeep along a lonely Vietnamese road. Would you prefer to have the roadside within 100 feet covered by thick jungle growth, suitable for ambush, or would you prefer a clear area out to 1,000 feet, offering little chance of concealment and permitting aerial surveillance ahead of your convoy? And, if an attack were launched upon you, would you prefer to have your attackers, your ambushers, close at hand, or a long distance off, so that their accuracy would be low and your chances for evasive action high?

Which would you prefer, if you were a soldier in Vietnam?

Mr. President, we all want our boys to come home, but the policy of the Government at present is to have them there. And as long as they are there, it is the feeling of the Armed Services Committee and the Research and Development Subcommittee which looked into this program, that the herbicide program at its present much reduced level, in order to save the lives of our American soldiers fighting in Vietnam.

So, with that, Mr. President, I urge the Senate to reject the amendment of the Senator from Wisconsin (Mr. NELSON).

Mr. HART. Mr. President, I urge passage of this amendment offered by the able Senator from Wisconsin (Mr. NELSON) to prevent the use of antiplant chemical weapons by the U.S. military.

The amendment, which I have cosponsored, also would prohibit the transfer of our stockpiles of such weapons to another country and would provide for elimination of those stockpiles.

My strong support for this amendment is based on testimony we have heard before the Senate Subcommittee on Energy, Natural Resources, and the Environment.

While little evidence is available as to the actual military effectiveness of such weapons, our hearings did make clear the potential damage which may result from continuation of defoliation and anticrop operations in South Vietnam.

Several prominent scientists have argued that no limits can yet be placed on the potential damage to man that may result from the use of chemicals such as 2,4,5-T and 2,4-D.

Whereas no case of human damage has yet been determined conclusively to be attributable to 2,4,5-T or 2,4-D, constantly we have been reminded that birth defects seldom bear a brand name which will allow determination of their cause.

Perhaps the most alarming prospect discussed at the hearings was that a highly toxic contaminant known as dioxin may now be building up in our bodies and in those of the Vietnamese. Currently produced 2,4-T, a major ingredient of agent orange, is known to contain small amounts of this contaminant. Although dioxin has not yet been found in 2,4-D, which is used in both agent orange and agent white, it has been discovered in its chemical precursor 2,4-dichlorophenol. Some scientists have concluded, as a result, that it is likely that it is contained in 2,4-D as well.

The dioxin associated with 2,4,5-T, we have been told, is stable when sprayed on soil. We have also learned that it accumulates in the tissue of chicks. What this evidence suggests is that dioxin may persist in the environment after being deposited on forests and plants and that it may, when transferred to the human body through the food chain, accumulate in human tissue. Although we do not know that it will do so, it seems irresponsible to take the risk with a chemical shown to be many times more toxic than thalidomide in experiments with chick embryos.

We have also received testimony at our hearings on the ecological damage that may be caused by defoliants. The risks of destruction of nontarget plants and of wildlife and fish species has been discussed, as has the possibility of permanent replacement of valuable vegetation by bamboo.

Although in most of these cases, we are dealing with possibilities rather than with instances of known harm to humans and the environment, we must ask ourselves whether the benefits of our defoliation and anticrop programs can justify these risks. Until impressive evidence of military effectiveness is available, I cannot find any such justification. At a time when we must make every effort to wind down the war in Southeast Asia, every weapon in our arsenal must be subjected to increased scrutiny and stiffer tests for effectiveness and possible harmful consequences. With the evidence at hand it does not appear that these tests have been met.

A policy which would destroy a country in order to save it would be absurd. It is the responsibility of Congress to insure against actions which might have such a consequence.

Senator NELSON effectively has described the reasons which should persuade us to adopt his amendment.

Mr. NELSON. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. GOLDWATER. Mr. President, while this particular subject is outside the province of the subcommittee I work on, I want to relate what I found in South Vietnam as to the use of these defoliants.

It is absolutely true that the Province chief must be consulted and that he must approve of any use of the defoliants.

I remember the trouble I got into in the campaign, about 6 years ago, when I suggested using liquid defoliants. I had served in the jungle, and I tell you, Mr. President, the jungle is no place for American boys to be. We made a mistake sending ground troops there, in the first place; but, as long as we made that decision, we had better not give up protecting the lives of our soldiers when they are in the jungle, when one cannot see through for 5 feet, and where it rains for a month after the rains above have ceased.

We must use these defoliants. It would be a tremendous and dangerous mistake for us not to do so, in order to protect our American boys, so that when they have to move through a defoliated forest, they can get to the enemy.

The PRESIDING OFFICER (Mr. HOLLINGS). All time has now expired on the amendment.

The yeas and nays have been ordered, and the clerk will call the roll.

Mr. STENNIS. Mr. President, a parliamentary inquiry: Do I correctly understand that this is a direct vote on the amendment, up or down?

The PRESIDING OFFICER. That is correct.

Mr. STENNIS. I thank the Chair.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from North Dakota (Mr. BURDICK), the Senator from Nevada (Mr. CANNON), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Minnesota (Mr. MCCARTHY), the Senator from New Mexico (Mr. MONTOYA), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL) would vote "yea."

I further announce that, if present and voting, the Senator from North Dakota (Mr. BURDICK) would vote "nay."

Mr. GRIFFIN. I announce that the Senator from Hawaii (Mr. FONG), the Senator from California (Mr. MURPHY), the Senator from Oregon (Mr. PACKWOOD), the Senator from Ohio (Mr. SAXBE), and the Senator from Alaska (Mr. STEVENS), are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from South Dakota (Mr. MUNDT), and the Senator from California (Mr. MURPHY), would each vote "nay."

The result was announced—yeas 22, nays 62, as follows:

[No. 272 Leg.]

YEAS—22

Bayh	Hughes	Nelson
Case	Magnuson	Proxmire
Cranston	Mansfield	Ribicoff
Eagleton	McGovern	Smith, Ill.
Goodell	Metcalf	Williams, N.J.
Harris	Mondale	Young, Ohio
Hart	Moss	
Hatfield	Muskie	

NAYS—62

Aiken	Ellender	Pastore
Allen	Ervin	Pearson
Allott	Fannin	Pell
Anderson	Goldwater	Percy
Baker	Griffin	Prouty
Bellmon	Gurney	Randolph
Bennett	Hansen	Russell
Bible	Holland	Schweiker
Boggs	Hollings	Scott
Brooke	Hruska	Smith, Maine
Byrd, Va.	Jackson	Sparkman
Byrd, W. Va.	Javits	Spong
Church	Jordan, N.C.	Stennis
Cook	Jordan, Idaho	Symington
Cooper	Kennedy	Talmadge
Cotton	Long	Thurmond
Curtis	Mathias	Tower
Dodd	McClellan	Williams, Del.
Dole	McGee	Yarborough
Dominick	McIntyre	Young, N. Dak.
Eastland	Miller	

NOT VOTING—16

Burdick	Hartke	Packwood
Cannon	Inouye	Saxbe
Fong	McCarthy	Stevens
Fulbright	Montoya	Tydings
Gore	Mundt	
Gravel	Murphy	

So the Nelson-Goodell amendment (No. 784) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HOLLAND. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PUBLIC WORKS APPROPRIATIONS, 1971—APPOINTMENT OF A CONFEREE

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Arkansas (Mr. McCLELLAN) be added as a conferee on the public works apropriations bill, H.R. 18127.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 853

The PRESIDING OFFICER (Mr. HOLLINGS). Under the unanimous-consent agreement, the Chair now lays before the Senate the Proxmire amendment No. 853, which the clerk will state.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered, and the amendment will be printed in the RECORD.

The amendment (No. 853) is as follows:

AMENDMENT NO. 853

On page 21, beginning with line 17, strike out all down through line 9 on page 22, and insert in lieu thereof the following:

"SEC. 504. (a) Of the total amount authorized to be appropriated by this Act for the procurement of the C–5A aircraft, $200,000,000 of such amount (hereinafter in this section referred to as the 'contingency fund') may not be obligated or expended except as provided in this section.

"(b) The contingency fund may be expended only for the reasonable and allocable direct and indirect costs incurred by the prime contractor under a contract entered into with the United States to carry out the C–5A aircraft program. No part of the contingency fund may be used for—".

On page 22, lines 23 and 24, strike out "such $200,000,000" and insert in lieu thereof "the contingency fund".

On page 23, line 4, strike out "such $200,000,000" and insert in lieu thereof "the contingency fund".

On page 23, between lines 16 and 17, insert the following:

"(d) No part of the contingency fund may be expended pursuant to this section except under one or both of the following conditions:

"(1) If the Armed Services Board of Contract Appeals has made a determination with respect to the amount in dispute between the prime contractor and the United States on the C–5A aircraft contract and has determined that the United States is obligated to such contractor on such definitized contract in effect on July 1, 1970 for all or any portion of the amount in dispute between the parties and no judicial review has been sought by either party with respect to the action of such Board, or if judicial review of the action of such Board was requested and has been completed, the amount, if any, finally determined to be owing to the contractor shall be paid from the contingency fund; by no amount in excess of the amount so determined to be owing by the United States (of the amount in dispute) may be expended from the contingency fund.

"(2) A trustee appointed by a court of bankruptcy pursuant to a voluntary or involuntary petition or in a corporate reorganization proceeding under chapter 10 of the Bankruptcy Act has determined that all or a part of the contingency fund is needed for the purpose of assisting the prime contractor in meeting the terms of the contract for the completion and delivery of C–5A aircraft during the fiscal year ending June 30, 1971; but no amount in excess of the amount determined by the trustee to be necessary for the contractor to meet such schedule may be expended from the contingency fund.

The Comptroller General of the United States shall, at the earliest practicable date after the enactment of this section, conduct a study of the financial capability of the prime contractor on the C–5A aircraft with a view to determining such contractor's capability of meeting the terms of the contract for the completion and delivery of forty-two C–5A aircraft by June 30, 1971, and for completion and delivery of the total number of such aircraft under the contract. The Comptroller General shall submit the results of such study to the Congress and the Secretary of Defense, at the earliest practicable date, and shall include in such report the total amount which would have to be expended by the United States to insure completion and delivery of forty-two C–5A aircraft and to insure completion and delivery of the total number of such aircraft contracted for by the United States. The Comptroller General shall include in such report such other information and cost data as he may deem appropriate.

"(e) In the event of any bankruptcy or corporate reorganization proceeding involving the prime contractor on the C–5A aircraft, the Secretary of Defense shall take all appropriate measures to insure that (1) the financial interests of the United States are fully protected, and (2) priority is given to the expeditious completion of the C–5A aircraft contract."

On page 23, line 17, strike out "(d)" and insert in lieu thereof "(f)".

On page 23, lines 18 and 19, strike out "$200,000,000 referred to in subsections (a) and (b) of this section" and insert in lieu thereof "contingency fund".

On page 23, between lines 21 and 22, insert the following:

"(g) None of the funds authorized to be appropriated by this or any other Act for any purpose other than the C–5A aircraft program may be transferred to or used for the C–5A aircraft program."

Mr. PROXMIRE. Mr. President, I send to the desk a modification of the amendment and I ask unanimous consent that the reading of the modification be dispensed with. I will explain it.

The PRESIDING OFFICER. Without objection, it is so ordered, and the modification of the amendment will be printed in the RECORD.

The modification of amendment No. 853 is as follows:

On page 2, line 18, strike out "both" and insert in lieu thereof "more".

On page 2, line 25, after the word "contract" insert a comma and the word "as".

On page 3, line 1, after "1970" insert a comma.

On page 3, line 11, strike out "A" and insert in lieu thereof "If a".

On page 3, between lines 21 and 22, insert the following:

"(3) If the Comptroller General of the United States has determined, on the basis of the study of the financial capability of the prime contractor conducted pursuant to this section, that the prime contractor cannot, without the assistance of all or a part of the contingency fund, meet the contract schedule for completion and delivery of forty-two C–5A aircraft by June 30, 1971, but can reasonably be expected to meet such schedule with the assistance of all or a part of such fund; but no amount in excess of the amount determined by the Comptroller General to be necessary for the contractor to meet such schedule may be expended from the contingency fund."

On page 4, line 7, strike out "and" and insert in lieu thereof the following: "except that the portion of the study relating to the contractor's capability of meeting the terms of the contract for the completion and delivery of forty-two C–5A aircraft by June 30, 1971, shall be submitted to the Congress and the Secretary of Defense not later than November 15, 1970. The Comptroller General".

Mr. STENNIS. Mr. President, before the Senator's time starts to run, I ask for order in the Senate.

The PRESIDING OFFICER. The Senate will be in order. This is an important matter. A period of 3 hours has been allocated for the amendment, the time to be controlled by the Senator from Wisconsin and the Senator from Mississippi.

The Senator from Wisconsin is recognized.

Mr. PROXMIRE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. PROXMIRE. Has the amendment been modified in accordance with the language I sent to the desk?

The PRESIDING OFFICER. The amendment is so modified in accordance with the modification.

Mr. PROXMIRE. Mr. President, I ask

for the yeas and nays on the amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. Who yields time?

Mr. PROXMIRE. Mr. President, I yield myself 10 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for 10 minutes.

Mr. PROXMIRE. Mr. President, last Thursday on behalf of the Senator from Pennsylvania (Mr. SCHWEIKER) and myself, as well as the Senator from Massachusetts (Mr. BROOKE), the Senator from Missouri (Mr. EAGLETON), the Senator from Alaska (Mr. GRAVEL), the Senator from Texas (Mr. YARBOROUGH), and the Senator from Ohio (Mr. YOUNG), I introduced an amendment aimed at protecting the taxpayers' interest in the disposition of the $200 million Lockheed contingency.

BUILD THE PLANES AMENDMENT

We believe that our amendment is necessary to make certain that the 42 planes funded by this bill are built, and we believe our amendment is necessary to guarantee that the men are kept at work. It is a build-the-planes, keep-the-men-at-work, protect-the-taxpayers-interest amendment.

The bill before us contains a $200 million contingency fund. This amount is over and above any money owed to Lockheed under the contract. That is what the Air Force says Lockheed insists that unless it gets these, and additional funds later, it will have to default on its contract. They have threatened to default unless they get the funds.

We have asked, repeatedly, for detailed cash flow information from the company to prove that they must have the funds. But the company and the Air Force tell us that such information is proprietary and will not be made public. We are asked, therefore, to give $200 million to the company on the basis of their word and their threat that without it they cannot complete even the 42 planes which the funds in this bill would provide.

This does not protect the public interest. Our amendment adds three additional conditions to the payment of the funds. Their basic purpose is to make certain that the funds are not paid out unless the company either has them coming or that they are needed to build the planes and keep the men at work.

THREE CONDITIONS

This amendment as modified provides that the $200 million provided in the bill for Lockheed above the amount the Air Force says is owed to Lockheed under the contract would not be given to Lockheed unless one of the following conditions were met:

First. The Armed Services Board of Contract Appeals or a court should decide that part or all of the $200 million is owing to Lockheed under the contract.

Second. A trustee in bankruptcy determines that all or part of the $200 million is necessary to complete the production of the 42 C–5A planes this bill would fund.

Third. The comptroller general determines, after a study that must be completed by November 15, 1970, that all or part of the $200 million is necessary to complete production of the 42 C–5A planes.

The third condition is a modification of the original amendment. It would permit the $200 million to be paid to Lockheed, but only after a competent, independent finding that could assure the Congress that the funds were needed to make production of the plane possible.

It would avoid what otherwise would be a precedent set in the bill that would give a defense contractor $200 million that the Air Force itself says the Government does not owe, and would give the funds without any independent determination that the money is necessary to produce the planes or that the $200 million would be adequate to permit the planes to be produced. The bill without the amendment would make the Government liable for a total of $800 million above the contract, not owed by the Government, before the contract is completed, and perhaps much more.

The amendment would require the Comptroller General to determine how much will be necessary to complete the contract.

Now that I have stated the general points in the amendment, let me go into additional details about the amendment.

The Senator from Pennsylvania (Mr. SCHWEICKER) and I are offering a very modest and, we believe, reasonable amendment. It places limitations on the use of the contingency fund and allows it to be used if any one of the three conditions is met.

EXPLANATION OF CONDITIONS

As originally offered, our amendment contained only two provisions aimed at seeing to it that 42 of the planes were finished and delivered, the subcontractors kept whole, and finally the workmen kept at their jobs building the C–5A. At the same time, the financial interests of the taxpayers would be protected.

Our first provision stipulated that if the Armed Services Board of Contract Appeals ruled that the Government owed Lockheed the money they were claiming, Lockheed would be paid and that would be the end of it. Lockheed's appeal has been before the ASBCA since early January of this year. And as I have indicated before, there is no reason the matter should not have been settled already. If the Armed Services Board of Contract Appeal rules that the Government does not owe Lockheed the money under the contract, two things could happen: first, it is possible that Lockheed could still meet their commitments. The assumption that they cannot meet their commitments is just that—an assumption. We have been told by the Pentagon that Lockheed is in desperate financial straits. On the other hand, we have not seen any hard facts that would substantiate this assertion by the Pentagon. Moreover, we have been specifically refused access to elementary cash flow information which could define both the type and magnitude of Lockheed's cash difficulties and indicate the source of those difficulties. According to the Pentagon, the U.S. Senate is denied this information because Lockheed does not want the Senate to see it.

PROTECTS AGAINST LOCKHEED THREAT TO DEFAULT

If events subsequently prove that the Pentagon's assertions regarding Lockheed's financial status are correct or if Lockheed's management chooses to default on their contractual agreements, our amendment would help keep the plant open and get the 42 airplanes built. If Lockheed should carry out its threat to default and file for bankruptcy, our amendment would speed up the granting of the $200 million contingency money if an independent and impartial trustee determined that the money was truly required to complete the 42 airplanes due the Government at the end of this year.

Nothing in our amendment would undercut the authority of the Senate Armed Services Committee to review and approve whatever plan the Pentagon submits for solving the Lockheed problem. All the restraints and provisions of the legislation reported out of the Armed Services Committee remain in effect. In my opinion, our amendment expanded and clarified the restrictions imposed by the Armed Services Committee. In addition, it provided for accelerating approval for use of the contingency fund if justified by an impartial trustee in the event the company carried out its threat to default or to go into bankruptcy.

Our amendment also provided that the GAO would furnish additional information to the Senate on the C–5A program, information we should have had long ago.

This was our original amendment. We thought it fair and constructive. We thought it helped protect the interests of our military and our taxpayers. Notwithstanding, our amendment has been strongly opposed. It has been opposed on the grounds that conditions we laid down were impossible to meet, that the ASBCA needs another year or so to rule on the Lockheed claim they have already had for 7½ months. It has been opposed on the strongly emotional grounds that our intent was to drive Lockheed into bankruptcy and throw thousands of people into the ranks of the unemployed. But it was Lockheed which threatened default and it is our amendment which protects the workers and the subcontractors if that should happen. But the opponents distorted our amendment.

Neither Senator SCHWEIKER nor I, nor any of our cosponsors, have any intent to single out Lockheed for special punishment or for special treatment. But we are intent on keeping a semblance of free enterprise motivation in the Pentagon's major weapons programs.

GAO REPORT

To demonstrate further our intentions, and our reasonableness we have modified our amendment to provide that the contingency fund can be used to keep the production lines open if the GAO, after study and analysis, determines it is necessary. Furthermore, in order to assure that there is no halt in the production of the 42 aircraft, we have stipulated that the GAO's report to the Congress should be made no later than November 15, 1970. The $344 million in the con-

tract for Lockheed under the contract will be sufficient to meet Lockheed's production needs until January 1971. So the additional $200 million will be available under the amendment, if necessary, in ample time.

It is my hope that this latest concession will convince our opponents that we are seeking only to provide what we perceive to be the minimum protection for the Government's interests in the spending of additional C–5A funds.

LANGUAGE OF MODIFICATION

Let me read the specific language of this third condition we have provided which, if met, would free the funds. It reads:

The $200 million contingency fund can be expended under the following conditions:

"If the Comptroller General of the United States has determined on the basis of the study of the financial capability of the prime contractor conducted pursuant to this section, that the prime contractor cannot, without the assistance of all or a part of the contingency fund, meet the contract schedule for completion and delivery of forty-two C–5A aircraft by June 30, 1971, but can reasonably be expected to meet such schedule with the assistance of all or a part of such fund; but no amount in excess of the amount determined by the Comptroller General to be necessary for the contractor to meet such schedule may be expended from the contingency fund."

We also provide specific language that the report shall be made by November 15, 1971.

The $200 million could be paid out if either this condition or one of the two other conditions were met. And each of them provides, essentially, that the funds can be paid out if an independent board or official determines that the company either has the money coming or that it is needed to build the planes.

The General Accounting Office is certainly in a position to make this determination. First of all, they have had officials in the plant from almost the day the C–5A was started.

Second, on numerous occasions they have gathered data above the financial conditions of the plane. They have done this for their reports on overruns—the SAR's. Furthermore, I asked them some months ago to determine the facts about the cash flow and other financial matters. This information ws refused to the GAO and to me. But the Pentagon told us the company had the information, but claimed it was proprietary. Thus, since the information is available, according to both the Air Force and the company, there is no reason why the GAO cannot determine from the information whether the $200 million is needed.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. TALMADGE. Has the Senator from Wisconsin asked whether the General Accounting Office is qualified to and can make the investigation he now proposes?

Mr. PROXMIRE. The question is, is it my judgment that they are qualified——

Mr. TALMADGE. Has the Senator from Wisconsin interrogated the GAO or the Comptroller General to determine whether or not they can make the decision the Senator from Wisconsin would require of them?

Mr. PROXMIRE. No; and frankly, I would say to the Senator from Georgia that, on the basis of my knowledge of Mr. Elmer Staats and my experience with him, he is not going to do anything unless the Senate or the Congress directs him to do it. If he is asked about engaging in a new activity he might indicate he did not want to take part in it or do it. That has consistently been his view, as it was when we wanted him to make a feasibility study of providing uniform accounting standards. He was reluctant to do it. He made a study, at the request of Congress however, and found such standards possible. On the basis of his study we went ahead and directed the Comptroller to start to put them into effect.

Mr. TALMADGE. The Senator from Wisconsin is aware, is he not, of the fact that the General Accounting Office, the Office of the Comptroller General, is a bookkeeping agency and does not have the authority to make decisions affecting the Pentagon?

Mr. PROXMIRE. In this particular case the decision is one that involves financial capability, whether or not funds are available to do this particular job. Of course, I understand that the GAO does not have the capacity to determine the performance capability of the C–5A or any other weapons system, but they certainly, in my view—it would seem to me obvious—have the capability of determining whether or not Lockheed Corp. has the financial capability of completing this particular contract.

Mr. TALMADGE. Mr. President, will the Senator yield further?

Mr. PROXMIRE. Yes.

Mr. TALMADGE. It seems to me that the Senator's sudden proposition, which was unknown to Members of the Senate until he modified his amendment a moment ago, would delegate something to the General Accounting Office and to the Comptroller General that is the prerogative of Congress and the Defense Department, to wit, the expenditure of Federal funds for a matter that is of primary importance to the military security of this country.

I do not think we ought to bring a bookkeeping agency in and say, "The Secretary of Defense cannot handle his job well, Congress cannot handle their job well, the Armed Services Committee of the Senate cannot handle their job well, the House Armed Services Committee cannot handle their job well, so we are going to delegate this responsibility to you, a bookkeeper."

Mr. PROXMIRE. First let me say to the Senator from Georgia that we are not delegating. We are determining the conditions under which this finding would trigger the release of the $200 million.

In the second place, I think it is perfectly obvious that as far as this particular contract is concerned, the Defense Department has not done its job right, and David Packard told the contractors of this country that only Thursday night. He cited the Lockheed case as a flagrant example of incompetent procurement, a situation in which the job had not been done right.

I think there is no question that Congress itself has shown, in regard to the C–5A, a long record of doing this job very badly. Therefore, it seems to me, that getting an independent agency to go over the facts with regard to the financial capacity of the contractor in this case is logical and appropriate.

Mr. TALMADGE. Mr. President, I call attention to the language of the committee report, on page 16, as follows:

The Committee in Section 504(a) provides that the $200 million will not be obligated until the Secretary of Defense has presented a plan that has been approved by the House and Senate Committees on Armed Services. In effect this means that the proposed contractual arrangement both for the use of the $200 million and the completion of the entire C–5A program will require approval of the two Committees. Through this method there will be the opportunity of a complete review by the Committees on this problem.

The second Committee language provision provides for strict statutory guidelines which will insure that the $200 million in contingency funding will be used only for the C–5A program insofar as the contractor is concerned and not possibly intermingled or diverted to other uses among the various other programs of the company. The bill in section 504(b) expressly excludes other uses for the $200 million.

It seems to me that this language is very stringent. I think the Senator's amendment, in effect, says we do not have confidence in the Armed Services Committees of the House and the Senate to handle their responsibilities and duties, their job, and that we are going to take it away from them and give it to the General Accounting Office.

The PRESIDING OFFICER (Mr. HOLLINGS). The Senator's time has expired. The Chair is at fault; the Senator from Wisconsin yielded himself 10 minutes, but 16 minutes have expired.

Mr. PROXMIRE. I yield myself an additional 5 minutes.

Mr. TALMADGE. I know the Senator is on limited time. I thank him for yielding to me.

Mr. PROXMIRE. I say to the Senator from Georgia that there is nothing in this amendment, as I tried to say in my statement, there is nothing in this amendment which indicates any lack of respect for the ability or the judgment of the Senate Armed Services Committee. What we are saying is that it would be helpful to Congress and the Senate Armed Services Committee, in our view, to have a finding by an expert accounting agency such as the General Accounting Office, which is a competent agency, which has been found to be accurate and reliable in the past, as to just what the financial conditions of Lockheed was, whether they needed this $200 million, for the production of the C–5A plane.

I cannot see anything wrong with a finding of that kind, except that the Senator from Georgia says that they are not capable of it. If they are not capable of it, many Members of Congress will be very surprised. The GAO has 2,000 or 3,000 people working over there, and their record has been excellent in the past.

Mr. TALMADGE. I would point out to

the Senator from Wisconsin that the Armed Services Committees of the Senate and the House of Representatives could, if they saw fit, call on the Comptroller General to provide whatever information the Senator would request, but the decisionmaking authority would be with the committees, and not in the Comptroller General. It seems to me that the Senator's third alternative is a vote of no confidence in the Senate and House committees.

Mr. PROXMIRE. May I say to the Senator that that certainly was not our intention, that we do not intend to indicate that we have no confidence in the committees. We do feel, however, that before this money is released, we ought to at least have a finding that the money is necessary to complete production on this plane.

To continue, Mr. President:

If we fail to at least have that kind of determination made, we will be setting a highly dangerous precedent.

MODEST AMENDMENT

Our amendment is certainly very modest. We do not strike out the $200 million. Neither do we seek to correct the grievous past errors in this program, including the ghastly mistake made by the Senate on the C–5A issue last year. In my opinion, the Senate's concurrence in last year's giveaway plan by the Pentagon was one of the most expensive errors we have made since I have been in the Senate. We wasted hundreds of millions of dollars of the taxpayers' money by failing to assess properly the facts that were before us at that time and to obtain quickly the additional facts that were so clearly needed. I would hope that having been misled and persuaded to give our blind approval we have learned a lesson. I would hope that the mistake will not be repeated, at least on this same disastrous and scandalous program.

SCANDALOUS PROGRAM

And it has been scandalous, make no mistake about that. Facts were deliberately concealed from the Congress. Civil servants and military officers who attempted to hold down the costs or even to get the true facts on the status of this program have suffered personal reverses through retaliation by high level Pentagon officials.

The real question is: What do we do from here on? I hope we will demonstrate that we have learned our lesson. I hope we will begin today to refurbish the Senate's reputation as the world's greatest deliberative body, and to dispel the growing belief that we are pushovers for special interest groups, particularly the military contracting community.

Senators can make a modest start on this undertaking by supporting the amendment offered by the Senator from Pennsylvania and me, along with our cosponsors.

Let me say, Mr. President, that anyone who has read the speech made by David Packard on Thursday night must have been convinced, although the secretary diplomatically did not indict Congress, that we have not done our job as far as procurement is concerned.

The PRESIDING OFFICER. The Senator's time has expired.

MESS IN PROCUREMENT

Mr. PROXMIRE. I yield myself 2 additional minutes.

He said that procurement was in a bad mess, that we overspent on our weapons systems as well as made many other serious mistakes.

It is Congress that authorizes this spending. If we are ever going to exercise any decision with regard to any question involving the Pentagon, it seems to me we should do it in this particular case.

Let me conclude by quoting the statement of the distinguished Senator from Pennsylvania (Mr. SCHWEIKER) in the conclusion he very effectively used in his speech on last Thursday. He said:

I ask Senators to support this amendment, whether they believe that the C–5A is needed or not, in the hope that we can give the clear indication to the Defense Department, the defense industry, and, most important, the people who pay the bills, that we are unwilling to sit back and give a blank check to these requests without asking "How much?" "How many?" "When?" and "Why?"

Mr. President, I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. PROXMIRE. Mr. President, I yield the Senator from Pennsylvania whatever time he may require.

Mr. SCHWEIKER. Mr. President, I thank the Senator from Wisconsin for yielding, and I compliment him for his early efforts, as well as for his follow-up, on the very serious and very critical procurement crisis that is typified by the C–5A.

I should like to speak for just a moment with reference to the charge of the Senator from Georgia (Mr. TALMADGE) that our amendment bypasses or somehow thwarts the Senate Armed Services Committee.

I am a member of the Senate Armed Services Committee, and this is the last, most remote, prospect that we had in mind in drafting this particular amendment.

The reason that we inserted the particular provision to which the Senator from Georgia referred was severalfold.

First of all, the GAO has a resource capability of some 5,000 men, many of whom are trained in exactly this kind of work—auditing and fiscal control work. Some 5,000.

The Senate Armed Services Committee has a staff of 2 dozen men and women, including clerks and typists, overall—2 dozen against 5,000. They are not geared up to do a quick, on-the-spot fiscal auditing operation, such as required by our amendment. It is a matter of using the resources necessary to do the job. It certainly was not a slight to the distinguished chairman or the other distinguished members of that committee.

Let me say, while I am on that subject, that a number of members of our committee agreed with my position in the committee and agreed, by an 11 to 5 breakdown, that the $200 million should not be paid. So there was a substantial body of thought in the committee that we should not pay the $200 million under any circumstances.

Our amendment goes far beyond that rather abrupt cut off of the $200 million, by making three conditions. Indeed, replying to the Senator from Georgia on his contention that it bypasses the committee, the third of these modifications specifically provides that, after making a GAO audit of whether the $200 million is necessary, it then goes on and makes another determination about how much this airplane will really cost, how much will the price tag be, and then it reports back to Congress. At that point in the cycle, the Armed Services Committee is really very much involved again. The next fiscal year authorization, they will be right on the spot, considering the same problem again, only this time they will have the availability of the GAO expertise and financial report.

So, far from excluding, it includes the committee, and provides that they are going to use the GAO information to make a determination for the next fiscal year.

So let us lay to rest the argument that we are bypassing or thwarting or somehow belittling the committee's efforts.

I should like to discuss some of the things that I feel are essential in the amendment offered by the Senator from Wisconsin (Mr. PROXMIRE) and me.

First, I think that the Senator has very ably summed up the first point I want to make. I think that Deputy Secretary of Defense Packard underscored it himself by his own statement, and I concur with it, that the C–5A undoubtedly is the worst procurement situation in modern military history, bar none. It is the worst procurement situation that we have seen in modern military history.

We are talking about 81 planes, originally estimated to cost $2.6 billion. Now, as of the end of last year, according to the selected acquisition reports, the cost has escalated to $4.6 billion, a $2 billion increase in the cost of those 81 planes. That was as of last year. That is not even figuring what cost increases have come this year.

No doubt features such as the "golden handshake clause," which is really a license to be inefficient, a license to overrun and hand the Government the bill, a license to do anything except watch costs, are also a basic issue in this contract.

I want to be fair and say that, unfortunately, those involved in the administration of this contract in the Defense Department are no longer there. I think this is tragic, because, in essence, the wrong men are taking the blame for the present situation, and a new group has come in which certainly does not deserve to be saddled with the rather atrocious procurement policies that so far have been obvious in this particular procurement.

In addition, even the Air Force's military personnel are no longer there, which points out how some of the rather foolish procurement policies of rotating procurement personnel every several years contributed to the rather great debacle known as the C–5A procurement situation. I think that this in itself testifies to why we have to change the system. The people who originated it in the DOD are not there; the military people who were charged with shepherding the proj-

ect are not there; and the question becomes, who is there who really knows and cares about this particular project?

We in Congress have a responsibility, too, which we have not used. We have a responsibility in terms of our oversight, and the reason why I have cosponsored this amendment with Senator PROXMIRE is to help Congress exercise that responsibility. We, in essence, are saying here that the direction of our procurement policy will be determined by the decision the Senate makes on this particular issue. We are saying here that the ultimate result of the buy-before-you-fly policy has been so disastrous that we have to reverse that climate to really change the situation. This is a test vote of whether we are willing to reverse the climate of buying sight unseen, buying before you fly, continuing the most wasteful kind of procurement practices imaginable.

Until the present time, we have always had the policy, in preceding administrations, of writing a blank check, of bailing the company out, with no questions asked. When are we going to change that policy, to come to grips with the issue, in which we have a responsibility, and in which we have to define some limits and guidelines and meet that test? This is the issue, that is what the fight is all about.

We have no quarrel with the need for the C–5A. We are not arguing that at all. Nor are we even saying that we should jeopardize the production line of the C–5A. The latest modification we made was specifically to avert the practical situation that might be confronted on that issue. So we do not quarrel with the need. We agree that the planes should continue to be built, that the lines should be operating, and that 20,000 employees in Georgia should be kept on the job. We are not arguing that issue at all. The amendment is designed on a reasonable and rational basis to keep all that happening.

I think it is important to review the Department of Defense position in this area. The interesting part about the whole C–5A contract is that the Air Force acknowledges that we do not owe the money we are trying to give them. Let me read a few statements made by Deputy Secretary Packard.

On March 10 of this year, before the Armed Services Committee, in answer to a question by the Senator from Mississippi (Mr. STENNIS), Secretary Packard said:

> The $344 million for the procurement—

The $200 million is not in that. That is just the normal amount due this year—

> The $344 million for the procurement of the C–5A in the fiscal year 1971 budget is what the Air Force would be obligated to pay under their interpretation of the contract.

So here we have the ironic situation in which the Deputy Secretary of Defense, the Secretary of the Air Force, the Air Force, and the Government say we do not owe the contractor a cent more than that $344 million; yet, we are being strongly urged to give them that $200 million or some fraction thereof.

I would like to read from another statement by Deputy Secretary Packard, once again acknowledging that we do not owe this money to Lockheed. This statement also was made before our committee:

> This $200 million, if authorized, would be available to apply against the $600 million gap we have between the Air Force position and what the company says its costs are going to be.

That brings me to the next point I should like to make.

The next point is that this $200 million is only the first step. This is not the end in itself. It is only the first step. Here we have a plane that was going to cost $2.6 billion. It is now up to $4.6 billion. We are asked to give them $200 million we do not owe them. The company says that they need $600 million more, and even the Department of Defense says they really need $800 million more to proceed.

What a series of tragic events. The $200 million is just a starter. It is just the beginning. It is just like an iceberg.

The whole point of this amendment is to get from the Comptroller General an honest-to-goodness definition of what the cost of this plane is—not to feed it, in pieces and dribs and drabs, $200 million this year and $400 million next year; and only then will the public and the Government really wake up to what we paid Lockheed for this particular plane.

Let me read from another statement by Deputy Secretary Packard:

> There is going to be additional money. The $200 million is not going to be the end of it.

Believe me, not the end of it by far. So we are really being asked to buy a pig in a poke. We are being asked to buy something whose cost we do not know. We are being asked to have blind faith that somehow this thing is going to work out all right, that it is $200 million now, and let them negotiate the difference, and then we will see what the bill really is. We are asked to buy the whole thing on faith, and we are $200 million over on faith already.

I should like to read from an article published in the Sunday Star of June 7, referring to a Securities and Exchange Commission investigation of Lockheed in connection with this situation. I should like to read from the article relating to the lower bid of Lockheed, as to how it was handled initially.

> "Lockheed wanted the contract badly and apparently knew they had to come in with a low bid to get it," the SEC report says. As a result, they cut estimates sharply—but figured the firm still would make a profit of 3 percent of costs.

Yet they were so naive, so ill-informed, so unknowing about this contract and its ramifications that they still thought they would make a profit here, and we are $2 billion in the hole already, with another $1 billion in sight.

Talk about mismanagement and inefficiency.

So the issue is, Are we going to reward that mismanagement, are we going to reward that inefficiency, are we going to give them a pat on the back and let them negotiate exactly what they want, in order to solve the problem?

There are hundreds of defense contractors watching to see if that will be our policy, because if it is, then the line will form right here and dozens of requests will come in to do exactly the same thing, to bid in low and bail out high. That is what the issue is all about.

Are we going to measure up to our responsibilities and stop this practice?

It is true that this has been the policy and the climate that has gone on for some time here. That is why we specifically designed this amendment so that we would not penalize Lockheed, so that we would not throw 20,000 people out of work, so that we would not cut them off without a red cent literally. We designed a reasonable amendment that would protect the taxpayers, keep the production line rolling, and still leave the responsibility where it belongs, namely, in Congress, to decide what to do subsequently, when the GAO report is available on the situation.

I was told that the Contract Board of Appeals, the normal person to arbitrate this dispute, will probably take more than 12 months to decide this issue, and because of that, we wrote in this other modification that would not trigger the bankruptcy of Lockheed. We bent over backwards to make sure that the production line would continue to work, that the people would not be thrown out of work, and that the Comproller General could rule, as early as November 15 that, if they need that money to keep the production line rolling and to keep the planes coming out, they do not have to wait 12 months but, at the same time, it would give Congress an authoritative report that we in the Armed Services Committee could use in the next fiscal year, to meet the same issue, the same problem and, really, get an honest picture and an honest count—which we have not had at any point in this process—as to what the airplane will cost by the time it is completed.

One of the arguments the opponents, of course, have been making is that we should not tie the hands of the Government, that they want to negotiate this contract, that they want to settle it outside of a dispute, that they want to be free to do what they see fit. To me, that is the real issue here. What they will say is, "Do not bother us. Do not disturb us. Do not rock the boat. We want to settle for another billion dollars, if that is what it is going to take. We want to be free."

The PRESIDING OFFICER (Mr. YOUNG of Ohio). The time of the Senator has expired.

Mr. PROXMIRE. I yield whatever time the Senator requires.

The PRESIDING OFFICER. The Senator from Pennsylvania may proceed.

Mr. SCHWEIKER. The argument is made that the Government should be free to negotiate a settlement with Lockheed. That is exactly what the Senator from Wisconsin and I are against, because if we leave a loophole there, to make an end run through the whole system, every defense contractor will know that whenever it is in trouble, all they have to do is pull out the Lockheed precedent and do exactly the same thing, and come in with a bad-looking balance sheet of cash resources, say that they

cannot complete the job, shed a few crocodile tears, and negotiate the contract again.

What is the sense of having any bids, what is the sense of having any procurement system, what is the sense of having any cost controls, if all we do is negotiate the whole deal again?

I cannot imagine a worse conception of how to run a procurement policy than to let them do that. They will pull out the argument that they have the right to do this. Well, no Government department should have the right to do that. If an industry goes $2 billion in the red, with another possible billion dollars additional, someone should blow the whistle on them. It is up to the Members of this Senate to blow the whistle and say, "Go this far, but not any farther than that because we will, at last, exercise our own legislative oversight. We are going, at last, to bring in an independent party, an outside fiscally competent agency, to decide whether they really need the money as they claim they do. They will tell us what that iceberg really looks like, whether it is $400 million, $500 million, $800 million, or $1 billion more."

Do not be surprised to see those figures come rolling out the next year, the next time, right here on the Senate floor. That is what we have a right to know, what it is going to cost.

The amendment simply provides for certain things to happen. Until we know what the price is, and the Armed Services Committee, and the Senate, can make a responsible judgment, with some meaningful fiscal information about the whole picture.

I want to say that this is a critical issue. It relates to whether we will reverse the whole procurement policy that has been so badly mishandled in the past two decades. We want a procurement policy that will recognize the taxpayers, and one that will make a military judgment based on an honest price tag of a weapons system, which we certainly do not have now.

Mr. PROXMIRE. First, I congratulate the Senator from Pennsylvania on an extremely able and powerful speech. It is hard to dispute the notion that without our amendment this giveaway is going to set a precedent. It not only says we will be giving away a substantial amount, in this case $200 million as a starter, but the committee says $800 million, before the plane is completed. As the Senator has brought out, that $800 million is a guess. It may be $1 billion. It may be more than that. Our guesses have been wrong in the past. They have often been too low. On the basis of past experience, we can assume the taxpayer gift will be considerably more. We not only give them that, we give them that without knowing, or having information, or making it public as to whether they even need it, in order to complete the contract.

What a situation for the taxpayers, if we are giving almost $1 billion away to a defense contractor just because they say they need it to finish the contract. In the amendment, all our amendment requires as modified is that the General Accounting Office determines they need it. Opponents dispute this because the GAO in their view is not competent to make the decision, that the Senate should make it, then argue we should make it without adequate knowledge; is that correct?

Mr. SCHWEIKER. That is correct. The tragedy is that this is probably the only real issue this year when we will have an opportunity to make that determination and assess our responsibility and measure up to that job of legislative oversight.

If we go along on this negotiated settlement, we will be writing another blank check all over again. As it is, this policy has been proven wrong time and time again. That is it. The Senator is absolutely correct.

Mr. PROXMIRE. What the Senator from Pennsylvania and I have tried to do is to avoid damage to anyone. In the first place, we tried to provide, if the court or the Board of Contract Appeals makes a finding that the $200 million is due Lockheed then the funds are released at once. I have documented the fact that the finding can be made in a few weeks and not in 12 months. In the second place, if Lockheed does go into bankruptcy, we provide that funds can be freed promptly.

In the third place, we provide that even if they go into bankruptcy, if a competent accountant—the Comptroller General—says they need this money in order to complete their contract, then the funds are freed. Under the circumstances, who is being damaged? Certainly not the 20,000 workers. They will not be laid off. Management will get the funds, if their word is shown to be correct. They will not be put through bankruptcy. They are not even faced with that prospect, even though they are over the contract by $800 million or $1 billion. They still will be permitted to go along.

It seems to me that this is an extraordinarily modest amendment that does its best to avoid any serious damage to anyone. As the Senator from Pennsylvania made abundantly clear, if we are to draw the line anywhere, or have any discipline over procurement, the least we can do is to avoid this kind of giveaway of taxpayers' money. We should go at least as far as this amendment would.

Mr. SCHWEIKER. I thank the Senator from Wisconsin. I would like to say that I do not know how we can devise a more moderate or a more reasonable approach. We are not quarreling about whether they ultimately get the $200 million. We say that if they need it, they can have it. They can have it, if it is determined, as the Senator from Wisconsin has pointed out, on the basis of the Comptroller General's ruling as early as November 15 of this year that they can have it, if they need it to keep the line open.

We are saying in our amendment that if the Board of Contract Appeals finds that the Air Force is wrong in its assessment that the money is not owed to Lockheed, they keep the money. Third, we are saying that if the worst should happen and the forecasts are not accurate and they should have to go into bankruptcy proceedings, we specifically authorize the money under those conditions and even direct the Secretary of Defense to give the C–5A production priority.

I do not honestly see how much more reasonable an amendment could be. But the important thing is that we are blowing a whistle and saying, "We are not going to write blank checks any more. We are not just going to pour money down a hole without knowing where it is going. We are going to have some independent auditor come in to advise the Congress or the Senate Armed Services Committee where we are going, because we do not know where we are going now."

There is a $2 billion overrun now and the bill asks for $200 million over the contract. The Defense Department says:

It is likely that we will need $800 million.

The company itself says:

We will need at least $600 million.

I predict that next year it will be admitted on the floor that they need $1 billion additional. Wait and see if that is not correct.

Let us get an honest appraisal from an independent auditor. How reasonable a proposal could we have? I do not see that the Senate has any other responsibility than to go ahead and adopt the amendment.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield myself 10 minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 10 minutes.

Mr. STENNIS. Mr. President, I address myself primarily to what is in the bill presented to the Senate, what the committee did, what the committee stands on, and what the committee asks the Senate to affirm.

Mr. President, in the first place this contract is in no way defended, so far as the type of contract is concerned. It is a contract that did produce a good plane, a plane that has been tested satisfactorily, as will be shown, and a plane that is needed.

There was not any corruption involved. None has ever been charged. The company is not getting a windfall in any way or making money out of this matter. It looks as if they are losing money. It is a question of just how much. So we start with a clean bill of health, so to speak, in this situation.

To get value for the money we have already spent and to get a plane we need, we may have to spend some more money than is currently interpreted as called for in the contract. Frankly, we do not know as yet how much money that will be.

There are two reasons why we do not know. The Air Force and the contractor are not together on what the respective liability of each is. There has not been a reasonable time to determine that. It would be highly impracticable anyway and would occasion a loss if we were to stop the wheels from turning until that matter could be adjudicated.

Nothing has been waived. The Gov-

ernment still has all of its rights, and they will be respected and rigidly maintained.

There is $344 million of what we might call a regular run, a routine amount of authorization for this year. There has been no contest over that amount. We included that in the bill.

There was a small sum allowed for spares in the bill. The $200 million is a matter that was before the committee for determination. That is the additional money that is necessary now to get the planes. I will give the details later. However, everyone agrees that is necessary.

Mr. President, there is no amendment to knock out that $200 million. There is an admission here, it seems to me, by all that that money is needed and that it should be kept in the bill.

I was really expecting to be attacked on that front. But there is no opposition here to that matter, and no proposal to take that money out of the bill.

To that extent, we apparently have a unanimous judgment that the committee made the right decision in putting it in the bill, although there was some honest opposition to it by some committee members at the time. Unless some other measure is filed, it apparently is unanimous that the committee should have put that money in the bill.

The question is how it will be safeguarded. That is the only question. The committee itself very carefully and laboriously wrote in some amendments directed to the problem of protecting this $200 million or whatever sum might be needed in addition to that.

I insisted that all of the facts be brought out and that we not come here with a piecemeal policy, this year so much and then stop. We went on to show how much money might be needed next year. I think we will not need that much next year, the $600 million, but we may. However, that is to be left open.

We included these safeguards to protect the $200 million. I am referring to protecting the Federal Government. I am not interested in what the Defense Department or the Air Force says about this. They had nothing in the world to do with the restrictions we included. Those were drawn by competent staff members with the assistance of competent legal guidance. It was a very laborious undertaking. I think they did a very splendid job.

There is one human factor in this that goes with these two amendments the committee is asking the Senate to stand by. That concerns the fact that we assigned Secretary Packard this problem, and it is a problem. We asked him to give it his best attention and advice and counsel and then to report to the committee. He did this. We had all of that testimony. It is in the record.

I said to Mr. Packard:

If we approve this $200 million, we expect you to give it your personal attention, your personal surveillance.

We found him to be an extremely competent man and, I think, an honest man.

I said:

We expect you to give this your attention and surveillance and keep in touch with us. We hold you morally responsible as far as we can to follow up on this matter and see that this money is spent exclusively for this purpose and that it is spent in the right way and that the plans be sound.

He assumed that obligation. He meant exactly what he said. That lends considerable strength to the whole solution of this problem. As I say, it is a problem.

I personally did not like the idea of the committee having to assume this obligation. The report explains it. So I will read from page 16 of the report near the bottom:

(The Committee in Section 504(a) provides that the $200 million will not be obligated until the Secretary of Defense has presented a plan that has been approved by the House and Senate Committees on Armed Services.)

In other words, we thought we ought to be willing—and that is not a happy note—to assume some special obligations in this matter.

I continue to read from the report:

In effect this means that the proposed contractual arrangement both for the use of the $200 million and the completion of the entire C–5A program—

Those are broad words—

will require approval of the two Committees. Through this method there will be the opportunity of a complete review by the committees on this problem.

Mr. President, that is about as far as you can go so far as senatorial surveillance is concerned. That is an obligation. This is not in the House bill now, but this is our guarantee, as we believe there will be a special surveillance with respect to this contract.

There would be the General Accounting Office role, if any. If the committee felt it needed the General Accounting Office to check on any item we have authority under the general law to call on the General Accounting Office for those services. I do not have to cite that law, but I have it available if anyone is interested. That is what the General Accounting Office is for; primarily to serve the committee. They can serve individual Senators, and I do not disagree with that. But this group is available under the law on the call of the committee for any phase of this matter. If a plan is submitted, and these two committees are not satisfied, all we have to do is reject it, or hold it up and call on the General Accounting Office to take any steps, such as that, as we see fit.

The second provision the committee put in for the Senate's consideration is:

Strict statutory guidelines which will insure that the $200 million in contingency funding will be used only for the C–5A program insofar as the contractor is concerned and not possibly intermingled or diverted to other uses among the various other programs of the company. The bill in section 504(b) expressly excludes other uses for the $200 million.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. I yield myself 2 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 2 additional minutes.

Mr. STENNIS. Then there comes Mr. Packard with respect to his special responsibility. Then comes the General Accounting Office, if we call on them for their statutory responsibility.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. PROXMIRE. With reference to section 504(b), page 22 of the bill, the Senator is absolutely right. The Senator from Pennsylvania (Mr. SCHWEIKER) and I both support this purpose to prevent the $200 million from being diverted to any other contract or material.

The difficulty is, although it may be the payments of the $200 million could be audited in such a way that the $200 million would go only to the C–5A, there is more. There is no discipline over the $344 million in this bill, presumably for the C–5A, that could be diverted to the airbus.

Mr. STENNIS. It better not be.

Mr. PROXMIRE. We were told by Air Force officials who came to my office that the reason Lockheed was in trouble was their commercial airbus. Here is where the money losses have gone, not to the C–5A. It would seem to me there is no effective way you can be sure the $200 million would go for this purpose.

Mr. STENNIS. There is some discretion in orderly procurement practices that would take care of that; but I do not propose to let this money go into other activities or contracts. If Mr. Packard does not bring in a plan that we think protects us in that field, I would be in favor of rejecting the plan. That is all I can say now.

Mr. President, I am glad to yield now to the Senator from North Dakota (Mr. YOUNG), a member of our Appropriations Subcommittee, on this subject for 20 minutes.

The PRESIDING OFFICER. The Senator is recognized for 20 minutes.

Mr. YOUNG of North Dakota. Mr. President, as I understand it, the proponents of this amendment, among other things, want to make sure there will be no more C–5A-type contracts. With this I am in full agreement.

The former Secretary of Defense who entered into this contract, Mr. Robert McNamara, is no longer with the Department of Defense. The proponents of the amendment can heap all the criticism on him they wish, and I will help them out because this is one of the worst contracts the Government has ever entered into. I see no possibility of this type contract ever being entered into again. Among other things, this is so disastrous to Lockheed, what industry would want that type of contract?

The real question now is, Do we want to get the rest of these planes we need so badly, which means we help keep this company from going bankrupt and shutting down? It is in the best interest of the Federal Government now to get these planes at the least possible cost.

Mr. President, one of the important military decisions before us is whether to authorize the $200 million in contingency funds which are necessary to insure continued production of the C–5A aircraft during the last half of fiscal year 1971.

President Nixon has indicated that

fewer U.S. forces will be stationed abroad in the future. This is a decision long overdue. I note now that plans are being made to bring over 60,000 troops back from South Korea, so more planes will be needed in the future. Bringing back these troops will save hundreds of millions of dollars and, more importantly, it will put the United States in a much more favorable financial position through easing our balance-of-payments problem and reducing the gold drain. At the same time he has made it clear that this Nation will honor its commitments to its allies and protect our interests wherever threatened.

This new foreign policy makes it more necessary than ever before that we acquire the number of C–5A aircraft that is deemed necessary to give us the required airlift capabilities. One C–5A cargo plane will carry 80.8 tons in cargo as compared with 24.4 tons for the C–141, which has previously been our biggest cargo plane. The C–5A not only will carry a much heavier load, but it can carry the much larger military equipment necessary for deployment of forces overseas.

The program to acquire the C–5A aircraft has been subjected to unusual scrutiny and has been the source of continuing controversy. Last year a decision to reduce the procurement from the originally planned 120 C–5A aircraft to only 81 was made principally because of increased costs and budgetary constraints. The current proposal of 81 production aircraft leaves us with a deficit in our strategic airlift capability, but with a substantial gain over what our position would be without any C–5A's. Reductions below 81 would seriously erode our military capability and our overall national security.

At present, the development of this plane is nearly completed and the company is well into the production phase of its contract. Congress has already authorized $3.4 billion for the program, and the Air Force has requested $544 million for C–5A production in fiscal year 1971. This sum includes $200 million in contingency funds.

If this request is not approved, Lockheed, because of financial problems, would be in no position to continue production of the C–5A and this at a time when only 17 aircraft have been completed. The unit cost of these aircraft would be prohibitive, over $200 million per unit, and the Nation would be denied further production of a superb cargo plane so badly needed for both our national security and foreign policy.

Similarly, if only $344 million were authorized for fiscal year 1971, the Air Force would receive only 30 or 31 aircraft at a unit cost of approximately $125 million per aircraft; still too small a force to provide the needed airlift capability.

In either of these instances where funding is denied, the contract would be terminated for the convenience of the Government and the Government would probably have to pay termination costs which would result in even higher cost per aircraft. On the other hand, if we continue with the 81 aircraft program to which the Government is already committed, the cost would be approximately $4.6 billion or about $57 million per unit under the Air Force's interpretation of the existing contract.

The Government has invested a large amount of money in this program for the last 5 years and is now beginning to receive a return on its investment. A case in point is the cost of the last 51 aircraft. Beyond the $344 million in this year's request, the cost to complete these 51 aircraft would only be $800 million.

The $344 million portion of the fiscal year 1971 request is expected to last only about the first half of the fiscal year. Generally this represents payments to cover most of the expenditures up to a level that reflects the interpretation of the contract which is most favorable to the Government.

An additional $200 million is needed to cover remaining projected expenditures for the latter part of the fiscal year to insure production continuity. Normally it would be the contractor's responsibility to provide such funding, but the amount in dispute, over $600 million, is more than the contractor can manage. Lockheed has not been able to obtain private financing in this amount. Thus, if the Government does not provide the funds, production will undoubtedly have to cease.

Back of the problems of Lockheed and the necessity of this $200 million item in the defense procurement bill is accelerated costs of all kinds going into the production of this plane and other military equipment and the resultant very large overrun. Overruns are the result of higher interest rates, higher wages, the alarming rate of inflation of the cost of everything, and some unwise provisions in the Defense Department's contract with Lockheed.

Most Air Force officials I talk with agree that this contract which was entered into by former Secretary of Defense McNamara required far more sophisticated manufacturing techniques and capabilities than were necessary. Some of these would be very difficult and expensive for any manufacturer to comply with. If the Defense Department were to enter into a new contract with Lockheed—and this may be the case sometime in the future—I understand that some of these highly sophisticated ideas will be dropped. It would still be a great plane and would meet most, if not all, of our requirements.

Mr. President, there has been a large cost overrun on the C–5A aircraft—far too much—and this speech is not intended in any way to approve of the C–5A type of contract or the procedures used. This was a bad deal both for Lockheed and the Defense Department.

The recommendations resulting from the Fitzhugh Commission investigations of Pentagon procedures will go a long way toward correcting bad contract procedures such as took place here. The prototype procedure, popularly called by Secretary Laird as the "fly-before-buy" approach, represents a much more economical approach and should result in better weapons systems.

The average person reading all of the publicity of the cost overrun on the C–5A cannot help but get the opinion that Lockheed had made a huge profit. This is far from the true situation. Lockheed lost very heavily and, as a result, is in deep trouble financially. Fortunately, the C–5A is a superb plane and more than meets the expectations of Air Force authorities.

Mr. President, there are huge overruns in most other military procurement. For example, the overrun in the F–111 percentagewise is far greater than the C–5A. It is important to note, however, that the C–5A contract was different than almost any other procurement contract entered into by the then Secretary of Defense Robert McNamara with other defense suppliers.

Cost overruns are very common in other segments of our economy. A good example is the John F. Kennedy Center for the Performing Arts here in Washington. The first estimated cost was $46.4 million. With the construction now more than half completed, it is now estimated to cost $66.2 million. Last December in the first supplemental appropriations bill for fiscal year 1970, Congress appropriated its share of this cost overrun. If we had followed the argument of many with respect to the C–5A, Congress would have refused to appropriate the last increment for the John F. Kennedy Center for the Performing Arts.

Anyone interested could also check Corps of Engineers projects over the last several years. The bids they have received have oftentimes been far in excess of the estimated cost of the projects. Regrettable as cost overruns are either in private business or government, there is nothing unique about them.

If production is not continued on the C–5A, nearly 20,000 employees will be adversely affected at the Lockheed Georgia Co. Feeder plants in Chattanooga, Tenn.; Uniontown, Pa.; Logan, Ohio; Charleston, S.C.; Shelbyville, Tenn.; Martinsburg and Clarksburg, W. Va., would likewise be adversely affected. In addition, an estimated 20,000 more jobs at subcontractors facilities in 42 States would be jeopardized.

The Air Force advises that there is a total of 2,388 different suppliers for the C–5A program, 644 of whom employ over 250 persons. General Electric is a prime contractor for the engines and employs approximately 6,500 persons in this endeavor. GE also has many subcontractors and suppliers who would also be adversely affected by program termination or delay.

In summary, we cannot ignore our considerable previous investment and the need for the C–5A. We should approve this request and obtain the planes at this more reasonable price. If we deny the $200 million, then Lockheed would undoubtedly have to stop production, the number of aircraft delivered would be less than required, and many thousands of employees would be jobless. If we approve the request and continue production, we will obtain the aircraft required to provide the strategic airlift capability so essential to our national security.

In reporting out the authorization bill, the Armed Services Committee has incorporated restrictive language to insure that the Government's best interests will be protected. The Secretary of Defense must obtain the approval of both the House and Senate Armed Services Committees prior to obligation of the $200

million. In addition, the authorization bill provides strict statutory guidelines to insure that the $200 million in contingency funds will be used solely for the C–5A program. These measures provide adequate safeguards over the expenditure of these funds.

Mr. President, it is important that we understand just what this $200 million contingency represents. There are a number of disputes over the original contract between the Air Force and Lockheed, one of which involves the total price for the production of the C–5A aircraft. The contractor contends that the total price for these aircraft may exceed the estimate under the Air Force's interpretation of the contract by as much as $500 million.

This is a matter that has to be settled through the established procedures for handling disputes of this nature, and the matter is now pending before the Armed Services Board of Contract Appeals. This $200 million contingency represents an advance to the contractor against his claim under the contract, and would be an offset against any amount that the contractor might be awarded in the pending proceedings.

In the event it is determined that the Air Force's position is correct, the recovery of this $200 million is a matter that will have to be handled in the plan for the disbursement of these funds required under section 504(a) of the pending bill.

The $200 million is necessary if the C–5A program is to continue. I believe it is in our best interest to complete this vital defense program. To liquidate the C–5A contract at this juncture would mean most of the billions of dollars we have already spent would have been wasted.

Mr. STENNIS. Mr. President, if the Senator will yield, if he has time, let me commend him highly for his presentation of this matter with clarity and substance.

A question was raised about it not being in the plan to give Mr. Packard surveillance over the $344 million and that it could not be used in connection with any other manufacturing process.

In the first place, I think the answer to that is that if he gives careful surveillance to the $200 million, that will take care of the $344 million not being diverted. But, anyway, the $344 million is strictly within the contract we already have with the manufacturer. After something is already set up under contract, it is an altogether different thing than legislation making a certain demand. When he controls the $200 million, he controls the $344 million that goes along with it.

I submit that to the Senator from North Dakota and to the Senator from Wisconsin.

Mr. YOUNG of North Dakota. I thank the Senator. I think these funds have been tied down very carefully by the House and Senate Armed Services Committees and by the statements made by the Secretary and Under Secretary of Defense.

Mr. STENNIS. I thank the Senator. Mr. President, whatever time the Senator from North Dakota did not use is yielded back, I am sure.

I now yield 10 minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I do not intend to discuss the amendment at any length at all, although I will have to say that it does provide protection. But I feel that the committee approach provides just as much protection as the amendment, and I have as much confidence in Mr. Packard's ability to carry this out as I have in that of any one man or committee organization in this Capital.

I would like to talk about the airplane itself, Mr. President, because it is probably the most important airplane for the armed services of the future that we have in being, or even planned.

I would remind my friends from Pennsylvania and Wisconsin, who are deserving of praise for their constant interest in reducing costs, that if the army of the future turns out to be what I think it is going to be, and what General Westmoreland is talking about, we are looking at savings, in this one area alone, of from $5 billion to $10 billion.

What we are asking for is just $200 million, to make sure that this C–5A does come into the inventory, so that we can provide the fast, heavy lift that is needed to keep our troops at home, but put them any place in the world that we have to.

Mr. President, we hear four categories of commentary critical of the C–5A program. These categories pertain to: First, the basic requirement for the C–5A; second, the performance of the aircraft relative to changes in specification requirements; third, operating costs; fourth, acquisition costs and the financial problems of the contractor. Each of these areas of criticism has been addressed by me in the past. My views are a matter of record.

In this regard, it is particularly misleading to state that the reasons for buying the currently planned C–5A force are obscure. Even the most superficial examination of the legislative history of the airlift program reveals the fact that the Congress has for many years pressed upon the Defense Department the urgent need for a major expansion in our military airlift capacity. Therefore, congressional initiative as well as efforts within the Department of Defense provided the initial impetus toward the achievement of that objective.

With regard to the C–5A requirement, itself, the authors of the report are apparently aware that it grew out of a series of airlift studies conducted during the early 1960's, which culminated in September 1964 with a joint Army-Air Force study called AIRTRANS—1970's. It was from this last mentioned study that the specific requirement for six squadrons of C–5A's—96 U.E. aircraft—emerged. And, it was this program which was presented to the Congress in tentative form in early 1965, and reaffirmed in its final form in early 1966.

Mr. President, I have described this aircraft before, but it is the world's largest airplane. It will be able to transport heavy equipment, which we cannot do today. It will be able to do so quickly, to any part of the world. The fact that the basic general purpose forces strategy has been changed from 2½ wars to 1½ wars—whatever that means, Mr. President; it does not make a lot of sense to me, but that is the intention; it has been changed from the 2½-war McNamara plan to the 1½-war Laird plan; and some day I think we will have that explained—does have a bearing on the airlift requirement.

But it should be noted that the Congress has refused to approve the FDL program, leaving the full weight of the quick response lift requirement on the airlift. In late 1969, during the course of the fiscal year 1971 budget review, Secretary of Defense Laird decided to hold the C–5A force at four squadrons and the total buy at 81 aircraft. He did so because of the tight budgetary constraints, the rising cost of the C–5A, and the overall reappraisal of defense requirements. Accordingly, there is nothing inconsistent in the JCS position, still validating a six-squadron C–5A requirement.

I have remarked about the uses of this airplane. Let me give an example of what I mean.

For example, in the case of a war in Europe, a typical reinforcement of our forces there might consist of 300,000 men, 105,000 tons of bulk cargo, and 66,000 tons of outsize cargo. With 97 C–5A's in operational units, plus all of the C–141's and 75 percent of the CRAF aircraft, this reinforcement can be moved to Europe in 20 days, fully ready for combat. With 70 C–5A's, the number expected to be available for operating units from a total buy of 81, this reinforcement could be moved to Europe in 28 days. Thus, it is perfectly clear why the JCS still validates a requirement for 120—that is, 96-unit equipment—C–5A's, and why the Defense Department still insists that a total of at least 81 aircraft should be bought.

Mr. President, another criticism that is leveled at this aircraft is that it has not met specifications and requirements. Mr. President, I have stayed rather close to this airplane. I flew it myself over a year ago. I went through the program then with the chief test pilot and his crew, and they pointed out to me the aerodynamic mistakes which Lockheed had discovered, and at their own expense, and at no expense to the Government, had corrected.

They had made an aerodynamic mistake in believing, in my opinion, that the wing root section of the C–141 enlarged would work on the C–5A, and it did not turn out that way. But they have corrected it.

The airplane is ahead of its testing program. We now have, I am not sure what number it is—it might have changed since I was last visiting with these gentlemen—about five or six have already been delivered to the Air Force, and deliveries across the waters have been accepted, and training is proceeding.

At a visit to Edwards Air Force Base earlier this summer, at which time I had the good fortune to again discuss with

the flight test crew and the chief pilot any progress being made, they were more enthusiastic then, after having performed especially desert tests, which tests are conducted on the dust-covered, dry lakes of California, and the engines are put into reverse to pick all the dust up they can. They were surviving these very rigid tests beautifully.

There has been one criticism of the wing. As I said earlier, I think Lockheed should be congratulated for having come up with this kind of trouble. The wing is really too strong, but it is too strong at a point just upward of the aileron. That is giving it some trouble in maintaining the flexibility needed in that type of wing. But that can be easily corrected. In fact, the Secretary of the Air Force has received the results of an analysis made by a study group appointed for this purpose, and I quote just one part of it:

> The flight performance of the C–5A meets the guarantees of the contract within the accuracy limitations of good flight test measurement.

Mr. President, we have tested this aircraft to 128 percent of stress. We would like to test it to 150 percent of stress, and we will do that.

This, I might say, is higher than we test commercial aircraft. We have always done this in the Air Force, and that is one of the reasons that the Air Force, in spite of what people might believe, has a very fine safety record.

The problems reported with the landing gear are not serious problems. This is possibly the most unusual landing gear ever developed, and why it did not have more troubles is again, I think, a credit to the Lockheed Co., for having been able to solve the problems. If Senators can imagine an aircraft of 750,000 pounds being able to kneel, after it gets on the ground, just like a big camel, so that we can drive our big trucks, tanks, jeeps, and other things into the aircraft, they can have some idea of the problems involved.

Mr. President, this is not a personnel-carrying airplane. It could carry a thousand people if you wanted to stuff them into it. It will carry heavy equipment, wheeled equipment, and the troops needed to operate that equipment, to any place on the globe. Again I stress, as I did at the outset, for those who are really interested in saving money, that when we look at the possible savings of billions and billions of dollars by the new Army of the 1980's, geared to the C–5A and the new heavy-lift helicopters that we have not even begun to build yet—I am not talking about 22-ton helicopters—and when we recognize the proven ability of our electronic sensors to detect the enemy forces, I think that when all this is laid out to the American public, they will have a fine understanding of why we can talk about a smaller standing army for the 1980's and even the late 1970's.

This gets back to our argument of yesterday, as to why we will have to go to a volunteer approach to our services, so that we can attract the highly intelligent type of person we feel we can to operate the things we will have to have in the Army of the future.

Mr. President, I hope this amendment is rejected. I hate to see anything happen that would jeopardize the delivery of these airplanes. I would hate to see us wake up the first day of January and discover that Lockheed-Marietta has closed down because the $200 million was not available to them. I recognize full well that this is a step aside from normal procedure. It is not a step that I particularly like to take. I would much prefer to have seen Lockheed get along without this money coming from the Government in this form. But I think the acquisition of the weapons system is more important than what I consider to be other justifications for not approving it, and I would hope that the committee bill, the way it has been reported, after the study we have given it, will pass.

The PRESIDING OFFICER. The Senator from Mississippi has yielded time to the Senator from Georgia. The Senator from Georgia is recognized.

Mr. TALMADGE. I thank the Chair.

Mr. President, only two basic issues are involved in the C–5A controversy:

First. Is there a military need for the aircraft? That is, is the C–5A vital to our defense?

Second. Can this airplane be produced under the terms of the pending amendment?

So many red herrings have been drawn across the path—all of them apparently for the purpose of discrediting the military, or the company, or the aircraft in a way that would gain maximum public attention.

It is true that there has been a tremendous cost overrun. There is a controversial legal case that resulted from poor military contracting procedures. Mistakes have been made, both by the contractor and by the military. But they have been blown all out of proportion to the facts.

I concede that the cost of C–5 has far exceeded anyone's expectations, and I deplore that as strongly as anyone. I too wish to get the maximum return from each defense dollar. It should be clear to everyone by now that this contract was good for no one—not for the Air Force, not for Lockheed, and not for the taxpayers.

But I fail to see how it would help anyone now to bankrupt the company at this stage of development and production, with the end in sight and the cost per plane dropping with each one that is produced.

Moreover, so immersed have we become by the financial and emotional side of the issue, there has been little or no recognition of the unexpected conditions and the unforeseen circumstances which helped to cause most of these problems.

The C–5 is a jumbo-sized aircraft. It has provided a jumbo-sized opportunity for the critics of national defense—a number of writers especially—to appear as knights on a white charger saving the taxpayers from the Pentagon and alleged contract waste.

What they are doing in reality is to propose a course of action that itself would produce far more waste than they purport to save.

The C–5 has been made a vehicle for talking about a reordering of national priorities. I share everyone's concern about the multitude of social and economic problems that plague our people. But I fail to see how the waste of a billion dollars of unfinished airplanes in a production pipeline all over the country would solve these problems.

The fact of the matter is, Mr. President, that we have been diverted from the main issue. The matter with which we ought to be concerned—national security—has been obscured.

I carry no brief for Lockheed Aircraft Corp., although I would be less than honest if I did not express concern for the 20,000 employees at the Lockheed plant in Marietta, Ga., and another 20,000 C–5A workers all across the country. I make no apology for not wanting to throw some 40,000 people out of work in one fell swoop.

I carry no brief for the Air Force. The Government must also share part of the blame for this contractual arrangement.

But I do strongly advocate national security. Throughout the legislative history of this issue, this has been, as it should be, the prime concern.

Mr. President, in considering production of the C–5 last April, the House of Representatives recognized that the central issue is the fact that the aircraft is vital to national security.

A question arose in the House about cutting off $200 million from the C–5 program, to limit production to just 30 or 31 planes, as opposed to the required 81.

I have carefully studied the House debate. Chairman RIVERS of the House Armed Services Committee reduced it to simple terms that none of us can fail to understand. He told the House:

> If you want to cut off $200 million and destroy a whole airlift system for which you have already paid $2 billion, you can do so, but who is going to lose? American security . . . That is how simple it is.

The House in its wisdom was not disposed to gamble with the requirements of national defense.

Then the dispute came to the Senate. In its report on the military procurement bill, the Senate Armed Services Committee also emphasized that the basic issue was whether or not the C–5 aircraft were needed. That was what the committee had to decide. This is what the committee reported:

> The fact is that additional C–5As are essential for national defense purposes.

The committee, therefore, quite properly primarily addressed itself to this essential need. It recommended that the C–5 program be funded in order to produce the required number of aircraft.

The committee was concerned with the contract disputes and with the cost overrun. But, first of all, it was concerned with national security.

That was the issue before the House. That was the issue before the Senate Armed Services Committee. This now is the fundamental issue before the Senate.

The issue boils down to a close examination of the amendment offered by the Senator from Wisconsin and the Senator

from Pennsylvania, laying down certain conditions for funding completion of the C–5 program. As I will discuss in more detail later, the first condition is impossible to meet.

Mr. President, the reason why it is impossible to meet is that it requires the Board of Contract Appeals to make a determination in this fiscal year, which has only 10 months to run, that the money is actually owed.

I ask unanimous consent to have printed at this point in the RECORD a schedule of events that would occur if the Board of Contract Appeals were to make a decision on it—the authority for this is the Pentagon itself—that it would require a minimum of 10 months, without any regard whatever for appeal, and an appeal probably would require another 2 years. Yet, we are legislating on a bill that will relate only to fiscal year 1971.

There being no objection, the schedule was ordered to be printed in the RECORD, as follows:

Rule 4 process: Air Force files on C5A compiled, transferred to Lockheed, documents and files studied by Lockheed, April to July of this year.

Discovery motions prepared and filed by both parties. Probable date of submission, September to October 1970.

Compliance with discovery requests will take about 60 days.

Study of discovery data and preparation for trial, about 60 days. The trial will take about 2 weeks to 1 month. Preparation of briefs will take about 60 days. Preparation of reply briefs, about 30 days.

Board deliberates and writes its opinion, about 60 days.

Time required, under the most optimum conditions, from date that discovery motions are filed, 10 months.

Mr. TALMADGE. I also have a statement of the chairman of the Board of Contract Appeals, Mr. Solibakke, wherein he says that the minimum time would be another 8 months in order to consider the matter without any reference whatever to an appeal on the part of either party.

Mr. President, I ask unanimous consent that the entire statement be printed at this point in the RECORD, as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NOTES FROM CONVERSATION WITH MR. RICHARD C. SOLIBAKKE, CHAIRMAN OF THE ARMED SERVICES BOARD OF CONTRACT APPEALS

1. The first item discussed was the question of whether both parties to a case before the ASBCA have the right to appeal to the Court of Claims. The answer is that both parties do have such a right, but a Government appeal almost never occurs. In effect, the ASBCA is acting for the Secretary of Defense and therefore, an appeal by the DOD would be, in this sense, an appeal from the DOD's own decision. However, the DOD occasionally does appeal the decisions, sometimes for the purpose of having the decision reviewed by a higher judicial body for the sake of appearances as well as for the purpose of having a stronger position. Mr. Solibakke estimated that less than 1% of ASBCA cases are appealed by the DOD.

2. The next question discussed was the average length of time required by the ASBCA to reach a decision. Mr. Solibakke indicated that this, of course, depended on the complexity of the case and the volume of material that had to be reviewed. He said he had known of cases that were decided by the ASBCA in less than 1½ years from the date of the case being docketed, but the average time required would be over 2 years.

In the C–5A case now before the ASBCA, he stated that his opinion is that the minimum time required for an ASBCA decision would be approximately 8 months from this date—and this could only occur if extremely expeditious handling were given to the case. He felt the urgency and importance of the C–5A case is such that all parties would give expeditious handling to the procedures—but the procedures would still require in his opinion a minimum of another 8 months.

He described in some detail the various procedural steps that are required by ASBCA rules and the procedural rights that each contending party has in an ABSCA case. The net result of such procedures led to his opinion that 8 more months would be required even with expeditious handling.

Mr. Solibakke indicated that he could be quoted freely with respect to his statements of opinion about the time required for consummation of an ABSCA case.

3. The next question discussed with Mr. Solibakke was the matter of time consumption required for a decision by the Court of Claims following an appeal to the Court of Claims from an ASBCA decision. Of course, Mr. Solibakke is not connected with the Court of Claims in any way, but he has had a great deal of experience in observing the actions of that Court which frequently follow ASBCA decisions.

He first noted that an appeal to the Court of Claims from an ASBCA decision requires that DOD attorneys turn the Government case over to the Department of Justice. This obviously means that the new group of attorneys would have a certain amount of time required to become familiar with the Government's case, thereby giving an appeal an inherent beginning delay.

Next, he noted that the time required by the Court of Claims would be, as in the ASBCA, dependent on two general factors. The first factor would be the complexity of the case and the volume of material to be reviewed, and the second factor would be the procedures of the Court of Claims. The net result of these, in the opinion of Mr. Solibakke, is that the minimum time required for a decision in a case like the C–5A would be 2 years from the date the appeal was made. He believes this is a conservative estimate and notes that this estimate is based on the most expeditious possible handling of the case in the Court of Claims. Obviously, he said, this would take a decision on the C–5 case by the Court of Claims at least to mid-1973 and more probably to the latter part of that year.

Mr. TALMADGE. Mr. President, I would point out that the volumes of detail, contracts, work reports, and so forth, involved in the C–5A contract are as large as this Chamber reaching all the way to the Capitol dome. It is absolutely impossible to make a determination very speedily.

The second condition that the Senator from Wisconsin and his colleague would require to make the money available is bankruptcy for the Lockheed Aircraft Co. I would point out that, under this condition, we would be operating a company under a court order. The trustee in bankruptcy might decide that this is a bad contract and, since he would want to conserve the assets of the company, the entire contract would necessarily be junked.

Mr. President, I ask unanimous consent to have printed in the RECORD a letter which my legislative assistant, Michael McLeod, has received from an outstanding Washington law firm, describing the alternatives under a bankruptcy proceeding and pointing out that the C–5A would never be acquired by the Government.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SELLERS, CONNER & CUNEO,
Washington, D.C., August 18, 1970.

Mr. MICHAEL MCLEOD,
Old Senate Office Building,
Washington, D.C.

DEAR MR. MCLEOD: Reference is made to your telephone conversation with my partner, Herbert L. Fenster, on August 13, 1970, in which you requested that we provide you with certain information relating to the alternatives posed in the Proxmire–Schweiker amendment to the military procurement authorization bill.

We are presenting in as brief a form as possible, certain information relating to the two referenced alternatives which we think will be helpful to the Senator. Obviously, it is not possible to present any detailed statement of procedures in bankruptcy or reorganization. Rather, we are presenting information which represents our opinion as to how reorganization or bankruptcy would operate in connection with the Lockheed matter.

In the telephone conversation on August 13, we indicated that there was perhaps an inconsistency in the information available relating to the first alternative posed by the referenced amendment. Specifically, Senator Talmadge indicated in his speech that an appeal proceeding before the Armed Services Board of Contract Appeals would not be concluded until the middle or latter part of 1971. We understand that the Chairman of the Armed Services Board indicated to Mr. Shillito that with a highly expedited proceeding, the appeal might be concluded in nine months. We do not believe that there is any substantial discrepancy between the two time estimates.

With reference to the first alternative, which refers to the expenditure of the contingency fund only to the extent of a determination by the Armed Services Board or to the extent determined by a court upon appeal from an Armed Services Board decision, we believe such alternative to be wholly unrealistic.

It is quite clear that the funds will be needed long before an appeals board decision can be expected. This is true all the more if judicial review of a board decision is necessary.

Passage of the amendment therefore would leave only the second alternative which contemplates bankruptcy or reorganization. In reviewing the salient features of a reorganization action, it must be kept in mind that any such action with respect to Lockheed would involve the entire Lockheed Aircraft Corporation not just the Lockheed Georgia Company.

Corporate reorganization is provided for under what is known as "Chapter X" of the Bankruptcy Act. The basis for and purpose of reorganization is the rehabilitation of the company. If reorganization is determined not to be possible, or fails, the only alternative is bankruptcy and the liquidation of the company.

In brief summary, a reorganization would proceed somewhat as follows: A petition would be filed by the company, in the case of a voluntary proceeding, or by three or more of its creditors in an involuntary proceeding. This petition would be submitted to a Federal District Court in whose jurisdiction the corporation has its principal place of business or its principal assets. Creditors and certain other interested parties could

answer this petition, indicating their interests or objections. The Federal District Judge would then enter an Order approving the petition if he were satisfied that all requirements of Chapter X had been complied with in good faith. We should point out that the petition would not be approved and the reorganization would not proceed if it were clear that the reorganization would fail.

Upon approval of the petition, if noncontingent debts which were liquidated as to amount exceeded $250,000, the Judge would appoint one or more Trustees to oversee the reorganization. The Trustee, in effect, would both reorganize and, during the reorganization period, manage the affairs of the company. His efforts could include the retention of existing management or the appointment of new management. The Trustee would be a disinterested party.

A principal function of the Trustee is to prepare and submit a plan of reorganization which would indicate some procedure in which the corporation could satisfy its obligations and develop sufficient capital and assets to continue as a viable business.

Of particular relevance to the matter at hand, it should be noted that in a reorganization the court might permit the rejection of contracts held by the corporation, except those which are characterized by the Bankruptcy Act as being "in the public authority." There is no clear judicial ruling as to whether this exception includes Government prime contracts so we cannot definitely say whether the Trustee could reject such contracts. As you will appreciate, the determination by the Trustee as to whether prime contracts could and should be rejected could involve any or all of the corporation's contracts not just those of the Lockheed Georgia Company.

Even assuming that Government prime contracts could not be rejected by the trustee in the course of reorganization—and we believe this is the probable interpertation—if performance of these contracts appeared excessively onerous, the Trustee or the Court might determine that reorganization was not feasible. The result would then be bankruptcy and liquidation of the corporation's assets.

The profound and chaotic effects of a reorganization of Lockheed under a Chapter X proceeding could perhaps be best appreciated by considering the impact on the complex array of subcontractors and suppliers which are an essential part of its various programs. The corporation has approximately 35,000 first-tier subcontractors and suppliers holding nearly 185,000 open orders with Lockheed, with a value of about two billion, one hundred twenty million dollars (the C–5A program alone involves about 2,300 first-tier suppliers furnishing material directly to the program). On virtually all major programs there are hundreds of suppliers, large and small, who furnish unique components that could be obtained from another source only after great delay and expense, if at all. Any indication that Lockheed was to be forced into reorganization or bankruptcy would have an immediate and disastrous effect on the ability and willingness of these firms to continue to perform. The ability of these firms to secure necessary credit to continue their businesses and pay lower tier subcontractors and suppliers undoubtedly would be severely impaired. Any failure by Lockheed to make prompt payment or otherwise fulfill its obligations under its orders would excuse suppliers from further performance, and even those who are not so excused would be under no obligation to accept new orders. The disruption of the complex procurement structure which would inevitably follow passage of the proposed amendment could not subsequently be remedied through election by the Trustee to require performance of open orders. Considering the straitened circumstances of the Aerospace Industry generally, before he could take such action critical suppliers might themselves have been forced into bankruptcy or might have found legal grounds for refusing to continue if this would reduce their losses.

Among other agreements of the corporation which might be affected are its collective bargaining contracts since such agreements might be subject to rejection by the Trustee.

Another effect of a Lockheed reorganization would be the automatic termination of long-term leases covering many of the buildings occupied by the Lockheed Missiles and Space Company (LMSC) at Sunnyvale, California. Some of these buildings are committed in their entirety to the performance of the Poseidon program and a number of classified Air Force space programs. Performance by LMSC of virtually all of its Government space programs would be seriously endangered and perhaps discontinued in the event of loss of these buildings. One of the buildings, used in the development and production of Government space craft and boosters, includes a thermal vacuum chamber, an altitude simulation chamber and an anechoic chamber which are essential to performance of Government space programs.

Essential work on Lockheed missile programs would also be seriously impacted by the loss of an additional leased building as a consequence of the initiation of reorganization proceedings. This building is used for fabrication of experimental Poseidon vehicles, as well as development, modification and check-out of the Safeguard System Target vehicles and Air Force reentry vehicles.

Other buildings covered by long-term leases include a building which houses LMSC's large computer complex used extensively on Government programs and the research laboratories in Palo Alto which perform a significant amount of research on Government programs.

Some additional buildings that are held under shorter term leases (*i.e.*, with initial terms expiring no later than 1974) are also subject to termination in the event of Lockheed reorganization or bankruptcy proceedings. Government programs performed in these buildings include Air Force special programs, advanced tactical missile and defense systems, missile systems logistics and publication.

Particularly on the long-term leases, even if the Trustee could negotiate new lease agreements, there would be major costs to these Government programs as a result of disruption and rent increases reflecting the appreciated value of these facilities.

A significant foreign sales program would also be impaired by a Chapter X proceeding. Without regard to the Lockheed commercial programs, there is a substantial foreign market, both actual and potential, for Hercules and Orion aircraft which might be eliminated under a Chapter X proceeding. We are advised that there are approximately $50 million in open foreign orders for Hercules aircraft under which the buyer would have the right to terminate in the event of a reorganization. In addition, there are almost $400 million of potential orders, about one-half of which appear to present excellent prospects for sales.

There is one other matter in connection with the amendment which we wish to bring to your attention. If, as we have indicated, reorganization becomes necessary, and even assuming that the company is able to stay in business, under the regulations of the Department of Defense (Defense Procurement Circular, No. 3, dated 4 March 1964; Armed Services Procurement Regulation 1–903) the company would be declared "not responsible" and would be ineligible to bid on or receive any new defense contracts. The result of the enforcement of these regulations would be, as a practical matter, the loss to the Government of its largest defense contractor whose work is critical to the national interest.

We have been pleased to provide the foregoing information to you. If we may be of any further assistance, please do not fail to call upon us.

Very truly yours,

GILBERT A. CUNEO.

Mr. TALMADGE. Mr. President, the Senator from Wisconsin came in this morning, without any knowledge or notice to anyone concerned with this fight, and set up a third condition, which is that the Comptroller General of the United States make a determination of this issue and report to the Congress by November 15, 1970.

I would point out that this condition, likewise, is probably impossible to meet.

The House of Representatives is in recess until September 9. The bill deals with a great many complex issues. Upon examination of the original House bill and the committee bill, we find that there are 14 major funding changes——

The PRESIDING OFFICER (Mr. GOLDWATER). The time of the Senator has expired. The Senator can yield on his own time.

Mr. TALMADGE. Mr. President, has the Senator from Mississippi left instructions with the Chair to yield time to anyone else?

The PRESIDING OFFICER. He has.

Mr. TALMADGE. Then, Mr. President, I yield the floor.

Mr. PROXMIRE. Did the Senator say that his time is limited? I would be very happy to yield him some limited time, if it will be helpful to finish his remarks.

Mr. TALMADGE. I am very grateful to the Senator from Wisconsin.

Mr. President, with the House of Representatives in recess and not coming back until September 9, and 14 major changes already in controversy between the House and Senate on the bill, and the possibility that the McGovern-Hatfield amendment could be agreed to, an amendment that would complicate the bill still further, and the fact that a conference between the House and Senate could run into weeks, there is the possibility that the bill might not even get to the White House until October 15 or November 1, so that it would be utterly impossible for the Comptroller General to make an examination of any records.

The PRESIDING OFFICER (Mr. GOLDWATER). If the Senator will permit the Chair to interject at this point, the Senator may have misunderstood my answer. The Senator from Mississippi has now returned to the Chamber, and he could yield him time.

Mr. TALMADGE. I thank the Chair. The Senator from Wisconsin was very generous to yield me additional time, and I thank him very much for it.

Mr. President, in addition to tampering with national defense, which I regard as the most important question before us, the Proxmire-Schweiker amendment would have the Senate prejudging Lockheed's legal case and preclude any possibility for a negotiated, compromise settlement.

Such an agreement between the company and the Air Force, if reached, would certainly be difficult for Lockheed

financially. But it would allow them to continue normally in business to complete their various military obligations, the C–5 program and others that are so vital to national defense. But negotiation is barred by the Proxmire-Schweiker amendment.

The amendment set up only two conditions under which the $200 million contingency fund can be spent to continue C–5A production. The first condition, the completion of proceedings of the Armed Services Board of Contract Appeals, is impossible to meet and the second condition is bankruptcy for Lockheed.

Other opponents of the pending amendment will deal more thoroughly with the issue of bankruptcy, but I would like to quickly review a few points. The only way that the sponsors of this amendment could guarantee that the C–5A would be produced under bankruptcy conditions would be to amend our Federal bankruptcy laws themselves.

The pending amendment refers to bankruptcy under chapter X, which means that the company would be reorganized so that, hopefully, it would continue to carry out production of the aircraft. However, a chapter X bankruptcy can proceed only if the trustee or the court determines that reorganization is feasible.

The Lockheed Corporation has already suffered a $290 million loss due to the C–5A program, and it may continue to suffer losses even if the $200 million contingency fund is provided. Faced with such a continuing unsatisfactory financial arrangement, the trustee might well determine that reorganization is not feasible. The result would be the liquidation of all the corporation's assets, with the termination of the C–5A program.

However, the most profound and chaotic effect of a bankruptcy proceeding would be its impact on the complex arrangements and contracts that Lockheed has with its vast array of subcontractors and suppliers. The corporation has approximately 35,000 first-tier subcontractors and suppliers holding nearly 185,000 open orders with Lockheed with a value of about $2,120 million.

Many of these subcontractors and suppliers are suffering the same kind of inflation and cost problems that have plagued Lockheed. Should Lockheed be forced into bankruptcy, many of these firms would no longer be able to secure credit to continue their business and to pay their own lower-tier subcontractors and suppliers. Moreover, any failure by Lockheed to make prompt payment or otherwise fulfill its obligations under its order would excuse these subconstractors from further performance. Hundreds of these suppliers furnish unique components which could be obtained from other sources only after great delay and expense, if at all.

The sponsors of this amendment are fond of comparing the C–5A program to the Penn Central bankruptcy. They like to point out that the Penn Central trains are still running.

Mr. President, there is a great deal of difference between running a train and building the largest, most complex airplane in existence. Should the complex structure of arrangements with subcontractors and suppliers be destroyed by bankruptcy proceedings, it is doubtful that we would ever obtain the C–5A airplanes which are so badly needed for our defense. If we ever would obtain them, it would be only after a great delay and a waste of millions of dollars of taxpayers' money.

The distinguished Senator from Wisconsin, although he is not a member of the Armed Services Committee, has a right to his own views. The distinguished Senator from Pennsylvania is likewise entitled to his own views, and he is a member of the Armed Services Committee.

However, the Senate must take note of the fact that the views of the Senators from Wisconsin and Pennsylvania are contrary to the overwhelming weight of evidence and judgment that has been presented to the Senate up to now.

Their views run contrary to those of the President of the United States.

Their views run contrary to the Secretary of Defense, who has utilized all the military expertise at his command to carefully study and analyze the need for the aircraft.

Their views run contrary to the Deputy Secretary of Defense, who has testified to the military need for the C–5.

Their views run contrary to the Joint Chiefs of Staff who also say the plane is required for national security.

The Armed Services Committee of the House of Representatives took a view opposite to that of the distinguished Senators from Wisconsin and Pennsylvania.

The House of Representatives voted overwhelmingly to the contrary. It regarded the military airlift capabilities of the C–5 as a prime defense item.

The Senate Armed Services Committee reported to the full Senate that the C–5A aircraft is an essential military need.

All of these have jurisdiction over the question. Each has carefully studied it, and acted after full investigation.

This indicates to me, as it should to the Senate, that the evidence is compelling on the importance of the C–5 program to national defense.

The proposal to wreck the C–5 program comes wrapped in a cloak of respectability. Everyone wants to save on defense expenditures. But it should be clear to everyone by now that destroying the C–5 is not an economy measure.

We cannot achieve economic security by cutting back on development of an aircraft that is vital to the Nation's Defense Establishment.

We cannot save the taxpayers' money by abandoning incomplete aircraft, valued at $1 billion, on a scrap pile. This would be like trying to trade a measure of economy for a billion dollars worth of waste.

In view of the alternatives, we have no real choice. We must build these airplanes because they are needed. To do otherwise would jeopardize national security. We must fund completion of the full complement of 81. To do otherwise would be fiscally irresponsible to the extreme.

For those who are concerned about reducing defense spending, let me suggest how savings can be affected. We can stop trying to police the whole world with American troops.

It has been estimated that bringing our troops home from farflung stations throughout the world could amount to savings of several billion dollars, or even go as high as between $15 and $20 billion.

The C–5 aircraft has been called "a major instrument of national policy." It is precisely that. It has opened up and made possible the concept of "remote presence" which would allow the United States to bring home several divisions of military personnel from overseas positions.

With the C–5, these troops could be maintained here in the United States on a combat-ready basis, and be speedily deployed by airlift should the necessity present itself.

Measured against this, the cost of acquiring, operating and maintaining adequate C–5 squadrons would be small in comparison with the tremendous savings that they could help bring about.

At the present time, the United States has some 15 to 17 treaties and commitments to about 42 nations throughout the world. For about 25 years since the conclusion of World War II, the United States has relied upon overseas bases, overseas armies, and sometimes uncertain allies in order to help preserve world peace.

We need only to look at the multibillion dollar balance of payments deficit year after year, the drain upon our financial and manpower resources, and the depletion of our gold reserves to see the results of this policy.

I do not say that it has not been a necessity. For many years following the war, U.S. presence was required. But I submit that this is no longer the case.

I contend that the maintenance of ground forces to honor treaties and keep the peace has virtually become a thing of the past because of technological capabilities for massive airlifts.

This after all is the mission of the C–5—to enable the United States to keep our commitments and to guard against aggression.

Through airlift, we can obtain these objectives. We can do so at great savings. We can avoid political difficulties and embarrassment in whch we often find ourselves by having too many American troops in too many foreign countries, where they are no longer needed nor welcomed.

We do not want and we should not be expected to forever maintain large contingents of American troops—like the more than 200,000 in Western Europe and some 60,000 in Korea—at stations all over the world. We do not want to dominate the affairs of foreign governments, or to become directly involved in their internal problems.

The crux of the "remote presence" concept is that we can keep our foreign commitments better and cheaper by bringing most of the troops home, and by providing for an airlift capability that could put them wherever they may be needed.

In the final analysis, the crucial issue is the unique capability of the C–5 to fulfill a defense need that exists today, and which will exist in even larger scale in the years ahead.

I hope that the Senate will reject the Proxmire-Schweiker amendment.

Mr. President, I yield the floor.

Mr. PROXMIRE. Mr. President, I yield myself 7 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for 7 minutes.

BOARD COULD ACT

Mr. PROXMIRE. Mr. President, last Thursday, August 20, 1970, at the conclusion of my prepared remarks, the Senator from Georgia objected to our amendment partly on the grounds that the first condition of our amendment was impossible to meet. The condition referred to by the Senator from Georgia provided that Lockheed could get the $200 million in the contingency fund if the Armed Services Board of Contract Appeals ruled that the Government owed them the money under the terms of their contract. To me and my cosponsors, this seemed a perfectly reasonable stipulation. On the other hand, the Senator from Georgia contended that the Armed Services Board of Contract Appeals could not possibly process this matter during the current fiscal year despite the fact that the matter has been before the Board formally since January 9, 1970. In support of this contention, the Senator from Georgia inserted a schedule of proceedings of the ASBCA which I would like to repeat here:

Rule 4 process: Air Force files on C5A compiled, transferred to Lockheed, documents and files studied by Lockheed, April to July of this year.

Discovery motions prepared and filed by both parties. Probable date of submission, September to October 1970.

Compliance with discovery requests will take about 60 days.

Study of discovery data and preparation for trial, about 60 days. The trial will take about 2 weeks to one month. Preparation of briefs will take about 60 days. Preparation of reply briefs, about 30 days.

Board deliberates and writes its opinion, about 60 days.

Time required, under the most optimum conditions, from date that discovery motions are filed, 10 months.

Until I studied this summary of the series of planned events, I simply could not understand why the matter which had been before the ASBSA for 7½ months had not already been dealt with.

Now I understand perfectly.

BUREAUCRATIC RIGIDITY

The schedule of proceedings of the ASBCA given to us by the Senator from Georgia is a perfect example of unthinking bureaucratic rigidity. I had suspected before that the Pentagon was stalling on this case. Now I am convinced.

Of course the ASBCA could take another year to process this case. They could take 2 years or 3, or more, under their routine. That is just the problem. This exceptional matter is being processed routinely through the lengthy, tedious bureaucratic system. This is being done despite the fact that Mr. Packard has said that the matter is to be given top priority.

I am convinced that Mr. Packard, the experienced and skillful Deputy Secretary of Defense, understands exactly how to accelerate this decision if he chooses to do so. To illustrate, let me quote to you from Mr. Packard's recent speech before the Armed Services Management Association in Los Angeles:

Every time we want something done in a hurry and want it done right, we have to take the project out of the system.

Quite obviously, if the Pentagon really wishes to accelerate the ASBCA proceedings, it would take the matter out of the routine, plodding system that has been established. They themselves understand this problem and understand it well, if I have read Mr. Packard correctly. Yet if the Senator from Georgia's information was correct, they plan to follow the same routine, the same leisurely and cumbersome procedures they usually do.

HOW TO SPEED UP

Later on in this same speech, Mr. Packard gave an example of how projects could be speeded up by cutting through the mass of nonproductive redtape in the Pentagon. I quote from Mr. Packard's speech:

In one case, a small, dedicated Air Force team developed the gunships which have been so successful in Vietnam. The Air Force decided to put this program into its formal system. About a month ago, I asked when we would be able to get some more gunships. The answer was in two years. That program is now out of the Air Force system and we will have more gunships in six months.

It appears to me that Mr. Packard and other high officials at the Pentagon know they can speed up lethargic and ponderous procedures. Apparently they just have not chosen to remove the Lockheed case from the ASBCA's laborious routine.

Clearly, any number of people could play at the game the ASBCA has mapped out for the Senator from Georgia. Any amount of time could be consumed. All one need do to have interminable delays occur in such cases as ASBCA's Lockheed deliberations is to let nature take its course. On the other hand, almost every segment of the Federal bureaucracy has demonstrated remarkable speed on occasion. I particularly remember the speed with which the Pentagon moved to commit the Government to the second buy of C–5A's on the last working day of the previous administration. The usually lengthy sequence of reviews, briefings, analysis, approvals and legal processes was telescoped from a typical period of several weeks or even several months to several days.

I have often marveled at the speedy handling of matters contrary to the taxpayers' interests, and the glacial movement of matters benefiting the people who pay the bills.

PROTECTS AGAINST DEFAULT

Mr. President, the second provision in the amendment stipulates that in the event Lockheed carries out its threat to default and goes into bankruptcy, the trustees could recover the $200 million on request, but it has been said that the corporation would disintegrate. Jobs would disappear. Production would stop.

I note that the same thing was said about Penn Central, that if they could not get the $200 million they said they needed to stay out of bankruptcy, the trains would not run, hundreds of thousands of people would be put out of work, the transportation system would be paralyzed, and there would be catastrophic economic effects.

What happened?

Penn Central did not move into bankruptcy. No one was thrown out of work. No one lost their jobs. No trains were delayed. The trains ran on time, or at least on their usual time.

GAO BEST EXPERT

The third point made by the Senator from Georgia related to the third condition, that the GAO should make a study. The Senator said that they could not possibly begin that study or might not be able to begin that study—might not—in the event the bill is delayed, and that it could be delayed, and that the House does not return until the middle of September.

We would have to have a conference and then the President would have to act on the bill and sign it. Only then could the Comptroller General act. But what is the actual situation? The GAO could not act tomorrow or today. He could begin this study on the basis of the determination of the U.S. Senate today on this amendment. The Comptroller General could certainly take action.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. Mr. President, I yield myself an additional 3 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for an additional 3 minutes.

Mr. PROXMIRE. Mr. President, certainly if the Senate of the United States passed this amendment today, the GAO could proceed with a preliminary study and preliminary action.

As I have pointed out, and as the Senator from Pennsylvania has pointed out, they have a great deal of information on the C–5A and on Lockheed. There are competent GAO personnel at the Marietta plant and have been for a long time. They are in a position to act swiftly, just as the Contract Board of Appeals can, if it wishes, act promptly.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. TALMADGE. Mr. President, the Senator on several occasions tried to compare the Lockheed case with the Penn Central case.

I point out that the Penn Central had no contract with the Government to build planes. They claim no damages from the Government and do not claim that the Government owes them anything. That comparison has absolutely no relation to this matter.

Mr. PROXMIRE. Mr. President, the point I was making was that the Penn Central went into bankruptcy. It was able to continue, as hundreds and hundreds of large corporations have been able to do. In the thirties we had many corporations go into bankruptcy and continue uninterrupted in production. When a large corporation goes into

bankruptcy there is no reason for the interruption of production or service to the public.

We want to prevent such a thing from happening.

Mr. TALMADGE. Mr. President, I point out that there is a vast difference between running a railroad and building the most sophisticated airplane on the face of the earth.

Mr. PROXMIRE. But it is not relative as far as bankruptcy proceedings are concerned.

Mr. TALMADGE. It certainly is. Furthermore, a large number of subcontractors are involved throughout the United States. Thousands of individual orders are dependent upon the integrity and the solvency of Lockheed.

As I pointed out in my remarks a moment ago, Lockheed has approximately 35,000 first-tier subcontractors and suppliers. If Lockheed goes into bankruptcy, the subcontractors and suppliers might decide that it was a bad contract and they would have legal grounds to avoid the contract. The trustee might want to stop production of the C5–A because Lockheed will continue to lose money on the contract. The Government would then lose billions of dollars on airplanes that had not been completed and would only be fit for junk.

Mr. PROXMIRE. Our amendment was designed in the event Lockheed went into bankruptcy. We have it already documented that they made that threat. Under those circumstances, we wanted to continue to have the production of the C–5A plant and we wanted them to operate.

We have provided that they can get the money if they need it. The GAO is certainly a competent agency. If the GAO finds that the company needs funds with which to provide the planes, they do not have to go into bankruptcy.

Mr. TALMADGE. Mr. President, the Senator's amendment does not purport to amend the Federal bankruptcy law.

Mr. PROXMIRE. No.

Mr. TALMADGE. Then, he could not determine what view the trustee in bankruptcy would take, because the bankruptcy law would control. The Senator would have to amend the bankruptcy law.

Mr. PROXMIRE. But the amendment does direct the Secretary of Defense to use his very extensive powers to keep the C–5A in production. I refer the Senator to lines 14 through 20 of page 4 of the amendment.

Mr. President, I yield such time to the Senator from Pennsylvania as he might require.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized.

Mr. SCHWEIKER. Mr. President, I would like to address myself to several additional points that have been raised in the debate on the C–5A amendment that the Senator from Wisconsin and I have offered.

The first point concerns the matter raised by the distinguished chairman of the Senate Armed Services Committee, who has been quite fair and certainly very equitable in the hearings and in the consideration of the amendment in the committee.

I would like to raise the question as to how much option and how much real opportunity for discussion there really is here.

I have here a statement from Deputy Secretary Packard. He made several statements in the committee indicating that $200 million is really needed, that it is a sort of open and shut case as to whether the $200 million is required or not. In his view, the $200 million is needed.

Let me quote from the statement of Secretary Packard before our committee on May 27. In the committee report he said:

> Under any possible solution of the Lockheed problem which I can see, the $200 million will be required for work which must be done for the remainder of fiscal year 1971.

There is no option, no discretion, no judgment on the part of the Armed Services Committees of the House or Senate.

Secretary Packard has said the money is needed. So all of this hocus-pocus about watchdog committees is irrelevant. The Secretary said that the money is needed, according to his definition.

He goes on to say, subsequently, on the same day:

> There is no possible solution to the Lockheed problem which will not require $200 million for payments for the C–5A in fiscal year 1971.

So there is no question about it. We are simply setting up a board that will rubberstamp Secretary Packard's determination that the $200 million is needed according to his own judgment. He said as much before our committee several times. So any discretion or judgment is simply contradictory to everything that Secretary Packard and the Department of Defense have said we want.

It is interesting to hear Secretary Packard's changing view concerning this $200 million. When he appeared before our committee on the 10th of March, he was then talking about the $200 million as a contingency fund. Back in March he was saying that if it is needed, we want to stand by this discretionary proposition on the $200 million only if certain contingencies related to Lockheed's fiscal problems arise—the contingency fund.

Now listen to what he said a few months later when he came back before our committee on May 27. He said:

> Under any possible solution to the Lockheed problem which I can now see, the $200 million will be required for progress payments for the work.

Two months ago it was a contingency fund. Now it is progress payments. I think we certainly might ask, "What kind of progress is this when we pay $200 million we don't owe? What kind of progress is that? There are no planes and no progress, but we are going to pay them $200 million for progress payments."

All I can say is that the argument I made a moment ago about the iceberg is proven by their own statements. Slowly but surely we are seeing the bottom of the iceberg.

First it is a contingency fund of $200 million and then it is progress payments.

I do not know what it will be next year, but I know that it will go up and the words will be a little more refined.

I have quoted from the statement Secretary Packard gave before our committee. Very interestingly in the committee record itself, the words "progress payment" are omitted. They knew they had a bad point, and they deleted those words. It is interesting that the change from the actual statement, the verbatim statement, and the statement delivered to all of the members of the committee contains that phrase, "$200 million will be required for progress payments."

However, if we read the sanitized version of the committee report—and this is a quotation on exactly the same point from Secretary Packard and relating to the same statement but with a little deletion—it reads:

> Under any possible solution to the Lockheed problem which I can see, the $200 million will be required for work which must be done for the remainder of fiscal year 1971.

There is not a word about progress payments. And that is exactly the way this illusory situation has been.

Mr. President, you see a little bit of it, then you see a little less of it, and then you see a little more. I think that despite all of that we do not have any restraint at all in this situation. The amendment is designed to serve several purposes, but one of the most important is to prevent a negotiated deal between the Government and Lockheed. There is evidence that that is what they are working on, that they are secretly negotiating and they are going to present a fait accompli fiscally and come to the committee and say, "We have agreed to settlement and adjudication with Lockheed," and we are going to have to pay millions more for the contract.

So contrary to what the Senator from Georgia indicated, who was bypassing whom? The negotiated deal would bypass everyone, and once again the Senate and Congress will be presented with a situation where we will be rubber stamping a fait accompli, something that has been accomplished, and we will go along and give them the $200 million because they need $200 million to settle the situation.

The only loophole this plugs up is that loophole whereby the executive department and Lockheed negotiated a deal and then present it to Congress and say, "This is it," whether it is $400 million, $600 million, $800 million or $1 billion, which has been hinted.

All we are trying to do is to keep everybody honest and above board so we will know the contract price and have a projection next year.

I cannot emphasize too much that after the Comptroller General determines whether they really need the $200 million we will have the option to prevent them from going into bankruptcy; after he has made that determination he is to supply a second report to give some fair estimate as to what the plane will really cost.

Congress and the Committee on Armed Services can make intelligent decisions based on realistic cost figures in this sit-

uation, realistic cost figures which have eluded us so far.

We have made no argument against the need for these planes. We have not questioned that. In spite of some severe technical difficulties that they are having, including a wing that will not fly for the job required, we have not even questioned that. So we are not arguing merits of that particular technical question, and maybe we should make that argument, but we are not.

We are saying it should be on the basis of a reasonable approach, on the basis of doing something fairly so everybody knows what the deal is other than just big government and a big contractor sitting down and working out a deal secretly and handing it to the taxpayers.

To me this is a very important precedent we are trying to establish. If we do not succeed and there is a negotiated secret deal, and it is given to the Department of Defense and our committee as a fait accompli, we will again have totally abdicated our responsibility and walked away from our responsibility in terms of legislative oversight on these contracts.

We cannot possibly assume our responsibility under those conditions.

So our amendment is merely designed to protect the taxpayers, to pull the water away from the rest of the iceberg and show everybody what it is, and let Congress work its will after it has the facts and not present a fait accompli or a fiscal coup d'etat in this situation.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I am glad to yield 5 minutes to the distinguished Senator from Tennessee.

The PRESIDING OFFICER. The Senator from Tennessee is recognized for 5 minutes.

Mr. BAKER. Mr. President, I thank the Senator for yielding to me for 5 minutes so that I may address myself to a point or two in the amendment offered by the Senator from Wisconsin (Mr. PROXMIRE) and the Senator from Pennsylvania (Mr. SCHWEIKER), especially on the bankruptcy aspect of this situation. It might be appropriate to consider for a moment, not in great detail, the purpose of the Bankruptcy Act applicable to this situation. The statement is made that if Lockheed chooses to go into bankruptcy, they get the money.

First of all, as I read the amendment, section (2) provides that in case of voluntary or involuntary bankruptcy, they can get the money.

The statement is made that this would in no way prejudice the interests of the United States, as I understood the distinguished Senators to say, or the production of these airplanes in the pipeline, or the 20,000 jobs at the plant in Georgia, or the thousands of jobs around the country, or the procurement of this defense system.

That is why I suggest we consider the provisions of the Federal bankruptcy statute because the Federal Government, including the Department of Defense, will only be a party to that proceeding by intervention.

The bankruptcy statute provides that the prime responsibility of the trustee in bankruptcy is not to protect the Government of the United States or any intervener, but rather, the creditors and the stockholders of that company; and to conserve the assets of that corporation so there will be a maximum realization of those assets, to protect them, and to pay the remainder to the stockholders. The Bankruptcy Act was to provide for arrangement for payment of creditors and to provide conservation of resources for payment to the equity owners, the stockholders.

It seems to me if we are to judge the second paragraph of this amendment, we must do it on the basis of whether we are going to protect the interests of the United States by preserving that company as a going concern, or whether we are going to provide for protection of the creditors and stockholders.

I believe I will choose to protect the best interest of the United States.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. BAKER. I yield.

Mr. PROXMIRE. The Senator from Pennsylvania (Mr. SCHWEIKER) and I are very anxious to keep them out of bankruptcy. But we say if they go into bankruptcy—and they have threatened to go into bankruptcy—we want to do all we can to protect the interests of the U.S. Government.

We provide another condition which states they will be given the money if the Comptroller General says they need it to complete the plane.

Mr. BAKER. Mr. President, how much time do I have remaining? I think I was yielded 5 minutes by the Senator from Mississippi.

The PRESIDING OFFICER. The Senator has 2 minutes remaining.

Mr. BAKER. Mr. President, with reference to paragraph 1, the point was made that by removing this procedure, that is, review of this contract, from the system, the bureaucracy, it could be expedited, and the example of Under Secretary Packard's efforts to do so in the case of the gunships was cited. That is true. I doubt there is any greater champion of government efficiency or anyone who tries to keep this nameless bureaucracy on its feet, than the Senator from Wisconsin (Mr. PROXMIRE). I am with him. I think he is right.

But undoubtedly we are overlooking one other fact. The Senator from Pennsylvania (Mr. SCHWEIKER) said to "pump the water away from the iceberg" or get this matter away from the bureaucratic maze—and this might expedite that portion of the procedure—the Department of Defense can control timely review by the Board of Contract Appeals.

There is no way I know of unless there is a modification of the Judicial Code that you can deprive either party of the right to appeal to the Federal judiciary. Unless that is done, either of them would have the right to appeal, and there is no way we can change that.

Mr. PROXMIRE. I yield myself 1 minute.

The answer is that if the Board of Contract Appeals finds in favor of Lockheed, on the basis of our precedents there would not be any appeal, and Lockheed would get the money. If they find against them, there would be time for an appeal.

It is true under any circumstances that if the Board of Contract Appeals finds against Lockheed, it would take substantial time to appeal the case, but if they have it coming, they would get it right away.

Mr. BAKER. They would. That is like saying if you win a lawsuit you are in good shape; if you lose, you are sunk. That is right, because if you——

Mr. PROXMIRE. If they lose the lawsuit they are not sunk. This is such a modest amendment that even if they do not have a legal leg to stand on and no money is owed, if the Comptroller General finds this money is necessary to build the C–5A, they will get it.

Mr. BAKER. Mr. President, will the Senator from Mississippi yield me 2 additional minutes so I may speak on the point just brought up by the Senator from Wisconsin?

Mr. STENNIS. I yield 2 minutes to the Senator from Tennessee.

Mr. BAKER. This does, in fact, bring us to the third proviso of the amendment, and that is the determination by the Comptroller General that the money is needed.

I think it probable that the Comptroller General could very quickly act in the matter. I think it is probable that the Comptroller General, as the Senator from Pennsylvania (Mr. SCHWEIKER) has suggested, would find that the money is needed, if that is the test.

The test in the third proviso, for the review and determination of the Comptroller General, does not tell me what the conditions precedent are that the Comptroller General must find in order to permit the disbursement of the $200 million contingency fund. If it means it is needed, as we have discussed, then I doubt that there would be great difficulty with time or anything else; but if it means the balancing of equities, the judgment of the interests of the Government and the need of the airplane, and the total concept of the defense needs—if that is what is meant by "needed"—it may take years before that is concluded.

I have studied the provisions of this amendment carefully. I am in frank admiration of the sponsors of it for taking this approach rather than deleting the money. However, I feel the intendment of the three conditions precedent under which this money might be made available to Lockheed requires one of two things, neither of which I can support: that is, the stopping of the construction of the rest of the planes, or a petition for voluntary bankruptcy by Lockheed, neither of which would be in the interest of the United States. Our duty now is to make good of a bad situation.

Mr. STENNIS. Mr. President, I yield 4 minutes to the distinguished Senator from Missouri (Mr. SYMINGTON).

Mr. SYMINGTON. Mr. President, many years ago I became convinced that military airlift was important to the security of the United States, especially from the standpoint of conserving our resources and at the same time maintaining an entirely adequate security.

Under the theory that the British have adopted, a central reserve, as against having thousands of bases all around the world, we need this C–5A plane.

No one has more respect than I, as I have repeatedly stated, for the mighty fine work that has been done by the distinguished senior Senator from Wisconsin in pointing out where waste could be eliminated in many aspects of our Federal budget, especially the military budget.

Therefore, it is with regret that in this case I must disagree with him and my distinguished colleague from Pennsylvania, with whom I have the honor of serving on the Armed Services Committee.

As I see it, one of the most important things we are talking about is psychology, and perhaps as much as anybody in the Senate I have had some experience in industry. Right now, if we do something when, in effect, could destroy the morale of this corporation, or even seriously impair it, we may be extending the length of time, by many months if not years, necessary to obtain planes I believe important to our security.

The United States today, in my opinion is heavily overcommitted, all around the world. Therefore, one of the chief reasons why for years I have been hoping we would develop a plane comparable to the C–5A is that I believe it will result in our being able to reduce many of the thousands of installations that are costing the American people billions of dollars every year.

I am glad to see this amendment to the proposed amendment, and believe it improves it. On the other hand, there are thousands of people involved in producing this plane. We need it. I would hope, therefore, that we continue with a program that does not impair their morale. If that happened, the losses could be far greater than any possible saving under this amendment.

Accordingly, I shall vote against the amendment of my distinguished colleagues, the able senior Senator from Wisconsin and the able junior Senator from Pennsylvania.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from California (Mr. CRANSTON).

Mr. CRANSTON. Mr. President, this amendment raises questions of critical importance to our national defense and our national economy.

There have been serious problems in connection with the C–5A program. Mistakes have been made at Lockheed and mistakes have been made at the Pentagon. Perhaps the most fundamental mistake of all was the adoption of the total package procurement contract procedure. This contract concept was devised by the executive branch of the U.S. Government—not by Lockheed. It did not happen under the present Republican administration. It happened under the preceeding Democratic administration. This unrealistic procedure was tried for the first time when the C–5A contract was let. Hopefully, it will be the last time.

Without question, the C–5A program has been a costly, wasteful mess. The question now is how to clean up the mess without creating even more of a mess in the process.

I believe we need the C–5A. This is at issue since the amendment threatens our Nation's ability to acquire it. The C–5A is one of the few weapons systems that can help us disengage from forward military bases around the world while at the same time give us the ability to move back in quickly if the need arises. This concept of remote presence will increase national security and, in time, save millions of dollars.

It will eliminate the balance-of-payments drain caused by our maintaining large numbers of American troops in Europe, Japan, Korea, and elsewhere around the globe. It will enable us to reduce our overall military budget and cut excessive military spending, which I strongly oppose.

I am also deeply concerned by the adverse effects this amendment could have on the national economy and on the production of other needed weapons systems.

The adoption of this amendment will put the U.S. Senate in the position of clouding Lockheed's prospects of corporate survival while threatening to create a tremendous waste both in manpower and in dollars represented by the incomplete C–5's still in the pipeline.

Many statements are made about the certainty of keeping planes coming and the certainty of keeping the tens of thousands of employees working if this amendment is adopted. These statements about certainties must necessarily be loose and fuzzy, the only thing certain about threatened bankruptcy is its uncertainty.

The Lockheed Corp. is by far the Nation's largest defense contractor. Its other divisions include the Missiles and Space Co. in Sunnyvale, Calif., where the Polaris and Poseidon missiles and the Agena military satellites are built—the Lockheed-California Co. in Burbank, Calif., where the P–3 and S–3 antisubmarine aircraft and the company's new commercial liner, the L–1011, are built—the Lockheed Electronics Co. in Plainfield, N.J., where the all-important Mark 86 gunfire control system is built for the Navy—the Lockheed Propulsion Co. in Redlands, Calif., where a new technological breakthrough in rocket motors has been achieved for use in the Air Force-Boeing SRAM missile—and the Lockheed Shipbuilding and Construction Co. in Seattle, Wash., where many ships are under construction for the U.S. Navy.

If this amendment forces bankruptcy on Lockheed, it is all these and more—not just the C–5 producing division in Marietta, Ga.—which will go under.

The first uncertainty out of bankruptcy is the uncertainty of whether the trustees under bankruptcy would be required by bankruptcy laws to complete the Government contracts now held by Lockheed, such as those programs mentioned before, and hundreds more. It is true that the Bankruptcy Act does not permit rejection of contracts held by the corporations which are "in the public authority." But there is no clear judicial ruling as to whether this exception includes Government prime contracts.

But even assuming the current Government contracts could not be rejected—and this seems to be where the preponderance of legal opinion lies—if the performance of these contracts appeared to be excessively onerous to the corporation, the trustees or the court might determine that a successful reorganization of the corporation was not feasible. In this event, the result would be liquidation of the corporation's assets.

So the first point made by the sponsors of the amendment—that it is a "keep building the planes" proposal—is hardly an accurate description of it. If this amendment passes, we may end up with economic chaos and no C–5A's at all.

But this is by no means the only uncertainty.

One of the more important uncertainties under bankruptcy is the sanctity of the corporation's collective bargaining agreements with union organizations. All such agreements could be subject to rejection by the trustees, which could void most or all of the protections the workers have under those hard-won agreements.

Another very important uncertainty would be the availability of many buildings and facilities leased by Lockheed, with the leases automatically terminated in the event of Lockheed bankruptcy. These include, for example, facilities that are essential to the Poseidon missile program and to the highly classified and highly important Agena satellite program.

Still another effect which is not so uncertain, according to eminent legal authorities, is the adverse effect on Lockheed efforts to get new Government business. If Lockheed is reorganized under bankruptcy, it then could not meet the financial requirements contained in the armed services procurement regulations. Lockheed would be declared "not responsible," and would be ineligible to bid on or receive any new defense contracts. That is a fairly drastic result, I would say, for a company that has fought for and won first place among defense contractors for most of the last 10 years.

And, of course, it would be a disastrous result for the 87,000 workers who hope to continue their employment with Lockheed, and with the benefits of seniority, retirement plans, and so on.

More is involved than the possible bankruptcy of a single company. Bankruptcy for Lockheed would affect more than that company's 87,000 employees and 50,000 stockholders—Lockheed has 35,000 first-tier subcontractors for all its programs. Some 25,000 of these subcontractors are small businesses, employing less than 500 people.

Subcontractors of Lockheed hold contracts totaling $2,120,000,000, of which $465,000,000 are held by those small businesses.

The effect of Lockheed bankruptcy on these subcontractors is almost incalculable, according to legal authorities. The rights of a group of bankruptcy trustees to alter subcontractor relationships could become a chaotic cloud over the more

than 185,000 subcontracts now in force with Lockheed. The ability of the subcontractors to finance their work-in-progress through loans or equity capital could be severely curtailed by the relative financial irresponsibility of the prime contractor. The possible lack of willingness of some subcontractors to continue their share of the production with even a short delay in progress payments during the initial period of bankruptcy reorganization could endanger the whole program.

Some subcontractors have the automatic right to "walk" if the prime contractor is in bankruptcy, and so the whole team effort could be lost.

All this constitutes a matter that cannot be dealt with lightly or carelessly, or without long detailed studies of what the social, economic, and political consequences for the country will be.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield 2 additional minutes to the Senator from California.

Mr. CRANSTON. The C–5A is not a local issue. I oppose wasteful and counterproductive spending in the guise of national defense no matter where the affected industries are located, in California or elsewhere. I have consistently voted against the ABM and other weapons systems I believe to be unproven and unnecessary even though major components are built in California. In fact, it is virtually impossible to find any major sophisticated weapons system which is not built, in part, in California. Yet my position in favor of reducing our excessively high level of defense expenditures is well known.

In a like vein, I am opposed to the development of the SST, in which California's aerospace industries have a major stake. I regard the SST as a dangerous threat to our environment which should never be allowed to get off the drawing boards, let alone off the ground. Moreover, I oppose adding still further to our long list of Government subsidies to commercial interests.

If a commercial venture like the SST cannot be economically developed and produced by private industry, it should not be developed and produced at taxpayer expense.

The C–5A involves enormously important national interests. Too much uncertainty already surrounds the fate both of the C–5A and the Lockheed Corp. At a time like this, when the Nation is in an economic recession with high unemployment, the Government dare not risk deliberately sinking a giant corporation which could take hundreds of other businesses and thousands of jobs down with it.

It is imperative that we make certain that these planes are delivered to the Government.

This amendment is undoubtedly well intentioned. But its practical effects could be chaotic militarily and devastating economically. I urge its defeat.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 8 minutes to the Senator from South Carolina. Again I regret that I do not have more time.

Mr. THURMOND. Mr. President, I would like to take a few minutes today to discuss briefly the C–5A program that is included in this year's authorization request. The budget request for this program totals $622.2 million identified as follows: $344.4 million for unfunded prior year production commitments; $66.2 million for initial spares; $11.6 million for research and development; and $200 million contingency funding. Mr. President, the principal item with which we are faced in this program request is the $200 million identified as a contingency requirement.

With this introduction, I would like to present some of the pertinent facts relating to this program that the Armed Services Committee considered in approving this budget request. I would first like to say, Mr. President, that the committee went deep into this program and studiously studied the issues. In fact, the committee called the Deputy Secretary of Defense over on three different occasions to discuss matters on this program. I would like to emphasize, as we are all well aware, that varying inputs are considered in making decisions on these major weapon systems and that cost figures can be added to different totals, depending on the method of presentation and the data included. This is to say, that any input on its own merit is not right or wrong, but must be considered in the overall decision and that is what the committee has attempted to do. The committee has also tried to present cost data that is consistent with the data presented in our quarterly reporting system and consistent with data used in hearings that the committee held last year on this program.

To briefly summarize the initial cost data on this program, Mr. President, the original estimate of cost for a projected 120 aircraft at the time of contract award in October 1965 was $2.985 billion. At hearings held by the Armed Services Committee last year, the cost estimate had been increased to $4.348 billion or an estimated cost growth of about $1.363 billion. These costs did not include an estimated $855 million for support equipment for 120 aircraft. The cost figures that are currently being considered are for only 81 aircraft and on a comparative basis are estimated at $3.463 billion or a cost growth of $1 billion over the original estimate for a like number of aircraft. This figure also does not include about $747 million of support equipment that is being estimated for these 81 aircraft. I want to say also that as we now understand it some additional costs may be added when a revised delivery schedule is finalized and when the cost to resolve current technical problems is determined. These estimated program costs do not consider the possible cost to produce the aircraft nor the litigation that has arisen on this program. Current estimates indicate that the cost to produce the C–5A aircraft that will be incurred by the prime contractor is about $648 million more than the contract ceiling costs estimated by the Air Force and included in the cost figures that I have presented.

Mr. President, with regards to the performance of this aircraft, I am aware of certain wing structural problems and developmental problems with the avionics and landing gear and am following the progress in these areas closely. I do not intend to put off lightly these technical problems, although some of the areas seem normal in development of an aircraft of this size. We have seen no indication to date, however, that would preclude the aircraft from meeting its basic mission requirement.

Mr. President, the original scheduling of the Air Force planned a rollout of the first aircraft in February 1968, the first flight in June 1968, and delivery of the last of 120 production aircraft in April 1972. While the rollout of the first aircraft and the first flight were on schedule, the remaining delivery schedule has slipped. The Air Force is currently estimating a final delivery of 81 production aircraft in February 1973 although this has yet to be finalized.

Now, Mr. President, I would like to discuss the funding for this program briefly as it relates to the financial problems of the prime contractor. Through fiscal year 1970, the Congress has authorized and appropriated about $3.4 billion for the development and production of C–5A aircraft.

As it now appears, the Air Force will receive about 17 complete aircraft plus other aircraft or material in various stages of completion for this money. If production is to continue with fiscal year 1971 funding of $344.4 million, an additional 13 aircraft can be completed through December 1970.

The $200 million budget request for contingency funding is intended for continued production of aircraft during the remainder of fiscal year 1971. It is estimated that an additional 12 aircraft can be completed during this period. Mr. President, without the fiscal year 1971 funding, we will receive very few aircraft and a large amount of unfinished work in process for our effort and money.

I believe, Mr. President, that it is proper to say something briefly here about the contractual litigation on this program without entering any judgment on the merits of this litigation. As I understand it, the prime contractor has raised several issues regarding possible ambiguities in the contract that would reflect on the amount of reimbursement the contractor would receive. The prime contractor has requested the Department of Defense to provide interim financing on this program until the litigation is settled because the contractor does not have the financial resources to continue the program while awaiting a legal determination. I understand that the issues concern over $600 million.

Mr. President, I don't think this presentation would be complete without a few words on the need for this aircraft. Last year the Senate had a fine debate on the need for the four squadrons of 81 C–5A aircraft and I believe, at that time, we firmly established a need for these planes when all things were considered.

To summarize this need, Mr. President, the C–5A is intended as an airlift aircraft designed to provide a fast reaction capability to airlift combat or sup-

port units to meet worldwide commitments. Since its inception, this aircraft has been primarily intended to provide the airlift capability for combat and support equipment outsized by dimension or weight to the present or planned airlift aircraft capability. This equipment, such as tanks, self-propelled howitzers, helicopters, et cetera, and in the case of an armored division, constitute about 75 percent of the heavy firepower. The C–5A aircraft is intended for use in complement with other airlift and commercial aircraft in meeting the rapid deployment requirements of the Department of Defense. We are all aware of this deployment requirement that has been discussed many times in connection with proposed reductions of overseas forces. The C–5A aircraft plays a vital role in providing the capability to meet the deployment requirements.

This leads us, Mr. President, to the main and only issue in this authorization request for the C–5A program that can be raised—the $200 million contingency fund. This issue was raised in the Armed Services Committee deliberation on the C–5A program and some very good data was presented. Considering all aspects of this issue, however, the committee approved this amount because there was no other reasonable solution that could be presented that would meet the airlift requirements of the C–5A at the estimated cost to complete this program. I can assure you that all issues relating to this difficult matter were discussed in the committee's deliberation. In fact, in approving the budget request for $200 million, the committee placed specific restrictions on any use of these funds.

In addition, the committee stipulated that the funds cannot be obligated until the Department of Defense presents a plan to resolve this issue in such a way to best protect the public's interest for approval of the House and Senate Armed Services Committees. As you can see, Mr. President, the committee did not intend in any way that this would establish a precedent or "bailout" for the contractor as has been reported in some media. The committee did consider, however, the current and future potential investment in this program and weighed this heavily against the requirement for the aircraft.

The committee arrived at the only possible solution to meet this airlift requirement and approved the funding request pending presentation of a reasonable plan by the Department of Defense. I urge the Senate to also consider the present and potential future investment in this program in their deliberation and to also consider the alternative ways of meeting the airlift requirements associated with the rapid deployment necessary as a deterrent capability in meeting our commitments.

Mr. President, again, the many ramifications of the C–5A program are being subjected to intense but justified scrutiny by Senators from both sides of the aisle. The distinguished Senator from Wisconsin and the distinguished junior Senator from Pennsylvania have submitted an amendment to restrict the use of the $200 million in contingency funds as it relates to continued production of C–5A aircraft. According to news releases I have seen, this amendment has been referred to as a keep-building-the-planes proposal.

Mr. President, I intend to devote the next few minutes to voicing my objections to this proposed amendment. I will base these objections on two prime points: First, the amendment cannot possibly achieve its stated purpose, due to the prime contractor's apparent need for the contingency funds to continue production beyond December of this year; second, the restrictive nature of the amendment eliminates any flexibility that the Department of Defense might have in restructuring the contract with the Lockheed Corp.

I am not the first to recognize the deficiencies in this amendment. My able colleague, Senator TALMADGE, addressed this topic most forcibly on the 12th of August. I commend the distinguished Senator for his discerning analysis and penetrating comments. I will tailor my comments in light of the auspicious start provided by my able friend and colleague.

Mr. President, as I see it, the proposed amendment would not only create another veil of confusion around the C–5 contract dispute, but more importantly would place a completely unfair and unrealistic time constraint on the adjudicative process now underway within the Armed Services Board of Contract Appeals. The language of the amendment, as I understand it, limits the use of the $200 million to three situations. The first situation requires the settlement of the outstanding contract disputes which exist between Lockheed and the Air Force. Specifically, the language of the amendment requires a decision in favor of Lockheed by the ASBCA or by a court of law. The second situation stipulated in the amendment is one wherein Lockheed has been forced into bankruptcy or reorganization. The third situation would require the General Accounting Office to decide on Lockheed's need for the money.

Now, forestalling for the moment consideration of the consequences of the second and third situations, let us focus on the unreality of the first situation identified in the proposed amendment. I emphasize the deficiency in this element of the amendment, because we are completely without precedent in presuming that the Armed Services Board of Contract Appeals will reach a decision on the complex C–5 dispute by the end of this year. Furthermore, it is not inconceivable that the adjudication of these issues could reach a higher level of appeal, namely the court of claims or even the Supreme Court. It has been estimated that the entire process, including the appellate procedures, could take as much as another 3 years. So, in effect the first situation outlined in the proposed amendment is an illusory objective unattainable by the time that Lockheed apparently needs the funds.

Therefore, since it is highly unlikely that a judgment on the contract dispute can possibly be rendered in time, the only operating sense of the proposed amendment is contained in the second and third provisions. The second provision, bankruptcy for Lockheed, presents several objections. First, by passing the amendment, the Congress in effect could be voting in favor of the bankruptcy or reorganization of the Lockheed Corp. Second, the trustee under bankruptcy is not obliged to protect the best interests of the firm's customer, in this case the Government. To the contrary, the trustee's duties are to protect creditors and then stockholders. Therefore, under this second provision we would have no assurance that the trustee would "keep building the planes."

The third situation, submitted only this morning, to subject the $200 million to a review of Lockheed's financial needs by GAO before November 15, 1970, is redundant and an unnecessary expense of taxpayers' moneys. As pointed out by Secretary Packard during May and June in testimony before the Armed Services Committee, the Department of Defense has already made a comprehensive analysis of Lockheed's financial condition and its ability to obtain necessary financing of the C–5A programs. This DOD analysis clearly indicates that Lockheed does not have the financial capability to support continued production of the C–5A pending the settlement of disputed issues. I find it hard to justify the use of GAO resources simply to verify something we already know.

I believe it should also be pointed out that language in the current bill presently before us provides for continued GAO review of all moneys flowing to Lockheed out of the $200 million contingency. Further, after each review by GAO a report is to be submitted to the Congress on the status of the $200 million contingency. I feel this continued GAO review, as well as the other controls in the present bill, provide sufficient safeguards on the $200 million to protect the public interest and prudent use of the taxpayers' funds.

Now, Mr. President, I do not wish to dwell too long on the inadequacies of this proposed amendment, without providing specific rationale as to an alternative course of action. The action I propose is in keeping with the spirit of the Proxmire-Schweiker amendment. In fact, it not only abides by the intent of their adopted slogan, "keep building the planes"; but also provides the foundation for an orderly continuation of the C–5 procurement program.

My proposal is that we should allow the Department of Defense sufficient latitude in their efforts to restructure the contract with Lockheed. Now, let me be perfectly clear in this regard. The restrictive language in the bill reported by the Committee on Armed Services requires the Secretary of Defense to have the approval of the appropriate committees from both the House and Senate before the contingency funds can be obligated. This restriction provides the Congress the appropriate degree of control in these contractual matters. It serves notice to both the Executive and to Lockheed that the Congress fully intends to abide by its responsibility in protecting the taxpayers' interests.

Now, when this restriction is in effect, it seems to me that the Executive should be allowed to pursue every potential

avenue of negotiation which might result in a satisfactorily restructured contract and, above all, permit the delivery of the much needed aircraft.

Mr. President, I hope the Senate will defeat this amendment.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I certainly thank the Senator from South Carolina, and wish I had more time to give him.

Mr. President, I thought perhaps the Senator from Wisconsin wished to use some time at this point. We are down to 14 or 15 minutes.

Mr. PROXMIRE. Mr. President, how much time remains on both sides?

The PRESIDING OFFICER. The Senator from Wisconsin has 21 minutes. The Senator from Mississippi has 14 minutes.

Mr. PROXMIRE. Mr. President, I yield myself 1 minute. I say to the Senator from Mississippi that I have discussed this with the Senator from Pennsylvania (Mr. SCHWEIKER), and he and I are pretty much ready to sum up, unless the Senator from Pennsylvania has another short statement he would like to make before his summary.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield myself 4 minutes.

I have given an outline of the issues here and of the committee's position. I do not need to repeat it simply for the sake of repetition. I want to refer to what the Senator from Pennsylvania said about the $200 million.

Yes, it is now a fact that this $200 million will have to be used. That is why we put it in the bill—in order to recover on what we already have spent. The question is, How is it going to be protected and how is it going to be used? That is why we put this restrictive language in here.

Contrary to our desires, we assume the responsibility of requiring a plan to come back to the two committees, whereby we would have to assume additional responsibility.

This is an amendment offered against the $200 million. I think it is admitted that it will have to be spent—that much, anyway. I am frank to say that I think it will probably be more than that, in order for us to recover on what we have already spent. But what I am concerned about is that we not stop the wheels until all the processes can be gone through to determine which one is right about this controversy between the Air Force and the contractor, under the contract, that we have the safeguards, and I believe we do have them.

I mention the one that is not written in, and that is the responsibility Mr. Packard assumes, where he has made special assumptions for us before, he has come through in a mighty fine way—and we have it written in here, too—that this money must be spent in such a way as not to become commingled and not to be used for any purpose but the product in which the Government has a stake. Unless that can be done, and Mr. Packard can recommend a plan to us that does, this money is not going to be spent.

I want to say this again to the Senate: This provision that we already have in the bill, which now would be substituted for by something else, is the tightest statutory language ever drawn for a defense contract with respect to precluding any possible intermingling or diversion of these funds to other programs of a contractor. The committee got that language up under its own responsibility, coupling it with their special responsibility under the other amendment, coupling it with Mr. Packard's special responsibility on his promise, and coupling it with the fact that we already have the authority to call on the General Accounting Office. For my part, they need not expect to escape being called on unless we are satisfied with this plan.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. I yield the floor.

The PRESIDING OFFICER. Who yields time?

Time is running equally.

Mr. STENNIS. I yield 4 minutes to the Senator from Tennessee.

Mr. BAKER. Mr. President, I thank the Senator from Mississippi for yielding so that I can continue with remarks I started earlier in this colloquy on the pending amendment.

As I pointed out at that time, the three conditions precedent, it seems to me, are not really in fact conditions precedent to obtaining disbursement of this $200 million contingency fund, but, rather, conditions that will lead inexorably to bankruptcy of Lockheed or the cancellation of the production run of the C–5A. That is the net effect of the amendment, in the humble judgment of the junior Senator from Tennessee.

Mr. President, I do not serve on the Armed Services Committee. I have no vested interest in the production of this airplane. So far as I know, no major parts or assemblies are manufactured in my State. I am trying to take—and I believe I am taking—the broadest view of the importance of this weapons system to the formulation of the first genuinely new foreign policy that the United States has attempted to formulate since the postwar era. Some are not aware that this we are doing, but we are doing it anyway.

So if we are trying to examine whether we continue to maintain a presence in the Asian crescent or in Western Europe or in the Middle East, and if so, how, the C–5A is a weapons system that becomes vitally important to that, because it gives us the flexibility to move with strength and to maintain a substantial presence for the United States, in its peacekeeping efforts, in any part of the world, without maintaining extremely costly fixed bases, without maintaining the irritant of American troops on foreign soil.

It seems to me that it is vital to our flexibility in determining how and how soon we can disengage from wars such as the war in Southeast Asia and Vietnam and how we can successfully come to terms with our responsibility as a great, moral, and free nation without committing millions of troops to positions of permanent strength overseas.

I have flown the C–5A, not as an accomplished pilot. Having some experience in this field, I wanted to see firsthand what sort of weapons system this was. I wanted to see the hardware. I was permitted to sit in the right seat of the biggest airplane on earth and to see it perform. The fact alone that it is a highly complex and sophisticated system is not justification for continuing our production of this machine, but it is nonetheless an impressive array. The fact that it is a marvelous performing airplane is not a justification for expending this $200 million in contingency funds, but it is a marvelous performing machine, the largest airplane on earth. The fact that it will permit us to have the mobility for the transport of troops, with front and rear loading, in a kneeling position, is not justification in itself for authorizing, appropriating, and expending under certain circumstances the $200 million contingency fund. But they are important items in our consideration.

The single most important point is this: There is a need for a strategic weapon of this sort. There is a need in the new and evolving foreign policy of the United States for a machine of this type and design. There is no other machine of this type and design in the world; and if we stop, if we do not authorize the continuation of the full production run on the C–5A, we will have to start over, because there is no other airplane that can fulfill this need.

If is unfortunate that there are cost overruns. They are due to many factors, and I do not defend them. The fact is that we are faced with a bad situation, but we necessarily must have this sort of weapons system if we are to have the flexibility to respond and the flexibility of defense that I think we all need.

I do not believe it is in the best interests of the United States to adopt an amendment which creates three untenable alternatives: One, to test the determination and review of the propriety of the paying of this contingency fund with the Board of Contract Appeals and a review through the judiciary; two, for the voluntary or involuntary bankruptcy of Lockheed, in which event the responsibility of the trustee in bankruptcy will be to conserve the assets and protect the debtors and the stockholders, not the Government; or three, until we create the situation where the Comptroller General has to pass on whether we need to pay the money.

I believe that we have got to face up to the fact that this is an expensive weapon system. We have been unfortunate in the cost overruns, but the cheapest thing that can be done now is to continue with the present production run.

Mr. STENNIS. Mr. President, I have only 10 minutes remaining. One of the speakers is delayed for some reason.

Mr. PROXMIRE. I will yield myself some time, and then shall yield to the Senator from Pennsylvania, but just let me answer the Senator from Tennessee who has just spoken, and also the Sen-

ator from Missouri and other Senators who have spoken about the great advantages of the C–5A.

IRRELEVANT POINT

Mr. President, that point is totally irrelevant. It has nothing to do with this amendment. There is nothing in this amendment that would foreclose the C–5A from being produced.

All we are trying to do by this amendment is to protect the taxpayer. In addition we provide additional circumstances not provided in the bill for the funds to be paid. That is without this amendment if the Lockheed Co. went into bankruptcy, there would be no provision in the bill that the trustees could call on the Federal Government for the money necessary to continue production of the C–5A.

We provide for that in this amendment.

No one—in spite of the fact that some of the ablest Members of the Senate are on the other side of this—has argued that the GAO is incompetent to determine financial capability. If the GAO is competent and finds that this money is needed in order to keep the airplane in production, they get the money.

What could possibly be fairer than that?

It would seem to me that we have tried hard in this amendment to meet the objections which have understandably been raised against those Senators—there were five members of the Armed Services Committee of this body who said that we should cut out the $200 million, period.

That was the position of five members of the committee who were familiar with the problem, and sat through the hearing, and concluded that we simply should authorize this $200 million at all.

Mr. STENNIS. If the Senator will yield briefly on that, those members do not say that now. There is no amendment to this——

Mr. PROXMIRE. No, there is no amendment on that, but they said that in the vote on the Schweiker amendment in committee.

Mr. SCHWEIKER. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. SCHWEIKER. I should like to state that that amendment offered in committee was much more arbitrary, much more inflexible, and much more rigid than what we are doing here. That was strictly to delete the $200 million, period.

Thus, with the three contingencies we allow, with the $200 million being paid, we actually have picked up some support. This is a most reasonable amendment that will still protect the taxpayers, yet not give a blank check on a Government contract, with no questions asked.

C–5A PROGRAM CALLED MESS

Mr. PROXMIRE. To listen to the opponents of the amendment, one would think that this was just a routine procurement of an important weapons system and that no problems have developed. Secretary Packard was right when he spoke on Thursday night and singled out the fact that the C–5A was the most scandalous and serious procurement problem in a situation which he called a mess, in which he said that we have made serious blunders, spent far too much money, overorganized, and overspent.

Under these circumstances, it seems to me that the Senate is bound to take some action to protect the taxpayers.

NEED INDEPENDENT FINDING

With the greatest of respect for the committee, I would say to the Senator from Mississippi that he has tried hard to write into the bill protective language. But all we are asking is that an independent agency make a finding of fact that has never been made to the Members of this body or to the public, to find that Lockheed needs this money in order to keep in production.

Mr. CRANSTON. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. CRANSTON. The Senator has referred to Under Secretary of Defense David Packard in his presentation today. He is a man for whom I have the greatest of respect. He is a fellow Californian. I gather that he is not a supporter of this amendment. Is that correct?

Mr. PROXMIRE. Of course he is not. No indeed. Mr. Packard is not a supporter of the amendment. We feel that the Department of Defense, with the greatest respect for Mr. Packard, Mr. McNamara, Mr. Laird, Mr. Charles, and other able men, has made blunders in the past on this, it has made mistakes, but this is not a partisan or an individual matter.

We are saying, under the circumstances, and the record which we have, that we should not be fooled again. Therefore, we should get from the GAO some assurance that these funds are needed.

Mr. President, I reserve the remainder of my time.

Mr. JACKSON. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield 4 minutes to the Senator from Washington.

The PRESIDING OFFICER. The Senator from Washington is recognized for 4 minutes.

Mr. JACKSON. Mr. President, I believe that the pending amendment is an unwise alternative to the careful arrangements secured by your Committee on Armed Services—arrangements designed to protect the interests of both the taxpayer and the needs of the armed services. I should like to take but a moment of the Senate's time to summarize the arrangement established by the committee and the substitute approach contained in the amendment introduced by the Senator from Wisconsin.

First, as a result of an understanding reached with the Deputy Secretary of Defense, the Senate has been assured that the funds in question will not be released unless the joint objectives of fiscal responsibility and the needs of the armed services are thereby realized.

Second, the Armed Services Committee has received solemn assurances that these funds will not be used for any purpose other than to facilitate the essential completion of the construction of 42 C–5A aircraft.

Third, and again by careful arrangement, we have been assured that any plan for the disposition of these funds for the purpose of acquiring the aircraft will be submitted to the Committee on Armed Services.

I believe, Mr. President, that these unusual arrangements are adequate to secure the interests of economy and prudent expenditure while, at the same time, making adequate provision for a wise decision with respect to the procurement of an important element in our national defense.

We are all concerned at the difficulties posed by cost overruns in Government procurement. The multiple causes of cost growth, particularly in areas of high technology and where operational specifications are subject to change in the course of development, require careful consideration by the legislative, as well as the executive branch. The complexity of the present dispute between the Government and the contractor should surely suggest how difficult determinations are in this area.

The alternative suggested by the pending amendment has two essential provisions. The third, which would make the funds available in the event that they are found legally owing to Lockheed, is simply gratuitous.

The first would leave the determination as to the necessity of releasing the contingency funds to the Comptroller General, whose decision would be based upon a necessarily hasty and possibly inconclusive study. The ability of the Comptroller General to make such a finding by November 15 after weighing all relevant considerations is questionable. In any event, it seems to me preferable that the determination be made by the Department of Defense and subject to the approval of the Committee on Armed Services.

The second method for reaching a decision on the disposition of the contingency funds—and that is all that is at issue here—would assign this responsibility to a trustee in bankruptcy—an unidentified individual whose competence, under the amendment, would substitute for that of the Department of Defense and the Committee on Armed Services.

Neither of these avenues to decision seems to me, Mr. President, as likely to result in a decision reflecting the national interest as the arrangements secured by the Committee on Armed Services. If anything they would entrust a most complex and difficult decision to institutions whose expertise provides only partial qualifications to make a judgment.

While I share the concern of many Senators at the rising costs of defense procurement, I simply cannot agree that the proposed amendment would be a wise or sensible corrective measure, either as a means of coping with the overrun in the C–5A program or as a model for the future. I would hope that we will set about the important task of finding answers to the overrun problem that will enable us to devise methods for correcting or minimizing it. We must not allow our displeasure at a general problem to lead us to unwise and uncertain action in a specific instance.

Mr. PROXMIRE. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for 5 minutes.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. YARBOROUGH. Mr. President, what amount of money has been spent on the C–5A by the Federal Treasury?

Mr. PROXMIRE. Mr. President, on page 18 of the committee report the following statement appears:

> If no additional funding is authorized we will have 17 aircraft at a cost of about $3.4 billion or approximately $200 million per aircraft.

Mr. YARBOROUGH. $3.4 billion has already been paid out for the aircraft.

Mr. PROXMIRE. It has been authorized to be paid out.

Mr. YARBOROUGH. We have actually appropriated $3.4 million, have we not?

Mr. PROXMIRE. The committee report language says that $3.4 billion has been authorized. As I understand, $2.5 billion has been paid out.

Mr. YARBOROUGH. Mr. President, I have recently had some unfortunate personal experience with Lockheed. One of their directors ran against me in the primary this spring and defeated me. He spent money in an amount that is triple any amount ever seen before in Texas primaries.

If we keep pouring money into such corporations, they will be able to buy the whole Senate. I have just been through that experience.

Mr. PROXMIRE. I think that is a point extremely well taken.

Mr. President, in this debate we have overlooked some important facts about this contract. The original contract called for 120 planes to be built at a cost of $3.4 billion. But 20 months ago, hearings before my subcommittee brought to light the fact that there was a $2 billion overrun. That is fact No. 1.

At the end of this year, the Air Force and the contractors will have spent every dollar coming to them under the original contract—including the added funds in the contract for inflation, target ceiling provisions, and the supplementary agreements. According to the committee, this amounts to $3.75 billion.

But instead of 120 planes, we will have only 30. Instead of costing $27 million a copy, these 30 airplanes will cost $125 million per aircraft, according to the committee report. That is fact No. 2.

That is the size of the scandal on this airplane. Let me repeat. We will have spent $3.75 billion at the end of this year, yet we will have only 30 airplanes completed instead of the 120 planes that should have been provided $300 million ago.

In addition, there has been concealment, suppression, and downright falsehoods told to congressional committees and the public.

Furthermore, contrary to repeated claims, the plane does not meet its original specifications. The Whittaker report listed 12 items which had been degraded and which, taken together, indicated a weakening of the structure of the airplane, a condition which has been very unhappily demonstrated since.

The crack in the wing, for example, limits the ability of the plane to land on unimproved airports, as originally specified. Now it is being said that it can be used on "lightly paved" runways. Those are the facts.

I can recall very well that on an NBC–TV program recently the C–5A was shown coming in for a landing. Awaiting the plane were some generals and the distinguished chairman of the House Armed Services Committee. As the plane touched the runway, a wheel rolled off. Then a tire rolled off. It was embarrassing for the distinguished Representative from South Carolina, Mr. RIVERS, and for the generals, as well.

This has been the history of the plane. It is true that it has potential. But it is not true that this is a plane which has been demonstrated in its excellence.

Nevertheless, this amendment does not go nearly as far as five members of the Armed Services Committee of the Senate felt we should have. This is a much more moderate amendment. I repeat, because I think it is important to repeat and to emphasize, that this amendment provides that $200 million will be paid providing one of the following conditions is met.

First. The Armed Services Board of Contract Appeals or a court should decide that part or all of the $200 million is owing to Lockheed under the contract.

Second. A trustee in bankruptcy determines that all or part of the $200 million is necessary to complete the production of the 42 C–5A planes this bill would fund.

Third. The Comptroller General determines, after a study that must be completed by November 15, 1970, that all or part of the $200 million is necessary to complete production of the 42 C–5A planes.

The third condition is a modification of the original amendment. It would permit the $200 million to be paid to Lockheed, but only after a competent, independent finding that could assure the Congress that the funds were needed to make production of the plane possible.

It would avoid what otherwise would be a precedent set in the bill that would give a defense contract $200 million that the Air Force itself says the Government does not owe, and would give the funds without any independent determination that the money is necessary to produce the planes or that the $200 million would be adequate to permit the planes to be produced. The bill without the amendment would make the Government liable for a total of $800 million above the contract, not owed by the Government, before the contract is completed, and perhaps much more.

The amendment would require the Comptroller General to determine how much will be necessary to complete the contract.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. Mr. President, I yield myself 2 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 2 minutes.

Mr. PERCY. Mr. President, will the Senator yield?

Mr. PROXMIRE. Mr. President, I yield to the Senator from Illinois.

Mr. PERCY. Mr. President, I was very much concerned about the amendment in its original form. However, in its modified form, I feel that a reasonable and rational approach has been taken. I am happy to indicate my support of the amendment.

I think I should also commend the Senator from Pennsylvania and the Senator from Wisconsin because not only does their amendment focus attention on a very serious problem, but it also has accomplished another purpose. Under the leadership of these two distinguished Senators, we have adopted a new policy.

The new policy enunciated by the Secretary of Defense is a result of their own bitter experience in these problems.

I commend the distinguished Senator from Wisconsin for the contribution he has made and indicate again my support for the amendment.

Mr. HATFIELD. Mr. President, the amendment we are offering today is an overture to the administration. We are seeking an approach which we believe will be most reasonable to all parties concerned.

What we are proposing is this: Let us complete the withdrawal of American Armed Forces from Vietnam by the end of 1971; yet we have no intention of setting any inflexible deadline. If the President discovers that for any reason, our troops cannot be withdrawn by that date, then the President may extend this period by 60 days. Thus, he has complete flexibility to do what is necessary to safely complete this withdrawal.

Furthermore, if the administration advocates an alternative course of policy, then he need only to request an extension of this period for the approval of the Congress.

Thus, we are giving the administration full authority to carry out its withdrawal program, to be completed by the end of 1971. If the administration differs with the course of action, then they need only to justify an alteration of the timetable to the Congress.

I do not know why the administration should find this to be an unreasonable proposal.

In my view, it certainly would be unreasonable to propose that the administration be given full authority for any course of continued military activity in Vietnam without congressional approval beyond 1971.

Therefore, I would hope that all the Members of the Congress as well as the administration will carefully consider this revised amendment with an open mind. In my view this represents a most sensible approach for guiding our future course of action in Vietnam; it is the responsible way for the legislative and executive branches to cooperate together in this process.

There is no excuse for men of reasonable mind to reject such an overture.

Mr. STENNIS. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 2 minutes.

Mr. STENNIS. Mr. President, I want to discuss for a few minutes amendment No. 853 introduced by Senator PROXMIRE and Senator SCHWEIKER and point out what I believe to be serious deficiencies in the meaning and intent of this amendment.

This amendment is being identified by these Senators as the "Keep building the planes" amendment. While this appears to be another catchy slogan, a detailed analysis of the amendment and its ramifications appears to have just the opposite effect.

The amendment proposes to restrict obligation and expenditure of the $200 million contingency fund to be authorized and appropriated to the following one or two conditions:

First. If the Armed Services Board of Contract Appeals—ASBCA—has made a determination that the United States is obligated to the contractor for the amount currently in litigation.

2. If a trustee appointed in bankruptcy under chapter 10 of the Bankruptcy Act determines that all or part of this contingency fund is needed.

The amendment also proposes to require the Comptroller General of the United States to conduct a study of the financial capability of the prime contractor with a view toward determining the contractor's ability to meet the contract terms.

The amendment proposes that the Secretary of Defense be instructed to insure that, in the event of any bankruptcy or corporate reorganization proceeding involving the prime contractor, the financial interests of the United States are protected and priority is given to expeditious completion of the C–5A aircraft contract.

The amendment finally proposes that none of the funds authorized to be appropriated by this or any other act for any purpose other than the C–5A program may be transferred to or used for the C–5A program. This section is intended to preclude programing from other programs.

In response to this amendment, the following points should be considered:

One of the intentions of this amendment is to preclude negotiated settlement of disputes or restructuring of the contract. The amendment precludes any use of the $200 million unless there is a dispute for the Armed Services Board of Contract Appeals to settle or there is a bankruptcy proceeding. Under the first clause, without a dispute, the money could not be used; under the second, without a trustee in bankruptcy, the money could not be used.

The first condition that the amendment proposes—that the $200 million cannot be used until the Armed Services Board of Contract Appeals makes a determination—appears to be an impossible condition with respect to the time factor involved in this program. The $200 million funding is required for continued production approximately at the end of December 1970. The contractor complaint appealing the contracting officer decision on the litigation issue was filed before the Armed Services Board of Contract Appeals in January 1970. Significantly large quantities of paperwork are being reviewed in this case.

The optimum schedule with a highly expedited proceeding as indicated by the Chairman of the Armed Services Board of Contract Appeals is estimated at about 10 months after discovery motions are filed sometime in September or October 1970. This would place the time of determination about June or July 1971 even without an appeal of the determination which could further prolong the issue. It appears fairly evident that under the best and fastest of circumstances the decision of the Armed Services Board of Contract Appeals would not be handed down in time to meet the funding requirements to continue production after December 1970.

It appears evident, therefore, that since the first condition of the amendment could not be met, the funds would not be available for continued production and the contractor would have the obvious choices of defaulting on the contract, which would probably ultimately result in bankruptcy proceedings, or declaring bankruptcy itself. The latter does not appear to be a desirable or feasible course of action.

Based on available data, therefore, it appears that passage of this amendment would force a bankruptcy proceeding. It also appears from all available information that any bankruptcy proceeding in this case would be under chapter 10 of the Bankruptcy Act. This would lead into the second condition of the amendment under which the $200 million could be obligated and expended.

Chapter 10 of the Bankruptcy Act provides the means for debtor reorganization. This section of the Bankruptcy Act, in essence, provides that a trustee appointed by the court to operate the corporation would draft a plan for reorganization for court approval and subsequent approval by the creditors whose interests are affected. The Secretary of the Treasury acts for the United States if the United States is a creditor.

The amendment would allow the use of the $200 million contingency fund if the trustee determined that all or a part of the fund was needed to assist the prime contractor in completing the contract.

The amendment does not require that a plan of reorganization be approved or that the trustee even have formulated a plan of reorganization prior to use of the $200 million. The amendment just provides that the trustee can use all or any part of the $200 million if he determines it is needed.

In summary, therefore, if the amendment passes, the $200 million could be used by a trustee with or without a plan of reorganization. The plan of reorganization would be subject only to the approval of the executive branch through the Secretary of the Treasury.

In comparison, it is stipulated in the authorization bill that the $200 million emergency fund could only be used after a plan submitted by the Secretary of Defense is approved by the Armed Services Committees of the Senate and the House of Representatives.

It is also important to note that this amendment would only cover the availability of funds to the trustee up through June 1971. While I do not intend to prejudge any issue of a potential bankruptcy, I do not believe that a responsible trustee, in formulating a reorganization plan, could consider maintaining a contract without some assurance of funding availability through the contract completion. The amendment does not make any provision for this issue and it can only be assumed that this contract would not be considered in a reorganization plan.

It is apparent, therefore, to me, Mr. President, that this amendment will not be a "Keep building the planes" amendment but would be one of the quickest ways to stop building the planes and deny us the capability that everyone agrees is required.

Mr. President, I ask unanimous consent to have a letter from Deputy Secretary Packard to me under date of August 25, 1970, put in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE DEPUTY SECRETARY OF DEFENSE,
Washington, D.C.

Hon. JOHN STENNIS,
Chairman, Senate Armed Services Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I have examined the proposed amendment to the Military Procurement Authorization Bill concerning the C–5A, which has been characterized by its authors as one to "Keep Building the Planes." In my opinion, this amendment would assure that we could not "keep building the planes."

Under the amendment the contingency funds for the C–5A could only be expended under one of the following conditions:

1. If the Armed Services Board of Contract Appeals (ASBCA) determines that a part or all of the money is owed to Lockheed, *or*

2. If a trustee in bankruptcy or reorganization under Chapter X determines that the funds would be needed in completing those aircraft scheduled to be delivered by the end of the fiscal year.

I wish to express my objections to the amendment for the reasons stated below.

The amendment does not achieve its stated purpose; that is, the continued production of the C–5A. Based on the present expenditure rate, the funds requested for FY 1971 will be exhausted shortly after the end of calendar year 1970. The ASBCA will not have reached a decision on the extremely complex issues by this date. Therefore, once the funds appropriated for the contract are expended, Lockheed would have to carry the burden of providing financing for this contract until a decision is rendered by the ASBCA. Present indications are that ASBCA cannot reach a decision before mid-1971.

As I have testified before your Committee on several occasions, the company lacks the cash resources to carry this obligation. In short, production of the C–5A aircraft would therefore cease with the expenditure of the FY 1971 appropriation.

Moreover, should the amendment pass and should Lockheed subsequently prevail before the ASBCA or the Court of Claims, the Department of Defense would be in serious danger of having created yet another litigation issue; that is, a charge of breach of contract for failure to continue making payments, which the Board or Court determined were due Lockheed.

I am particularly concerned that the amendment, if passed, would impair our flexibility to seek alternative solutions to this

problem. As I informed the Committee during my testimony in May and June, we are trying to negotiate our disputes and restructure the C–5A contract in a manner which will create a better working arrangement for management by the Air Force.

As I also have testified, the present contract is fraught with several clauses subject to divergent interpretation and not conducive to intensive management on the part of the Air Force. The repricing formula, the abnormal escalation clause, and the production option dispute have all tended to obscure and divert attention from that which is most needed—management by both the Air Force and the contractor to assure continued production at reasonable future incremental costs. It has become my conviction that a restructuring of this contract to eliminate these problems and to promote improved management is mandatory.

I must emphasize that whether the solution is ultimately reached through litigation or settled by negotiation, the funds will be needed in early calendar year 1971 to continue production of the C–5A. Since a decision by the ASBCA is not likely to occur before the funds are needed, passage by Congress of the amendment would halt production of the airplanes.

As I have informed your Committee, I would not use any of the $200 million involved in this issue without again appearing before both your Committee and the House Armed Services Committee to explain in detail my proposed course of action and recommended solution.

Sincerely,

DAVID PACKARD.

Mr. STENNIS. Mr. President, I yield to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized.

Mr. COOK. Mr. President, under normal circumstances I would like to vote for the amendment. I must say that I think it is a bad contract. I think it has been badly handled.

I disagree with the Senator. This can in no way stop the production of the C–5A. The amendment says that the trustee in bankruptcy can make up his mind whether they need the funds.

A court of bankruptcy has two responsibilities, to see to the interests of the creditors and the stockholders.

The U.S. Government would be last. If this corporation were to go into bankruptcy, it would be the determination of the bankruptcy court whether it should stay in business or not stay in business. If he should say that it should not stay in business, the C–5A would not be built, Poseidon would not be built, the SAM would not be built, the SR–71 would not be built, and the U–2's would not be built.

This is a determination that the trustee makes for the benefit of the stockholders and the creditors and not for the U.S. Government.

I will give a good example. We are now faced with the bankruptcy of the Penn Central. If they cannot pay their debts and they quit, if the Federal Government wants this company to operate, it will then have to subsidize it.

I do not like it. I think it is a bad contract. I think that everyone admits that. However, we cannot say to the American people that we are saving them $200 million because if we need these 81 aircraft and have to have them, we will have to pay for them. If it costs too much, we will have learned a lesson. But we cannot go to the American people and say that we are saving something for them when in the long run we will have saved them nothing at all.

The PRESIDING OFFICER. Who yields time?

Mr. PROXMIRE. I yield the remainder of my time to the Senator from Pennsylvania.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized.

Mr. SCHWEIKER. Mr. President, I thank the Senator from Wisconsin for giving me a further opportunity to sum up the arguments that he and I have made.

We have pointed out that this is probably the worst illustration of military procurement practices in modern history. Rightly or wrongly it has become a test case. The amendment gives us the opportunity to permit this to continue or to blow the whistle and reverse these policies.

As the Senator from Wisconsin has pointed out, we can cite this example as the worst one we have ever come across.

So this is not in dispute. What is in dispute is how we are going to get out of the mess we got into. The original price was $2.6 billion. The latest figure from the selected acquisition reports indicate that it has gone up to $4.6 billion. For 81 planes we are up $2 billion, or nearly a 100-percent overrun.

Now we come to the situation where there is requested another $200 million which Secretary Packard said is actually needed to keep the company from going bankrupt, but in the next breath he said, and the chairman of the committee also said, that is just the beginning; that $200 million is just a part of it. No one knows how much must be supplied after the $200 million. But both of them pointed out that the company said it needs $600 million. Yet the Department of Defense said it really needs $800 million more. Where will all this come to an end?

Now they want us to, in essence, rubberstamp the procedure, as if we have not made enough mistakes, and as if this is a wonderful policy and this is what we should be doing, when the reverse is true.

Mr. President, the only way we will change the policy is to blow the whistle somewhere, and I hope this body today has the courage and the conviction to blow the whistle.

The Senator from Wisconsin and I have offered a reasonable amendment that will not put anyone out of business; it will not put anybody into bankruptcy and it treats them the way the committee would in this regard. There is no question about our amendment triggering that. We give the Comptroller General the right to give them the $200 million, if it is necessary.

We are going to reverse the policy and not permit companies to bid in low and bail out high. If this amendment is rejected, I can imagine that one result will be that we will invite other contractors to bid in low and bail out high. We would set a terrible precedent and invite everyone to do what Lockheed has done.

If we reject the amendment we are going to show everyone that the United States is not going to regulate its own house and put its procurement in order, and that we are not going to meet the issue head on, but give the $200 million to Lockheed because Secretary Packard told the committee that.

In addition, now there are discussions going on between the Government and Lockheed to settle the matter out of the normal process. They want to bypass Congress and the appeals procedure, and sweep us aside once again, whether the figure is $600 million, $800 million, or $1 billion. Then, once again, we will be presented with a fait accompli or a fiscal coup d'etat, and we will go along.

I concede we need the planes, but through our amendment we would be saying, for once, that we should stand on our feet and say there is a limit; that we are going to meet our responsibility today; and that we are not going to condone and sanction the bad military practices that have gone on before.

Mr. President, this vote is vital to determine the future of our procurement policy, whether we have the old blank check approach, the old "give it to them if they need it" philosophy, the bid-in-low and bail-out-high policy; or whether good auditors with fiscal responsibility will deal with military contracts, as is done with every other contract in this Government.

Mr. SCOTT. Mr. President, I am pleased to support the Proxmire-Schweiker amendment controlling the expenditure of funds for the C–5A transport. This amendment provides that the $200 million provided for the C–5A would not be payable to the prime contractor, in this case Lockheed Aircraft Co., unless one of certain conditions are met.

The important modification of this amendment which leads me to support it is that provision directing the Comptroller General of the United States to complete an independent study by November 15, 1970, to determine whether all or part of the $200 million is necessary to complete production of the current contract for the C–5A aircraft. I believe this modification is sound and deserves support by the Members of the Senate.

Mr. President, this debate marks the end of a year in which military expenditures have been given the closest scrutiny ever. I support that effort. We should not be paying $1 more than we have to for military procurement.

It is inconceivable that American taxpayers must foot bills for unwise procurement procedures. For that reason, I support the Proxmire-Schweiker amendment and urge Senators to do the same.

Mr. PROXMIRE. Mr. President, I yield back the remainder of my time.

Mr. STENNIS. I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back.

Mr. STENNIS. Mr. President, what is the matter pending before the Senate?

The PRESIDING OFFICER. The matter pending before the Senate is the

amendment of the Senator from Wisconsin and the Senator from Pennsylvania.

Mr. STENNIS. Mr. President, the yeas and nays have been ordered; is that correct?

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. STENNIS. This is straight up and down on the amendment.

The PRESIDING OFFICER. The Senator is correct.

The question is on agreeing to the amendment (No. 853), as modified, offered by the Senator from Wisconsin and the Senator from Pennsylvania.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HATFIELD (after having voted in the affirmative). Mr. President, on this vote I have a live pair with the distinguished Senator from California (Mr. MURPHY). If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. SPARKMAN (after having voted in the negative). Mr. President, I answered the rollcall and voted in the negative. However, I have a live pair with the Senator from Arkansas (Mr. FULBRIGHT). If he were present and voting, he would vote "yea." If I were permitted to vote I would vote "nay." I withdraw my negative vote.

Mr. KENNEDY. I announce that the Senator from Indiana (Mr. BAYH), the Senator from North Dakota (Mr. BURDICK), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Alaska (Mr. GRAVEL), the Senator from New Mexico (Mr. MONTOYA), and the Senator from North Dakota (Mr. BURDICK), would each vote "yea."

Mr. SCOTT. I announce that the Senator from Hawaii (Mr. FONG), the Senator from Michigan (Mr. GRIFFIN), the Senator from California (Mr. MURPHY), the Senator from Oregon (Mr. PACKWOOD), the Senator from Ohio (Mr. SAXBE) and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

On this vote, the Senator from Ohio (Mr. SAXBE) is paired with the Senator from South Dakota (Mr. MUNDT). If present and voting, the Senator from Ohio would vote "yea" and the Senator from South Dakota would vote "nay."

The pair of the Senator from California (Mr. MURPHY) has been previously announced.

The result was announced—yeas 30, nays 48, as follows:

[No. 273 Leg.]

YEAS—30

Brooke	Kennedy	Percy
Byrd, Va.	Mansfield	Proxmire
Case	Mathias	Ribicoff
Church	McGovern	Schweiker
Cooper	Mondale	Scott

PRESENT AND GIVING LIVE PAIRS, AS PREVIOUSLY ANNOUNCED—2

Hatfield, for.
Sparkman, against.

NOT VOTING—20

Bayh	Gravel	Mundt
Burdick	Griffin	Murphy
Cannon	Hartke	Packwood
Dodd	Inouye	Saxbe
Fong	McCarthy	Stevens
Fulbright	Metcalf	Tydings
Gore	Montoya	

So the amendment (No. 853) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote whereby the amendment was rejected.

Mr. TALMADGE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MANSFIELD. Mr. President, may we have order? I ask Senators to stay, because we are going to try to see if we can expedite the business, on both sides.

The PRESIDING OFFICER. Under the order previously agreed to by unanimous consent, amendment No. 853, the McGovern-Hatfield end-the-war amendment, is to be laid before the Senate at this time.

Mr. MANSFIELD. Mr. President, before the amendment is laid before the Senate, I wonder if it would be possible to determine whether any Senators have amendments they would like to offer this evening, under a time limitation.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. MANSFIELD. Yes, indeed.

Mr. STENNIS. If it is at all possible to get up another amendment, I think we should do it—one that we can dispose of today.

Mr. MANSFIELD. That is what I mean. Mr. President, it is my understanding that the senior Senator from Illinois (Mr. PERCY) will now agree to a 1-hour limitation on his amendment, which will come up at approximately 11:30 tomorrow morning.

Mr. STENNIS. Mr. President, if the Senator will yield, debate would start at——

Mr. MANSFIELD. On the amendment, it would be changed from 2 hours to 1 hour, with the time to be equally divided between the Senator from Illinois and the Senator from Mississippi.

Mr. STENNIS. Mr. President, reserving the right to object, the Senator from Illinois tells me he thinks he is going to get an agreement on his amendment. If he should, frankly, we would not oppose it, because it is an administrative matter, dealing with detoxification. So, if we could have something else right behind it, it would be helpful.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the time limitation on the amendment of the Senator from Illinois be changed from 2 hours to 1 hour, the time to be equally divided.

The PRESIDING OFFICER (Mr. BENNETT). Is there objection? Without objection, it is so ordered.

Mr. MANSFIELD. Following the amendment of the distinguished Senator from Illinois (Mr. PERCY), on the amendment offered by the distinguished Senator from Wisconsin (Mr. NELSON), again having to do with herbicides, he indicates that he is willing to agree to a 30-minute limitation.

Mr. STENNIS. Mr. President, reserving the right to object, I want to cover this point: The amendment of the Senator from Illinois may be agreed to. I want it fixed where we can move immediately, then, into the next amendment, without having to wait an hour.

Mr. GOODELL. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. GOODELL. I am going to offer that amendment, coauthored by the Senator from Wisconsin and myself. We have discussed it, and I believe we can be prepared at any time tomorrow to take it up.

Mr. STENNIS. Let us take it up now.

Mr. GOODELL. The Senator from Wisconsin is not on the floor. I am perfectly willing to take it up now.

Mr. STENNIS. We had the same speech made this morning, Mr. President. We are all familiar with it. The same Senators are here.

Mr. MANSFIELD. That is why they are willing to agree to a reduced time limitation. But apparently we can get nowhere.

We do have a 1-hour limitation on the Percy amendment, after which time, hopefully, the Nelson-Goodell amendment will be brought up. I would like to get a half hour time limitation on it now. If not, apparently we can get it tomorrow.

Mr. STENNIS. Reserving the right to object on this matter tomorrow, as I understand, now, the Goodell amendment would follow immediately after the amendment of the Senator from Illinois has been disposed of.

Mr. GOODELL. Right.

Mr. STENNIS. Let us make that 20 minutes to a side.

Mr. MANSFIELD. All right. Mr President, on the Nelson-Goodell amendment, which will follow the Percy amendment, I ask unanimous consent that there be a time limitation of 40 minutes, the time to be equally divided between the Senator from New York (Mr. GOODELL) and the Senator from Wisconsin (Mr. NELSON) on

the one side, and the manager of the bill (Mr. STENNIS) on the other.

The PRESIDING OFFICER. Is there objection?

Mr. STENNIS. Mr. President, reserving the right to object one more time now, I understand that one of these amendments is not even printed yet.

AMENDMENT NO. 863

Mr. GOODELL. We will submit it for printing today.

The PRESIDING OFFICER. The amendment will be received and printed and will lie on the table.

Mr. STENNIS. Has the amendment of the Senator from Illinois been printed?

Mr. PERCY. My amendment is a printed amendment.

The PRESIDING OFFICER. Without objection, the order is entered.

The unanimous consent agreement, later reduced to writing, is as follows:

Ordered, That during the further consideration of H.R. 17123, military procurement bill, debate on various amendments thereto be limited as follows:

Debate on the amendment by the Senator from South Dakota (Mr. McGOVERN) and others, the so-called "end-the-war" amendment, numbered 862 (which became the pending business following the disposition of the Proxmire amendment (No. 853 on C–5A)) to be limited to 6 hours of controlled time, with a vote coming at 10 o'clock a.m. on Tuesday, September 1. Five hours of the controlled time will begin at 12 o'clock noon on Monday, August 31, and the other hour will occur on Tuesday, September 1 following the prayer, with all of the controlled time to be equally divided and controlled by Mr. McGOVERN and the manager of the bill, Mr. STENNIS. Any amendments to the amendment or motions or appeals relative to the amendment—except a motion to table, if offered—shall be limited to 30 minutes, to be equally divided and controlled between the proponents and Mr. McGOVERN; if Mr. McGOVERN is not opposed to any such amendments, motions, or appeals, the time in opposition will be controlled by Mr. STENNIS or the majority leader or his designee.

The amendment by the Senator from Wisconsin (Mr. PROXMIRE) (No. 861) relative to reduction of military funds by $5 billion, shall be laid down before the close of business on Thursday, August 27; on Friday, August 28, after the prayer, debate on this amendment to be limited to 3 hours, to be equally divided and controlled by Mr. PROXMIRE and the Senator from Mississippi (Mr. STENNIS) with the vote occurring immediately thereafter.

Debate on an amendment by the Senator from Wisconsin (Mr. PROXMIRE) on draftees (No. 754) will become the pending business on Tuesday, September 1 following the disposition of the so called "end-the-war" amendment by the Senator from South Dakota (Mr. McGOVERN), to be limited to 1 hour, to be equally divided and controlled by Mr. PROXMIRE and the Senator from Mississippi (Mr. STENNIS); debate on any amendment to the amendment shall be limited to 20 minutes, to be equally divided and controlled by the mover of the amendment and Mr. PROXMIRE, or Mr. STENNIS if Mr. PROXMIRE is not opposed to the amendment.

Debate on an amendment to be offered by the Senator from Illinois (Mr. PERCY) to be limited to 1 hour, with the time to be equally divided and controlled by Mr. PERCY and the manager of the bill (Mr. STENNIS); any amendments to the amendment will be limited to 10 minutes each, to be equally divided and controlled by the mover of the amendment and Mr. PERCY, or Mr. STENNIS if Mr. PERCY is not opposed to the amendment. Following the disposition of the above amendment, debate on an amendment to be offered by the Senator from Wisconsin (Mr. NELSON) and the Senator from New York (Mr. GOODELL) to be limited to 40 minutes, with the time to be equally divided and controlled by Mr. NELSON and the manager of the bill, Mr. STENNIS.

Debate on two amendments to be called up by the Senator from Massachusetts (Mr. BROOKE) (by unanimous consent if the McGovern amendment, No. 862, is pending) to be limited to 3 hours each, to be equally divided and controlled by Mr. BROOKE and Mr. STENNIS with any amendments thereto to be limited to 10 minutes each, to be equally divided and controlled by the mover of the amendment and Mr. BROOKE, or Mr. STENNIS if Mr. BROOKE is not opposed to the amendment.

The PRESIDING OFFICER. The McGovern-Hatfield amendment will be stated.

The legislative clerk read as follows:

AMENDMENT No. 862

At the end of the bill add a new section as follows:

"SEC. — (a) In accordance with public statements of policy by the President, no funds authorized by this or any other Act may be obligated or expended to maintain a troop level of more than 280,000 armed forces of the United States in Vietnam after April 30, 1971.

"(b) After April 30, 1971, funds herein authorized or hereafter appropriated may be expended in connection with activities of American Armed Forces in and over Indochina only to accomplish the following objectives:

"(1) the orderly termination of military operations there and the safe and systematic withdrawal of remaining armed forces by December 31, 1971;

"(2) to secure the release of prisoners of war;

"(3) the provision of asylum for Vietnamese who might be physically endangered by withdrawal of American forces; and

"(4) to provide assistance to the Republic of Vietnam consistent with the foregoing objectives.

"*Provided, however,* That if the President, while giving effect to the foregoing paragraphs of this section, finds in meeting the termination date that members of the American armed forces are exposed to unanticipated clear and present danger, he may suspend the application of paragraph 2(a) for a period of not to exceed 60 days and shall inform the Congress forthwith of his findings; and within 10 days following application of the suspension the President may submit recommendations, including (if necessary) a new date applicable to subsection (b)(1) for congressional approval."

Mr. McGOVERN. Mr. President, the proposal we present today is the fruition of several months of effort to offer Congress a practical alternative to the course now being followed in Vietnam and in Indochina as a whole, and at the same time to bring into play the legitimate responsibilities of Congress on questions of war and peace.

The amendment has gone through several revisions since it was first offered on April 30, shortly before the dispatch of U.S. troops into Cambodia. The sponsors of the amendment have maintained from the very beginning that the initial draft or any subsequent version could be modified to meet reasonable suggestions designed to strengthen the base of support for our essential purpose.

We have sought, we have received, and we have incorporated the suggestions of a number of Senators and the numerous private individuals who have expertise on the issues we are raising.

On last Wednesday, a week ago today, we announced that the original sponsors of the amendment had agreed to some modifications in our first proposal. We felt then, and we feel now, that because several months have passed since we first introduced the amendment, it was advisable to modify the termination date for withdrawal to reflect the fact that several months had passed since the amendment was first introduced. But the amendment continues a terminal date approximately 1 full year after the pending amendment could be enacted. The superfluous reference to a declaration of war was dropped from the original language, and the language was changed to provide a uniform terminal date for U.S. military operations in all the Indochinese states.

Finally, we eliminated the provision which would have prohibited expenditures after December 31 of this year on offensive combat operations. We eliminated that out of a desire to avoid any unnecessary problem of definition and to assure that the President would have full flexibility as Commander in Chief to establish strategies best suited to meet the overall policy limitations called for by the amendment.

Mr. President, the amendment we formally introduce today incorporates some further modifications based primarily on valuable suggestions of members of the Committee on Foreign Relations. Outside of adjustments in form, there are three substantive alterations that would have significant legislative effect.

First of all, a new paragraph has been added to codify the withdrawal schedule already announced by the President to reduce the American troop strength in Vietnam to no more than 280,000 men by next April 30.

We believe that that withdrawal schedule, if combined—and this is a very important quotation "if"—with the commitment to full withdrawal, is a highly worthwhile initiative, and we endorse it.

Second, we have added a provision which would allow the President to suspend the December 31, 1971, deadline for up to 60 days and to do that on his own motion, without the consent of Congress, but upon his finding that American troops were subjected to a clear and present danger.

Third, if the President did exercise the authority to extend the deadline, and if he believed that additional time would be needed beyond the 60 days, the amendment provides that he could submit recommendations to Congress within 10 days, including a revised deadline. Such recommendations are to be submitted to Congress within 10 days after the President exercises his option to extend the withdrawal date, so that we would eliminate any doubt that delays

inherent in the congressional process might prevent timely action. The President would, of course, be free to submit recommendations to Congress at any time, as he is now.

These changes do not alter the basic purpose or the central policy objective of our amendment. In fact, they clarify it.

We appreciate the important contributions of key members of the Committee on Foreign Relations with whom we have worked, including the Senator from New York (Mr. JAVITS), who has been one of the leading members of that committee in working out substantive provisions in this amendment that would get the concurrence of a significant number of members of the committee.

Mr. GOODELL. Mr. President, will the Senator yield?

Mr. McGOVERN. I am happy to yield to the Senator from New York.

Mr. GOODELL. Mr. President, I think it is important that we emphasize that, although there are modifications in the original amendment to end the war, the two major substantive thrusts of the amendment to end the war are retained.

When I introduced the bill last year, S. 3000, it was a one-sentence bill which said that we are cutting off all funds for American military personnel in Vietnam by December 1 of 1970. That set a fixed date and used the congressional power to cut off funds. That approach was embodied in our amendment to end the war. It is embodied in this modification.

The original concept that I had and that the other Senators had who sponsored the amendment to end the war was that we were not calling for immediate withdrawal, which is unrealistic and unattainable. One cannot just wave a wand and get all the men out of Vietnam. There is a time factor here, in which the troops must be withdrawn with full attention to their safety and the orderliness of the withdrawal. In addition, there is a notice to the Saigon government, to the North Vietnamese, to the Vietcong, and to the world, in advance, that by a fixed date in the future we are going to be out completely. So those features are retained.

Last fall, we could say December 1, 1970, which was essentially a year hence from the date of introduction. Last spring, we could say July 1 or June 30 of 1971, essentially a year hence. Now we are saying December 31 of 1971, which still gives approximately a year's time for withdrawal of the troops in a safe and orderly way, with the President retaining his power as Commander in Chief to protect the troops in the interim period. Other Senators, as the Senator from South Dakota has indicated, have come forward with very important and substantive suggestions.

It is my view that what is incorporated as a modification in the amendment was implicit in the amendment to end the war and my proposal last fall; namely, that we could provide asylum for the South Vietnamese, if necessary, and that we would give the President full authority to protect the troops in the interim period.

Of course also, if the President felt this was an unattainable objective, he could come back to Congress, which he can do in any event, and request an extension of whatever deadline date we had set. That obviously is implicit, that the President can come back on his own, but we have provided that specifically here and we have also provided specifically to continue to give arms aid to the Vietnamese which, of course, was implicit in the original amendment, and that we can provide asylum.

Those are important additions, simply to underscore the fact that we are not saying, "Abandon everything. Pull out. Leave with no continuing concern, no continuing responsibility there." We are saying that we cut off our responsibility for combat troops and military personnel, with aid to go on, and to provide asylum, if necessary. The President can come back and suggest or propose to Congress extending the date, and Congress will then exercise its rightful responsibility in assessing whether the extending date is necessary, and whether it should be approved by us.

Thus, I join the Senator from South Dakota in praising the members of the Foreign Relations Committee for their contribution, particularly my senior colleague Mr. JAVITS, who has been the leader in this endeavor, and has been active in negotiating an approach that retains the viability of the amendment to end the war. The operative provisions of the amendment to end the war bring forth the other substantive aspects of the issue that are dealt with directly in the amendment.

I think this is a good modification and I join the Senator from South Dakota, the Senator from Oregon, the Senator from California, the Senator from Iowa, and the other cosponsors, in this modification.

Mr. McGOVERN. I concur completely in the Senator's elaboration on what it is we are attempting to accomplish with the modifications. They certainly go to the heart of what the junior Senator from New York has had in mind for a long period of time. To the best of my knowledge, he was the only Member of Congress, either in the House or Senate, to submit legislation calling for termination of U.S. military operations in Vietnam, and he did that many months ago. I was proud to be a cosponsor with him on the measure at the time. I am very much pleased to be a cosponsor with him on this modified amendment today.

Mr. CRANSTON. Mr. President, will the Senator from South Dakota yield?

Mr. McGOVERN. I yield.

Mr. CRANSTON. The Senator from South Dakota is in the process of presenting to the Senate what I believe historians will look upon as the most important matter we will have an opportunity to vote upon during this session of Congress.

There are two points I should like briefly to stress.

First, in revising the amendment, great care and wisdom have been exercised in removing language that might have led to the feeling in some quarters that there was some challenge to the President's responsibilities as Commander in Chief. There is nothing in the amendment that does that in any way in its revised form. What is now at issue here is a sharing of the constitutional responsibility that is quite clear, between Congress and the President, in determining what the American Armed Forces shall do, where they shall do it, and whether or how they shall be financed.

The second point—which I will develop later in the course of this debate but wish only to mention now—is that the amendment provides far greater assurances as to the safety of our men in Vietnam and, hence, for the safety and security of this country, than in the present situation, where we have no time table, and an erratic withdrawal program of great uncertainty. The President, in seeking to withdraw troops—and no one challenges him on that point, as to how far or how fast he can go—could lead us into a dangerous situation, having reduced the number of American troops in Vietnam in the course of withdrawal under that approach.

That, I think, is one of the most vital reasons for giving careful consideration to the merits of the amendment, in providing greater protection to American troops in Vietnam.

Mr. McGOVERN. The point the Senator makes is especially important because once we have set a definite, published timetable for withdrawal, we have removed most of the reason the enemy might have for attacking our forces. He knows that every American soldier is going to be out of there by such and such a date. It seems to me that that eliminates the temptation to make that withdrawal difficult. But the present formula that we are following, where we say that we will reduce our forces to such and such a level by next spring, would leave open ended the length of time the remaining forces may stay there, which would be an invitation to the enemy to step up his military operations as long as we have combat forces in the field.

Mr. CRANSTON. That is the exact point. The feeling of the Senator, and my feeling, too, is that if Vietnamization proved not to be working and if, as we withdrew many of our men, they were more and more dependent, as they, of course, would be on the South Vietnamese forces for their protection, and if their forces proved unable to provide that protection, then the failure of Vietnamization would mean a blood bath for the American troops left in Vietnam without adequate American reenforcement to insure their safety.

Mr. GOODELL. Mr. President, in addition to the impact on the North Vietnamese, they would have no motive—reasonable or unreasonable—to attack American forces once a fixed date was set. We know that we are withdrawing completely, and that should have a salutary effect upon Saigon, upon the Thieu-Ky government, because, after all, if there is going to be any negotiated settlement among the Vietnamese, the South Vietnamese leaders must be more realistic about their approach here. This, I think, would make them somewhat more realistic.

One vital point with reference to that

raised by the Senator from California, as to the safety of our troops, at a public meeting that I participated in last spring, a group of sincere individuals in the audience were waving a sign disagreeing with those of us speaking on the platform. The sign read, "Defend the safety of our men in Vietnam."

There was a young veteran who had just returned from Vietnam, who spoke from the platform, and he pointed to the sign and those who were conscientious and sincere in their belief about it, and he said, "The best way to protect the safety of our men in Vietnam is to bring them home."

That is exactly what this would do.

Mr. McGOVERN. The Senator's point is well taken.

Mr. President, I made reference here a while ago to the consultation with the Senator from New York (Mr. JAVITS), and other members of the Foreign Relations Committee, in agreeing that the amendment has not formally been considered by that committee, as was the case with the Cooper-Church amendment. We are hopeful that a majority of the committee will be prepared to support the revised amendment following the return of the committee chairman, the Senator from Arkansas (Mr. FULBRIGHT), who unfortunately has been called away from the Senate this week because of a death in his family.

Throughout the period since we first proposed action of this kind we have held to one central belief—that the interests of the United States would be best served by establishment of an orderly timetable for the removal of all U.S. Forces from Vietnam. We remain firmly convinced that such a commitment is the best available means of terminating the tragic conflict in Indochina, of ending its enormous drain on our human, material, and spiritual resources, and of recapturing the respect of nations throughout the world that look to the United States for leadership.

I think this formula that we offer in the pending amendment can release American policy from arbitrary control by others, either from Saigon or Hanoi, as the Senator from New York (Mr. GOODELL) has just underscored, and place it back in American hands; namely, in the control of Congress and the President of the United States. And it can stimulate the negotations which have been stagnating so long in Paris while the killing has been going on.

At the same time the amendment raises another issue of paramount importance. It seeks to reassert the declining role of Congress in decisions whether or not to commit American forces to battle. I emphasize in this connection that we do not pose a confrontation with any particular President. Rather we confront a dangerous trend which goes back many years, in violation of what we take to be the clear intent of the Constitution. If anyone sees provocation of a "constitutional crisis" in what we are doing, that is perhaps the best illustration of the distance we have strayed from the Constitution itself. Neither the legislative history nor the language of that document allows the interpretation that the Executive alone can initiate war or that, once begun, a war becomes his prerogative alone to end or to expand and continue indefinitely without reference to the wishes of Congress. On the contrary there rests with the Congress an affirmative duty—more than a power—to regularly review every military activity in which the Nation is engaged. The notion of an unbridled executive war power is as foreign to our system as would be an assertion that the President can simply dissolve the Congress and run the country by one-man rule.

Although they will be discussed in more detail as the debate progresses, I do want to make brief reference at this point to several provisions in the amendment that affect central points of concern about the consequences of withdrawal.

No one would be so foolish as to suggest that any kind of a plan, a withdrawal formula or any other formula, for dealing with this war is entirely free from risk.

Among the most serious problems we must face is the status of prisoners of war now held by North Vietnam in a manner which defies standards of decency, including those established in the Geneva accords to which North Vietnam is a signatory. We believe a timetable for withdrawal would facilitate their release by opening the way to meaningful negotiations and by allowing concentration of our strategy on this specific problem in place of its inclusion in a broad range of other goals. The amendment leaves the President with full authority to pursue this issue in any manner he deems appropriate.

Another matter of great concern to all of us is the safety of our forces in Vietnam. On this point, the language explicitly states that the withdrawal shall be conducted in a safe and systematic manner, and it would not hamper the President's power to determine the tactical arrangements and deployments by which this objective can be best achieved within the broad time limitation.

This gives the safest and most systematic disengagement possible within this broad time limitation extending to the end of 1971 and with an emergency clause that would permit the President the right to go ahead in an emergency for a 60-day period beyond that.

It is my conviction that if the amendment is adopted there will be little likelihood of forcing withdrawal under combat pressure.

If one stops to think about it, an adversary would have little or no incentive to attack troops that are being removed. As a matter of fact, it would be in his interest to enhance that withdrawal process if he were certain all the forces would be out by a certain date, provided he did not interfere. The enemy would have a greater incentive to see that that withdrawal is conducted safely lest they risk a longer U.S. presence.

This amendment would permit that to take place in the event there was serious interference with the safe withdrawal of our forces.

The effects of American withdrawal on the people of South Vietnam has also been widely discussed. In my view the predictions of a "bloodbath" have been greatly inflated. But if this is a concern, we suggest a diligent effort, in combination with other nations, to find asylum for those South Vietnamese who might be endangered.

Let me just say parenthetically, Mr. President, that there are tens of thousands of South Vietnamese being killed as this war proceeds. We talk about a bloodbath. We need to keep in mind that not only have thousands of combat forces been killed on both sides, but also hundreds of thousands—I have seen estimates running up to 2 million—of South Vietnamese civilians that have been killed as a result of this war. Many of the deaths have been unintentional. However, it is the direct and indirect result of the kind of massive firepower that has been introduced into this conflict. So, the question is how to terminate this with a minimum continuing danger to the people of Vietnam.

I think that likely there are people prominently identified with the government, either with the military or the political side of that government, who might feel that they are the targets of reprisals in the event the American forces were to be withdrawn. I feel that those people and others who might have the feeling that their lives and well-being are in danger should have some assurance that we will do everything we can to see that asylum is offered in various parts of the world.

My guess that is in view of the French speaking character of the people of Vietnam, many of them would follow their countrymen who have already gone to France in previous months.

The amendment does not oblige the President to take this course and it does not prevent him resources needed to explore the possibilities. Surely such an approach is preferable to the situation now, in which we practice the chilling paradox of staying in Vietnam to prevent a bloodbath while innocent civilians continue to die by the tens of thousands each year because of our own massive firepower.

I again want to stress that most of these deaths are unintentional. I do not think that American artillerymen or American pilots are trying to slaughter innocent people. However, when they pursue enemy guerrillas into areas or towns marked for interdiction or as free fire zones, it is quite obvious that some innocent people are going to be killed in the process.

Beyond these provisions, the amendment specifies that funds will remain available for general assistance to South Vietnam both during and after the withdrawal of U.S. forces, in amounts authorized under ordinary constitutional process. We do not draw a distinction between military and civilian aid. This language further emphasizes that our single purpose is to complete the withdrawal of American Armed Forces both on the ground and in the air by December 31 of next year. And it assures that even then the South Vietnamese will not be denied supplies and equipment from the United States unless Congress makes a separate determination on that issue.

Mr. President, we make no claim that the course we advocate will be convenient or painless. A Vietnam policy with such attributes will never be found. Cer-

tainly they cannot be claimed for the course that is promised if our alternative is rejected.

All we ask is that our proposal be fairly compared with existing policy, and that the Congress exercise its own responsibility for bringing this terrible conflict to an end.

Mr. President, I ask unanimous consent that the text of the amendment now pending and discussed earlier this afternoon be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

At an appropriate point in the bill insert the following:

"1. In accordance with public statements of policy by the President, no funds authorized by this or any other act may be obligated or expanded to maintain a troop-level of more than 280,000 armed forces of the United States in Vietnam after April 30, 1971.

"2. After April 30, 1971, funds herein authorized or hereafter appropriated may be expended in connection with activities of American armed forces in and over Indochina only to accomplish the following objectives:

"(a) the orderly termination of military operations there and the safe and systematic withdrawal of remaining armed forces by December 31, 1971;

"(b) to secure the release of prisoners of war;

"(c) the provision of asylum for Vietnamese who might be physically endangered by withdrawal of American forces; and

"(d) to provide assistance to the Republic of Vietnam consistent with the foregoing objectives.

"Provided, however, That if the President, while giving effect to the foregoing paragraphs of this section, finds in meeting the termination date that members of the American armed forces are exposed to unanticipated clear and present danger, he may suspend the application of paragraph 2(a) for a period of not to exceed 60 days and shall inform the Congress forthwith of his findings; and within 10 days following application of the suspension the President may submit recommendations, including (if necessary) a new date applicable to section 2(a) for Congressional approval."

Mr. McGOVERN. Mr. President, in connection with the amendment an important brief has been prepared by a number of lawyers, law professors, and law students. A part of the brief was printed earlier in the RECORD. But for the convenience of Senators and others who will be following this debate over the next few days, and because the amendment does raise certain constitutional questions that will especially concern Members of the Senate, I ask unanimous consent that the entire text of the brief be printed at this point in the RECORD.

There being no objection, the brief was ordered to be printed in the RECORD, as follows:

THE AMENDMENT TO END THE WAR: THE CONSTITUTION QUESTION

(Material submitted by the Senate Steering Committee of the Congressional Committee for a Vote on the War: Hon. GEORGE MCGOVERN, Democrat, of South Dakota; Hon. MARK HATFIELD, Republican, of Oregon; Hon. CHARLES GOODELL, Republican, of New York; Hon. ALAN CRANSTON, Democrat, of California, and Hon. HAROLD HUGHES, Democrat, of Iowa).

May 13, 1970

Mr. MCGOVERN. Mr. President, there are two profound issues involved in the amendments which have been proposed to limit U.S. activities in Southeast Asia.

The merits of whether it is politically, militarily, or morally sound for us to be entangled in that conflict will be debated at length, as they have been debated for many years. Most of us have strong opinions.

The other issue has received less attention, and for that reason alone it deserves a special focus. Regardless of how any Senator feels about the wisdom of our involvement, he has good reason for deep interest in the procedures through which it has come about, and particularly in the role Congress has or has not played. Concern has been expressed about a possible constitutional crisis over the war power. In truth that crisis already exists, and the Vietnam war is the best possible illustration of that fact.

The complementary amendments introduced by Senators CHURCH and COOPER, on Cambodia, and by Senators HATFIELD, GOODELL, HUGHES, CRANSTON, myself, and other Senators on Vietnam, Cambodia, and Laos, are practical attempts to assert proper congressional involvement. In fact, they use the only vehicle—limitations on spending appropriated funds—that we have available to enforce our decisions on the use of American military power abroad. Moreover, it is a vehicle which the founders of our Republic believed should be vigorously employed.

In this connection, Mr. President, I would like to make available to Members of the Senate an analysis of the constitutional issues broached by these amendments. Entitled "Indochina: The Constitutional Crisis," it supplies an excellent historical description of the war power and a concise discussion of the legislative actions which have been used to justify our posture in Southeast Asia.

With respect to our amendment, it concludes that:

"Proposed restrictive provisions (such as those advanced by Senators McGovern, Hatfield, Hughes, Goodell and Cranston) are not only a legitimate exercise of Congress' money power, but pose no danger of inflexibility committing our policy to a hazardous course because (1) they include exceptions which insure the safety of our forces and (2) they may be overridden by future congressional action if circumstances change."

Mr. President, the authors of this memorandum include prominent legal scholars and former government officials. I should like to read their names:

Alexander M. Bickel, Professor of Law, Yale Law School.

Bruce Bromley, Attorney, New York City; former Judge, New York Court of Appeals.

Elias Clark, Professor of Law, Yale Law School.

Ramsey Clark, former Attorney General.

William T. Coleman, Attorney, Philadelphia, Pa.

John Doar, President, Bedford-Stuyvesant D&S Corporation, Brooklyn; former Assistant Attorney General.

John W. Douglas, former Assistant Attorney General.

George N. Lindsay, Attorney, New York City.

Burke Marshall, Professor of Law, Yale Law School; former Assistant Attorney General.

Louis F. Oberdorfer, former Assistant Attorney General.

Robert M. Pennoyer, Attorney, New York City.

Stephen J. Pollak, former Assistant Attorney General.

Paul C. Warnke, former Assistant Secretary of Defense.

Edwin M. Zimmerman, former Assistant Attorney General.

In addition, Mr. President, I want to note that the basic research and drafting for the memorandum was done by the 12 Yale Law School students: David Cooke, Reid L. Feldman, Gary Fontana, Frank Hamsher, Gertrude Hamsher, Howard O. Hunter III, Christopher Lunding, David Marks, Jeffrey Orleans, Randall Shepard, Eric Stauffer and John M. Townsend.

Their outstanding work on this project provides a graphic demonstration of how students are doing important, useful, and constructive work on behalf of the peace effort.

I ask unanimous consent that the memorandum to which I have referred be printed in the RECORD.

(There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:)

INDOCHINA: THE CONSTITUTIONAL CRISIS

The dispatch of American troops into Cambodia by the President, without specific authorization by Congress, raises serious questions about the constitutional allocation of power between the legislative and executive branches. The most significant factor in the resolution of such questions is the presence or absence of action by each branch.

The power to commit American forces to combat was originally entrusted to Congress, which retained it almost unchallenged for over a century. But in the twentieth century, Congress has passively allowed the effective ability to engage the United States in hostile actions abroad to be assumed almost entirely by the Presidency.

Proposals now before Congress invoke the money power as a means of asserting control over the Indochinese War. If Congress exercises its money power to prohibit specific uses of the armed forces, it will reassert its long dormant capacity firmly and constitutionally to limit the President's ability to use the armed forces for purposes which Congress does not approve.

I. The language of the constitution

The power to commit American troops to battle was allocated by the Constitution between the President and Congress. (The relevant clauses of the Constitution are quoted in the Appendix.) The President is entrusted with the executive power,[1] made Commander in Chief of the Army and Navy,[2] and, with the advice and consent of the Senate, empowered to make treaties and appoint ambassadors.[3] The Congress is empowered to lay taxes to provide for the common defense,[4] to define and punish offenses against the law of nations,[5] to declare war,[6] to raise and support armies (but not to finance them for more than two years at a time),[7] to provide and maintain a navy,[8] to make rules for the land and naval forces,[9] and to provide for calling up and organizing the militia.[10]

II. The original understanding

The Constitution does not say explicitly whether the army may be sent into battle when Congress has not declared war, or if it may, under what circumstances and by whose decision. In interpreting the Constitution on this point, it is helpful to look at the intent of the Framers and to the understanding of the men who first put the Constitution into practice.[11]

The Constitutional Convention debated the clause giving Congress the power to declare war on August 17, 1787.[12] The clause originally empowered Congress "to make war." [13] Some delegates objected that the power should lie with the executive, as it did in England.[14] Most of the Convention seemed firmly of the opinion that the power should lie with Congress, but that the President should have the power to defend against a sudden attack. The Convention decided to "insert 'declare,' striking out 'make' war, leaving to the executive the power to repel sudden attacks." [15] The Framers had in mind a division of functions. The President, as Commander in Chief, was charged with the conduct of hostilities after they are legally begun. He was also expected to take measures

Footnotes at end of article.

to repel any actual attack upon the United States, as an incident of his executive power. But the power to initiate hostilities was clearly meant to be served to the Congress, with the President participating in that initiative only so far as his signature was necessary to compete an act of Congress. Thus, *the President, unless his veto is overridden, may prevent war, but he cannot constitutionally act alone to begin a war.*

The judicial branch was also quick to conclude that Congress alone can declare war. Delivering the opinion of the Supreme Court in an 1801 prize case, Chief Justice John Marshall concluded that the "whole powers of war" were "vested in Congress."[16]

There may, however, be hostilities which fall short of requiring an actual declaration of war. Ten years after the adoption of the Constitution, the naval trouble between the United States and France which had begun under Washington became so acute that American shipping was greatly endangered.[17] President Adams had to decide what to do. Alexander Hamilton advised the administration against action without Congressional authority:

"In so delicate a case, in one which involves so important a consequence as that of war, my opinion is that no doubtful authority ought to be exercised by the President."[18]

Adams decided to wait for Congress to act, and it passed laws authorizing him to protect American commerce.[19] Similarly in 1801, President Jefferson was faced with hostilities on the Barbary Coast, but felt that he could order only defensive measures until Congress authorized him to commit forces to offensive action.[20]

In the first two limited wars in which the United States found itself, both Adams and Jefferson had the means to order retaliatory action immediately. Perhaps some lives and property would have been saved had they done so. But both clearly felt that the decision to commit American forces was not constitutionally theirs to make, and preferred the preservation of the Constitutional process to the pursuit of a temporary military advantage.

III. Historical development of the war power

A. Wars and Limited Wars in the 19th Century

If the President's power to engage American forces in hostilities on his own initiative is limited to defensive action by a strict construction of the Constitution, the question of the proper role of Congress arises. Congress clearly has the power to engage the United States in formal war, as it did in 1812 with the President reluctantly assenting.[21] It may declare war at the request of the President.[22] And the Congress may also ratify after the fact hostilities begun by the President.[23]

The executive branch very early recognized the exclusive power of Congress to declare war. In the course of a dispute with Spain in 1805, President Jefferson told Congress:

Considering that Congress alone is constitutionally invested with the power of changing our position from peace to war, I have thought it my duty to await their authority before using force in any degree which could be avoided.[24]

Similar deference to the sole power of Congress to make any decision to commit the United States to war was voiced by President James Monroe,[25] Secretary of State John Quincy Adams,[26] and Secretary of State Daniel Webster.[27]

The Congress itself was jealously aware of its war power, and on one occasion nearly censured the President for invading it. In 1846 it had declared, after the fact, that a state of war existed with Mexico. But the debate was bitter and the war unpopular. At the end of the war, the House of Representatives voted its thanks to General Taylor, but amended its resolution to note that he had won a war unnecessarily and unconstitutionally begun by the President of the United States.[28]

Among the Congressmen supporting the amendment were former President John Quincy Adams and future President Abraham Lincoln.

Congress also has considerable power, short of a declaration of war, to authorize and regulate limited hostilities, as it has done on a number of occasions, with and without executive approval, since 1798.[29]

During the nineteenth century, the executive branch frequently recognized the need for congressional authorization even for limited military actions. In 1857 the Secretary of State refused to send ships to help a British expedition in China, because he lacked congressional authority to do so.[30] The next year President Buchanan pleaded with Congress for authority to protect transit across the isthmus of Panama, but refused to act without it.[31] Nor in 1876 would the State Department use force to help Americans in Mexico, because it felt it lacked the power to do so.[32] As late as 1911 President William Howard Taft felt that he had enough power to move troops to the Mexican border, to be ready in case Congress told him to protect American lives and property endangered by the revolution there, but refused to send them in on his own authority.[33]

B. Erosion of the Congressional Warmaking Power in the 20th Century

In the early part of the twentieth century, the executive began to exercise greater discretion in the use of American armed forces abroad. For instance, without specific congressional approval, President Theodore Roosevelt sent American troops into Panama in 1903 and President Wilson sent troops into Mexico in 1916 in pursuit of the Pancho Villa bandits.[34]

Since 1945, the executive has regularly used military force abroad as a tool of diplomacy. Aside from Indochina, the greatest use of American force was in Korea, where several hundred thousand troops were committed to combat and major casualties were incurred. There was neither a formal declaration of war, nor any other specific congressional sanction for the Korean conflict.[35] American forces were sent into the Formosan Strait in 1955, into Lebanon in 1958, and into the Dominican Republic in 1965. The Navy was used to blockade Cuba during the missile crisis in 1962. And, most recently, naval vessels were dispatched to the vicinity of Haiti and Trinidad in response to internal conflicts in those countries. Prior congressional resolutions were obtained by the President for the Formosan and Lebanese actions, but both the validity of those resolutions and the degree to which President Eisenhower relied on them has been questioned.[36]

The application of prior historical precedents to unilateral executive use of armed force abroad in the mid-twentieth century can, however, be misleading. For instance, as precedents for the Vietnam War, a State Department Memorandum cites a long series of military actions ordered by the President alone.[37] The majority of the cited military actions undertaken by the executive without congressional approval took place in the nineteenth century. Most of them were not actions that involved conflicts with foreign states; rather, the bulk of them involved the protection of individuals, police actions against pirates or actions against primitive peoples. Furthermore, the United States did not have a significant standing army during peacetime until after 1945, and the President was limited in the military actions that he could take by the need to approach Congress to ask for any increase in the size of the armed forces. *Today, with a tremendous military machine and modern transport at his immediate disposal, the President is under little practical pressure to seek congressional authorization for his actions, and therefore he is unlikely to seek it unless Congress insists that he do so.*[38]

IV. The theoretical bases for unilateral Presidential action

The theories on which various Presidents have relied for the use of military force abroad without congressional approval may be divided into three general categories: (1) the sudden attack theory; (2) the neutrality theory; and (3) the collective security theory.[39]

(1) *The Sudden Attack Theory.*—The President as the Chief Executive has the inherent power to defend the sovereignty and integrity of the nation itself and to respond to an armed attack on the territory of the United States without requesting congressional approval. For example, we do not question the constitutional authority of the President to order a retaliatory strike in the event of an atomic attack on the territory of the United States. In the absence of an armed attack on American territory proper, the power of the President is more closely circumscribed.[40]

(2) *The Neutrality Theory.*—Also known as "interposition," the neutrality theory was developed during the nineteenth century as a justification for American military involvement abroad to protect American citizens and property. When American armed forces were sent into a foreign nation, their presence was supposed to be "neutral" with respect to any conflicts there. *The executive, in taking such action, was not necessarily "making war" but merely dispatching troops to act as security guards for American citizens and their property. The real difficulty, clearly, was in remaining neutral and avoiding conflict.*[41]

(3) *The Collective Security Theory.*—Since 1945, the United States has entered into many security treaties with foreign nations. Many of these agreements have clauses which indicate that the security of each signatory is vital to the security of each other signatory. Unilateral presidential action under these agreements may be justified as necessary for the protection of American security even though the conflict may arise thousands of miles from American shores, but, *carried to its extreme, the collective security theory would justify almost any unilateral presidential use of armed force abroad,*[42] *a result contrary to Constitutional standards.*

V. The justifications for unilateral executive action in Indochina

The involvement of the United States in Vietnam, the commencement of an air war in Laos, and the expansion of the ground war into Cambodia have resulted almost entirely from executive decisions and actions. The executive branch of the government has justified its action primarily on the grounds of: (1) the presidential prerogative to protect American security interests abroad by whatever means necessary. (2) the SEATO treaty; and (3) the Gulf of Tonkin Resolution.[43] *It cannot be said that the recent actions by the executive in Cambodia or the earlier actions in both Vietnam and Laos are clearly contrary to the Constitution. However, the expansion of the war into Cambodia is the latest in a long series of acts which, taken together, have nearly stripped Congress of its war power.*

(1) *The Presidential Prerogative.*—Undoubtedly, the speed with which crises develop in the modern world necessitates a strong executive who can respond quickly to such crises. The need for a speedy response, the need for secrecy, the need to protect American citizens and property abroad, and the need to protect American security interests in the balance of power are all used to legitimize the use by the executive, without congressional approval, of American armed forces abroad. Recent United States

Footnotes at end of article.

actions, especially in Korea and Indochina, are cited to support great executive discretion in the use of American military force abroad. The recent invasion of Cambodia without prior congressional approval or even notice is not without historical precedent and not without justification under a broad interpretation of the collective security theory.[44]

However, the real question is whether the balance has shifted too far in favor of the executive.[45] A war, such as the one in Indochina, requires great sacrifices on the part of great numbers of the American people. It is difficult, if not impossible, to predict the ultimate outcome of any American intervention. Consequently, when there is a possibility of large scale American involvement and even a limited risk of war, Congress should pass on the desirability of American military action.[46]

The executive has also placed reliance on the power of the President as chief formulator of foreign policy and as Commander in Chief of the armed forces. *Granted that the President does have primary responsibility in the modern world for the handling of foreign policy, he should not have the discretion to initiate war as an instrument of foreign policy.*

Finally, the Commander in Chief provision of the Constitution is an expression of civilian control over the military; it does not give the war power to the President.[47]

(2) *The SEATO Treaty.*—The Southeast Asia Treaty Organization is one of the many multilateral collective security treaties which the United States has signed. Neither South Vietnam nor Cambodia is a signatory, but both countries are within "protocol areas" which the signatories consider to be vital to their security interests.[48] The terms of the treaty are ambiguous, and it is at least questionable whether the United States was obligated by the terms of the treaty to come to the aid of South Vietnam.[49]

More importantly, the SEATO agreement cannot help answer the constitutional questions, because it specifically states that action by a signatory in response to an attack on another signatory or a "protocol country" is to be made only after a decision made according to the "constitutional process" of the signatory.[50]

The more relevant issue is the power of the President to involve American forces in foreign combat on the basis of a treaty. The Constitution requires that the Senate must give its advice and consent to any treaty before it can become effective.[51] Once approved, the treaty is of the same nature as any other duly passed law which the executive is bound to execute faithfully.[52] If, however, the war power is a congressional prerogative, the decisions regarding the initiation of war should be made by both houses of Congress and not just the Senate.[53]

(3) *The Tonkin Gulf Resolution.*—Following reported attacks on American naval vessels in the Gulf of Tonkin in August of 1964, Congress passed a joint resolution which gave the President broad discretion to respond to "aggression" in Southeast Asia.[54] Congressional action which does not amount to a formal declaration of war may be a valid congressional authorization of hostilities,[55] and some commentators think that the Tonkin Gulf Resolution is an adequate congressional authorization for the Vietnamese War.[56]

There are two factors, however, which make the Tonkin Gulf Resolution an invalid basis for continued Congressional inaction. First, it was passed with great speed and in the heat of emotion that resulted from the reported attack on American naval vessels in the Tonkin Gulf.[57] Secondly, there were few American troops in Vietnam in the American ground combat forces there.[58]

It has also been argued that congressional inaction and failure to repeal the Tonkin Gulf Resolution give implicit authorization to the Indochinese War. The logical outcome of such an argument is that the President can do whatever he wishes and the Congress has the affirmative duty to try to stop him. This shifts the presumption of the Framers in favor of congressional control over war-making and gives the initial and continued upper hand to the executive.[59]

VI. The opportunities for reassertion of congressional power

The power of the purse is the last bastion of popular control of the government.[60] Congress now has the opportunity to use this power to restore the constitutional balance by including in authorization acts any of a number of restrictions on the use of American funds and forces in Indochina. More forcefully than a resolution of one or both houses,[60a] enacting specific restrictions on the use of our military forces in Indochina and directing their withdrawal would effectively assert congressional control of the limited war in which we are now engaged. Proposed restrictive provisions (such as those advanced by Senators McGovern, Hatfield, Hughes, Goodell and Cranston)[61] are not only a legitimate exercise of Congress' money power, but pose no danger of inflexibility committing our policy to a hazardous course because (1) they include exceptions which insure the safety of our forces and (2) they may be overridden by future congressional action if circumstances change.

A. Specifically restricting the use to which military forces may be put is a legitimate exercise of congressional power

There is no doubt that under the Constitution Congress has complete control over governmental use of funds. Historical precedent, textual analysis of the Constitution, the intent of the Framers, and judicial construction unambiguously indicate that the money power may be used to restrict the President's control of the armed forces.

Past congressional success in the restriction of military policy through the use of specific provisions in money acts offers conclusive support for the legitimacy of such a measurable to control the military actions of the President. Riders and amendments on appropriation and authorization acts traditionally have been a device favored by Congress to restrict and to control executive action.[61a] The most recent example is Section 643 of the Defense Appropriation Act for the current fiscal year, passed in 1969, which states that "none of the funds appropriated by this Act shall be used to finance the introduction of American ground combat troops into Laos and Thailand."[62] *Last year's rider alone serves as clear precedent for similar restrictions on use of forces or funds in Cambodia or in Vietnam itself.*

An almost identical restriction was enacted by Congress in the Selective Service and Training Act of 1940, which included the proviso that:

"Persons inducted into the land forces of the United States under this Act shall not be employed beyond the limits of the Western Hemisphere except in the Territories and possessions of the United States, including the Philippine Islands."[63]

It appears that in the past Presidents have always complied with such restrictions, even when they originally expressed an intention to ignore them.[64] Compliance by the executive is, in fact, clearly dictated by the Constitution.

The general grant to the President of the executive power[65] is qualified by the admonition that "he shall take care that the laws be faithfully executed."[66] The powers of Congress to raise and appropriate revenues, to raise and support armies, and to provide and maintain a navy, are all law-making powers.[67] *An appropriation rider enacted into law would therefore impose a clear constitutional obligation on the President to abide by its provisions.*[68] In addition, it would constitute a *pro tanto* repeal of previous statutes granting the President discretion to use funds for military purposes.

The President's power as Commander in Chief does not free him from enacted restrictions. The Constitution has granted to Congress the fundamental power to create the resources employed by the branches of the government. *The Commander in Chief clause merely entitles the President to the supreme command of the armed forces within the limits established by the legislation which created those forces,* provided the limits are reasonable.[69]

The fundamental importance of the money power is evident from the determination of the Framers to place this power firmly in the hands of Congress. Particular care was taken to maintain under congressional control the use of funds for military purposes, as indicated by the constitutional provision that no money may be appropriated for the army "for a longer term than two years."[70] The rationale for the allocation of power made by the Framers of the Constitution is basic to our concept of demoracy: that the legislators, as representatives of the people, should have complete control over the nation's resources. Madison described the money power in these terms:

"This power over the purse may, in fact, be regarded as the most complete and effectual weapon with which any constitution can arm the immediate representatives of the people."[71]

The wisdom of this grant of power is borne out by recent history. The conduct of the Indochina War has precipitated a widespread disillusionment with the government, and attendant loss of respect for law. *If the people, through their representatives, have no control over the commitment of their resources to war-making, the result is inconsistent with the democratic principles of the Constitution.*

The Supreme Court spoke most directly to the issue in the *Steel Seizure Case,*[72] concluding that the powers of the President, both as Commander in Chief and in his executive capacity, were not unlimited and could be restrained by another branch of the government.[73] All the Justices in the majority indicated that the extent to which Congress had acted to control the action taken by the President, seizure of most of the nation's steel mills, was significant in determining the constitutionality of his action.[74] The opinions imply that *When Congress speaks on the question of what form executive action may take, such power to act alone as the President may have will be circumscribed.* In the *Steel Seizure Case,* the Justices disagreed on the proper interpretation of Congress' failure to act on relevant legislation; in contrast, *if Congress enacts a clear prohibition on military action in specified areas of Indochina, the meaning would be clear, and presidential power would be effectively limited.*

B. Continuing congressional control and the inclusion of adequate exceptions to restrictions on military action insure that military policy will remain flexible

There is, of course, a possibility that changed circumstances will force a reconsideration of the wisdom of certain specific limitations. But the assertion of congressional control by enacting the proposed restrictions merely shifts from the President to Congress power over future military involvement in Indochina.

The President would retain the power to engage in immediate self-defense under the executive power to repel sudden attacks. In addition, exceptions to the restrictions of the McGovern-Hatfield-Hughes-Goodell-Cranston proposal permit full executive free-

Footnotes at end of article.

dom to protect our troops and prisoners during withdrawal.[75] *But major decisions would be reserved for Congress, which is fully capable of making major decisions quickly and competently. And by asserting its proper role in decisions of war-making, Congress would act to re-establish the traditional constitutional balance.*

VII. Conclusion

The current unlimited freedom enjoyed by the executive to engage in military action is largely the result of inaction by Congresses past. As Supreme Court Justice Jackson stated:

"We may say that power to legislate for emergencies belongs in the hands of Congress, but only Congress itself can prevent power from slipping through its fingers."[76]

Wormuth, "The Vietnam War: The President versus the Constitution," on which this paper draws heavily. It is reprinted in Falk, ed., *The Vietnam War and International Law,* Princeton University Press, 1969.

[12] James Madison, *Notes of Debates in the Federal Convention,* Ohio University Press edition, 1966.

A transcript of Madison's notes on the debate on the war power is included in the appendix to this paper.

[13] *Ibid.,* debate of August 17, 1787 (Ohio edition page 476).

[14] *Ibid.,* remarks of Mr. Butler (see appendix). For a discussion of the English allocation of power, still accurate when the Constitution was written, see John Locke, *Second Treatise on Government* (1960), chapters 12 and 13, § 145.

Mr. Gerry remarked that he "never expected to hear in a republic a motion to empower the Executive alone to declare war."

[15] *Ibid.,* the motion passed eight states to one, Massachusetts absent (see appendix).

[16] *The Amelia,* 1 Cranch (5 U.S.) 1 (1801). Chief Justice Marshall wrote:

"The whole powers of war being, by the Constitution, vested in Congress, the acts of that body alone can be resorted to as our guides in this inquiry."

The case involved a ship whose seizure would have been legal under the President's privateering proclamation, but whose seizure the Court held was illegal under the terms of the Act of Congress which authorized the proclamation. The privateer was made to pay damages to the ship's owner.

[17] After the outbreak of the war between France and England in 1792, American shipping was molested by the blockades of both nations. President Washington met the challenge with his famous Neutrality Proclamation, which kept the United States out of the conflict. By 1798, however, French depredations on American commerce had become so menacing that action was needed to protect it. The question was whether President Adams could do so on his own authority or whether he needed the authority of Congress.

[18] Alexander Hamilton to James McHenry, the Secretary of War, May 17, 1798 (quoted in Wormuth, *op. cit.*)

[19] Congress suspended commercial intercourse with France in the Act of June 13, 1798, augmented by the Act of February 9, 1799. (1 Stat. 565, 1 Stat. 613).

It denounced the treaty with France in the Act of July 7, 1798 (1 Stat. 578).

It created the Department of the Navy by the Act of April 27, 1798 (1 Stat. 553).

And it established the Marine Corps by the Act of July 11, 1798 (1 Stat. 594).

The controversy with France is described in note 17, above.

[20] The Barbary States, particularly Tripoli, had been marauding American shipping, in an attempt to exact a payment of tribute from the United States. When the promised tribute was not paid, Tripoli declared war on the United States. President Jefferson sent ships to the Mediterranean, but authorized them only to defend themselves and other American ships. The Navy captured a Tripolitan ship, but released it after disarming it, as the President told Congress:

"Unauthorized by the Constitution, without the sanction of Congress, to go beyond the line of defense, the vessel, being disabled from committing further hostilities, was liberated with its crew. The Legislature will doubtless consider whether, by authorizing measures of offense also, they will place our force on an equal footing with that of its adversaries."

Thomas Jefferson, First Annual Message, December 8, 1801, *Messages and Papers of the Presidents* (1908) vol. I, p. 326.

[21] Act of June 18, 1812 (2 Stat. 155).

[22] Act of April 20, 1898 (30 Stat. 738), containing the ultimatum to Spain, and the Act of April 25, 1898 (30 Stat. 364), declaring that a state of war had existed since April 21.

[23] Act of May 13, 1846 (Stat.), and Act of August 6, 1861 (12 Stat. 326).

[24] *Messages and Papers of the Presidents,* vol. I, p. 389.

[25] In 1824 Colombia notified the United States that it was threatened by France, and asked for protection. The Monroe Doctrine had been announced the year before, but the administration would not commit itself to defend Colombia. President Monroe wrote to Former President Madison that:

The Executive has no right to compromit the nation in any question of war."

Letter of August 2, 1824, quoted in Wormuth, *op. cit.*

[26] Three days after Monroe's letter to Madison, Secretary of State Adams formally wrote to the Minister of Colombia to the United States:

"By the Constitution of the United States, the ultimate decision of this question belongs to the Legislative Department of the Government."

John Quincy Adams to Jose Maria Salazar, August 6, 1824.

[27] In 1851 Hawaii asked the United States for protection from France. Secretary of State Daniel Webster refused to help:

"I have to say that the war-making power rests entirely with Congress and that the President can authorize belligerent operations only in the cases expressly provided for by the Constitution and the laws. By these no power is given to the Executive to oppose an attack by one independent nation on the possessions of another."

J. B. Moore, *Digest of International Law,* Washington, G.P.O. vol. 7, p. 163.

[28] *Congressional Globe,* 30th Congress, 1st Session, page 95, January 3, 1848.

The Mexican War had been precipitated in 1846 by President Polk's dispatch of American troops into a territory whose possession was disputed with Mexico. After hostilities erupted, Congress reluctantly declared that a state of war existed between the United States and Mexico.

The resolution referred to was a vote of thanks to General Zachary Taylor, the Commander of the successful American forces. The clause censuring the President was moved as an amendment to that resolution. The amendment was adopted on January 3, but was dropped when the resolution came up for a final vote.

[29] For the 1798 legislation, see note 19, above.

Congress authorized the President to act against Tripoli in the Act of February 6, 182 (2 Stat. 129).

In 1839, in the course of a dispute over the boundary of Maine, Congress authorized the use of force against England in the Act of March 3, 1839 (5 Stat. 355). Force was never needed.

In 1890 the Congress passed an act, which became law without the President's signature, authorizing the use of force to extract an indemnity for the seizure of American ships off Venezuela. Act of June 17, 1890 (26 Stat. 674). The indemnity was secured by arbitration.

[30] Secretary of State Lewis Cass wrote the British Government that:

"Under the Constitution of the United States, the executive branch of this Government is not the war-making power. The exercise of that great attribute of sovereignty is vested in Congress, and the President has no authority to order aggressive hostilities to be undertaken. . . . Military expeditions into the Chinese territory cannot be undertaken without the authority of the National Legislature." Moore, *op. cit.* vol. 7, p. 164.

[31] President Buchanan told Congress that: "The executive government of this country in its intercourse with foreign nations is limited to diplomacy alone. When this fails it can go no further. It cannot legitimately resort to force without authority of Congress, except in resisting and repelling hostile attacks." *Messages and Papers of the President,* vol. 5, p. 616: Message of December 6, 1958.

[32] Acting Secretary of State Hunter wrote: "The President is not authorized to order or approve an act of war in a country with which we are at peace, except in self-defense. This is a peculiarity of our form of government which at times may be inconvenient, but which is believed to have proved and will in the future be found in the long run to be wise and essential to the public welfare." Moore, *op cit.* vol 7, p. 167.

[33] In his Third Annual Message, President Taft told Congress: "The assumption by the press that I contemplate intervention on Mexican Soil to protect American lives or property is of course gratuitous, because I seriously doubt whether I have such authority under any circumstances, and if I had I would not exercise it without express congressional approval."

Despite presidential protestions to the contrary, a diluted but similar recognition of the need for Congressional approval of limited hostilities lay behind the requests for the Formosa Resolution of 1954, the Middle East Resolution of 1957, and the Gulf of Tonkin Resolution of 1964.

[34] See generally, Reveley, "Presidential War-Making: Constitutional Prerogative or Usurpation?" 55 Va. L. Rev. 1243, 1257–63 (1969). President Wilson sent American troops into Vera Cruz in 1914 on his own authority, but he had asked Congress for an enabling act the day before the troops were used, and the day after the landing Congress ratified his action.

[35] See, "Congress, The President and the Power to Commit Forces to Combat," in *The Vietnam War and International Law,* v. 2 (Falk ed. 1969) at 616, 636–37. This article originally appeared as a Note in the Harvard Law Review, 81 Harv. L. Rev. 1771 (1968). Much of the content and many of the arguments in this memorandum have been drawn from this Note. Hereinafter it will be cited as the "Harv. Note" with page citations to the Falk collection.

[36] See, Moore, "The National Executive and the Use of Armed Forces Abroad," in Falk, supra (n. 35) at 809, 817. This was originally an address given by Professor Moore at the Naval War College on Oct. 11, 1968. (Herein-

after cited as "Moore Address" with page citations to the Falk collection); and see Harv. Note at 637.

[37] U.S. Department of State, "The Legality of United States Participation in the Defense of Viet-Nam," 54 Department of State Bulletin 474 (1966), reprinted in "Symposium—Legality of United States Participation in the Viet Nam Conflict," 75 Yale L.J. 1084 (1966). [Hereinafter cited as State Department Memo.]

[38] As precedent for Vietnam, however, the majority of the nineteenth century uses of force do not survive close scrutiny. Most were minor undertakings, designed to protect American citizens or property, or to revenge a slight to national honor, and most involved no combat, or even its likelihood, with forces of another state. To use force abroad on a notable scale, the President would of necessity have had to request Congress to augment the standing army and navy.

Reveley, supra, n. 8, at 1258.

[39] See generally, Harv. Note.

[40] See generally Harv. Note at 624, 631.

In the event of an armed attack on the territory of the United States proper, there is little question that the executive possesses the power to respond with all means at his disposal. Congressional approval of such action would probably be immediate. When, on the other hand, an attack is made on American persons or property abroad, then the response should generally be proportional to the attack. The recent "Pueblo Incident" is a striking example of the fact that not every use of force against the United States is an act which places the country at war and that a variety of factors should enter into the development of an appropriate response. Short of an attack which threatens the life of the country, therefore, it seems that the President's power under the sudden attack theory is fairly limited.

There is also the danger of provocation, either planned or accidental. The mere presence of American forces near a hostile nation may provoke a "sudden attack." Consider, for instance, the U–2 incident in 1960, the various RB–47 incidents, then the "Pueblo Incident." If the response to such an attack is not limited, then the country may become involved in a much larger conflict with little or no executive-legislative collaboration.

[41] See generally, Harv. Note at 634; Reveley, supra (n. 34) at 1257 et seq.; and Velvel, "The War in Viet Nam: Unconstitutional, Justiciable and Jurisdictionally Attackable," 16 Kan. L. Rev. 449 (1968). (Caveat: Prof. Velvel's article is highly one-sided.)

Modern analogies of the "neutrality theory" were the landing of troops in the Dominican Republic in 1965 and the recent dispatch of American naval vessels to the area around Haiti and Trinidad.

The real problem with the neutrality theory is remaining neutral. "Interposition" may easily lead to "intervention" and the Congress may be faced with a fait accompli. President Roosevelt accomplished an actual "intervention" in Panama in 1903 by "interposing" American troops there under an executive order, ostensibly to protect American property and citizens, but actually to support a friendly government.

However, American citizens who live or own property abroad probably should be able to expect some degree of aid from their government in time of conflict. But if the President has an unfettered right to employ the American military anywhere at anytime to protect American property, Congress may be left without an opportunity to assert its views. And, in many cases, the risks of deployment may be greater than the risks of restraint.

[42] See generally, State Department Memo, Alford, "The Legality of American Military Involvement in Viet Nam: A Broader Perspective," 75 Yale L.J. 1109 (1966); Harv. Note at 627 et seq.; cf., Memorandum of Lawyers' Committee on American Policy toward Viet Nam, 112 Cong. Rec. 2552–59 (daily edn. Feb. 9, 1966).

Almost every national in the world has become classified as friendly, hostile, or neutral, and conflicts which might have seemed minor fifty or a hundred years ago are now often viewed as dangerous because they tend to upset the precarious world order and balance of power. Consequently, the idea of American security has expanded greatly so that an armed conflict in a far part of the world may appear to be a threat to the security of the United States itself. Unilateral Presidential employment of armed forces abroad, under the collective security theory has, therefore, been justified on much the same grounds as unilateral executive action under the sudden attack theory. The physical territory of the United States may be in no immediate, or even distant, danger.

There may be no immediate threat to American forces, citizens, or property, but a conflict may seem to endanger the worldwide security system of the United States. The argument for Presidential action under the collective security theory is that the executive must have the power to respond quickly and forcefully to attacks which are considered important, for a variety of reasons, to the maintenance of the balance of power.

The executive action in Indochina has been premised largely on the collective security theory. The Indochinese War and other recent American military actions serve to indicate that the neutrality theory is no longer viable. In a world which is divided into friendly, hostile, and neutral countries, most armed conflicts will probably affect the existing order. It is difficult, if not impossible, therefore, for American intervention in such conflicts to remain wholly neutral.

The notion that the United States possesses extraterritorial security interests is not novel. The Monroe Doctrine of 1823 is a clear example. But the proliferation of bilateral and multilateral security agreements since the end of World War II has widened American security interests to include most of the world.

Accepting the general premise of the collective security theory, the question is: who determines when the security interest of the United States is threatened, the President or Congress? And who determines what response is to be taken to protect that interest?

[43] See generally, State Department Memo.

[44] See Text and notes, supra.

[45] If the balance has shifted too far in favor of the executive, then Congress must share the blame for its failure to act in the past. Is there any real concern or is it acceptable for the President to have primary responsibility for the use of American forces abroad?

There is certainly a strong argument in favor of giving the executive the ability to respond with speed and force to crises which constitute a *direct* threat to the security of the United States. (See Harv. Note at 640.) But, there are equally strong, if not stronger, arguments in favor of increased congressional control over executive actions which may involve the United States in lengthy conflicts that are costly both in terms of lives and economic resources.

[46] See generally, Moore Address.

[47] Velvel, supra (n. 41) at 457.

[48] The full text of the SEATO Treaty may be found in 6 U.S. Treaties 81; T.I.A.S., No. 3170; 209 U.N. Treaty Series 28; and Falk, supra (n. 35) at 561 and seq. The signatories were: Australia, France, New Zealand, Pakistan, Philippines, Thailand. the United Kingdom, and the United States.

The Protocol to the SEATO Treaty provides in pertinent part that:

The parties to the Southeast Asia Collective Defense Treaty unanimously designate for the purposes of Article IV of the Treaty the states of Cambodia and Laos and the free territory under the jurisdiction of the state of Vietnam."

6 U.S. Treaties 87; T.I.A.S., No. 3170; 209 U.N. Treaty Series 36; Falk, supra (n. 35) at 564.

Laos was removed from the "protocol area" by the Geneva Accords of 1962. See: Protocol to the Declaration on the Neutrality of Laos, T.I.A.S. 5410; Falk, supra (no. 35) at 568.

Article IV goes to the core of the collective security agreement:

"1. Each party recognizes that aggression by means of armed attack in the treaty area against any of the parties or against any state or territory which the parties by unanimous agreement may hereafter designate, would endanger its own peace and safety, and agrees that it will in that event act to meet the common danger in accordance with its constitutional processes. Measures taken under this paragraph shall be immediately reported to the Security Council of the United Nations.

"2. If, in the opinion of any of the parties the inviolability or the integrity of the territory or the sovereignty or political independence of any party in the treaty area or of any other state or territory to which the provisions of paragraph 1 of this article from time to time apply is threatened in any way other than by armed attack or is affected or threatened by any fact or situation which might endanger the peace of the area, the Parties shall consult immediately in order to agree on the measures which should be taken for the common defense.

"3. It is understood that no action on the territory of any state designated by unanimous agreement under paragraph 1 of this article or on any territory so designated shall be taken except at the invitation or with the consent of the government concerned."

(1966); Falk, "International Law and the United States Role in Viet Nam: A Response to Professor Moore," 76 Yale L.J. 1095 (1967); but cf. Moore, "International Law and the United States Role in Vietnam: A Reply," 76 Yale L.J. 1051 (1967).

[50] Art. IV, ¶1 of SEATO Treaty, supra (n. 48).

[51] Constitution, Art. 2, § 2, cl. 2.

[52] Id, Art. 2, § 3.

However, the treaty is rendered of no effect if it conflicts with subsequent legislation, since the lawmaking power of Congress is equally as potent as the treaty power.

"A treaty may supersede a prior act of Congress, and an act of Congress may supersede a prior treaty. *The Cherokee Tobacco*, 78 U.S. (11 Wall.) 616, 621 (1870); accord. *Pigeon River Co.* v. *Cox Co.*, 291 U.S. 138, 160 (1934); *Moser* v. *United States*, 341 U.S. 41, 45 (1951).

[53] See Harv. Note at 643–46.

The possibility of giving the war power to the Senate alone was specifically considered and rejected by the Farmers. See, Appendix on the debate in the Constitutional Convention.

[54] Southeast Asia Resolution, Aug. 10, 1964, Public Law 88–408 (H.J. Res. 1145); 78 Stat. 384. The Resolution is also reprinted in Falk, supra (n. 35) at 579.

[55] See e.g. opinion of Chief Justice Marshall in *Talbot* v. *Seeman*, 5 U.S. (1 Cr.) 1, 25 (1801). And, as former Secretary of Defense McNamara has said, "There has not been a normal declaration of war—anywhere in the world—since World War II." Address to American Society of Newspaper Editors, May 18, 1966, *New York Times*, May 19, 1966, p. C–11, col. 1 (city edn.) at col. 2.

[56] See generally, Moore Address; Alford, supra, (n. 42); Moore and Falk articles, supra (n. 49).

Whether the Tonkin Resolution is sufficient authority for the Cambodian invasion and the air action in Laos has not been con-

sidered by the legal commentators thus far, but the language of the Resolution is so broad that it could, arguably, authorize almost any American action in the Western Pacific area. See, remarks of Senators Fulbright and Cooper during debate on the Resolution, 110 Cong. Rec. 18409–410 (1964).

[57] One commentator, however, does argue that Congress had sufficient information to form a reasonable opinion about the possible consequences of the Resolution, and that it was perhaps an unfortunate, but not unconstitutional abdication of responsibility. See, Moore Address at 821, and see generally, Moore and Underwood, "The Lawfulness of United States Assistance to the Republic of Viet Nam," 112 Cong. Rec. 14943, 14960–67, 14983–89 (daily edn., July 14, 1966).

[58] It is at least questionable whether a resolution passed in response to a relatively minor attack on American warships was sufficient authorization for a war which has resulted in more American casualties than any war except the Civil War and World Wars I and II.

It has also been argued that Congress has given its implied approval to the Indochinese War because it has passed military authorization bills for the area. The argument based on enactment of military appropriations legislation is specious. The authorization of expenditures for the support of the soldiers in Southeast Asia War necessitated by the executive fait accompli in dispatching forces there. And, if the Framers had thought that the money power by itself gave Congress sufficient control over the military, there would have been no need to grant Congress the explicit war power. See generally, Harv. Note at 646.

[60] The power of the purse was the weapon used by the English parliament to combat the exercise of despotic power by Charles I and James II. The Framers of the Constitution were certainly aware of its utility as a guarantee of the powers and privileges of the legislature.

[60a] The resolutions now before Congress, though carrying important political impact, would affect the constitutionality of subsequent executive action. If a resolution were made before the initiation of hostilities, Presidential commitment of American forces or significant expansion of the war would be precluded because the resolution would be a clear assertion of the primacy of Congress in the making of war. See *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U.S. 579 (1952) (Jackson, J., concurring). Once forces were involved in combat the resolution would prohibit expansion of hostilities.

[61] Such restrictions should be distinguished from the so-called "legislative veto," which reserves to Congress or one of its components the right to determine the actual effect of the restriction by subsequent action falling short of actual legislation, such as disapproval by committee action or a resolution of one or both houses.

It is arguable that the inclusion of specific dates on which these restrictions take effect is an invasion of the inherent powers of the President as Commander in Chief. According to a strict construction of the Constitution, the President's inherent power may be limited to the power to repel sudden attacks only by immediate and temporary action. The expansion of his power through its unopposed exercise may be determinative of its constitutionality when Congress does not act, but it may be limited by Congressional action. The important question is whether the proposed limitation is reasonable. Since there is no indication that compliance with these restrictions is not fully feasible, there is no reason why the will of Congress should not be respected on this issue. The authors thus reject the argument.

[61a] Harris, *Congressional Control of Administration*, 213–215 (1964); Huzar, *The Purse and the Sword*, 211, 220, 240 (1950).

[62] 83 Stat. 469 (1969).

The inclusion of the phrase "in line with the expressed intention of the President of the United States," whatever its value as a face-saving device for the President, detracts not at all from the force of this proviso. The full text of the amendment reads:

"In line with the expressed intention of the President of the United States, none of the funds appropriated by this Act shall be used to finance the introduction of American ground combat troops into Laos or Thailand."

[63] Act of September 16, 1940 (54 Stat. 885).

[64] In 1955, for instance, Congress attached a rider, § 638, to the Defense Appropriation Act prohibiting use of funds appropriated therein "for the disposal or transfer by contract or otherwise of work that has been . . . performed by civilian personnel of the Department of Defense unless justified to the Appropriations Committee(s) . . . ." 69 Stat. 321 (1955). A threat to Congress' constitutional powers arose when, in a message to Congress, the President stated that § 638 was unconstitutional and declared that "to the extent that this section seeks to give to the Appropriations Committees of the Senate and the House of Representatives authority to veto or prevent executive action, such section will be regarded as invalid by the executive branch of the government . . . unless otherwise determined by a court of competent jurisdiction." 101 Cong. Rec. 10459–60, 10416, 84th Cong., 1st Session (July 13, 1955).

But despite this threat, the Defense Department complied in full with the provisions of Section 638. The Department reported, as required by the Act, and agreed to delay action to accommodate Congress. And after the Armed Services Subcommittee of the House Appropriations Committee formally denied permission to dispose of several operations employing civilians, the President and the Defense Department followed its directions during the time that § 638 remained law. Carper, *The Defense Appropriation Rider* (1960).

The response of the Comptroller General to this crisis adds further support to the position of Congress. A month after the President had made his threat, the Comptroller General informed Congress that—

"On the fundamental basis that it is for Congress to say how and on what conditions public monies should be spent, the position of the GAO, as the agent of Congress, must be, in this case and always, to accord full effect to the clear meaning of the enactment by the Congress so long as it remains unchanged by legislative action and unimpaired by judicial interpretation. *Id.*"

Therefore, he concluded, where a violation were found he would exercise his power as Comptroller General to disallow credits in the agencies accounts and hold the officers personally liable for the cost of the illegal activity. *Id.* Although § 638 was an example of the use of the legislative veto, it serves as a valid indication of expectable executive response to an unequivocal restriction, particularly since the legislative veto is open to possible attack as a circumvention of the constitutionally required lawmaking process.

[65] U.S. Constitution, Art. II, § 1.

[66] U.S. Constitution, Art. II, § 3.

[67] U.S. Constitution, Art I, §§ 8, 9.

[68] Even if the President acts beyond the constitutional limits of his powers, "Congress has not thereby lost its exclusive constitutional authority to make laws necessary and proper to carry out the powers vested by the Constitution in the Government of the United States, or any Department of officer thereof." *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U.S. 579, 588–89 (1952).

Whatever the merits of the arguments about the President's power to impound funds, such practices under which the executive exercises discretion within the limits set by Congress in appropriations acts can be clearly distinguished from a more clearly unconstitutional breach by the executive of restrictions on positive action. See, e.g., Fisher, "Presidential Impoundment of Funds," 38 Geo. Wash. L. Rev. 124, 130 (1969); Davis, "Constitutional Power to Require Defense Expenditures," 33 Fordham L. Rev. 39, 40–41, 55 (1964).

[69] In the words of Justice Black:

"The Constitution is neither silent nor equivocal about who shall make laws which the President is to execute. . . . The Constitution does not subject this lawmaking power of Congress to presidential or military supervision or control. . . . The Founders of this Nation entrusted the lawmaking power to the Congress alone in both good and bad times."

Youngstown Sheet & Tube Co. v. *Sawyer*, 343 U.S. 579, 587–89 (1952).

Other judicial pronouncements on the "raise and support" and appropriations clauses have construed them to give Congress power to control the creation of military forces. One early opinion stated the argument succinctly:

"The power of congress to raise and support armies . . . is clear and undisputable. The language used in the constitution in making this grant of power is so plain, precise and comprehensive, as to leave no room for doubt or controversy, as to where the supreme control over the military force of the country resides."

In re Griver, 16 Wisc. 423, 431 (1863).

Another court has stated the conclusion more forcefully:

"The purpose of the appropriations, the terms and conditions under which said appropriations were made, is a matter in the hands of Congress and it is the plain and explicit duty of the executive branch of the government to comply with the same."

Spaulding v. *Douglas Aircraft Co.*, 60 F. Supp. 985, 988 (S.D. Cal. 1945), affirmed 154 F. 2d 419 (9th Cir. 1946).

[70] U.S. Constitution, Art. I, § 8.

[71] *The Federalist.*

[72] *Youngstown Sheet & Tube* v. *Sawyer*, 343 U.S. 579 (1952).

[73] For instance, Justice Frankfurter felt that the absence of Presidential power would have been beyond contention "had Congress explicitly negated such authority in formal legislation." *Id.* at 602.

Rejecting the view that the Commander in Chief clause supports "any Presidential action, internal or external, involving the use of force," Justice Jackson concluded that "Congress alone controls the raising of revenues and their appropriation and may determine in what manner and by what means they shall be spent for military and naval procurement." *Id.* at 643.

[74] The much-noted concurring opinion of Justice Jackson stated the proposition in more detail:

"Presidential powers are not fixed but fluctuate, depending upon their disjunction or conjunction with those of Congress. . . . When the President takes measures incompatible with the expressed or implied will of Congress, his power is at its lowest ebb. . . . Courts can sustain exclusive presidential control in such a case only by disabling the Congress from acting on the subject. Presidential claim to a power at once so conclusive and preclusive must be scrutinized with caution, for, what is at stake is the equilibrium established by our constitutional system. *Id.* at 635–638."

[75] Exceptions broader than these are not required by the Constitution, since Congress could authorize at any time military action beyond immediate self-defense.

[76] *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U.S. 579, 654 (1952).

THE CONSTITUTION OF THE UNITED STATES

(Clauses related to war)

Article I

Section 1. All legislative power herein granted shall be vested in a Congress of the United States . . .

Section 8. The Congress shall have Power to lay and collect Taxes, Duties, Imposts, and Excises, to . . . provide for the common Defences . . .

To declare War, grant letters of Marque and committed on the high Seas, and Offences against the Law of Nations;

To declare War, grant letter of Marque and Reprisal, and make rules concerning Captures on Land and Water;

To raise and support Armies, but no Appropriation of money to that Use shall be for a longer term than Two years;

To provide and maintain a Navy;

To make rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia . . .

To provide for organizing, arming, and disciplining the Militia . . .

To make all laws which shall be necessary and proper for carrying into Execution the foregoing Powers, . . .

Article II

Section 1. The executive Power shall be vested in a President of the United States of America. . . .

Section 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the Several States when called into the actual service of the United States; . . .

He shall have power, by and with the advice and consent of the Senate, to make Treaties, provided two-thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors . . . and all other Officers of the United States . . .

(The appropriations clause)

Article I

Section 9. No money shall be drawn from the Treasury, but in consequence of Appropriations made by law; . . .

THE DEBATE ON THE WAR POWER IN THE CONSTITUTIONAL CONVENTION

(From Madison's notes)

Friday August 17th in Convention.

"To make war"

Mr. PINKNEY opposed the vesting this power in the Legislature. Its proceedings were too slow. It would meet but once a year. The House of Representatives would be too numerous for such deliberations. The Senate would be the best depository, being more acquainted with foreign affairs, and most capable of proper resolutions. If the States are equally represented in the Senate, so as to give no advantage to large States, the power will notwithstanding be safe, as the small have their all at stake in such cases as well as the large States. It would be singular for one authority to make war, and another peace.

Mr. BUTLER. The objections against the Legislature lie in great degree against the Senate. He was for vesting the power in the President, who will have all the requisite qualities, and will not make war but when the Nation will support it.

Mr. MADISON and Mr. GERRY moved to insert "declare," striking out "make" war; leaving to the Executive the power to repel sudden attacks.

Mr. SHARMAN thought it stood very well. The Executive should be able to repeal and not to commerce war. "Make" better than "declare" the latter narrowing the power too much.

Mr. GERRY never expected to hear in a republic a motion to empower the Executive alone to declare war.

Mr. ELLSWORTH. There is a material difference between the cases of making *war* and making *peace*. It should be more easy to get out of war than into it. War also is a simple and overt declaration, peace attended with intricate and secret negotiations.

Mr. MASON was against giving the power of war to the Executive, because not safely to be trusted with it; or to the Senate, because not so constructed as to be entitled to it. He was for clogging rather than facilitating war; but for facilitating peace. He preferred "declare" to "make."

On the motion to insert *declare*—in place to *make*, it was agreed to.

N.H. no.

Mas. absent

Cont. no (On the remark by Mr. King that "make" war might be understood to "conduct" it which was an Executive function, Mr. Ellsworth gave up his objection, and the vote of Connecticut was changed to—ay.)

Mr. Pinkney's motion to strike out the whole clause, disagreed to without call of States.

COMMENTS ON THE ROLE OF CONGRESS AND THE PRESIDENT IN MILITARY AND FOREIGN AFFAIRS

JAMES MADISON: "The management of foreign relations appears to be the most susceptible of abuse of all the trusts committed to a government, because they can be concealed or disclosed in such parts and at such times as will best suit particular views; and because the body of the people are less capable of judging, and are more under the influence of prejudices, on that branch of their affairs, than of any other. Perhaps it is a universal truth that the loss of liberty at home is to be charged to provisions against danger, real or pretended, from abroad."—Letter to Jefferson, May 13, 1798.

THOMAS JEFFERSON: "Considering that Congress alone is constitutionally invested with the power of changing our condition from peace to war, I have thought it my duty to await their authority for using force in any degree which could be avoided."—Message to Congress, December 6, 1805.

JOHN MARSHALL: "The whole powers of war being, by the Constitution, vested in Congress, the acts of that body alone can be resorted to as our guides in this inquiry."—Opinion in *The Amelia*, 1801.

JUSTICE SAMUEL P. CHASE: "Congress is empowered to declare a general war, or Congress may wage a limited war; limited in place, in object, in time. If a general war is declared, its extent and operations are only restricted and regulated by the *jus belli*, forming a part of the law of nations; but if a partial war is waged, its extent and operation depend on our municipal laws.—Opinion in *Bas v. Tingey*, 1800.

DANIEL WEBSTER: "In the first place, I have to say that the war-making power in this Government rests entirely with Congress; and that the President can authorize belligerent operations only in the cases expressly provided for by the Constitution and the laws. By these no power is given to the Executive to oppose an attack by one independent nation on the possessions of another. We are bound to regard both France and Hawaii as independent states, and equally independent, and though the general policy of the Government might lead it to take part with either in a controversy with the other, still, if this interference be an act of hostile force, it is not within the constitutional power of the President; and still less is it within the power of any subordinated agent of government, civil or military."—Statement while Secretary of State, 1851.

JAMES BUCHANAN: "The executive government of this country in its intercourse with foreign nations is limited to the employment of diplomacy alone. When this fails it can proceed no further. It cannot legitimately resort to force without the direct authority of Congress, except in resisting and repelling hostile attacks. It would have no authority to enter the territories of Nicaragua even to prevent the destruction of the transit and to protect the lives and property of our own citizens on their passage. It is true that on a sudden emergency of this character the President would direct any armed force in the vicinity to march to their relief, but in doing this he would act upon his own responsibility."—Message to Congress, December 6, 1858.

ABRAHAM LINCOLN: "Let me first state what I understand to be your position. It is that if it shall become necessary to repel invasion, the President may, without violation of the Constitution, cross the line and invite the territory of another country, and that whether such necessity exists in any given case the President is the sole judge. . . . Allow the President to invade a neighboring nation whenever he shall deem it necessary to repel an invasion, and you allow him to do so whenever he may choose to say he deems it necessary for such a purpose, and you allow him to make war at his pleasure. Study to see if you can fix any limit to his power in this respect, after having given him so much power as you propose. . . .

The provision of the Constitution giving the war-making power to Congress was dictated, as I understand it, by the following reasons: Kings had always been involving and impoverishing their people in wars, pretending generally, if not always, that the good of the people was the object. This our convention understood to be the most oppressive of all kingly oppressions, and they resolved to so frame the Constitution that no one man should hold the power of bringing oppression upon us. But your view destroys the whole matter, and place our President where kings have always stood."—Letter to Herndon while in Congress.

May 19, 1970

Mr. CRANSTON. Mr. President, the Senate debate and public discussion of the Church-Cooper amendment have been replete with references to an alleged interference with the President's powers as Commander in Chief. In terms of the manner of action it proposes, this legislative vehicle is, of course, identical to amendment No. 609 to the military procurement authorization bill, the "amendment to end war," and we should not doubt that the same questions will be repeated when that measure is the pending business.

The assertion is that if we deny him the wherewithal he needs to conduct his war policy, the Congress will interfere with the constitutional prerogatives of the President.

It is simply not true, Mr. President, and those who raise such arguments are avoiding—through inadvertence or design—the core of the issue raised by these measures. What we propose is that the Congress fulfill its long-neglected constitutional obligation to decide whether this war shall continue.

In this connection, I would like to call to the attention of the Senate a "Legal Memorandum on the Amendment To End the War" which has been prepared by students of the Harvard Law School under the direction of members of the Harvard Law Review. I understand that it will be released in the near future with the endorsement of a number of prominent legal scholars and members of the legal profession.

On the power of the Commander in Chief, the memorandum points out that the Constitutional Convention had two objectives in mind:

"First, the Convention desired to concentrate in a single civilian leader the tactical control of armies engaged in battle.

"Second, the framers sought to transfer to the President a check on an overly martial legislature so as to insure further against any precipitate commitment of our forces."

Neither purpose presumes a plenary grant of power to conduct wars over the opposition of Congress. On the contrary, again quoting from the memorandum:

"The debates in the Constitutional Convention clearly indicate one thing: Congress was to be given ultimate control over the warmaking power, with a variety of means at its command to enforce its views. At the minimum the framers would have viewed an appropriation restricted in use to disbanding an army and bringing it home as a proper exercise of Congressional power.

"Congress will have abdicated its own powers over war policy, however, if it remains inactive once the question of troop commitment is formally raised."

Let us, therefore, debate the wisdom of continuing the conflict in Vietnam. Let us consider as well the implications in terms of the role of Congress if we allow the war to go on without a positive grant of specific, understandable authority.

But let us avoid the grave error of pitching the debate on issues that do not exist. These amendments have nothing to do with the powers of the President as Commander in Chief; rather, they ask each Member on the Congress to exercise his affirmative duty to approve or disapprove American participation past next June in the Vietnam conflict.

Mr. President, I commend the authors of this "Legal Memorandum on the Amendment to End the War," and I ask unanimous consent that it be printed at this point in the RECORD.

(There being no objection, the memorandum was order to be printed in the RECORD, as follows:)

LEGAL MEMORANDUM ON THE AMENDMENT TO END THE WAR

(This memorandum was prepared under the general direction of several members of the "Harvard Law Review."

(Faculty Advisers: Abram Chayes, Professor of Law; Frank Michelman, Professor of Law.

(General Editors: Jerry Shulman, Joel Klein.

(Contributors: Philip Bakes, Jr., Robert Denham, Ed Glazer, Robert Gordon, Rob Hager, William Kolasky, Frank Kramer, Ira Lupu, James McGibbon, Mark Moskowitz, William Pizzi, Michael Seidman.)

"* * * the doctrine of the separation of powers was adopted by the convention of 1787, not to promote efficiency but to preclude the exercise of arbitrary power. The purpose was, not to avoid friction, but, by means of the inevitable friction incident to the distribution of the governmental powers among three departments, to save the people from autocracy."—*Meyers v. United States*, 272 U.S. 252, 293 (1926) (Brandeis, J. dissenting).

"* * * Congress can alone raise armies; and may put them down, whenever they choose."—2 J. Story, Commentaries on the Constitution of the United States, section 1187 (4th ed. 1873).

A. Introduction

This memorandum examines the constitutional basis for the Amendment to End the War. Most constitutional debate heretofore has focused on the President's authority to engage American troops in hostilities abroad without congressional approval. We do not address this question. Rather, we address the question of congressional power. Regardless of the President's power, Congress may exercise its independent judgment on the use of American forces abroad, indeed, it has an obligation to do so.

There is no doubt that Congress has the competence and responsibility, though not exclusive of presidential competence and responsibility, to make decisions regarding the commitment of U.S. military forces in foreign hostilities. By Article I, section 8, Congress is given the power "To declare War," "To make Rules for the Government and Regulation of the land and naval Forces," and "To provide and maintain a Navy." Nor is there any doubt as to the power of Congress to use the appropriations process to carry out congressional policy on matters within the congressional competence and responsibility. Under Article I, section 8 of the Constitution, Congress is empowered "to lay and collect taxes, . . . to pay the Debts and provide for the common Defense and general Welfare of the United States . . ."; and it is provided by Article I, section 9 that "no money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law . . ." Moreover, the link between congressional responsibility to oversee our military commitments and congressional power over appropriations is explicitly forged by the provision in Article I, section 8 that Congress shall have power "to raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two years."

It cannot, then, be contended that in conditioning appropriations upon the orderly withdrawal of American forces from a foreign field, Congress would be acting beyond the scope of its powers under the Constitution. The objection, if there be one, must rather be that for Congress by this means to deny the President resources required for the support of troops in the field would be to encroach upon his prerogatives under Article II, section 2, as "Commander in Chief of the Army and Navy of the United States." The Constitution seems to endow both branches with some relevant competence and responsibility; the question is whether legislative appropriations powers may prevail over executive powers of military command when the policies of the two branches are in conflict.

It is possible to define, if somewhat crudely, the respective spheres of supremacy of Congress and the Presidency in "substantive" terms—in terms, that is, of the issues to be decided. The band of division appears to lie between, on the "congressional" side, decisions as to whether a war is a justified and desirable means of pursuing some United States objective (or of how much and what sort of war is to be waged in pursuit of what objectives); and, on the "presidential" side, decisions as to how those resources committed by Congress to warmaking ought to be managed so as to achieve the contemplated objectives. In light of this analysis an explicit congressional decision that no interests of the United States justify continued American military activities in Indochina, and that accordingly we should withdraw, ought to prevail over a contrary presidential judgment.

A perspective limited to the doctrine of separation of powers, however, yields an incomplete analysis of presidential and congressional prerogative and responsibility. The Constitution, while it sought to provide a harmonious framework for intraction, also aimed at a system of checks and balances among the three branches of government. Underlying this doctrine of checks and balances is the notion that each branch of the government has sufficient power to check the actions of the other branches that it deems unwise. The idea is starkly simple, and is the purest rendition of the constitutional text: only the President may deploy and command the troops, while only Congress may appropriate the wherewithal for their subsistence, equipage, and transport. What the President chooses not to command, Congress cannot well buy; what Congress chooses not to buy, the President cannot well command.

The interplay of these two contending powers illustrates the wisdom of the framers. The commitment of men and treasure to extended foreign war is the gravest exaction a government can make of its people. The constitutional allocation of powers insures that only when both branches—executive and legislative—concur can such an exaction be maintained.

B. The constitutional understanding

Congressional power to enact the Amendment to End the War must ultimately derive from the powers granted the legislative branch by the Constitution. The conflict over the constitutionality of the bill arises because the Constitution divides authority over military affairs between Congress and the President. Article II, section 2 denominates the President as "Commander in Chief of the Army and Navy." Article I, section 8, however, grants Congress the powers to "provide for the common Defence," "To declare War," "To raise and support Armies," and "To make rules for the Government and Regulation of the land and naval Forces."

The phrases on their face establish both a shared and divided power with exclusive Presidential control over troops in the field, and the larger areas of war policy decision-making falling within the domain of Congress.

The original constitutional undertaking did not occur in a historical vacuum, but against the backdrop of the 17th century English struggles between King and Parliament. These struggles were in large part over the power to conduct foreign relations, most especially the power to maintain and use a standing army. Detailed knowledge of this history was part of the common intellectual heritage of the framers.

At the beginning of the 17th century political men accepted almost without question the doctrine that the conduct of foreign affairs, and above all, the making of peace and war, were mysteries of state, the exclusive business of the crown. By the end of the century—a century of the Stuarts, the Commonwealth, the Restoration, and the Glorious Revolution—all this had changed. Parliament had assumed an important role in the policy-making process.

The device Parliament developed for asserting its control was the power to vote revenue.

Before 1624 Parliament had, in time of war, granted the King subsidies without restriction as to how they could be spent. In the Subsidy Act of 1624 the Commons for the first time conditioned the grant. The money was to be spent only for defending England and Ireland, financing the Navy, and aiding the Dutch. Such restrictions were not yet ripe for success; the Lords protested. But Parliament did wring from King James the promise to make no treaty without its "advice and consent." Charles I, successor to James I, tried to wage war without Parliament's help. When nothing was voted for war in 1626 he sought to finance his policy through forced loans. But the impossibility of continuing the war without a parliamentary grant forced him to yield to the Petition of Right (1628), which declared illegal the collection of taxes without Parliamentary consent. The issue was again contested over Ship Money, a tax on towns in lieu of building ships for the navy. This attempt ultimately failed, however, and in 1641 Parliament emphaticaly reasserted its right to a measure of control over the raising and deploying of armies by outlawing Ship Money. Charles I was beheaded shortly thereafter.

The early years of the Restoration monarchy were notorious for Charles II's secret pacts with foreign powers. Parliament once again used the money power to invade this closed policy-making process. In 1666 Parliament revived the technique of placing conditions on its grants of revenue by making a grant of £380,000 and specifying that if the treasurer of the Navy diverted the grant to anything but wages of seamen he should forfeit treble the value of the money. By 1678 the technique of imposing restrictions on the grants of revenue was standard practice. In that year Charles II sought freedom to maintain or disband his army in Flanders as he saw fit. Parliament insisted on retaining general control over basic military policy. It responded with the Supply Act of 1678 which granted a sum of about £206,000 and specified that this sum must be applied to disbanding the Flanders forces and to no other purposes the Act even specified the date of disbandment, a date less than three months from the date of the act. It was, indeed, Parliament's Amendment to End the War.

The Founding Fathers were well aware of this exercise of parliamentary power over military decisionmaking. They were also aware that Parliament's role in foreign affairs had deteriorated just prior to the American Resolution. Alexander Hamilton reported in Federalist No. 26 that Americans derived their ideas about the control of the military "from the nation from whom the inhabitants of these states have in general sprung." Men like Hamilton, a strong advocate of executive power, and James Otis were determined that the American Congress would maintain the authority over warmaking that Parliament had once achieved but was then in danger of losing.

The aims of the Constitutional Convention in making the President the Commander in Chief were two: First, the Convention desired to concentrate in a single civilian leader the tactical control of armies engaged in battle. But this was no plenary grant of power to maintain troops in a particular theater of war once Congress had decided to disengage. As Hamilton interpreted the power, it "amounted to nothing more than the supreme command and direction of the military forces, as first General and Admiral of the Confederacy." This clause places the civilian President at the top of the military command. It contains no grant of power to define the purposes for which the President may exercise his command over the troops.

Second, the framers sought to transfer to the President a check on an overly martial legislature so as to insure further against any precipitate commitment of our forces. They remembered all too well the very broad delegation of responsibility for warmaking conferred by the Articles of Confederation on Congress Mason, arguing for the proposition that someone, either the President or a council of revision, should be given the power to veto legislative action, stated that "The purse and sword must not be in the same hands; if this is true, and the Legislature are able to raise revenues and make and direct a war, I shall agree to a restraining power of the Legislature either in the Executive or a council or revision." The President's check, of course, was by no means intended to grant the executive any exclusive and unrestrainable power over the disposition of the army and navy.

The debates in the Constitutional Convention clearly indicate one thing: Congress was to be given ultimate control over the warmaking power with a variety of means at its command to enforce its views. At a minimum the framers would have viewed an appropriation restricted in use to disbanding an army and bringing it home as a proper exercise of Congressional power. Parliament had exercised this much power in 1678 and the conscious design of the Constitution was to give Congress more power over foreign affairs and warmaking than Parliament had possessed. The Constitution, read in light of the historical context and the framers' fear of a military establishment, thus established that the President could command the tactical operations of an army while engaged, but that Congress had the power through appropriations to provide an army, to disband it, or to disengage it from a particular theater of operations.

The reading is confirmed by the discussion of the relevant constitutional provisions in the Federalist papers. The colonists had seen how easy it was for a king, with a standing army at his disposal, to engage his subjects in foreign conflicts. Thus many objected to this Constitution drafted at Philadelphia because it failed to prohibit a standing army. Hamilton argued that such a prohibition was unnecessary because the Constitution gave the legislature the power to check the President in his capacity as Commander-in-Chief through the control over appropriations attendant on the power to raise and support armies. The requirement, unique in the Constitution, that "no Appropriation of Money to that Use Shall be for a Longer Term than Two Years" was designed to insure review by each new Congress of presidential exercise of command over the armed forces. In the Federalist No. 26, Hamilton said:

"The legislature of the United States will be *obliged*, by this provision [two-year appropriation], once at least in every two years, to deliberate upon the propriety of keeping a military force on foot; to come to a new resolution on the point; and to declare their sense of the matter, by a formal vote in the face of their constituents. They are not *at liberty* to vest in the executive department permanent funds for the support of an army. . . ."

A definitive practical gloss on the intentions of the constitutional framers is provided by the early relationships between Presidents and Congresses in times of crisis. President Adams sought Congressional authority to respond to French attacks on American ships even though he did not seek to declare war. President Jefferson, too, felt compelled to call on Congress to make a judgment on our response to attacks on our vessels by Tripolitan ships. He indicated this in his first annual message to Congress, in recounting the capture of a Tripolitan cruiser:

"Unauthorized by the Constitution, without the sanction of Congress, to go beyond the line of defence, the vessel being disabled from committing further hostilities, was liberated with its crew. The Legislature will doubtless consider whether, by authorizing measures of offense also, they will place our force on an equal footing with that of its adversaries. I communicate all material information on this subject, that in the exercise of this important function confided by the Constitution to the Legislature exclusively their judgment may form itself in a knowledge and consideration of every circumstance of weight."

Again, in deciding how to respond to the potential Spanish threat in Florida, Jefferson asked Congress to take certain steps, acknowledging that "the course to be pursued will require command of means which it belongs to Congress exclusively to yield or to deny."

Jefferson's successors—Madison, Monroe and even Jackson—all acknowledged executive deference to the legislature on questions of troop deployment and armed hostilities. Indeed, the nineteenth century in general is replete with acknowledgments of congressional preeminence. Lincoln, for example, when he was a member of Congress, stated:

"The provision of the Constitution giving the war making power to Congress, was dictated, as I understand it, by the following reasons: Kings had always been involving and impoverishing their people in wars, pretending generally, if not always, that the good of the people was the object. This, our Convention understood to be the most oppressive of all Kingly oppressions; and they resolved to so frame the Constitution that no one man should hold the power of bringing oppression upon us."

Moreover, Congress was quick to protect its war powers whenever these were challenged. After President Polk dispatched an army to Mexico in "hot pursuit" of an invading Mexican force, but without Congressional approval, the House passed a resolution stating that the war had been "unnecessarily and unconstitutionally begun by the President . . ."

The twentieth century particularly during the crisis moments of the Cold War, saw increasing congressional acquiescence to broad presidential assertions of power. The high-water mark of this trend came when President Truman committed troops to Korea without prior or subsequent approval by Congress. Thereafter Eisenhower in 1955 (Formosa) and 1957 (Lebanon), Kennedy in 1962 (Cuba) and Johnson 1964 (Tonkin), all sought approval of military action by congressional resolution. Some members of Congress have felt the legislative role in these cases was simply to rubber-stamp executive action. Senator Morse, for example, viewed the Tonkin Gulf Resolution as a carte blanche for presidential discertion. But no one has agreed that this sort of resolution exhausted congressional power.

Even when there is need for rapid response (*e.g.*, the Cuban missile crisis), an accommodation between the President and Congress can be reached. Congress' responsibility is to evaluate the costs and priorities of military abroad. Congress can exercise this most serious decisionmaking function *after* the initial executive commitment has been made as well as before. Indeed only then can Congress get possession of all the data relevant to the commitment involved and make a considered evaluation of it. To allow the President to persist in military action abroad because he deems it essential to the national security even after Congress, on the basis of a full evaluation of the threat and the costs of meeting it, has concluded otherwise, is to extend the President's "defensive" power beyond limitation. The decision to terminate a war is different from one to declare a war, it is nonethelesss within congressional power. It gives the legislature a needed negative check against unbridled executive action.

In sum, the present legislation attempting to establish broad timetables of U.S. withdrawal is an appropriate way for Congress to enforce its policy regarding national priorities and the removal of U.S. military presence from Southeast Asia. It is a mandate of national will which the President as Commander in Chief must follow. Congressional action will not usurp the President's power: he may still decide what is tactically the safest and most effective way to withdraw consistent with spirit of the congressional mandate. Congress will have abdicated its own powers over the war policy, however, if it remains inactive once the question of troop commitment is formally raised.

C. Appropriations power

The means most readily available to Congress to assert congressional power is its authority over appropriations. This power provides a particularly apt negative check on the executive. Historically, there has never been any doubt that Congress has the power to limit executive action through control of the purse. The Constitution explicitly states that "no money shall be drawn from the treasury but in consequence of appropriation made by law," and both branches of Congress have on occasion used this power

to exercise detailed control over the minutiae of executive action.

Richard H. Fenno, Jr., states:

"To criticize Congress for intervening in a specific and detailed fashion is to attack it for doing the only thing it can do to effectively assert its influence. Specifics and details are the indispensable handles which Congressmen use to work inductively toward broader kinds of oversight judgments . . . Congressional control is or is not appropriate in the context of the realities of legislative and executive decisionmaking. The legislator ought not to be criticized for using those controls which are available to him and which his experience tells him bring the greatest influence over executive activity."

Supreme Court Justice Robert Jackson, formerly Attorney General to Franklin Roosevelt, reaffirmed plenary Congressional power over appropriations, with particular reference to control of the armed forces. He wrote:

"Congress alone controls the raising of revenues and their appropriations and may determine in what manner and by what means they shall be spent for military and naval procurement . . . While Congress cannot deprive the President of the command of the army or navy, only Congress can give him an army or a navy to command."

The general power of Congress over appropriations is reinforced by the specific reference to the appropriations power in the Article I, section 8 grant of power to Congress to "raise and support Armies."

There are numerous precedents of carefully placed Congressional restrictions on military appropriations sanctioning the use of appropriations as a vehicle for achieving substantive policy. In 1909, President Theodore Roosevelt sought by executive order to restrict the use of the Marine Corps to onshore bases, apparently in an effort to raise the morale of the Navy. Congress disagreed and sought to force the retention of the Marine Corps on board battleships and cruisers. The House of Representatives' version of the Naval Appropriations Bill of 1909, H.R. 26394, 60th Cong., 2nd Sess. (1909), included the following proviso:

Provided, That hereafter officers and enlisted men of the Marine Corps shall serve as heretofore on board all battleships . . . in detachments of not less than eight per centum of the strength of the enlisted men of the navy on said vessels."

The proviso was written as a directive, with no clear penalty for executive noncompliance.

The Senate Committee on Naval Affairs amended the above proviso so as to make the entire Marine Corps appropriation contingent upon fulfillment of the condition. Senate debate focused on the division between legislative and executive warmaking powers. Senators Lodge, Cummins, and Borah all opposed the particular conditional appropriation. However, under questioning it became clear that the stand these critics took against Congress' power was a very limited one. Senator Bacon asked them whether Congress could order the President to remove troops from the District of Columbia after the President had placed them there. Senator Cummins and Senator Borah both acknowledged that Congress had the constitutional power to do so; Senator Lodge also admitted that his objections were on policy grounds, not on whether Congress had the requisite power to so restrict the use of appropriations.

Some Senators went considerably further in defining Congress' power. Senator Fulton said:

"[N]o doubt . . . Congress has the power to say that money should not be expended on payment of a particular corps of the army if it should be stationed in a particular place.

"And the simple fact that the President in advance had sent the army there would not preclude Congress from still exercising its constitutional function of ordering it removed from there."

In an effort to draw the hazy line between Congressional and Presidential power, Senator Fulton continued:

"I concede that Congress cannot absolutely control and fetter the President, but that is simply when and while he acts as commander in the field and has charge of the movements of military forces and matters of that character that pertain distinctly and peculiarly to the duties of a Commander in Chief. In those matters he is supreme, but after all he is subordinate in all cases to such rules and regulations as Congress shall make. . . . [H]e is nothing more than any other commander in point of power, except that he is the supreme commander. . . . Is the proposed amendment anything more than a regulation? It is a regulation of the navy and provision as to in what manner the Marine Corps shall serve the Nation, where it shall be placed, how long it shall remain at sea, or whether it shall go at all or not."

Following this debate, the amendment containing the conditional appropriation passed both houses of Congress and was part of the bill signed into law by President Roosevelt. If the matter had gone no further, we would have only Congress' side of the power struggle. However, the Secretary of the Navy took the proviso to the Attorney General, George Wickersham, for a ruling on its constitutionality. The Attorney General held the conditional appropriation constitutional, saying:

"If, therefore, in the discharge of his powers and duties as Commander in Chief, the President desires to direct the Marine Corps to perform and function which shall involve the application of the appropriation made by the Act . . . he must direct [that the corps] shall serve as heretofore on board all battleships. . . .

"Inasmuch as Congress has power to create or not to create, as it shall deem expedient, a marine corps, it has power to create a marine corps, make appropriations for its pay, but provide that such appropriation shall not be available unless the marine corps be employed in some designated way, and I therefore am of the opinion that the provision of the statute to which you direct my attention is constitutional."

The parallel here to the Amendment to End the War is obvious. Congress would be exercising its control over expenditures to enforce its policy decisions as to where troops should and should not be without detailing their use by the Commander in Chief while there engaged. Congress would be exercising its historic and constitutional mission as a check on the executive's power to engage American forces in major conflict. It would in no way be interfering with the President's tactical control over the troops during the disengagement process.

A more recent example of Congressional efforts to use the appropriations power to control military policy is provided by the RS–70 manned bomber conflict. The House Armed Services Committee wanted to insure that the Secretary of Defense instituted development of a supersonic manned bomber instead of relying exclusively on guided missiles. The Committee unanimously asserted the power for Congress to use appropriations restrictions to require affirmative policy decisions by the executive. Certainly the power to require affirmative executive action is even greater than the negative power implied in an appropriation which merely reverses prior Presidential action.

A final, and most relevant, example of Congress' conditioning appropriations in order to affect military action is the Defense Appropriations Act of 1970. The Act provides:

"In line with the expressed intention of the President of the United States, none of the funds appropriated by this Act shall be used to finance the introduction of American ground combat troops into Laos or Thailand."

Thus Congress has already used its appropriations power with the acquiesence of President Nixon, who signed the bill without constitutional objection, to restrict presidential use of military appropriations in a way that expresses Congressional policy regarding the conduct of U.S. military involvement in Southeast Asia.

D. Conclusion

Members of Congress face the solemn duty of deciding whether to allocate further national resources to the war in Southeast Asia. We do not argue here on the merits of that question—that is for Congress to decide. What we do argue is that Congress has the power—indeed, the duty—expressly to make that decision. The Constitution was drafted to allocate governmental power. Once allocated, that power remains, even though lying occasionally dormant, within the branches originally receiving it. The President received power as Commander in Chief to direct all American troops. His actions in employing those troops may or may not have been excessive in recent times; that question is irrelevant to this study. What is relevant is that Congress, too, received warmaking power, the power to determine when and where the United States will commit its armies and its resources to a major conflict.

The Constitution also allocated duties. The President has the duty of protecting American troops during an engagement. He must therefore be accorded by Congress a certain leeway in controlling tactical decisions affecting the safety of American soldiers. The President, however, also has the duty of making sure that the laws are faithfully executed. He must therefore accord to Congress the lawmaking power that is constitutionally theirs to exercise, and he must respect any congressional mandate on the allocation of American resources.

The applicability of these conclusions and of the research and analysis upon which they are based, to the various amendments now before Congress can be succinctly put as follows:

First, it is entirely appropriate under the Constitution for Congress to define the scope and objectives of commitment of military forces to combat abroad. It has acted accordingly in the past two decades. The 1969 National Commitments Resolution asserts the sense of the Senate that no such commitment shall be made without explicit congressional approval.

Second, Congress may constitutionally effect its policy determination by appropriations acts that condition the appropriation upon a specific use of the money granted.

Third, Congress under the Constitution should accord the President enough leeway as Commander in Chief to safeguard the withdrawal of American forces—leeway which the Amendment to End the War carefully preserves. But it is for Congress to decide how restrictively to exercise the appropriations power.

Finally, it is incumbent upon each member of Congress to fulfill his constitutional role by exercising the congressional power to determine the military policy of the United States.

In the twentieth century strong Presidents have exercised their powers to the fullest, while Congresses all too often have quietly acquiesced. That such power has sometimes lain dormant does not mean that it has been abandoned, for in the constitutional scheme of things Congress cannot abandon it. The power must always rest in Congress to decide when the nation has had all the war that it can afford to endure.

If Congress does indeed wish to restore the historic balance between Congress as arbiter

of American military policy and the President as Commander in Chief, it must now seek to implement its decisions by use of the key tool it was given for this purpose: the power to allocate money for national endeavors.

May 13, 1970

Mr. GOODELL. Mr. President, a bipartisan group of Senators purchased prime television time to explain the amendment to end the war—amendment No. 609 to H.R. 17123—to the American public and to seek support for it.

The half-hour broadcast marks the first time that a congressional group has produced such a nationwide program.

The program—"The Amendment to End the War"—was broadcast on Tuesday, May 12, at 7:30 p.m. over the NBC television network.

Senators GEORGE MCGOVERN, MARK HATFIELD, HAROLD HUGHES, FRANK CHURCH, and I participated in the program.

The amendment to end the war was drafted by Senators MCGOVERN, HATFIELD, HUGHES, and me and was introduced on May 5, 1970. It states that unless Congress shall have declared war, no moneys appropriated under the act to which it is attached, or under any other law, shall be used in Vietnam after December 30, 1970, except for the withdrawal of all American forces. It requires that the withdrawal of American forces from Vietnam be completed—that all American military personnel be pulled out—by June 1971, unless the President of the United States requests and Congress passes a joint resolution extending that deadline.

The amendment provides that no money shall be used for military operations in Laos after December 1970. And it provides that no moneys shall be authorized for any military operations in Cambodia or for military aid for that country 30 days following the adoption of the amendment.

I ask unanimous consent that the transcript of the program be printed in the RECORD.

(There being no objection, the items were ordered to be printed in the RECORD, as follows:)

THE AMENDMENT TO END THE WAR: A NETWORK TELEVISION BROADCAST, MAY 12, 1970, NBC

(Participants: Senator George McGovern, Senator Mark O. Hatfield, Senator Charles E. Goodell, Senator Harold E. Hughes, Senator Frank Church)

NARRATION. Today, in the bright springtime of 1970, the United States of America has been ripped apart. Citizens bludgeon each other in the streets of New York. Students die in campus eruption. Buildings explode. Banks burn. The Nation's colleges are shut down. The population is polarized, and there are parades of protest everywhere. Not since the days of the Civil War have Americans treated each other like this.

At the heart of the trouble lies the war in Vietnam. It is a strange war—a war that we have to keep explaining to ourselves year after year after year. And it is a difficult war to explain—particularly to the people who have to go and fight on its inconclusive battlefields.

But while all the talk goes on, the war goes on, too. It continues tonight, as it has continued for a decade. Tonight, Americans will die in Vietnam. Tonight, Americans will die in Cambodia.

What can we do?

Last week, amendment No. 609 was introduced on the floor of the United States Senate. It was co-sponsored by a bi-partisan coalition of twenty Senators. These Republicans and Democrats call it *the amendment to end the war*. They regard it as a realistic new thrust for peace. The Senate debate on it will begin in just a few days.

In the next half hour, five of these Senators will make a case for this amendment. If the American people can effectively urge its passage upon the Members of the House and Senate, if "the amendment to end the war" is passed, then the traditional right of declaring whether or not we shall commit Americans to battle will be returned to the Congress—where it belongs.

Through protest . . . petition . . . and an act of *law*, we shall have at last ended the Vietnam war.

And now, Senator George McGovern of South Dakota.

Senator MCGOVERN. There is no way under the Constitution by which the Congress of the United States can act either to continue this war or to end it, except by a decision on whether we will appropriate funds to finance the war.

Article I, Section 8 of the Constitution reads as follows: "The Congress shall have power to raise and support armies, but no appropriation of money to that use shall be for a longer term than two years."

Senator HATFIELD. Our amendment to end the war fulfills the obligations that we have under the Constitution. The amendment clearly states that unless the Congress shall have declared war, that no monies appropriated on the act to which we attach the amendment, or any other law, shall be used in Vietnam after December the 30th, 1970, except for the withdrawal of American troops and other provisions.

It provides that no money shall be used for military operations in the country of Laos after December of 1970. It provides that no monies shall be authorized for the use of any military operations in Cambodia, thirty days following the adoption of the Amendment; and that all troops shall be withdrawn from Vietnam, all American troops, by June 1971 unless the President of the United States shall deem that it is important enough to extend that time by requesting the Congress to pass a Joint Resolution authorizing such extension time.

Senator HUGHES. The Amendment to End the War provides continuing funding for full protection of American troops during the total period of our withdrawal. It also provides adequate funding to provide political asylum for all those South Vietnamese and other civilians for which there may be great concern about a bloodbath; and there are adequate provisions that these civilians may be placed in other places for their own protection.

It also provides for a continuing negotiation of exchange of prisoners.

Senator CHURCH. Very soon the Senate will be acting on another Amendment offered by Senator Cooper and myself, which is addressed to the Cambodian situation and sets the limits on that adventure to those declared by the President.

But this End the War Amendment takes the full step, and provides an orderly method for the extrication of the United States from the war in Vietnam, itself.

Senator MCGOVERN. And so what we're looking for is a reasonable way to accomplish that withdrawal, and I think that the principal stumbling block now is that we're somehow worried about losing face. We're worried about embarrassing the policy makers that sent us in there. We're worried about admitting that perhaps we made a mistake.

Actually, I think it would contribute to the greatness of the United States if, as a free people, we could just admit that we're capable of making a mistake; and then do the best we can to put an early end to it.

Senator HUGHES. Vietnamization is not a change in policy at all. It's a continuation of the old, old policy. It is dedicated to war, not to peace. It means that the war will go on and continue to go on for years to come. It means that there has been no one speaking, in this Administration or the last, of an end to our support commitment in Vietnam.

It means that we can look into the future for at least a decade, in all probability, to a quarter of a million men involved in Vietnam. I think every mother and father in America who has a son right now that's five, or six, or seven years old, or anywhere up to 15 or 16, should well realize that that boy is going to be involved in our future commitment in Vietnam under existing policy.

Senator GOODELL. We have come to the point where we realize, and I think the President realized when he went into Cambodia, that Vietnamization will not work; and it was an admission of the failure of Vietnamization.

I think it's time that the American people recognize that the President doesn't have the power to declare war or make war, alone. He can ask Congress to declare that power; and I think that's why what we are discussing here, and urging support from the American people for, is so important.

Congress can do this, and it's not an irresponsible action; and with the walls all falling down around American prestige and power in the world if we decide we're going to get out, Congress would simply be saying, "Okay, we've fought for seven years, we've bled and died, and we've spent our resources on this; and now the time has come to say to the South Vietnamese, 'take it over. We'll give you time. Over a period of time we're going to be withdrawing and you can go on getting aid if you fight for yourself in your own civil war. We're not going to stay there and fight and bleed and die for you any longer.'"

Senator HATFIELD. But the point is simply this: It's no longer the opinion of Presidents, and no longer the opinion of Senators; it's the evidence of history, of over 40,000 deaths, and this amount of resource expended that has proven each one of those escalations to be wrong. And I say, how many more American men have to be heaped upon that funeral pyre of war to disapprove a theory or a doctrine of military action that has been proven wrong each time that it's been acted upon.

Senator CHURCH. After all, the United States is not going to impose any permanent solution in Asia to settle Asian problems among Asian people on the Asian mainland. Now, the idea that we are going to do that is—runs against the whole current of history.

Now, what's happening in Asia is that the western powers are moving out, and that the Asians are taking over for themselves; and Vietnamization, as it's been pointed out here, is not the method for extricating us from this morass. It will merely perpetuate our involvement in this war. Half of the troops may come home; the other half will stay indefinitely; and it does not serve the interests of the United States to maintain a permanent military base in Southeast Asia.

Senator GOODELL. The President reiterated the other night that he was going to continue to bring back these 150,000 men in the next 12 months. Now, many Americans may feel that that means they're all going to be coming back, and nobody's going to be going.

Under a policy of bringing back 150,000 men in the next 12 months, we will send to South Vietnam 276,000 men who are not there now, who are now in the military or about to go into the military; and we'll bring back more, 150,000 more than we send, but in the rotation process there will be this 276,000 men go over there to fight, and perhaps die.

Senator MCGOVERN. And what would we have accomplished, or what evidence is there based on past history, to lead us to believe that we would be in any better position, or that South Vietnam would be in any better position, 1 year or 5 years or 10 years hence, after tens of thousands of additional Americans have been killed, than we are now? What would we have gained?

Senator CHURCH. We have created a "crisis

of confidence," and a deep disillusionment and an alienation that doesn't just affect a narrow fringe of radicals on campus. Anyone who goes to the campuses knows that this feeling extends to millions of young Americans.

Now, if they grow up without a belief in this system, that, it seems to me, has far greater bearing upon the future of the United States than anything we have now, or have ever had at stake out in Indochina.

Senator HUGHES. I think one of the great, tragic byproducts of all of this has been the spiritual scarring of our own people. The questioning in our own minds of why we're involved in a body-count war with total military supremacy, with indiscriminate bombing and far-ranging effects on the ecology of those nations by spraying chemicals and driving the people off of the land into the cities, completely changing the complex of that little nation involving sixteen to eighteen million people.

And we ask ourselves, can we be happy about the fact that we've killed 10,000 Vietnamese and suffered 300 deaths ourselves and in the process that this complete psychology that we have of destroying life, you know, at any expense, and what the results of it are—

Senator CHURCH. It's brutalizing our own society.

Senator HUGHES. It's brutalizing us internally, and we find our young people turning away from it, fleeing to Canada to avoid a war they consider immoral and attitudes that they consider unrealistic in a time, in an age when we really are questioning ourselves to find national purpose again.

Senator MCGOVERN. What we need to understand is that there is no way to separate the cost of this war in Asia, from the cost of our own society. Now, there were stories in the press recently that some of our poor people, some of the black citizens and other minority groups, have shied away from participating in protests against the war on the ground that their concerns are with hunger and with racism and with poverty.

But what I think all of our fellow Americans need to understand is that the answer to these other problems will not come until we put this war behind us, and the enormous drain that it's taking here in our society. The person who's worried about inflation ought to realize that war is a principal cause of it. The man who's worried about the stock market skidding ought to realize that the stock market jitters are associated, to a great extent, with the war.

And as you've said so many times, the Governors and the city councilmen and the others who are worried about where the money is going to come from for those new schools or new sewage projects or other things, they have to understand that the war is robbing them of those possibilities.

Senator HUGHES. We're talking about 16 to 18 million people in South Vietnam. There are 23 million blacks in America who have not been able to find justice in this great country. Untold thousands of American Indians who have never been brought to their fulfillment. You who have worked so long and so energetically in the field of hunger in America, and poverty, with some 35 million people living in poverty, with the very foundations shaking of every major city in the Nation, with the great, basic, undergirding of this Nation that has always kept it stable, with those minorities is now being drained off and siphoned off in the name of somehow saving face in Southeast Asia, you know.

So when we talk, I think you would agree that there seems to be a great paradox in this.

Senator GOODELL. The cost of the war last year was $23 billion, so you can say in just about specific terms that 1 year's cost of this war would clean up all our waters in the United States.

Senator HATFIELD. The half hour that this program is being telecast to the American people, to reduce that or to translate that into terms of the cost of the war; the Federal Government will be spending $1 million just in this one-half hour period.

Senator GOODELL. In Vietnam.

Senator HATFIELD. In Vietnam. Just in Vietnam.

Senator CHURCH. Mark, you know the argument is made that the world will think we're weak if we withdraw from Vietnam. I think that of all the arguments that are made, that is the least impressive. Actually, the world knows that we have the power to exterminate every living inhabitant of Vietnam. If we unleashed that power we could salt it over the way Rome salted over Carthage.

It's not our power that's in question out there. It's the wisdom of our policy; and the world sees the biggest, richest, strongest nation dropping more bombs on North Vietnam than we dropped on all Europe in the Second World War. They see this tremendous disproportion of strength and wealth, and that puts us in a very bad light in the world.

In fact, this war has done more to undermine America's moral leadership in the world than anything that's ever happened to us, and the faster we put the matter right in Southeast Asia and end this war, the sooner we will begin to win back again the respect that this country ought to have throughout the world.

Senator HUGHES. What do you say to people who are really concerned, and I know they're concerned, about the fact that we'll lose face in the world, you know, that we'll really not be a first rate power, as has been implied by our Chief Executives in the past and in the present? And the concern of honest Americans who want to get out of the war, who want to stop the killing and the dying, and yet they say this is America's place in the world, that unless we accept this challenge we're somehow failing in world leadership.

I think this is the question in the minds of millions of Americans today.

Senator HATFIELD. What constitutes leadership? Not just power of armament, but power of ideals. And I say that we are losing in the world today by continuing to be in Vietnam.

It's not a matter of national pride. It's a matter of whether we're practicing what we preach. It's a matter of whether our ideals that were embodied in the Constitution, in the hearts of the American people, are really at the center of our policy, or whether we're out here with some peripheral object of face-saving, and so forth. I say, if it's to be humiliated to admit we're wrong and to save lives, then the sooner we do this, the better it's going to be for our nation. But I don't consider it humiliation. I consider it greatness, because only the powerful can take the chance of admitting error, and we're that powerful today.

Senator GOODELL. And most civilizations that have died, have died from within; and that is happening now in the United States of America if we don't get out of this war.

Senator CHURCH. We clothe this war in the sacred words of "justice" and "freedom" and "peace." But justice and freedom and peace aren't at stake out there. You know, the Government that we're supporting is not a democratic government, it's an incompetent and corrupt military dictatorship; and it's involved in a war with another dictatorship. This is a war between two dictatorships for control of Vietnam.

So I think we make a grave mistake when we try to clothe such a war in terms of the ideals for which this country should stand. Freedom is not at issue for the people of Vietnam. One way or the other, the kind of freedom that we know is not going to be the gift of this war out there.

Senator HUGHES. I think the gut question, though, Frank, and particularly George, when we're talking about this Amendment to End the War, to most Americans is, how can I support this Amendment and at the same time support my country in an involvement we've had over the last 15 years. And I think if people could resolve this in their own minds, you know, they'd very willingly bring this war to an end through this Amendment.

Senator MCGOVERN. Now, the President said the other night that if we leave Vietnam now, we're going to be through, or I think he said we're going to be finished as a peacemaker in Asia. Well now, I think we ought to quit trying to be the policeman for Asia. Let's quit trying to be a solo policeman and banker and pacifier in Asia alone. How ironic it would be if at long last we succeeded in pacifying Southeast Asia and couldn't pacify our own society.

Senator HUGHES. The invasion of Cambodia, I think, was truly the straw that broke the camel's back. They're writing to me at about 8 to 10 to one against the President's posture right now in Southeast Asia; and in the belief and the hope that the Senate of the United States will offer the leadership, you know, to alter this posture.

Senator GOODELL. Everything we have said here tonight is completely unpartisan. I think we have all been as critical of the Democratic Presidents as we have of Republican Presidents, and we should not be considering this in terms of political or partisan advantage one way or the other. This war transcends partisanship, and I know a great many Republicans as well as Democrats who think our policy now is wrong, and we ought to get out. I think the overwhelming number of all Americans, whatever their political party, believe this.

Senator MCGOVERN. I think what we're trying to do with our Amendment to End the War, is to say that that is too important a decision to place on the shoulders of one man. It's too big a risk to ask one man to decide alone. The President ought not to have to make that judgment alone, and under the Constitution, he's not supposed to make that decision alone.

What we're proposing to do is to share that responsibility, and whatever political risk, whatever opportunity, whatever hazard is involved in making the decision to end this war, we're prepared, as elected officials, to stand up on that question and answer yes or no, and then take whatever blame or whatever credit is involved.

Senator GOODELL. In effect, we're providing a situation where the President can withdraw faster, where he can make a determination the war is going to end by a fixed date, and he will not bear the whole onus, himself. We recognize that when you've made such a tragic mistake, there's no painless way to get out of that mistake. We're saying. "We'll share that pain, we'll share that responsibility. But let's recognize the mistake and get out of it."

Senator HUGHES. What do we say to the American parents who have sons fighting in Vietnam? Is this a patriotic move that we are taking in this Amendment to End the War? Is this support of their sons and of our fighting men in Vietnam?

Senator GOODELL. There is no better way to protect the young men who are fighting over there than to bring them home; and I don't know of any military person in any responsible position, who doubts that if we made our declaration, "we're coming out," that they would be brought home safely then.

As long as we stay there, the casualties are going to go up, and if President Nixon's program works, over the next three years, we are talking about a minimum of 5,000 more American dead, and probably closer to

20,000. Four or five times that many casualties, and four or five times that many Vietnamese deaths in the process. Not to mention the billions of dollars involved.

Senator McGOVERN. But now what we're proposing is not a disorganized and uncoordinated outcry. We're proposing a specific legislative Act that will have the full force of law, and it will say in effect, no more money for Southeast Asia for any purpose other than arranging for the systematic and safe withdrawal of our forces, for the exchange of prisoners, for asylum for those people that might be threatened by our withdrawal. It's an orderly, Constitutional procedure for bringing about an end to this war.

Senator CHURCH. Now, this brings the Congress back to the role that it should have been playing all along. It asks the Congress to assume its responsibility to the American people, and it brings our democratic system back to life again in a balanced, Constitutional manner; and that in itself is as important in the long run to the life of this Republic as ending the war in Vietnam.

Senator HATFIELD. What do we say to the American people who have been watching, and who would say, "Well, we agree with you, but our voice is not very loud. I'm only one person, I'm just a little person, so-called little person." You hear that many times. Does that voice have a place in this whole great issue of war and peace?

They say, "We're tired of speeches. We want some action." A lot of the young people say this to us. A lot of the older people say, "All right, turn it off. We agree with you, but what have you done about it? What can you do about it, what can we do?"

Senator CHURCH. We're asking people to make their views known responsibly to their Congressmen, and we are asking the Congress and the Senate of the United States particularly, to begin to assume its responsibility under the Constitution. For years and years now we've abdicated. We've given all the power to the President when it came to war. We've sat on our hands and done nothing, and hoped that the people would look the other way.

Well, the time has come to reassert our responsibility and to stand up and vote on the question of war or peace.

Senator HATFIELD. You know, we've sort of enshrined silence as the virtue of patriotism in the last year or so; and actually, I think the highest patriotic duty that any citizen has is to speak up, to speak his convictions and his mind. That's the hope that we've got to give to all American people. That there is this method, there is this channel open to them, and that we, and others like us on this end of the power structure, so to speak, are receptive. We're not only receptive, but we're inviting them to participate in this Amendment to end the War.

Senator HUGHES. This is what we must do. We need their help. Even if we had 40 Senators presently on this Amendment, we need the help of the people of the United States. There's no other way that we can succeed; and the voice of the people counts in the final analysis. If I'm to exercise my judgment and to follow my conscience in a position of responsibility, I must tell the people when I think we're right, and I must tell them when I think we're wrong; and expect them to support those positions, or to oppose them. But for Lord's sake, don't be quiet. Write, support or oppose, but do something in this critical time.

Senator HATFIELD. If you want to cast your vote to end the war in Indochina, there is something you must do in the next few days. Write to your Congressman or your own Senator, just the simple words, "I vote for the Amendment to End the War in Southeast Asia."

Senator GOODELL. And there's something else you can do. Take a sheet of paper and write on the top, "We, the undersigned, favor the Amendment to End the War." Leave room for names and addresses; and then go out to work, to the church, to the supermarket, where ever you can collect signatures, and get people to sign who agree with you. Send those petitions to your Congressman and to your Senators.

Senator HUGHES. The President of the United States rightfully can command all media to bring a message to the people of the United States any time he deems he has a message of importance. For those of us who have differing viewpoints, and wish to express those to you, the American people, it requires that we seek your assistance.

Senator CHURCH. Remember that 66 cents out of every tax dollar now goes for war. A dollar for peace could go a long way. So send your contribution, whatever it may be, in order that we can continue to speak out. Make your checks out to "Amendment to End the War," post office Box 1A, Ben Franklin Station, Washington, D.C. 20044.

Senator McGOVERN. Let me close this broadcast on a very concrete and specific point. What we are proposing here is that for the first time in the long history of this war, the Senate of the United States stand up and be counted yes or no, on the question of whether we wish the war to continue, or to be ended. We propose to do that in a vote that will come in a very short time. We pledge you that that vote will be held. This is not a sense of the Congress Resolution, it is not a debator's point; it is an act of law, which if carried, will put an end to this war in a systematic way. We ask earnestly tonight for your support in that effort.

President NIXON. Strive in every area of the world——

General WESTMORELAND. In 1968, a new phase is now starting.

President JOHNSON. General Westmoreland's strategy is producing results.

General WESTMORELAND. The enemy's hopes are dim.

President NIXON. If, when the chips are down, the world's most powerful nation acts like a pitiful, helpless giant——

Closing NARRATION. In just a few days, debate on the amendment to end the war will begin on the floor of the United States Senate.

If the American people can effectively urge its passage upon the Members of the House and Senate, if the amendment to end the war is passed, then the traditional right of declaring whether or not we shall commit Americans to battle will be returned to the Congress—where it belongs.

Through protest, petition, and an act of law, we shall have at least ended the Vietnam war.

Mr. McGOVERN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

By unanimous consent, the following routine morning business was transacted.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. McGOVERN) laid before the Senate the following letters, which were referred as indicated:

REPORTS OF FOREIGN-TRADE ZONES BOARD

A letter from the Secretary of Commerce, transmitting, pursuant to law, the annual report of the Foreign-Trade Zones Board for the fiscal year ended June 30, 1969, together with the reports covering the activities during the same period of Foreign-Trade Zones Nos. 1, 2, 3, 5, 7, 8, and 9, located respectively at New York, New Orleans, San Francisco, Seattle, Mayaguez, Toledo, and Honolulu (with accompanying reports); to the Committee on Finance.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on the audit of financial statements of the St. Lawrence Seaway Development Corporation, calendar year 1969, Department of Transportation, dated August 26, 1970 (with an accompanying report); to the Committee on Government Operations.

REPORTS OF THE BOARD OF ACTUARIES OF THE CIVIL SERVICE RETIREMENT SYSTEM

A letter from the Chairman, United States Civil Service Commission, transmitting, pursuant to law, the 46th and 47th annual reports of the Board of Actuaries of the Civil Service Retirement System for the fiscal years ended June 30, 1966 and 1967 (with accompanying reports); to the Committee on Post Office and Civil Service.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare, with amendments:

H. Con. Res. 675. Concurrent resolution expressing the sense of the Congress with respect to the conquest of cancer as a national crusade.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. MAGNUSON, from the Committee on Commerce:

Saul Haas, of Washington, to be a member of the Board of Directors of the Corporation for Public Broadcasting.

By Mr. PASTORE, from the Committee on Commerce:

Frank E. Schooley, of Illinois, John Hay Whitney, of New York, and Jack Wrather, of California, to be members of the Board of Directors of the Corporation for Public Broadcasting;

Rudolph A. Peterson, of California, to be a member of the Board of Directors of the Communications Satellite Corporation; and

Thomas W. Moore, of Connecticut, to be a member of the Board of Directors of the Corporation for Public Broadcasting.

BILL INTRODUCED

A bill was introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MOSS:

S. 4291. A bill to amend the Railroad Retirement Act of 1937 to provide that the amount of the annuity payable thereunder to a widow shall not be less than the amount of the annuity which would have been payable to her deceased husband if he were living and otherwise qualified to receive an employee's annuity thereunder; to the Committee on Labor and Public Welfare.

ADDITIONAL COSPONSORS OF BILLS

S. 4106

Mr. KENNEDY. Mr. President, at the request of the Senator from Washington (Mr. MAGNUSON), I ask unanimous consent that at the next printing of S. 4106, the National Health Service Corps Act of 1970, the following Senators be added as cosponsors: The Senator from Texas (Mr. YARBOROUGH), the Senator from Missouri (Mr. EAGLETON), the Senator from Minnesota (Mr. MONDALE), the Senator from New York (Mr. JAVITS), the Senator from Vermont (Mr. PROUTY), the Senator from Michigan (Mr. HART), the Senator from Massachusetts (Mr. BROOKE), the Senator from Indiana (Mr. BAYH), the Senator from Hawaii (Mr. INOUYE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Nevada (Mr. BIBLE), and the Senator from Oklahoma (Mr. HARRIS).

The PRESIDING OFFICER (Mr. YOUNG of Ohio). Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES—AMENDMENTS

AMENDMENT NO. 862

Mr. McGOVERN (for himself, Mr. HATFIELD, Mr. CRANSTON, Mr. GOODELL, and Mr. HUGHES) proposed an amendment to the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which was ordered to be printed.

(The remarks of Mr. McGOVERN when he proposed the amendment appear earlier in the RECORD under the appropriate heading.)

AMENDMENT NO. 863

Mr. GOODELL (for himself and Mr. NELSON) submitted an amendment, intended to be proposed by them, jointly, to House bill 17123, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mr. GOODELL when he submitted the amendment appear earlier in the RECORD under the appropriate heading.)

ANNOUNCEMENT OF FUELS AND ENERGY COMMISSION HEARINGS

Mr. MOSS. Mr. President, on behalf of the Subcommittee on Minerals, Materials, and Fuels of the Senate Interior Committee, I announce that public hearings have been scheduled for September 10 and 11 on S. 4092, a measure introduced by the distinguished Senator from West Virginia (Mr. RANDOLPH), for himself and some 52 cosponsors.

The title of the bill states clearly its purpose: "To establish a Commission on Fuels and Energy to recommend policies and programs intended to insure that the U.S. requirements for low-cost energy will be met, and to reconcile environmental quality requirements with future energy needs."

Thus, Mr. President, the far-reaching mission of the commission is to find ways and means of meeting the twin crises that are upon us. These crises are, on the one hand, our requirements for ever greater supplies of energy to meet the needs of our people, and, on the other, to protect and to ameliorate the quality of our environment while meeting these increased energy needs.

The commission to be established by S. 4092 is designated as the National Commission on Fuels and Energy, and its membership will be a most high-level one, composed of members of the Senate and the House and Presidential appointees from agencies of the executive branch that have key responsibilities in the field of energy supplies and environmental quality control and, in addition, persons from private life who have particular knowledge and expertise of the subject matter.

This prestigious group is to make a full and complete investigation and study of the energy demands and of the fuels and energy resources, requirements, and policies of the United States. In particular, it shall evaluate all possible alternative methods of energy production and the relative merits of all energy sources, including fossil fuels, synthetic fuels derived from natural fossil fuels, nuclear, and any other practical sources. Based on such study, it shall recommend those programs and policies which are most likely to insure, through maximum use of indigenous resources, that the Nation's rapidly expanding requirements for low-cost energy will be met, and in a manner consistent with the need to safeguard and improve the quality of the environment.

The commission must submit to the President and to Congress a report of its findings and recommendations within a year from the date of its organization.

Mr. President, all too often we establish commissions or other entities with responsibility for but a single phase, or aspect, of a problem, such as for control of pollution but not for needed production, or for production and not for pollution. The National Fuels and Energy Commission to be established by the bill of the distinguished Senator from West Virginia will have the mission to consider both our needs for increased production and our needs for environmental quality protection.

Mr. President, it is recognized that the broad subject matter of S. 4092 cuts across the jurisdictional lines of several committees of the Senate, including those of the Committee on Public Works, of which the sponsor of the bill is chairman, and the Committee on Commerce, of which Senator MAGNUSON is chairman and who is a cosponsor of the measure, as well as that of the Interior Committee.

Accordingly, on behalf of the Minerals, Materials, and Fuels Subcommittee, I invite members of Commerce and Public Works Committees as well as other members of Interior Committee to participate in our September 10 and 11 hearings. The hearings will be held in the Interior Committee room, 3110 New Senate Office Building. The first day's hearing, that on the 10th, will open at 11 a.m., and those of subsequent days at 10 a.m.

ADDITIONAL STATEMENTS OF SENATORS

AWARD OF DD–963 DESTROYER CONTRACT TO LITTON INDUSTRIES, INC.

Mrs. SMITH of Maine. Mr. President, on June 29, 1970, I expressed in this Chamber my concern about the circumstances of the award of the DD–963 destroyer contract to Litton Industries, Inc. One concern that I expressed was about the leaks of vital information, including prices, and the effect of this industrial espionage on the DD–963 procurement.

I said then:

> The very heart of the competitive process has been nullified in the DD–963 bidding by apparent flagrant discussions of proprietary data. This situation cannot be permitted to go unchallenged and be continued in the future.
>
> It has been alleged to me that personnel of shipping lines, for whom Litton has built, or is building, merchant ships, told a member of the House of Representatives at a golf and country club that Litton had underbid Bath by nine million dollars a ship or two hundred and seventy million dollars on the thirty-ship contract—and that this disclosure was made more than two months before the award of the contract.

On July 1, 1970, I wrote the Attorney General reporting this to him and giving him the name of the person making the allegation to me and the name of the U.S. Representative reportedly making the statement to my informant—and I asked that the matter be fully investigated for potential violation of the law.

Not until 41 days later after a second letter and two telephone calls did I receive a response from the Department of Justice—a letter of August 10, 1970, from Will Wilson, the Assistant Attorney General in charge of the Criminal Division. Even after that amazing length of time it took to even get an acknowledgment of my letter, the long delayed response was incredible. The chronological negativeness of the response was matched by the content negativeness of the response.

Mr. Wilson wrote that there was "insufficient basis for any investigative action by this Department" and stated specifically:

> We have found no indication that any Government employee was the source of the statements described in your letter.

How naive can Mr. Wilson be? Or how naive does he think I am? For where else could the original information come from than from an employee or officer in the Navy Department or Defense Department handling the bidding on this procurement?

Mr. Wilson further stated about the statements that I reported specifically:

> Such statements could have been conjectural in origin or as the result of hindsight flowing from publicity attending the award of the contract.

This portion indicates that Mr. Wilson did not carefully read my letter of July 1, 1970, for there was nothing conjectural about the statements I reported nor were

the statements a result of hindsight after the award of the contract. This was quite clear from my letter.

What I reported was not conjectural at all—to the contrary, it was specific and solid coming from James L. Goodrich, the president of the Bath Iron Works, and Representative WILLIAM D. HATHAWAY, the Congressman from the Second Congressional District of Maine. I gave the names of these two responsible individuals to the Attorney General and yet the Department of Justice apparently and arbitrarily decided not to contact or question either of them.

What I reported was not hindsight after the award had been made—to the contrary, what I reported were alleged statements made more than 2 months before the contract award was made—and the amounts were extremely accurate, both per unit ship and overall. I informed the President, the Secretary of Defense, and the Secretary of the Navy as early as April 24, 1970, by my letter of that date to them, of the report of such statements that were made more than 2 months before the contract award was made.

In his extremely tardy letter of August 10, 1970, to me, Assistant Attorney General Will Wilson further stated:

> In addition, it is not clear whether the information allegedly disclosed is the type of information contemplated under 18 U.S.C. 1905.

One of his assistants subsequently told my assistant that they had concluded that there was no violation under 18 U.S.C. 1905—and yet they made this conclusion without any investigation at all.

As I wrote Mr. Wilson on August 12, 1970, I found his letter of August 10, 1970, to be incredible. In response to inquiry by my office, the cognizant Navy Department official has stated that there are several statutes that would cover pre-award disclosures of the type reported in this case and one of the applicable statutes listed by the Navy Department official is 18 U.S.C. 1905—a statute rejected in this case by Assistant Attorney General Will Wilson without even making an investigation of the matter. Other potentially applicable statutes cited by the Navy Department official are 18 U.S.C. 371, 18 U.S.C. 201, 18 U.S.C. 203, and 18 U.S.C. 641.

The brushoff by the Criminal Division of the Department of Justice and its failure to contact either Mr Goodrich or Representative HATHAWAY about these statements attributed to them is shocking.

Assistant Attorney General Wilson's record on this is:

First. His fallacious conclusion that the statements were conjectural when the specific names of James L. Goodrich, president of the Bath Iron Works, and WILLIAM D. HATHAWAY, U.S. Representative from the Second Congressional District of Maine, were given and his office apparently had made no attempt to interview them on their statements—when the time is clearly set as at least 2 months before the contract was awarded—and when the place is specifically set as the Congressional Golf and Country Club;

Second. His fallacious conclusion that the statements resulted from hindsight after the award of the contract when the specific time is given as more than 2 months prior to the award of the contract;

Third. His rejection of the possibility that 18 U.S.C. 1905 is applicable—when the cognizant Navy Department official himself cites 18 U.S.C. 1905 as applicable to the situation, if the allegations are true;

Fourth. His fallacious conclusion that no Government employee was the source of the alleged statements—when obviously only a Government employee could have been the original source if the statements were made; and

Fifth. His refusal to have an investigation in spite of the very specific information supplied to the Department of Justice.

This pattern of the leaks on Bath's prices is neither sudden nor "hindsight" after the award of the contract. Bath officials have repeatedly reported the leaks to the Secretary of the Navy and other Navy officials. Their contract requires that they report apparent industrial espionage. They have done so on January 13, 1970, to Captain Henning—on April 1, 1970, to Rear Admiral Sonenshein and Rear Admiral Weschler—and later to the Secretary of the Navy.

Specifically, the Bath officials reported to the Secretary of the Navy that they had reason to believe that their February 2, 1970 price was known in the industry before March 26, 1970—that is 3 months prior to the contract award.

Let us examine the significance of this. On March 20, 1970, the Navy directed the competitors to propose a new type of contract. Such leaks are an example of the way Bath could have bid to take irregular advantage of the reset point and is the only logical explanation for any substantial variation in cost submittals on February 2, 1970, and March 26, 1970. Audits had been conducted after each proposal and cost negotiations had occurred from December 5, 1969, to March 20, 1970. As Bath officials pointed cut to Rear Admiral Sonenshein, such a bid would be in violation of the regulations and hence nonresponsive. Bath officials were informed by Government auditors that Mr. Rule was conducting a special audit involving "cost traceability."

If the Litton low offer is credible, then the March 20, 1970, letter of the Navy to the competitors directing them to propose a new type of contract actually permitted an auction insofar as target cost is concerned. Let, in accordance with the Navy's March 20, 1970, letter and Department of Defense regulations, the fourth round could reflect only the third round plus the "clarifications" thereof plus a reduction in profit because of increased ceiling and the new sharing formula.

As a result of the leaks, the prices were known to the industry, and there were no technical changes which would cause a change in cost from the third round of proposals. Litton's apparent drastic reduction in the target cost could only have been on an auction basis to take advantage of the reset point and to get substantially below Bath.

SLOWDOWN AND CUTBACK IN SPACE PROGRAM

Mr. SPARKMAN. Mr. President, I have been concerned with the slowdown and cutback in our space program. I suppose this concern arises from my being close to the program because of the extensive operations carried on in my hometown of Huntsville, Ala., and the presence there for the last 20 years of the highly competent team centered around the German scientists who came to this country shortly after the end of World War II and have rendered such outstanding service since that time. One thing that disturbs me greatly in the present reduced space program is the breaking up of that team and the loss of many of those who have been outstanding leaders in this work.

On August 21 the Birmingham News published an article entitled "Top scientists left stunned, confused by space cutback". Two days later another article, entitled "At Huntsville emotions run high at NASA cutback," appeared in the Birmingham News.

I feel that this problem is dealt with understandingly in these two articles. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TOP SCIENTISTS LEFT STUNNED, CONFUSED BY SPACE CUTBACK

HUNTSVILLE.—The old "Operation Paperclip" team soon will be gone.

The team of top German scientists, headed by Dr. Wernher Von Braun, rose to international fame as the backbone of the U.S. space program.

The some 130 "team" members were brought to the United States in 1945 to direct the program that would eventually see the U.S. win a space race to the moon.

After 25 years, federal belt-tightening on the space program is breaking up the team.

VON BRAUN already has been shifted to Washington as a top executive in the National Aeronautics and Space Administration.

Now his colleagues at NASA's Marshall Space Flight Center in Huntsville are coming under the economy axe. Seven are expected to lose their jobs by Oct. 1, four others have retired before being forced out, and several others have applied for retirement.

At least two others are to be downgraded to lesser positions.

The cutbacks in federal spending come almost exactly 25 years after the team of German scientists entered U.S. Service as a part of "Operation Paperclip."

THAT NAME emerged late in the war. The Pentagon had obtained the names of key German scientists it wanted to bring to this country if they could be found after V-E Day.

The Pentagon files on these men were singled out by paperclips.

The name on one of those paperclipped files was "Wernher Von Braun." At the time he was selected to head the team of scientists, he and a hand-picked team were developing the V-2 rocket.

When Germany surrendered, the United States moved Von Braun and almost his entire team to this country, where they continued their research.

Von Braun directed high-altitude firing of

captured V–2 rockets at White Sands Missile Range in New Mexico, and later became project director of a guided missile development unit in Texas which employed about 120 of his former colleagues.

In 1950, the whole team moved to Huntsville. Early 1970 saw about 50 of the team members still at the Alabama space center. Of the others, eight were at other space agency installations, 21 were in private industry in the United States, 16 had returned to Europe, 14 had retired and 11 were dead.

Now, the remainder of the team probably will either leave or fall victim to the spending cutback.

The seven being forced out are stunned, confused and exasperated. So are the others, who can see more cutbacks coming.

The men had believed the government would protect them in their jobs, no matter how serious manpower cutbacks might become. All but one had accepted the U.S. offer of "excepted positions"—that is, outside civil service—before they became U.S. citizens.

The government is trying to soften the let-down for those men, who are reluctant to leave the only business they know. The only way the German specialists could leave now with full benefits would be if the space agency abolished their jobs—which is exactly what has happened. "Paperclip" team members will get full benefits on the way out.

AT HUNTSVILLE EMOTIONS RUN HIGH AT NASA CUTBACK

(By Pat Houtz)

HUNTSVILLE.—Although only 121 of the almost 6,000 workers at Marshall Space Flight Center have been notified that they will lose their jobs, emotions over the cutback have run high as many of those given walking papers are highly placed workers, with long years of service.

There are seven to be retired that were part of the original Werner von Braun "Operation Paperclip" team, a group of German scientists brought to this country to get a U.S. space program off the ground 25 years ago.

Six of the seven, however, held alien-accepted positions—that is they have long been offered a chance to become a part of the United States Civil Service and have chosen not to.

As a result, they were eligible in the RIF (reduction in force).

Since six of the seven Germans slated to lose their jobs are in the alien-position, they are not allowed to transfer to another career civil service job since they do not have veterans' preference.

"The only way I could stay would be if they would give me credit for my time in the German air force," one of the retirees quipped last week. The humor, however, failed to produce any smiles among the American coworkers.

Officials said the men will receive special consideration for full retirement benefits because their jobs are being abolished.

The seven represent more than 200 years of time in space technology, going all the way back to when they worked on the V–2 rockets at Peenemünde, Germany during World War II.

Four of the original Von Braun team, which numbered 130, have recently retired voluntarily. Most of the Germans are not young men as they were top scientists when they arrived in this country 25 years ago.

In June of this year 48 of the original team were still employed at Marshall.

Their leader, Dr. Von Braun, has been transferred to Washington in a top planning position for NASA.

According to top public information officials at Marshall, no further cutbacks in personnel have been announced or hinted at for the near future.

The officials refused to publicly disclose the names of the German space pioneers whose jobs will be abolished.

THE CRISIS OF A POWER SHORTAGE

Mr. MUSKIE. Mr. President, in recent weeks the Subcommittee on Intergovernmental Relations has heard testimony on legislation concerned with the need for adequate, dependable electric power. The crisis of a power shortage in the New York area highlighted the problem very dramatically. Of equal significance, however, is the fact that the power problem was joined by a severe air pollution condition—one which held for several days. The combination of air pollution and electric power reduction now threatens to become a commonplace item in our lives. The question is whether we will establish appropriate national policies intended to recognize problems when they occur and to offer remedies, or whether we will continue to drift along and try to muddle our way through to their solution.

An editorial by the noted journalist Edward P. Morgan realistically raises points concerning air pollution and power facilities and the need for national planning effort to avoid this one and promote the other.

I ask unanimous consent that Mr. Morgan's comments be printed in the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

STATEMENT BY EDWARD P. MORGAN

This is Edward P. Morgan in Washington with the Shape of One Man's Opinion. A look at a four-letter word after this word. (60)

For generations, one of the most obscene terms in the American lexicon has been a four-letter word spelled p-l-a-n, plan. If cleanliness was next to godliness, planning was a sin, the very thought of which produced goose-bumps on the rugged physiognomy of American private enterprise because it raised the spectre of creeping socialism.

It is hard to think of an area in which this bogey was raised more threateningly than in the field of electrical power. In the New Deal days, private utilities had periodic seizures of apoplexy over the creation of the rural electrification administration, bringing light and power to farmers, extension of service to whom was not considered "profitable" enough to private firms.

The power lobby fought tooth and nail the conception and construction of TVA, Hoover, Grand Coulee, Bonneville and other giant multipurpose dams. Even today, private utilities still propagandize against public power and co-op systems, writing off such advertising costs as "business expense," thus enjoying tax deductions—all of which is another way of saying that rate payers and taxpayers helped finance the power companies' propaganda campaign against their "public" competitors.

Furthermore, private utilities have systematically bucked the application of a national power policy and a system of regional grids whereby power could be pooled and routed, in emergencies, to regions suffering shortages caused by overloads or technical difficulties. True, consumer demand for power has increased staggeringly and paradoxically companies have been seriously stymied by public opposition to their projection of nuclear power plants and other expansions. But here again wise advance planning could have done much to clear such obstacles.

Now, to nobody's surprise, a day of reckoning has arrived, New York City is struggling with a brownout and facing a repeat of the northeast's massive power blackout of a few years ago. Ironically, New York's Consolidated Edison has kept its juice flowing by purchasing extra power from as far away as Canada and, of all subversive instrumentalities, the Tennessee Valley Authority.

Nature has compounded the emergency with an eye-burning smog in wilting weather. But is nature the real villain? Who planned the traffic jam exhausts and other contributors to the smog by pollution belching from industrial chimneys—even those of Con. Edison itself?

I'll be back with a footnote. First this.

The weather readily conspires with urban non-planners to make city life miserable elsewhere. Washington is on the edge of an air pollution alert. This town's principal product is politics, which produces its own pollution but a more palpable kind emerges from garbage dumps, traffic jams and uncoordinated suburban growth.

WOMEN HAVE WON THE RIGHT ON MERIT TO FULL PARTNERSHIP WITH MEN

Mr. RANDOLPH. Mr. President, in 1854, three women were employed as copyists by the U.S. Patent Office. In the following year, when they were about to be dismissed, a Representative wrote to the Secretary of the Interior on behalf of one of them.

The Secretary reportedly replied:

There is every disposition on my part to do anything for the lady in question except to retain her, or any of the other females who work in the rooms of the Patent Office. I have no objections to the employment of females in the performance of such duties as they are competent to discharge, but there is such obvious impropriety in the mixing of the sexes within the walls of a public office that I have determined to arrest the practice.

Let me add, as a historical footnote, that the "lady in question" was Clara Barton, who a few years later went to work on the Civil War battlefields and, as founder of the American Red Cross, became one of the most illustrious women in American history.

Today, August 26, marks the 50th anniversary of women's suffrage, a true legislative landmark that has had an incalculable impact on the course of our Nation.

On this date in 1920 the Secretary of State certified that the 19th amendment had become a part of the Constitution. West Virginia ratified the amendment on March 10, 1920.

The enfranchisement of women to participate in the political life of our country was only the first major step in escalating the so-called battle of the sexes. Today, women seeking equal opportunity hold honored positions in all levels of business and government. Employment officers are abandoning the shopworn phrase, "Can you type?" and are asking, "Can you think?"

Ever mindful of the fact that there are 3 million more women voters than there are men voters, I pay due homage to the American women. She has come a long way from the days when nursing and teaching were considered the only proper occupations.

Working conditions for women in years past left much to be desired. Back in the 1880's, there was published a listing of duties for nurses which seems both laughable and tragic today.

Nurses were told that they must:

First. Bring in a scuttle of coal each day.

Second. Report every day at 7 a.m. and leave at 8 p.m., except on the Sabbath "on which day you will be off from 12 until 2 p.m."

Third. Graduate nurses in good standing will be given an evening off each week for church services.

Fourth. Any nurse who smokes, uses liquor, goes to the beauty shop, or frequents dance halls will give the director a good reason to suspect her worth, her intentions, and integrity.

Fifth. The nurse who performs faithfully and without fault for 5 years will be given an increase of 5 cents a day, providing there are no hospital debts outstanding.

At that time, women comprised only 17 percent of all workers. Today, one in every three workers outside the home is a woman. Her achievements and progress toward job equality and opportunity have been aided and abetted by understanding males.

Today, I fear, this progress is being retarded by a strange and strident voice that professes to speak for all women—everywhere. It parades under a banner of odd acronyms claiming "oppression" and screams for an ill-defined liberation. It calls for a strike when none is needed.

Even to suggest today that there might—just might—be a physiological difference between women and men draws waves of venomous wrath. The small band of bra-less bubbleheads who consider free and unlimited abortions an absolute "right" are not the valid voice for the American woman, any more than the fashion designers or makers of slimmer cigarettes and more kissable lipsticks.

Passage of the so-called equal sexual rights amendment is morally laudable, but it could create a jungle of jurisprudence that might result in such inanities as maternity leave for male employees. Women today must be encouraged to prepare for whatever jobs they are interested in and aspire to do. No field is closed to the capable and well-trained woman. Those who want to play professional football or dig ditches may do so; it is not a matter of competition with men but rather permitting each person to make fullest use of his or her talents.

FRANK BORMAN'S TRIP TO INDIA IN BEHALF OF PRISONERS

Mr. DOMINICK. Mr. President, there are news reports this morning that Frank Borman, the astronaut-turned-diplomat, has arrived in New Delhi, India, in his round-the-world efforts to help American prisoners held by the North Vietnamese. As President Nixon's personal envoy on this mission, he has contacted world leaders to urge their help in putting pressure on the Communists to treat American prisoners in a more humane, more decent manner.

In India he has a great opportunity. Prime Minister Indira Gandhi is a woman with great compassion and great understanding. She has demonstrated her feeling for the personal problems of humans in trouble, both in her homeland and abroad. It can be hoped that the President's emissary can convince Mrs. Gandhi of the need for her intervention in this grave matter.

I feel strongly that only worldwide public opinion pressure can force the Communists to change their tactics and reverse the stand they have taken that is so detrimental to our men. Mr. Borman has been assigned the task of helping to muster that world opinion, and is doing it well.

But we cannot depend on others alone to do the job. We must continue our own efforts at every possible diplomatic and personal contact level to bring the Communists to a more realistic and a more tractable position.

ADDRESS BY DOUGLAS R. SMITH, CHAIRMAN, NATIONAL SAVINGS & TRUST CO.

Mr. BYRD of Virginia. Mr. President, at the annual meeting of the Army Mutual Aid Association, Douglas R. Smith, chairman of the board and president of the National Savings & Trust Co. of Washington, D.C., delivered an enlightening and wide-ranging address.

Mr. Smith talked not only about economic matters, but also about many other problems that face our country at home and abroad.

I feel that Mr. Smith's remarks should be brought to the attention of Senators. I, therefore, ask unanimous consent that the text of his speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MR. DOUGLAS R. SMITH

I have been told that one of the most graceful compliments that you can ever receive is to be asked to share your thinking on a return engagement and I can tell you with all sincerity that I could never have been more pleased than to have Kirk Martin invite me to again participate in the annual meeting of the Army Mutual Aid Association. The relationship between our two organizations is one of such importance to us that I could never properly exaggerate it, one that has been in existence since 1892, and I would hazard a guess that our bank has very few relationships that have preceded our treasured association with you. I can only pray that it will continue to flourish for ever and ever. Kirk was not only so generous in inviting me to be with you today, but he was kind enough to not lay down the guidelines of what I should say. I am sure as a banker you expect me to have some very wise advice and sophisticated knowledge of current economic conditions, and I will hasten to tell you that I have as mixed emotions about the world today as anybody.

It is awfully difficult to try to explain or assess the variety of elements that exist. We have had a government in office for 15 months, a government that is committed to cool the inflationary trends that have such a sinister effect on every segment of our economy. We have seen the implementation of tight money policies, high interest rates, some form of, I guess you would say, rationing of credit, an increase in unemployment rate, a declining stock-market, and yet the inflationary trends have been very nearly disaffected.

We were pleased with what was believed to be a proposed balanced budget, but the temperament of the Congress and appropriations since indicated that this is a faint hope only, if even that. We find from the heavy industry areas concern over reduction in sales, the impact of strikes and a hope for easier money to accelerate the economy. We in Washington, I think, are in a unique situation. We are so limited in the effect of general national economic conditions because of the very large, virtually one-industry community—the stable government payroll that generates the wide variety of service industry to our Federal City—so that we are not as sensitive to the impact of broad economic conditions as are other areas. Also, we find ourselves in the fortunate position of being able to visit with some frequency with high ranking government officials, but perhaps I wonder if sometimes we find ourselves believing to be fact what in reality are the hopes of these policy makers.

As I am sure you are aware, the prime rate has just been reduced from 8½ to 8% which should be an indication that there will be some loosening of money, yet so far I have seen very little signs of return to the banking structure of the deposits that have flown into other areas through disintermediation with the net result that with the reductions in rates there is not any strong indication that there are any substantial new funds available for creative loans. There is an urgent need for triggering some action to generate adequate funds for the home building segment of our economy, and yet as of now there are virtually no signs of this coming about. Certainly, after our major government industry, the second most important to us here in Metropolitan Washington is the building industry, and all of us, I am sure, would like to see a stimulation in this field to not only generate a more vital economy but to see some real forward strides made in meeting the desperate housing needs.

And we, certainly here in the Federal City proper, can feel only distress over the inertia displayed in bringing about a renaissance to our inner city which, I think, should have a priority over many projects being undertaken elsewhere. If we do not have a healthy, thriving Capital there is very little room for optimism that the revitalization of inner cities throughout the country will take place. Indeed I think that Washington, D.C., the Capital of the world, should be a showcase community in every way, shape and form. I urge you as concerned Americans to give a sense of leadership so that every single citizen of our country will feel a real proprietary interest in demanding that their town be what it should be.

Perhaps I should be like Mrs. Mitchell and engage a public relations counselor to guide me in more gracefully expressing myself, but strange as it may seem, as a banker I think our economic concerns should be secondary today. I think the avalanche of destructive elements that have taken possession of our country should receive our concern and action before anything else, that if we can get our country back on the right track I think the economic problems will solve themselves.

I would assume you all would know that I am a conservative, that I deeply believe in and love the fundamental strengths that have made our country what it is, and that I am so disheartened by the variety of forces that are unceasingly working to downgrade or eradicate all of these fundamental truths to such a degree that our country finds itself today in the position it is. I am assuming, too, that in the main we think in common on many subjects, and I am taking the liberty of addressing you on that basis.

The Army Mutual Aid so far, far ahead

of its time evolved a program of taking care of its own through concert action of providing the foundation for security and emergency needs to bring peace of mind for so many tens of thousands of people. This is one of the great evidences to me of what I call the strengths of our country, and you all should be so proud of the glorious history of service that you have given, but I wonder every day how many organizations and individuals are completely dedicated to the very destruction of the Army Mutual Aid. I get so disheartened with the constant attacks on the Viet Nam War and wonder what really are the political motivations of many of the people who give their leadership to condemnation of our country. An "unpopular war" it is called, yet I am dumb enough to think there really never was anything such as a popular war. I can assure you World War II wasn't very popular with me when I left my wife and children to go to the South Pacific, but the only thing I would have hated more than going was not going, and I think the insidious propaganda that has given respectability to draft dodgers and flag burners denotes a tragedy beyond words. I think the exaggerated extension and distortion of civil rights philosophy that is permitted to dominate our country is beyond defense: to find virtually every college campus controlled by destructive radicals, to see wanton destruction and vandalism permitted, filth and obscenity not only permitted but encouraged, the contempt for our judicial system—these are all so serious that they defy exaggeration. Certainly indeed we know in Washington that the deterioration of our courts, the complete lack of respect for police and all forms of authority, have brought our City to such a low that it is heartbreaking. Convention, good manners, respect and consideration for others, patriotism, plain boy scout decency have all become descriptions of contempt. I can honestly say I believe I am not a reactionary. I have never in any way approved or identified with any of the extreme right wing elements because they too can be just as destructive. But I believe that unless these virtues are brought back into the mainstream of our country we are going to end up in a disaster that will make other governmental collapses pale in comparison.

I am an absolute integrationist from my heart and I believe so strongly in equality and justice for all, but we are on a one-way street that provides equality and justice for every radical in every area yet denies justice and safety to the decent real American. We have heard and read so much about the silent majority, and I think the day has come that we can no longer be the silent majority. Most assuredly I don't believe in counter-demonstration and riots, but I believe in actively participating in every program, in every organization, every election that will work toward bringing sanity and serenity to our beloved country. I think that forceful expression at the ballot box and constant communication to all levels of elected officials will bring a pressure that can prayerfully correct so many of these desperate conditions that exist; that we should demand that the American way be brought back into the proper perspective, that the conjured up blasphemies such as Anti-God, "The Establishment", the military-industry complex and so forth be completely discredited. I believe that each of us who feels as I do should become truly dedicated missionaries in really spending our energy toward overcoming the false power of influence that has come to dominate our country:

Devotion to our country, respectability, decency, honest law and order and real justice, at least a fairly objective press, must be again made to the elements we look up to. And I can assure you gentlemen unless we place these objectives as our primary ones we will never get our economic structure into one of stability, soundness and security.

I long for the future of the Army Mutual Aid to be as bright, compassionate and as constructive as it has been in the past. I have every ambition for the National Savings and Trust Company to prosper and advance as a public service organization that continues to stand for what it has stood for for 103 years, but I most earnestly believe that unless all of us who share similar hopes and beliefs join hands and give the leadership and the vitality to the very truths in which we believe, we all are living in a house of cards.

MARK TRICE

Mr. AIKEN. Mr. President, I want to join my colleagues in paying tribute to Mark Trice as testimony to his 50 years of service in the Senate.

It takes only one look at Mark to convince me that there were no child labor laws in effect at the time he began this service; but regardless of whether his first employment would have constituted a violation of present day child labor laws, we are all appreciative of the fact that we have had the benefit of his acumen and energy for 50 years.

Certainly during the time that I have been a Member of this body, Mark has been always on the job and is a reliable source of information of what is going on in the Senate from day to day and hour to hour.

And while we are congratulating ourselves, let us also congratulate Margaret Trice for the many years during which she has had the benefit of Mark's advice—and vice versa.

I close this statement by simply saying, "Thank you, Mark."

THE WOMEN'S EQUAL RIGHTS AMENDMENT

Mr. NELSON. Mr. President, today citizens of the United States observe the 50th anniversary of the 19th amendment to the Constitution, which granted women the right to vote. Activities are planned throughout the country to mark this historic occasion and to call attention to the fact that in these subsequent 50 years, women as a group have made very slow and uncertain progress toward the goals of equal rights under the law, equal opportunity in employment and education, and equal dignity and status as human beings. Women, as many other groups in society, are becoming highly aware of this situation, and are demanding long-overdue measures to correct the inequities.

Women today find themselves in a changed role, which technology and an ever-opening society have made possible for them, but not allowed them to fulfill. Society now allows a woman to take up a career, and encourages her to chart her own destiny to a certain extent. But at every step it places before her almost insurmountable barriers to real achievement. While she is expected to educate herself, at least to a certain level, and support herself for a certain period of time, as well as contribute to the support of her family, she is invariably placed in a subordinate position in the working world and must accept lower paying jobs, and positions of limited challenge with little chance for advancement into decisionmaking and executive capacities.

Realistically, it is impossible, and it always has been impossible, for all women to live a sheltered life, serving her family by the hearthside. This is not a satisfying life for many women—nor should it be. The idea of the weaker female being totally dependent upon the male is not only outmoded, but also self-defeating for society. It is a blight upon many more lives than it brings contentment to.

Liberation for women does not mean the usurping of one person's place by another, any more than civil rights means that the black man usurps the place of the white man. It simply means giving everyone, men and women alike, the chance to find and to live the life they find personally fulfilling. In the long run, the winner will be society.

One major step we can take toward correcting the present inequities which women encounter, is to swiftly pass the women's equal rights amendment. Theoretically, such an amendment should not be necessary, as equal rights under the law are the birthright of every American citizen. However, experience has shown that this measure is indeed necessary, and I urge its early passage by the Senate.

SOVIET UNION INVASION OF CZECHOSLOVAKIA

Mr. HANSEN. Mr. President, it was 2 years ago, on August 21, that the forces of the Soviet Union invaded Czechoslovakia. This year it has been a very dismal summer in Prague, with the Czechs pretending that the Warsaw Pact invasion never happened and the Soviet viceroys making sure it was a success. Caught between these opposing forces, the Czechslovak leadership is promoting the Soviet-sponsored "normalization" program through the "political purification" of dissidents. One popular anecdote expresses the party's attitude toward occupation:

Question: What is the most neutral country in the world?

Answer: Czechoslovakia. She doesn't even intervene in her own internal affairs.

A reluctant resignation to the realities of power politics is the prevalent mood in Prague after 2 years of occupation. Outrage, fear, anger, disillusionment, all the outward signs of protest that filled Prague when Soviet tanks entered the city in August 1968 have been spent. These emotions have been frustrated so often that it would be masochism to continue to express them. Such are the political facts of life in Prague.

The Soviet Union provides the primary incentive for normalization. Its occupation forces, estimated at 70,000 to 75,000 troops, are discreetly garrisoned in villages and forests outside the major cities and along the Czechoslovak-West German frontier. Construction of officers' quarters and schools to accommodate the families of Soviet brass indicate that the

troops intend to stay indefinitely. The Russian diplomatic staff monitors political trends and public opinion from its conspicuous yellow-walled villa in Prague. The recent visit of Brezhnev and Kosygin worked to the mutual advantage of the Soviet and Czechoslovak leadership. The Russians got their new friendship treaty with Czechoslovakia. Party Secretary Gustav Husak got this visible Soviet acknowledgment of their confidence in him. The citizens of Prague greeted Brezhnev and Kosygin in silence as their black Chaika limousines and security cars drove through the city. But the Soviet leaders are hardly concerned about their popularity index in Czechoslovakia. For the country is subdued. The party is again "in control." Czechoslovakia is again a loyal member of the Warsaw Pact. Its economy is reoriented toward the Soviet Union. These, after all, were the objectives of the invasion. Not the gratitude of the people. To the Soviets, it is sufficient that the Czechs are quiet.

A number of secondary motives prompt them to take safe refuge in silence. After the dismantling of the former liberal coalitions, the active reformists do not have organizations to support dissent. Now that their articles have been labeled "revisionistic," Czech journalists, who once encouraged reform, are resigned to their eventual expulsion from the Party without an interview. Few liberals who retain tenuous party posts wield effective power. Because the major vehicles of public opinion have been subverted by the post-invasion leadership, critical comment no longer has a forum. Theater performances are now being censored for improper audience reaction. Even the old Dubcek signs have been painted over.

After a recent trip to Prague, Journalist K. C. Cole expressed the current effort to erase the invasion this way:

> Two years ago, when the Russians first came to Czechoslovakia, a young girl named Maria was shot down while crossing the street by a panicky Russian soldier. A small plaque was mounted on a cement wall to commemorate her death. Recently, the plaque was removed and tall flowers were planted to hide the bare spot on the wall. The girl never died. The invasion never happened.

Mr. President, free people everywhere must remember the people of Czechoslovakia and the small nation that was forced to bow to the military might of its colossal neighbor. These events did happen, and we must all work for the day when the people of the world can live in peace and freedom.

THE ATOM: ITS DANGEROUS AFTERMATH—PART VI: ATOMIC POWER AND ATOMIC SAFETY

Mr. CHURCH. Mr. President, on April 16 of this year, in a keynote address opening Earth Week activities at the University of Pennsylvania, a noted nuclear scientist, Dr. Ralph E. Lapp, delivered an address which places in remarkably clear perspective the power needs of our Nation in the future and alternatives we face as a nation in providing for those needs. Dr. Lapp points out that we must begin to think in terms of the needs of future generations and not simply in terms of the next 5 to 10 years:

> Like the Dutch who make half-century plans for reclaiming land from the sea, we need to plan for our thermal future now.

In his remarks, Dr. Lapp points out four dangers that we face regarding the use of nuclear power and suggests how they may be overcome. Any accident hazard, he points out, may be overcome by long-range plans as to the central siting of reactors away from large centers of population. Thermal pollution, caused by the release of heated water used to cool the reactor to the environment, must also be dealt with in considering the long-range development of nuclear power. Effluent discharges from nuclear plants must also be carefully followed and monitored, and Dr. Lapp suggests the possibility of monitoring from sources other than the AEC as a check upon the consolidated power of one agency in this field.

In regard to this subject, I was pleased to read recently that Westinghouse Electric has announced the development of a nuclear power facility which "eliminates any discharge of radioactivity to the environment during normal operating conditions." If the claims made by Westinghouse are true, this certainly is welcome news that bodes well for future development of nuclear power facilities.

Dr. Lapp also points out that our Nation has never developed a long-range program for "burying the atom's ashes." This is a matter which I have repeatedly stressed in past speeches on this subject in the Senate. I feel that greatly intensified research programs in this area are essential. In my own State of Idaho, the National Reactor Testing Station would be an ideal site to conduct such studies and experiments. I suggest the NRTS because I am familiar with its facilities in Idaho and the expertise available there to undertake such a program. I do not suggest that this is the only site which could be utilized, for obviously this is a field of inquiry which will take the combined efforts of many laboratories and experimental stations throughout the country.

Dr. Lapp discusses a number of possibilities, including the development of the elusive fusion reactor, to provide for our future power needs. Because his remarks bear so directly on this whole area and because they place the problems of environmental pollution and power production in such clear focus, I ask unanimous consent that his speech be printed in the RECORD.

I also ask unanimous consent that a press release I received from Westinghouse Electric Corp. asserting their claim of having perfected a nuclear plant which eliminates radioactive discharge appear following Dr. Lapp's remarks.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

POLLUTION, POWER AND POLICY

(Keynote address by Dr. Ralph E. Lapp)

The key words in dealing with environmental problems for the rest of the century and for centuries to come must be "control and planning."

In the last third of the 20th century we are going to have to pay for the lack of control and lack of planning in the first two-thirds. I shall focus on the problems of pollution by concentrating on man's lust for power. From an effluent viewpoint, we may symbolize this as the smokestack and the tailpipe. Others in this series of discussions will talk about the non-power aspects of pollution.

A good way to put pollution in perspective is to survey the century in terms of fuel consumption. In the dim gas-lighted days of 1900 our energy needs were met almost exclusively (92%) by burning coal. But coal is difficult to dig out of the ground and its transportation is costly. Now that its use is being restricted to low sulfur types, it does not appear as the fuel of the future, although it is still highly valued for generating central station electrical power. Over the span of a century—as I have plotted it on a semi-logarithmic scale—the use of coal is almost a flat line.

The United States currently mines about half a billion tons of coal per year and roughly half of this is used to produce electricity. Coal remained the dominant source of energy in U.S.A. until mid-century when it was displaced by petroleum. The automobile, of course, accounts for the spectacular rise of petroleum consumption after the turn of the century. I have plotted the growth in gasoline sales as well as that of automotive horsepower from 1905 to 1970. If we keep burning gasoline at comparable levels, then by 1980, we will consume 100 billion gallons per year—that's well over 1,000 gallons per U.S. family per year.

Looking back along the growth curve of gasoline consumption, it must seem that we were incredibly short-sighted not to have anticipated our present pollution problems emanating from the tailpipe. Surely some medium-bright individual in the thirties must have wondered about the cleansing capacity of the atmosphere. And then was the time that long range highway planning and traffic controls could have been started at very reasonable costs. Today we are on the verge of a great expansion in jet travel. Consumption of jet fuel is rocketing upwards and now is the time to think through jet pollution before we end up paying excessive costs for remedies. As a general rule, every government agency concerned with resource alteration ought to be required to make exhaustive studies of possible adverse effects of an emerging technology before the nation is plunged into its exploitation.

The use of natural gas in the United States follows the growth curve for petroleum and could, were it not for limited reserves, overtake it as the prime fuel of the year 2,000. At the present time the U.S. energy consumption has the following percentage origin:

	Percent
Petroleum	43
Natural gas	30
Coal	23
Hydropower	3
Nuclear power	1

The total energy, measured in British Thermal Units or Btu, for 1970 amounts to about 64 million billion Btu or 6.4×10^{16} Btu. By the end of the century it is expected that this will double. All in all, from one end of the century to the other, the total energy consumption of all fuels will increase 16-fold. If we regard the population of the U.S.A. as quadrupling in this century that means the

per capita energy consumption will go up four-fold.

Such an energy increase is considerable but it does not signal calamity merely on the basis of statistics. It is in the specific use of this energy and in its localization that we must look for our pollution woes. Currently, the split-up among energy sources for the generation of electrical power is:

	Percent
Coal	53
Natural gas	18
Hydropower	16
Petroleum	6
Nuclear power	5

The U.S. appetite for electrical kilowatts is prodigious. From 1900 to the year 2000 the U.S. kilowatt-hours will probably jump 2,000-fold. This means a doubling of electrical power every 9 years over the course of the century. If we assume four times as many people at the end of the century as at the beginning we have a 500-fold per capita increase in electricity in 100 years.

We can illustrate the incandescent America of the year 2000 by projecting a 9,000 billion kilowatt-hour consumption of electricity. This would be roughly 100,000 kw-hr of electricity per family per year. On the basis that 2/3 lb of coal will be burned to produce 1 kw-hr of electrical power, we find that each family will demand the combustion of 33 tons of coal per year just to supply electrical power. That figures out to be almost 3 billion tons of coal!

Obviously, we can't use this much coal to produce electricity, especially if we demand low-sulfur coal. Yet if we examine the fuel requirements for the year 2000 we face a most complex and perplexing problem. What is to be the make-up of the energy sources we tap to produce electrical power then? Looking back to our 1970 energy source break-down, we can systematically examine each energy source and estimate how each may contribute to power production. We need to consider not just the pollution factors, but also fuel reserves and what I call the RDUs—the research and development unknowns. For example, one RDU is that of converting coal to gas. Another is the power-breeder that will allow nuclear powerplants to tap more fully the energy of uranium. Still another is the feasibility of light element power i.e. nuclear fusion.

Up to now man has supplied his thermal and power needs largely by chemical means—by the oxidation of fossil fuels. The U.S. has imense reserves of coal but its sulfur content and availability and transportability make it necessary to taper off our dependence of solid coal as a combustible in powerplants.

Natural gas reserves today are estimated as 300 trillion cubic fet. This could conceivably double by the year 2000 but again an RDU makes estimation uncertain. Much natural gas is locked into gas-bearing formations that could be released by nuclear explosives. However, the radioactive content of such gas poses very real dilemmas for the U.S.

What level of radioactivity in pipeline gas should be permissible? The problem is easy to dismiss by answering "no radioactivity" but our energy demands, especially for gas, may force some compromise. For example, if one takes the historic growth pattern for natural gas and represents it as a straight line on a semi-logarithmic chart, the 1900 value of 128 billion cubic feet soars to 20,000 billion cu. ft. by 1970—a 150-fold increase. If continued at this rate we will run through our gas reserves well before the year 2000. Even if we moderate our demand for natural gas, merely doubling our consumption by the turn of the century, we will have exceeded the reserve supply.

One thing seems very clear when the 20th century is laid out on a logarithmic scale—not everything can be consumed at the pace set by the past. The curves have to bend over. This is easy to say but such curve-bending has the most profound implications for our society. Almost all projections are keyed to a rising Gross National Product. Looking back the only significant dip in the energy curve occurred during the 1930s when the Great Depression abated man's lust for power.

It is very difficult to believe that any reasonable year 2000 energy projection can be met by consuming fossil fuels, however they may be made available through solid-to-gas conversion or by new means of exploitation. Significantly the energy prospects are altered when we crank the atom into our calculations.

The uranium atom was first split in December 1938. The chain reacting nuclear assembly was first initiated four years later. In 1945 it was claimed that atomic energy was just around the corner and prophets predicted that electricity would be produced so cheaply you would not bother to measure its cost. However, the engineering realities of converting the atom's energy through thermal processes into electricity have delayed the debut of the economic atom. Nonetheless, the prospects are such that it is reasonable to assume that by the year 2000 some 45% of electrical power will be atom-produced. If so, we can then make a split-up as follows:

[In percent]

Nuclear power	45
Fossil-fueled power	48
Hydropower	7

It would appear that nuclear power has come along just in time to rescue man from an energy deficit. However, some critics feel that uranium power is more an anchor than a life saver.

We have already mentioned the biggest unknown in the uranium atom's future, namely whether or not a power reactor can be made to produce economic power and breed more nuclear fuel than it consumes. If breeding doesn't work—and this remains to be proved in practice—then nuclear power will exhaust cheap uranium ore in less than two decades. Resort to more costly uranium ores will drive up the power costs and cause utilities to place greater reliance on fossil-fueled plants.

From a hazards viewpoint, atomic plants involve four district categories of dangers.

First, there is the catastrophic hazard, more technically known as a "nuclear excursion" or a "core melt-down". Reactor designers take many precautions to obviate such nuclear disasters. In the event of such an accident, designers believe that the resulting release of radioactive debris can be contained by the plant structure. I believe that a prudent policy of reactor siting requires that no nuclear power plants be located close to metropolitan populations. Additionally, I believe that prudence dictates restricting the population allowed to reside near nuclear power installations.

Second, we have the problem—not unique to nuclear plants but present to a higher degree in them—of thermal pollution. In a nuclear plant, the uranium core substitutes for the fuel box of a coal-fired steam boiler. The difference is that nuclear plants do not release oxidation products up a stack (a means of heat dissipation but also a severe source of pollution) and they are less efficient on a heat conversion basis. Thus a nuclear plant may generate 40 or more percent more heat than a conventional plant. This heat has to be dissipated and it is often done by simply passing cooling water from a river or lake around the coils of a heat exchanger.

The discharge water is heated up and can thermally alter the river or other body of water into which it flows or is pumped. Such heat inputs into a marine environment may significantly alter it. Even though the objections of local critics may be marginal in technical validity so far as present power installations are concerned, there is little doubt that the swift escalation of nuclear power requires that careful consideration be given to future reactor sitings. Here forward planning on a long range scale becomes an absolute necessity.

Looking at the energy curves for the 20th century it is clear that the upward growth of the kilowatt curves aims them at intersecting the total energy curve sometime around the year 2030. This would mean an all-electric economy in sixty years. Then the energy consumption in the U.S., whether all-electric or not, would involve the generations of something like 3×10^{17} Btu. A not unreasonable estimate, assuming a 50%-electric economy and 90% of this serviced by nuclear fuels, would be 10^{17} Btu of waste heat per annum. Much of this would be concentrated at a relatively few sites in U.S.A.

The year 2030 is not that far distant that we can dismiss its thermal tragedies lightly. Like the Dutch who make half-century plans for reclaiming land from the sea, we need to plan for our thermal future now. Proper planning calls for a very broad approach to the energy problem, viewing it in full perspective and taking into account fuel logistics and energy logistics. For example, it may become national policy to promote long-lines distribution of electrical power. The RDUs cloud this prospect right now but it should be possible to transport large amounts of electrical power over great distances and isolate the powerplants. Indeed, one can think of federal power reservations where population is excluded and only nuclear installations are allowed. Such reservations would be located in areas where thermal energy can be dissipated with minimum impact on the ecology. For example, huge nuclear plants may be sited on offshore islands.

Third, there is the matter of effluent discharges in routine operation of nuclear reactors and fuel reprocessing plants. Here the problem is one of being sure that effluents do not exceed wisely-set standards for radioactive pollutants. The U.S. Public Health Service needs to rid itself of its inferiority complex with regard to the Atomic Energy Commission. Self-regulating agencies like the A.E.C. readily succumb to the disease of arrogance and need to be "kept honest" by external forces. We have recently seen that a handful of concerned citizens can constitute a corrective force; I have in mind the word of a few scientists in Colorado; they brought the AEC into confrontation on a number of radiation hazards and very effectively used the antiseptic of criticism to make their points.

Fourth, we must face up to the challenge of burying the atom's ashes. Once nuclear fuel elements have been reprocessed, there remains a residue of long-lived fission products. Once the voluminous liquids have been reduced to some solid form, they need to be given permanent burial. As yet—a quarter century after the expedient of storing radioactive wastes in buried tanks—the Federal Government has not ennunciated a real policy on this waste disposal. It appears that solidified, probably vitrified, wastes will be consigned to salt mines, these being the tightest geologic formations available to man. But which States are to become the permanent sites for such atomic burials? Is the mode of storage truly adequate to confine the contamination for thousands of years? Are the sites capable of handling wastes when volumes swell to levels of the next century?

One thing should be evident from this discussion—we need to make national systems analyses of our energy problems. Our research and development activities should be patterned to these needs. Plunging ahead so rambunctionsly in one field, such as atomic energy, while neglecting research on fossil fuels has turned out to be a very short-sighted policy. Presumably, things might im-

prove if the Atomic Energy Commission were reoriented to be a National Energy Commission with a broader responsibility in research but not in regulation. Much research needs to be done on means of energy tranmission so that plants can be sited far from cities. In addition, a means of direct conversion of fission or fusion energy to electrical power should be a high priority item of our national energy agenda.

When we reach the end of this logarithmic century and look back on our exploits in energy conversion, we will probably reckon that our exploitation of fossil fuel reserves has been profligate. Pollution woes serve to draw attention to the problem. Over the span of one hundred years we will have burned up fossil fuels equivalent to 200 billion tons of coal!

If we continue as a nation to demand thermal energy as in the past, escalating for new population and new per capita demands, then in a quarter century after the year 2000 we can burn up the equivalent of another 200 billion tons of coal. Of course, we will probably resort to nuclear energy to supply these needs for power. However, unless we can power-breed in our reactors, we will run through available low-cost uraniferous ores and be forced to import our uranium and pay higher costs. Hopefully, we will by then have learned how to imitate the stars and burn light elements in fusion reactors. But this is a great RDU and no one can forecast fusion's future with any accuracy.

In conclusion, the nation needs to adopt a new attitude of respect and concern for energy, treating it as a unified and national problem with a century-wide depth of focus. Short-term and long-term pollution parameters must be incorporated into the nation's plans for energy systems. We have for many decades rapaciously looted a one-time only heritage of natural fuel and we must now substitute a wise policy for plunder and plan for the future.

I think that I would be remiss in my responsibilities as a scientist today if I did not mention the strategic arms limitation talks (SALT) now beginning in Vienna. We have been dealing with what I call "slow forms" of pollution—by products and wastes resulting from energy conversion and manufacturing processes. The supreme and acute pollutant of our times is nuclear war and it is therefore appropriate to discuss the criticality of the SALT discussions as they relate to control of the arms race.

The United States engages in the SALT talks as the world's No. 1 nuclear power but to judge from its behavior it appears to be a nervous nuclear giant. The U.S. has the power to hurl some 4,200 nuclear weapons at Soviet aim points and it is in the process of replacing land-based Minuteman ICBMs with a multiple warhead or MIRV system—and substituting 10 MIRV Poseidon warheads for every 3 Polaris A–3 MRVs. The U.S. strategic stockpile will double by 1974 and it could triple shortly thereafter. The arms race spirals upward. That is what SALT is all about—it is an attempt to cool off the arms madness and leave each side with a sense of nuclear sufficiency.

The U.S. nuclear giant is nervous about its vulnerability to a first strike, fearing that the mighty Soviet SS–9s could throw MIRVs at our 1,000 Minuteman silos and destroy the U.S. power to retaliate, thus unhinging the whole system of nuclear deterrence. Ten years ago I testified before a Congressional committee, urging that no land-based missiles be deployed. I argued that with the passage of time offensive missiles would become increasingly accurate and our land-based ICBMs would become vulnerable. Moreover, I testified that our ICBMs would attract enemy fire and the fallout from a Soviet attack on missile bases would cloak northeastern states in a mantle of lethal radioactivity. This would be the most acute and lethal form of atmospheric pollution imaginable.

We are now stuck with this "attractive hazard" in the form of 1,000 Minuteman bases. The U.S. Air Force has invested $17 billion in the total Minuteman program and now we are deploying the Safeguard ABM system to protect Minutemen. From an arms control viewpoint land-based missiles are an anathema, not only because they make each nation psychotic about a first-strike, but because their fire-power cannot be assayed except by on-site inspection. No orbital cameras can look under the silo cover and count warheads. Since the Soviet SS–9 has at least five times the throw-power of our Minuteman III, this asymmetry perturbs the whole arms control equation.

A risk-free agreement cannot be produced at the SALT talks. Some risks will have to be taken, but these should be acceptable risks when one realizes how much excessive capacity has been built into the sea-based and bomber strike forces of the U.S.A. The alternative is to plunge ahead into ever more costly weapons systems and into levels of armament which promise no more, probably less, security than we have now.

Half of the U.S. research and development budget presently goes to arms development. From a standpoint of resource conservation this $8 billion each year represents a low-yield investment of the nation's brainpower and funds. Given the prospect of a depleted fuel bin and mounting pollution, there is an urgent need to apply our scientific and technical talent to preserving the subtle balance of the air-land-water interface upon which all life depends.

WESTINGHOUSE NUCLEAR PLANT ELIMINATES RADIOACTIVE DISCHARGE

PITTSBURGH, May 6.—A major advance in nuclear power plant design that eliminates any discharge of radioactivity to the environment during normal operating conditions has been developed by Westinghouse Electric Corporation.

Joseph C. Rengel, executive vice president, nuclear energy systems, said the new design is now being offered on new plants to electric utility companies.

"We feel strongly that existing federal radiation standards for nuclear plant discharge levels more than adequately protect the health and safety of the general public," he declared. "At the same time, from the beginning of the nuclear industry, we have sought methods for reducing radioactive releases from our nuclear plants to the lowest levels attainable through technological advances."

"The experience gained from operating and maintaining the nine plants we have already placed in operation, plus recent technological developments, now make it possible for Westinghouse to offer what is essentially a zero release plant under normal operating conditions." Mr. Rengel said.

He explained that the new system enables plant operators to concentrate and contain radioactivity within the reactor system itself for long periods of time.

"Radioactive gases will be contained within the system and either stored on-site or shipped off the site periodically. The quantity of gases involved yearly is an amount small enough to be shipped in five normal sized oxygen tanks such as those used by welders," Mr. Rengel said.

The new design completely eliminates the release of tritium (an isotope of hydrogen) from the plant during normal operations. Tritium, in the form of tritiated water, is confined within the system and need be processed for off-site disposal only once or twice during the approximate 40-year lifetime of a nuclear plant.

Mr. Rengel said that Commonwealth Edison Company of Chicago will install a comparable system for minimizing radioactive liquid discharge to Lake Michigan from two one million one hundred thousand-kilowatt nuclear plants now under construction at the Zion Station about 40 miles north of Chicago.

Existing nuclear power plants now discharge minute quantities of radioactive wastes into the air and cooling water. Release levels from all nuclear plants have rarely exceeded one percent of the maximum allowable limits established by the Federal Radiation Council to assure public safety.

The Westinghouse executive said the new radioactive waste system would add about $1 per kilowatt to the cost of a new nuclear power plant.

Mr. Rengel said the phrase "during normal operating conditions" refers to plant operation within design basis with no significant leakage of primary plant water. "Our plants have routinely operated well within these criteria," he added.

He said the only discharge of radioactive gases from the new plant design could occur when the containment structure is ventilated during once-a-year refueling operations.

"Such discharges would be barely detectable above natural background radiation levels," he added.

In addition to the nine plants Westinghouse has placed in operation since 1957, the company has orders for an additional 35 plants now under construction or in the design stage.

"We have felt for some time that the production of electricity with nuclear power was one of the best things that happened to the environment in decades," Mr. Rengel said. "This new development will make it even better."

SHORTAGE OF OIL IN NEW ENGLAND

Mr. MUSKIE. Mr. President, summer is drawing to a close, and the fall and winter seasons will soon be upon us.

The colder weather coming in New England requires the heating of homes, of institutions, of schools, and of businesses, and it will put new strains on the shortage of oil which exists at this time.

The burden of the shortage will be, as always, on the back of the consumer. The homeowner who has to heat his home, the small businessman who has to heat his store, the school district which must have warmth for the children, the hospital which must keep patients comfortable during the fall and winter months, will suffer.

The Concord Monitor, of Concord, N.H., published an excellent editorial in a recent issue which pointed up the critical nature of this fuel shortage in most pointed terms. I was glad to note this editorial's comments about the efforts of the distinguished Senator from New Hampshire (Mr. MCINTYRE) to do something about this shortage. All of those from New England are working hard to see that we have adequate fuel oil at a price which compares with that paid by the rest of the country.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Concord Monitor, Aug. 3, 1970]

NEW ENGLAND'S OIL SHORTAGE WOES

New England is on the brink of a critical shortage of fuel oil. After a record-breaking

heat wave, the consequences of this short supply are not readily apparent. But if present conditions continue, it will spill over into winter.

The category currently causing consternation is number 6, or residual, fuel oil. It is used in large manufacturing plants, institutions and most importantly in power generating furnaces.

The oil shortage problem is four-fold:

(1) The demand for oil is nearly double the expected increase. Officials had planned a two and a half per cent increase; it is closer to five per cent.

(2) Restrictions on the sulfur content of oil have resulted in lower supplies of conforming fuel, since major refineries have not completed construction of sulfur-removing facilities.

(3) The war between the Arab nations and the Israelis in the Middle East has closed the Suez Canal and limited the supply from that major oil-producing area. In addition, the long trek around the southern tip of Africa has boosted the per barrel price of Middle East oil by 75 cents.

(4) An acute shortage of tankers, mostly of foreign ownership, touched off by the diversion to the demands of the Middle East fighting.

The then-chairman of the New Hampshire Public Utilities Commission said a month ago he had been assured by the Public Service Company of New Hampshire there was no prospect of a power shortage in the state for the next three years.

But Atty. Francis J. Riordan said this was "barring unexpected contingencies."

Since then, the critical nature of the supply problem has deepened.

A crisis has hit New York, where power supplies have been reduced a total of eight percent after a Consolidated Edison Co. generator failed. New England power has been diverted to New York to help take up the slack.

New Hampshire's Sen. Thomas J. McIntyre, a tiger on the backs of the major oil companies, called today for a phasing out of the oil import quota system, which clobbers New England, and replacing it with a tariff system.

The McIntyre proposal would implement the recommendations of President Nixon's Cabinet-level Task Force on Oil Imports, which the President has not yet put into force.

McIntyre charged that the oil import quota was costing U.S. consumers about $5 billion a year.

The oil shortage, which applies to home-heating fuel as well as residual, is making the market ripe for oil price increases. And because oil is so widely used in power-generating plants, this could lead, in turn, to increases in the consumer price of electricity.

Apparently Concord is in no immediate danger of a power shortage. Most electricity serving the city is generated by coal from the Bow plant of Public Service Co.

And while the U.S. Office of Emergency Preparedness says coal reserves are down a bit, the supply locally is considered adequate at least through the coming winter.

What is more ominous, however, is that coal is under increasing assault as a source of air pollution. With growing emphasis on environmental quality cleanup, legislative pressure may be applied to replace coal with sulfur-free (2 percent or less) oil for generating purposes.

This is not only would be a costly undertaking, it would require a temporary shutdown of the Bow facilities.

The oil supply problem—not only in New England, but worldwide—is under intense scrutiny by public as well as private sources.

How the major oil companies handle it will determine whether they are re-oriented to the interests of the public, or will capitalize on a growing crisis for private gain.

NATIONAL TELEPHONE COOPERATIVE ASSOCIATION ENDORSES RURAL COMMUNITY DEVELOPMENT BANK

Mr. PEARSON. Mr. President, on March 19 of this year I introduced a bill (S. 3607) to create the Rural Community Development Bank. This Bank would make loans to job-creating industries locating in rural areas and would also make loans and provide technical assistance to public bodies for the purpose of developing community facilities needed to sustain an expansion in industrial activity.

I have been encouraged by the reception the bill has received. The most recent indication of support comes in the form of an endorsement of the bill by the National Telephone Cooperative Association. Mr. President, the 19 cosponsors of the bill and I welcome this endorsement.

I ask unanimous consent that the association's resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RURAL COMMUNITY DEVELOPMENT BANK BILL

Whereas, S. 3607, the Rural Community Development Bank Bill has been introduced into the United States Senate by Senator James Pearson, and

Whereas, this legislation would work to improve the resources of rural America, and

Whereas, this bill would establish a bank which would make loans to:

Job creating enterprises which would serve to expand and improve the community's economic base;

Public and quasi-public bodies for the development of industrial sites and for the expansion and improvement of those public services and facilities necessary to support a community's overall development effort;

Recreational and cultural facilities;

Developer of public housing where needed; and

Whereas, passage of this legislation would be in the best interest of telephone cooperatives, rural America and the nation as a whole,

Now therefore be it resolved, that the National Telephone Cooperative Association go on record as favoring passage of this legislation, and

Be it further resolved, that the staff of NTCA is hereby authorized and requested to expand such time as possible to work toward this end.

TAXING THE WISDOM OF SOLOMON

Mr. CHURCH. Mr. President, the tax code is a literary abomination. It is a nightmare which even the tax experts puzzle over.

In an article entitled "The Sheer Hell of the Internal Revenue Code," published in the August 1970 issue of the American Bar Association Journal, Mr. Allen D. Choka examines in some detail his view of the code. He points out that for a retired person to take advantage of a $228.60—$457.20 for a couple—tax credit, the taxpayer must fill in—or consider—46 entries on schedule R of form 1040. Mr. Choka notes that some sentences in the code run as high as 506 words. Sentences of 150 to 200 words are commonplace. The language of the code is couched in painful legalese. Definitions refer to other definitions rather than substantive explanation. Mr. Choka concludes his article with a suggestion for rewriting one section of the code to make it understandable.

Mr. President, it adds insult to injury to require American taxpayers to be bookkeepers and then provide them with a set of rules too complex to follow. If experts shudder at the code, how must the average taxpayer feel?

I ask unanimous consent that Mr. Choka's excellent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SHEER HELL OF THE INTERNAL REVENUE CODE

(By Allen D. Choka)

The June 11 *Wall Street Journal* quotes Wilbur D. Mills, Chairman of the House Ways and Means Committee, as describing the proposed "Deadwood Bill" as "an attempt to simplify the [Internal Revenue] Code by deleting the deadwood". The bill apparently would repeal some 150 obsolete sections of the code and make deletions in about 885 others.

Laudable as this effort may be, it falls far short of what the code desperately needs—a thorough overhauling. It is so complex, so involuted, so convoluted that even the experts are bewildered. Consider this:

Item: In the April 13, 1970, issue of *The Wall Street Journal* Edwin S. Cohen, Assistant Secretary of the Treasury, disclosed the results of a survey of tax returns on which annuities and pensions were reported. He stated that more than 6,000,000 people receive such payments. A study of the tax returns in which these were reported disclosed that 75 per cent were reported incorrectly. Two thirds of those incorrectly reporting overstated their tax.

Item: The retirement income credit permits older taxpayers a credit against their tax. This runs $228.60 for a single person and $457.20 for a couple. To get this credit the taxpayer must fill in (or consider) forty-six entries on Schedule R of Form 1040.

Item: Commenting on the Tax Reform Act of 1969, Mortimer Caplin, former head of the Internal Revenue Service, said in *Fortune* for March, 1970: "It is going to take us at least ten years to comprehend everything that is in this bill."

Just what kind of tax laws have we spawned that causes 75 per cent of the annuities to be reported wrong, requires forty-six entries to earn a $457.20 credit and is amended in such a way that ten years will be required to understand the amendment? Something more than rummaging about the code's deadwood is in order. I recommend an effort to: (1) simplify the code wherever possible, making even substantive changes if necessary; (2) eliminate the prissiness and paranoia that seems to run endemic through legislative draftsmen; and (3) rewrite the code completely in a style that is targeted toward understanding, not obfuscation.

Let me show you with examples—all from the 1969 act—what makes the code so difficult to understand, even for trained lawyers and accountants. Any number of examples could be chosen for this purpose; I doubt that the ones I cite are the worst.

Sentence Length. Almost twenty-five years ago Rudolf Flesch showed in his book, *The Art of Plain Talk*, that short sentences are understandable and long sentences are not. This assumed we hadn't learned this in grammar school. Any sentence of twenty-nine words or more was classified by Mr.

Flesch as "very difficult". Even presupposing that lawyers and accountants are superhuman in dealing with long sentences, it is conceivable that sentences that run 385 words, 397 words and 506 words can be handled by anyone? (Sections 6651(a), 170(b)(1)(A) and 7701(a)(19) respectively.) Almost at random in the code you find sentences running 150 to 200 words.

Strangulated Conceptuality. In an effort to bring tax justice to a precision that would appear to the rational mind as not only impossible but undesirable, we find ourselves confronted with such provisions as Section 1250(f)(2):

For purposes of paragraph (1), the amount taken into account for any element shall be the sum of—

(A) the amount (if any) determined by multiplying—

(i) the amount which bears the same ratio to the lower of the amounts specified in subparagraph (A) or (B) of subsection (a)(1) for the section 1250 property as the additional depreciation for such element attributable to periods after December 31, 1969, bears to the sum of the additional depreciation for all elements attributable to periods after December 31, 1969, by

(ii) the applicable percentage for such elements, and . . .

Is it possible that the conceptualization of the tax structure has completely gotten out of hand when tax justice depends on such language?

Definitionitis. Though definitions are essential to any law, nowhere are they used with such vengeance as in the Internal Revenue Code. In Section 167(1) public utilities are granted a "reasonable allowance" for depreciation. This must be defined. One of the definitions of this term is "the applicable 1968 method." This must then be defined. One of *its* definitions is a "subsection (1) method". And obviously this must be defined. And all this can be used only if a "normalization method of accounting" is used. Defined? Of course. And it can't be used unless a "flow-through method of accounting" is in effect. Also defined. We encounter definitions of definitions of definitions—subject to two other definitions.

Boldly Meaningless. For the blatantly impossible sentence we could pick any number of examples. Here is the first sentence of Section 1348(b)(1):

The term "earned income" means any income which is earned income within the meaning of section 401(c)(2)(C) or section 1911(b), except that such term does not include any distribution to which section 72(m)(5), 72(n), 402(a)(2), or 403(a)(2)(A) applies or any deferred compensation within the meaning of section 404.

Does anyone in this world know what this means standing by itself?

Prissiness and Precision. The 1969 act reduced the amount of accumulated earnings credit for certain groups of corporations under common control. This "credit", in effect, is an amount a corporation can accumulate without fear of being accused of accumulating "excessively". As such, the credit is a kind of floor on a presumption of unreasonableness. This presumption is amended for the year 1970 to $83,333 and for 1971 to $66,667. It is likely the timbers of our tax foundation would have splintered if this presumption in 1970 had been $83,300, or even $84,000?

Similarly, the multiple surtax exemption is reduced for 1970 to $20,833 and for 1971 to $16,667. Would any real difference had been made if, in 1970, the exemption were $21,000?

To take an example from the pre-1969 period, the retirement income credit is based upon 15 per cent of $1,524—not $1,500 or even $1,520, but $1,524.

We have indeed polished and honed tax justice to perfection when we can say that the accumulated earnings presumption should be exactly $83,333, the surtax exemption exactly $16,667 and an elderly taxpayer should get a credit on exactly $1,524.

The Dating Game. Different provisions of the 1969 act go into effect on different dates: January 1, January 10, January 29, April 18, April 30, May 26, May 27, June 30, July 11, July 24, July 25, July 31. August 6, August 7, October 9, November 30, December 19 and December 29.

Frankly, I may have missed a few dates in my search. But I question what injustice might have occurred if the May 26 date had been made May 27, the July 24 date, July 25, and the August 6 date, August 7. Or, for that matter, if the entire law had gone into effect on one date.

Paranoia. Like trust indentures, the code is rapidly entombing the fears of generations of tax draftsmen. For example, the 1969 act decreed that if a corporation uses appreciated property to redeem its shares, a tax must be paid on the appreciation. (Section 311(d).) It then lists seven exceptions to the rule. The conference report added four more. We now have a basic rule with eleven exceptions. The effect on revenue, according to the Senate Finance Committee report (page 279), is: "This provision will prevent the loss of substantial revenue which *would occur in the future if there were to be* a substantial expansion of practice now beginning of buying stock with appreciated property." (Emphasis added.)

Note the future contingencies. Note also the inability to quantify the effect on revenue. But the end result is that a rule with eleven exceptions now clutters up the code.

Labyrinths. The Labyrinthian nature of the code has been epitomized, perhaps inadvertently, in a recent law review article. In the March, 1970, issue of *The Practical Lawyer*, Norman A. Sugarman has brilliantly broken down the fourteen categories of charitable foundations under the 1969 act. In tabular form he has then applied to each of these fourteen the thirty-four different benefits and burdens under the law. This makes 476 different combinations. Did tax justice really demand a law for foundations that requires a tax chart with 476 combinations in order to begin to understand it?

I have taken the extreme liberty of rewriting one of the never-ending sentences I mentioned: Section 6651(a). My rewrite has 190 words instead of 385. No sentence within it numbers more than twenty-eight words. You will be told that laws aren't written in this style. They aren't. They should be.

SECTION 6651(*a*)

You're penalized if you're late filing your tax return or paying your tax under Subchapter A of the following:

Chapter 61, except Part III—(Spirits, Wines and Beer)

Chapter 52—(Tobacco, Cigars and Cigarettes)

Chapter 53—(Firearms)

1. If you don't file your return on time, you're penalized 5% of the tax due on the return for each month (or fraction) you're late.

2. If you don't pay the tax shown in your return on time, you're penalized one-half of 1% on the tax due for each month (or fraction) you're late.

3. If you haven't paid the full tax you owe, you're penalized one-half of 1% of the additional tax for each month (or fraction) you're late paying it. This starts 10 days after our notice to you of the additional tax.

4. You're not late if we've given you an extension of time and you file and pay within this time. If you show us that your lateness was due to reasonable cause and not willful neglect, you won't be penalized. None of these penalties can exceed 25% of the tax due.

REVENUE-SHARING PLAN DESERVES CONSIDERATION

Mr. BENNETT. Mr. President, throughout the postwar period, State and local governments have found themselves in increasing financial difficulty. These governments carry the burden of the provision of basic services necessary to the maintenance and well-being of any society—police and fire protection, health, education and welfare services, highway construction, and so on—the demand for all of which has increased at record levels in the past decade alone.

Tax Foundation Inc., in Facts and Figures on Government Finance 1969, reveals that local expenditures may be nearly five times larger than local revenues, that since 1950 State debt has increased 303 percent, local debt 579 percent, and that current State and local debt averages at levels close to $600 per capita throughout the United States.

Last year this body discussed proposals, notably that of Senator BAKER, for the sharing of Federal revenues with the States. Unfortunately, these proposals were put aside. I believe now is the time for another consideration of a no-strings-attached revenue-sharing measure.

State and local governments find themselves in a situation today which has deteriorated substantially from their position a year ago. We have, since the initial date of these proposals a year ago, launched a massive war on pollution, which can only be effective if local governments cooperate fully, a new crime measure, which must be emulated at State and local levels, but which will require large sums for police forces of increased size, additional officer training, a revamping of local court systems and juvenile detention facilities. We have increased the need for State and local educational and health funding, and we constantly hear the call for new social welfare measures, which, invariably, must begin at local levels. Our population has continued to grow and we have mass demands for services on all sides. Obviously, the Federal Government is not intended nor equipped to handle all the demands at State and local levels—it cannot, for example, be expected to discharge the administration of Utah schools, nor the provision of a firefighting unit for a small Utah county. The point is, these small units of governments are ill equipped to handle the increased demands for these services. If they cannot provide their own services the Federal Government may have to provide them for them.

Mr. President, a revenue-sharing proposal is sorely needed to enable beleaguered State and local units of government to meet the demands of their citizens. Earlier I cited some statistics. We have all seen and heard these figures time and time again. Joseph Pechman of the Brookings Institution tells us, the First National City Bank of New York tells us, that State and local governments will experience an aggregate revenue-expenditure gap of $15 billion by 1975, even when all State attempts to balance their budgets have been considered.

I would like to review for a moment, the reasons why State and local governments cannot continue to provide the financing for all of their public services.

First. State and local officials are politically handicapped in terms of raising needed revenues, even though citizens may be demanding more services. An official who wants to retain his position cannot force tax increases upon an unwilling populace. As Governor of Iowa, our colleague, Senator HUGHES, said it well in his estimation of public reaction to State and local tax increases. He said:

> We governors are afraid of tax increases. We sit there, and we face the people every day. We sit on the firing line and we come down and recommend a $100 million tax increase, and we know we have signed our resignation right along with it. Whereas the federal government can sit here with a tax increase, with not total immunity, but a little immunity as to local effects, and as to what effect it has on individual pocketbooks.

Many more have agreed with Senator HUGHES, and local officials are even more vulnerable to pressure from the taxpayers.

Second, from the standpoint of tax equity and long-range economic policy, it is undesirable to finance long-range needs by property and consumer taxes, the sources upon which State and local governments largely depend. The regressive nature of these taxes is only too well known, and as our inner cities continue to be pockets of low income, the revenue garnered from these sources will continue to diminish in relation to the needs of the areas. The inhabitants of poor areas cannot be expected to bear the brunt of the taxes intended to provide the bulk of services to these nonproducing areas. The question here becomes one of taxing jurisdiction—the relation of the size of the taxing jurisdiction as compared to the size of the economy as a whole.

In each State, in contrast with the Federal Government, the taxing jurisdiction embraces only a limited portion of the American economy, and although it may be a sizable portion of economic activity, no State, and especially no city, is an economically independent unit. "Federal Revenue Sharing With the States," a publication of the National Industrial Conference Board puts the essence of this problem clearly:

> The Federal Government, relying for the most part on personal and corporate income taxes, has shown itself a much more efficient taxing unit in the postwar years than state and local governments which rely largely on property and sales taxes. The reason is that taxing ability depends to some extent on the size of the taxing jurisdiction in relation to the size of the economy.

Cities find themselves in an even weaker position. They may derive their taxing power from the State and have to rely heavily on the property and sales tax to finance their public services. Their tax base is also under a constant state of flux as industry moves in and out of areas. According to both Heller—author of "New Dimensions of Political Economy and Revenue Sharing and the City"—and Pechman, in a Federal system of government where the provision of public services is divided between two or more levels of government, but the taxing power of the different levels is highly unequal, economic decisionmaking will not be rational. Not without reason are slums mainly in areas with weak taxing powers. In addition, these taxes do not fluctuate with the state of the economy. They do not provide an adequate basis for long-range planning of vital services.

My second concern rests with the current grant programs. Certainly we could attempt to meet new demands by an expansion of grant in aid programs, but indications are that it may not be desirable to do so. The grant program is large and growing and its administration is often found wanting. Harvey Lutz, in the Wall Street Journal of December 12, 1966, highlighted some of the problems of the grant system, and if anything, the well-nigh impenetrable administrative jungle he describes has become thicker since the article appeared.

> From the beginning a chain reaction has intensified proliferation of the grant system. As results fell short of expectations and prophecies, more grant programs were devised and more agencies or sub-agencies were set up to operate them. There have been both inter and intra-departmental power struggles to get or keep control, and all kinds of pressure tactics have been employed. A new type of professional has developed in Washington, whose expertise is in advising states and communities regarding the kinds of grants for which they are eligible and the amounts of money they can obtain.
>
> Confusion, duplication, and overlap are characteristic of a government too big to be managed efficiently. The grant system has provided an excellent opportunity for the development of this well-nigh impenetrable administrative jungle. In some cases administrative costs absorb more than half of the available funds for any one program.

To increase grant-in-aid in many instances would be to increase waste, duplication, and inefficiency.

Revenue sharing itself is a simple proposal, made all the more attractive by its simplicity. Revenues shared with lower levels of government will enable them to operate independently, without Federal controls. To a much greater extent local officials will be free from Federal domination and redtape involved in meeting the stringent matching requirements and other conditions required to qualify for Federal assistance under grant-in-aid. Many programs which are currently administered from Washington could be performed at the State and local level by officials who are most familiar with their own particular needs and problems, and who thus can probably make the wisest allocation of these funds in the interests of their own citizens. This increased local autonomy is, perhaps, the greatest advantage of a revenue-sharing proposal. Revenue sharing provides an increased federalism, an increased sense of responsibility at the State and local level, and an increased efficiency in meeting the problems of our Nation when those problems are met by the people who must live with the solutions.

There are other advantages to the proposal also—the distribution formula is especially advantageous to small States, such as Utah, who have small populations but a high level of tax effort. The measure proposed earlier by Senator BAKER provides for a per capita distribution to give large States with large problems the largest share of the intended revenues. In addition, giving smaller States with high tax effort a proportion of the revenues based on their revenue effort provides an added incentive for these States to continue to attempt to meet their own problems out of their own resources. As an example, Utah would receive $30,396,736 under this formula, 0.6 percent of all Federal funds shared with the States, although on a straight population-based formula she would only receive $25,870,000, or 0.5 percent, of the funds so distributed.

Murray L. Weidenbaum, Assistant Secretary of the Treasury, has succinctly summed up the advantages of a revenue sharing proposal:

1. Revenue sharing is a simple program, it would require no new administrative machinery or additional costs to implement.
2. It is automatic in the distribution of the funds.
3. It is equitable—funds go to every city, county, and State in the Nation on a formula basis.
4. It has no strings attached—it provides increased independence to local and state governments.
5. It is neutral—the State-by-State distribution is based primarily on where people reside. The allocation among governments within a State is based on the existing distribution of financial responsibilities among the various units of government as decided in each area.

A no-strings-attached revenue sharing proposal today would demonstrate the commitment of Congress to a reordering of priorities and a return of power to the States. The solution to our growing problems of crime, pollution, traffic congestion and a host of others, must be met at the level at which they exist by the people that they affect at the State and local level. They cannot be met without an additional provision of funds. I endorse revenue sharing legislation and urge early congressional consideration.

EDITOR OF THE CANADIAN RECORD, CANADIAN, TEX., CHALLENGES THE EFFICIENCY OF THE POSTAL SERVICE'S PROGRAM FOR THE ELIMINATION OF RURAL POSTMARKS

Mr. YARBOROUGH. Mr. President, the Canadian Record for August 13, 1970, contains a well written and timely editorial which challenged the Postal Service's claim that the elimination of canceling mail in small cities and towns will insure more efficiency in mail service. As the editor, Mr. Ben Ezzell, so correctly points out:

> Channeling increasing loads of mail into the sectional centers has been the biggest boondoggle ever devised by a government bureau which has been known for some whoppers. When the sectional centers are unable to handle, efficiently and speedily, the volume of mail which is already being unnecessarily channeled through them, increasing the volume obviously isn't going to improve the situation.

Mr. President, throughout my State, small cities and towns are losing their identity through elimination of their

postmarks, and the citizens of these communities are being subjected to outrageous and ridiculous delays in service.

For example, in Tulia, Tex., a town of over 6,000 people, a letter intended for in-town delivery, was mailed at the local post office, taken on a 150-mile journey, and finally placed in the post office box of the person to whom the letter was addressed in the same post office 3 days after it was mailed. On first consideration, situations such as this might seem humorous if not so widespread; however, on closer examination, this type of inefficiency shows a callous indifference to the needs of those citizens of our country who reside in the rural areas. This administration, by allowing such practices as this to continue, is expressing its disinterest in the problems and interests of these Americans and its intention to treat them as second-class citizens.

Mr. President, I do not believe that the people of America will tolerate this inefficiency much longer. Therefore, I submit that it is the duty of every Member of Congress to make every effort possible to insure that rural America receives prompt and efficient postal service.

I ask unanimous consent that the editorial, entitled "Less Efficiency, Please," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESS EFFICIENCY, PLEASE

In an interview with a Hereford Brand reporter, carried by that newspaper last week, Postal Service Officer Mel Benesch, the man in charge of Amarillo's regional postal center, declared that cancelling all mail from outlying small-town post offices in the Lubbock Regional Center "is going to save $50,000 a year."

Benesch was assuring the Hereford interviewer that the changes already put into effect in the Lubbock region . . . where all out-of-town letters are carried into Lubbock for rapid cancellation with a Lubbock postmark . . . had not been put into effect yet in the Amarillo region. Benesch said "there is no indication yet when it will be but the time is coming."

We don't know how Mel Benesch arrived at that nice round $50,000 figure, but even assuming that it may be correct, there is no accurate way of estimating how much the resulting delay in mail service may be costing the businessmen of the Lubbock postal region.

Mel Benesch, of course, will quickly deny that there is any delay . . . but every postal patron who has had any extensive business with the United States Post Office in recent years can attest to the fact that there is, and that every centralized "improvement" instituted by the postal service has made it worse.

Channeling increasing loads of mail into the sectional centers has been the biggest boondoggle ever devised by a government bureau which has been known for some whoppers. When the sectional centers are unable to handle, efficiently and speedily, the volume of mail which is already being unnecessarily channeled through them, increasing the volume obviously isn't going to improve the situation.

Mr. Benesch is proud of the high-speed cancelling machines which his department has installed at the Amarillo Sectional Center. "We don't even know we've got 10,000 pieces of mail," he told The Brand reporter, "it goes through so fast . . . its just absorbed."

And "absorbed" may be a good word for what's happening to much of the mail in the sectional centers these days. It is absorbed so well that it sometimes disappears for days.

Mr. Benesch is the postal officer who explained to the staff of this newspaper at great length a couple of years ago how it was actually going to speed delivery of our newspapers to places like Allison and Briscoe and Wheeler and Lipscomb . . . all of them served by routes which originate in the Canadian post office . . . to carry them into the sectional center in Amarillo on Thursday afternoon and bring them back to the Canadian post office the following morning to be transferred to the route carriers. We couldn't understand how hauling those newspapers on a 200-mile round trip and processing them through the Amarillo sectional center was going to be an improvement over simply holding them overnight in the Canadian post office for carrier dispatch the next morning. but Mr. Benesch assured us that it was going to save the government a lot of money and also speed up the service.

We didn't believe it then, and we don't believe it now. Our disbelief is frequently strengthened when we find that our newspapers failed to make it through the Amarillo Sectional Center on their overnight Thursday journey, and don't get back until Saturday morning to be transferred to our subscribers in neighboring communities.

The mail service just can't stand many more "improvements" of the type that Mr. Benesch and his fellow post office experts keep instituting. And we can ill-afford many more of those "savings" which keep bringing increased postal rates and slower delivery times, either. Can't we please have a little less efficiency and a little more service, Mr. B.?

VOTING RIGHTS IN WYOMING

Mr. HANSEN. Mr. President, today is the 50th anniversary of the 19th amendment to the Constitution granting equal suffrage to women.

We in Wyoming are particularly proud to recognize this accomplishment because Wyoming led the Nation, and indeed the world, when it granted equal suffrage to women in 1869, at the time the Wyoming Territory was organized. In 1890, Wyoming became the first State to give women equal voting rights.

The women of Wyoming enjoyed equal voting rights a full 51 years before these rights were included in the Constitution of the United States.

In 1924, Nellie Tayloe Ross was elected Governor of Wyoming and became the first woman Governor in the country. She then served three Presidents as Director of the U.S. Mint, and to this day is vitally interested in the affairs of her State and Nation. Since 1890, women have served in every elected State office and as Speaker of the Wyoming House of Representatives.

In this day, when many of us advocate lowering the voting age below 21, there is a tendency by some to believe that Federal legislation should set a standard of 18, implying that at the Federal level there exists some great power which makes the Federal Government all knowing in determining the proper voting age. I believe it is appropriate to note at this time that if the women of Wyoming had to wait for Congress and the Nation to wake up and act on women's suffrage, they would not have enjoyed the one-half century of equal rights granted to them by Wyoming.

There is much to be said for the system that has permitted the States the flexibility to take progressive steps to expand the voting franchise, and the benefits we have received from that flexibility are the strongest argument for refusing to preempt State responsibility by Federal statute and applying any change nationally by means of an amendment to the Federal Constitution.

As Governor of Wyoming, I called for the adoption of an amendment authorizing voting by 18-year-olds. This year the State of Wyoming is again in the front ranks and is voting on an amendment to the State Constitution to lower the voting age in Wyoming to 19. I am confident that such action by the State of Wyoming will be as rewarding as that of granting equal suffrage to women.

SOVIET UNION INVASION OF CZECHOSLOVAKIA

Mr. TOWER. Mr. President, the invasion of Czechoslovakia by the Soviet Union 2 years ago last Friday sent a shock wave through the civilized world which belied the popular image of Soviet mellowing. We were shaken to a renewed memory of Hungary, Poland, and the Katyn massacre, the "annexation" of the Baltic states and, indeed, the total scope of brutality and oppression which has characterized the history of Soviet Russia.

In January of 1968, Antonin Novotny, one of the last remnants of Stalinism in Eastern Europe, was removed as first secretary of the Czechoslovakia Communist Party under pressure from liberal reformers, principally writers and intellectuals. Alexander Dubcek was installed as first secretary and the Czech Government embarked on a series of moderate reforms. Censorship was eased. In a speech in Brno, Dubcek promised the widest possible democratization for Czechoslovakia and hinted that, while Czechoslovakia would maintain her alliance with the Soviet Union, she would take a more independent stance in world affairs.

By May of 1968, relations between Czechoslovakia and the Soviet Union were tense. Soviet troops were engaged in military maneuvers near the Czechoslovak frontier. Soviet Premier Kosygin went to Prague for talks with the Dubcek government. Moscow was determined to retard the reformist movement but when Kosygin departed from Prague after 8 days no agreement had been reached. Since Kosygin's visit was ostensibly a "vacation" no official communique was issued and reports indicated that the visit was more amicable than perhaps actually it was.

Reform continued, and Dubcek held the balance in his party between the more radical progressives and Novotny elements. In June, Soviet troops were engaged in military exercises on Czechoslovak territory, a display of military might obviously for the purpose of intimidating the Dubcek regime. Under this threat, the Prague government was brought into conference with the Soviets at Cierna by the end of July. At the conference, Czech leaders reasserted their loyalty to the Soviet Union and Warsaw Pact allies, but insisted upon their rights to guide the internal affairs of Czecho-

slovakia. Finally the Soviets, unsatisfied with the assurances of the Czech Government poured a force of Soviet and Warsaw Pact troops, variously estimated at 200,000 to 650,000 men, into Czechoslovakia. The reform leaders were arrested, and the iron hand of Soviet occupation was clamped down on Czechoslovakia.

Mr. President, the deep sympathy of the American people and of all people who value freedom goes out to the people of Czechoslovakia, who twice in 30 years succumbed to invasion by a superior force. But the lesson of Czechoslovakia is clear: A people who would be free must be strong. The independent spirit of the Czechoslovak people has not been crushed; they have passively resisted the Soviet occupation. But it is clear that only sufficient strength can discourage the use of force by the Soviet Union. The lesson in Soviet diplomacy provided by events in Eastern Europe of 2 years ago is well worth remembering.

THE 50TH ANNIVERSARY OF VOTE FOR WOMEN: ITS REAL MEANING

Mr. PROXMIRE. Mr. President, today is the 50th anniversary of the ratification of the 19th amendment to the Constitution. It is the amendment which gave women the right to vote. It is a good time to pause and actually reflect on how much equality women have today.

Women comprise more than half of the country's population but are still treated as second-class citizens in many important ways. This morning the Washington Post published an article entitled "A Half-Century of Suffrage for Women" which pointed up many of the inequalities which still exist. The Post story points out for example that:

> On the average, a woman with a college degree earns little more than a man with an eighth-grade education. Women constitute only 9% of all professions, 7% of the doctors, 3% of lawyers, and 1% of the engineers. Average starting salaries are lower for women in these fields than for males. Almost all the elementary school teachers are women—but almost all the elementary school principals are male.

The vote for women did not bring equality. Today is not a time to look back, but to look ahead toward eliminating inequalities which still exist. While women do have the vote, it is revealing that, according to Gallup, only 66 women have been elected or appointed to the House and 10 to the Senate. The current Congress has 11 female Members, 10 in the House and one in the Senate. Full political rights for women include equal opportunity to seek elective office. One of the most important steps which the Senate can take to guarantee women of all nations equal political rights is to ratify the convention on political rights for women. Action on this treaty is long overdue. If we are really sincere in our desire to guarantee women equal rights, then the time has come to take action on this treaty. Words will not satisfy the women demanding their rights. They want to see concrete action. Ratification of the Political Rights for Women Convention is one important way in which the Senate could demonstrate to American women that it is really interested in their cause.

WOMEN'S STRIKE FOR EQUALITY

Mr. GOODELL. Mr. President, the Women's Strike for Equality, called for today, August 26, brings an end to the era of dormancy in the women's rights movement.

The date of the strike is significant because it represents the 50th anniversary of the 19th amendment which guaranteed women's suffrage.

This "golden anniversary" does not, unfortunately, represent 50 years of equality. The path to equality has been boobytrapped with delays and frustrations. For example, in 1963, I authored the Equal Pay for Women Act. It provided for a very simple equality that equal pay should be given for equal work regardless of sex. Today, the median income of a woman is $4,200 while a man receives nearly double that amount—$7,200—for comparable work. Lack of progress as in the case of this law, has characterized the movement for women's rights.

That era has ended. The women's rights movement has been revolutionized—charged—with a new spirit and strength that will no longer tolerate inequality and discriminatory institutions. The strike is a dramatic example of this new spirit.

I support the Women's Strike for Equality. It is designed to promote unity among women and to demonstrate that women have the power to make changes in this world. It is designed to encourage women to reflect on the ambiance of inferiority that has limited their life choices. It employs for women the tried and true tactic of organization that has worked so effectively for labor and minority groups in achieving their demands. The strike will enable women to take full advantage of this important tool to meet their own articulated demands.

Yesterday, I had the opportunity to meet with the women who represent the coalition which is organizing the strike in New York City and across the Nation. The actions to be taken in New York City and other cities will be in support of the major demands of the coalition which include free abortions, universal child care centers, and equal opportunity in jobs and education.

While testifying before the Senate Judiciary Committee in support of the equal rights amendment I stated then that the amendment would be meaningless unless accompanied by legislation which would put muscle into the constitutional guarantee of equality. I suggested that such legislation would include the repeal of restrictive abortion laws, the creation of adequate day care centers, and equality of education and occupational opportunity.

As a result of the discussion yesterday, I will be introducing a legislative package within the next few weeks which will implement many of the suggestions made in our meeting.

This legislation and any other legislation designed to provide choices for women will not pass the Congress or the State legislatures for that matter unless women present a united front in support of the efforts. The Women's Strike for Equality represents such a united front. I applaud the efforts of these dedicated women. I sincerely hope that it is the beginning of a new awareness and motivation among both women and men to fight for the equality women have a right to.

In this new spirit of awareness, the men and women graduates of the 1970 class at Vassar College invited Miss Gloria Steinem, a noted journalist and leader of the women's rights movement, to present the commencement address at the June graduation exercises. Miss Steinem's message emphasized that today's women's liberation movement is an integral part of the revolt against social injustice in this country and urged each of the graduates to discard the old prejudices—racial and sexual—which inhibit individual growth and freedom.

In recognition of the strike today, I ask that the full text of Miss Steinem's address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LIVING THE REVOLUTION

President Simpson, members of the faculty, families and friends, first brave and courageous male graduates of Vassar—and Sisters.

You may be surprised that I am a commencement speaker. You can't possibly be as surprised as I am. In my experience, commencement speakers are gray-haired, respected creatures, heavy with the experience of power in the world and with Establishment honors. Which means, of course, that they are almost always men.

But this is the year of Women's Liberation. Or at least, it's the year the press has discovered a movement that has been strong for several years now, and reported it as a small, privileged, rather lunatic event instead of the major revolution in consciousness—in everyone's consciousness, male or female—that I believe it truly is.

It may have been a part of that revolution that caused the senior class to invite me here—and I am grateful. It is certainly a part of that revolution that I, a devout nonspeaker, am managing to stand before you at all. I don't know whether you will be grateful or not. The important thing is that we are spending this time together, considering the larger implications of a movement that some call "feminist" but should more accurately be called humanist; a movement that is an integral part of rescuing this country from its old, expensive patterns of elitism, racism, and violence. The first problem for all of us, men and women, is not to learn, but to un-learn. We are filled with the Popular Wisdom of several centuries just past, and we are terrified to give it up. Patriotism means obedience, age means wisdom, woman means submission, black means inferior—these are preconceptions imbedded so deeply in our thinking that we honestly may not know that they are there.

Unfortunately, authorities who write textbooks are sometimes subject to the same Popular Wisdom as the rest of us. They gather their proof around it, and end by becoming the theoreticians of the status quo. Using the most respectable of scholarly methods, for instance, English scientists proved definitively that the English were descended from the angels, while the Irish were descended from the apes. It was beautifully done, complete with comparative skull-measurements and it was a rationale for the English domination of the Irish for more

than 100 years. I try to remember that when I'm reading author Jensen's current and very impressive work on the limitations of black intelligence. Or when I'm reading Lionel Tiger on the inability of women to act in groups.

The apes-and-angels example is an extreme one, but so may some of our recent assumptions be. There are a few psychologists who believe that anti-Communism may eventually be looked upon as a mental disease.

It wasn't easy for the English to give up their mythic superiority. Indeed, there are quite a few Irish who doubt that they have done it yet. Clearing our minds and government policies of outdated myths is proving to be at least as difficult. But it is also inevitable. Whether it's woman's secondary role in society or the paternalistic role of the United States in the world, the old assumptions just don't work anymore.

Rollo May has a theory that I find comforting. There are three periods in history, he says—one in which myths are built up, one in which they obtain, and one in which they are torn down. Clearly, we are living in a time of myths being torn down. We look at the more stable period just past, and we think that such basic and terrifying change has never happened before. But, relatively, it has. Clinging to the comfortable beliefs of the past serves no purpose, and only slows down the growth of new forms to suit a new reality.

Part of living this revolution is having the scales fall from our eyes. Everyday, we see small obvious truths that we had missed before. Our histories, for instance, have generally been written for and about white men. Inhabited countries were "discovered" when the first white male set foot there, and most of us learned more about any one European country than we did about Africa and Asia combined.

I confess that, before some consciousness-changing of my own, I would have thought the Women's History courses springing up around the country belonged in the same cultural ghetto as home economics. The truth is that we need Women's Studies almost as much as we need Black Studies, and for exactly the same reason: too many of us have been allowed from a "good" education believing that everything from political power to scientific discovery was the province of white males. I don't know about Vassar, but at Smith we learned almost nothing about women.

We believed, for instance, that the vote had been "given" to women in some whimsical, benevolent fashion. We never learned about the long desperation of women's struggle, or about the strength and wisdom of the women who led it. We heard about the men who risked their lives in the Abolitionist Movement, but seldom about the women; even though women, as in many movements of social reform, had played the major role. We knew a great deal more about the outdated, male-supremacist theories of Sigmund Freud than we did about societies in which woman had equal responsibility, or even ruled.

"Anonymous," Virginia Woolf once said sadly, "was a woman."

I don't mean to equate our problems of identity with those that flowed from slavery. But, as Gunnar Myrdal pointed out in his classic study, *An American Dilemma*, In drawing a parallel between the position of, and feeling toward, women and Negroes, we are uncovering a fundamental basis of our culture." Blacks and women suffer from the same myths of childlike natures; smaller brains; inability to govern themselves, much less white men; limited to job skills. Identity as sex objects, and so on. Ever since slaves arrived on these shores and were given the legal status of wives—that is, chattel—our legal reforms have followed on each other's heels. (With women, I might add, still lagging considerably behind. Nixon's Commission on Women concluded that the Supreme Court was sanctioning discrimination against women—discrimination that it had long ago ruled unconstitutional in the case of blacks—but the Commission report remains mysteriously unreleased by the White House, An Equal Rights Amendment, now up again before the Senate, has been delayed by a male-chauvinist Congress for 47 years.) Neither blacks nor women have role-models in history: models of individuals who have been honored in authority outside the home.

I remember when I was interviewing Mrs. Nixon just before the 1968 election. I asked her what woman in history she most admired and would want to be like. She said, "Mrs. Eisenhower." When I asked her why, she thought for a moment, and said, "Because she meant so much to young people."

It was the last and most quizzical straw in a long difficult interview, so I ventured a reply. I was in college during the Eisenhower years, I told her, and I didn't notice any special influence that Mrs. Eisenhower had on youth. Mrs. Nixon just looked at me warily, and said, "You didn't?" But afterwards, I decided I had been unfair, After all, neither one of us had that many people to choose from. As Margaret Mead has noted, the only women allowed to be dominant and respectable at the same time are widows. You have to do what society wants you to do, have a husband who dies, and then have power thrust upon you through no fault of your own. The whole thing seems very hard on the men.

Before we go on to other reasons why Women's Liberation is Men's Liberation, too—and why this incarnation of the women's movement is inseparable from this larger revolution—perhaps we should clear the air of a few more myths.

The myth that women are biologically inferior, for instance. In fact, an equally good case could be made for the reverse. Women live longer than men. That's always being cited as proof that we work them to death, but the truth is: women live longer than men even when groups being studied are monks and nuns. We survived Nazi concentration camps better, are protected against heart attacks by our female hormones, are less subject to many diseases, withstand surgery better, and are so much more durable at every stage of life that nature conceives 20 to 50 percent more males just to keep the balance going. The Auto Safety Committee of the American Medical Association has come to the conclusion that women are better drivers because they're less emotional than men. I never thought I would hear myself quoting the AMA, but that one was too good to resist.

Men's hunting activities are forever being pointed to as proof of tribal superiority. But while they were out hunting, women built houses, tilled the fields, developed animal husbandry, and perfected language. Men, isolated from each other out there in the bush, often developed into creatures that were fleet of foot, but not very bright.

I don't want to prove the superiority of one sex to another. That would only be repeating a male mistake. The truth is that we're just not sure how many of our differences are biological and how many are societal. In spite of all the books written on the subject, there is almost no such thing as a culture-free test.

What we do know is that the differences between the two sexes, like the differences between races, are much less great than the differences to be found within each group. Therefore, requirements of a job can only be sensibly suited to the job itself.

It deprives the country of talent to bundle any group of workers together by condition of birth.

A second myth is that women are already being treated equally in this society. We ourselves have been guilty of perpetuating this myth, especially at upper economic levels where women have grown fond of being lavishly maintained as ornaments and children. The chains may be made of mink and wall-to-wall carpeting, but they are still chains.

The truth is that a woman with a college degree working fulltime makes less than a black man with a high school degree working fulltime. And black women make least of all. In many parts of the country—New York City, for instance—a woman has no legally guaranteed right to rent an apartment, buy a house, get accommodations in a hotel, or be served in a public restaurant. She can be refused simply because of her sex. In some states, women cannot own property, and get longer jail sentences for the same crime. Women on welfare must routinely answer humiliating personal questions; male welfare recipients do not. A woman is the last to be hired, the first to be fired. Equal pay for equal work is the exception. Equal chance for advancement, especially at upper levels or at any level with authority over men, is rare enough to be displayed in a museum.

As for our much-touted economic power, we make up only 5% of all the people in the country receiving $10,000 a year or more. And that includes all the famous rich widows. We are 51% of all stockholders, a dubious honor these days, but we hold only 18% of the stock—and that is generally controlled by men. The power women have as consumers is comparable to that power all of us currently have as voters: we can choose among items presented to us, but we have little chance to influence the presentation. Woman's greatest power to date is her nuisance value. The civil rights, peace, and consumer movements are impressive examples of that.

In fact, the myth of economic matriarchy in this country is less testimony to our power, than to the resentment of the little power we do have.

You may wonder why we have submitted to such humiliations all these years; why, indeed, women will sometimes deny that they are secondclass citizens at all.

The answer lies in the psychology of secondclassness. Like all such groups, we come to accept what society says about us. And that is the most terrible punishment of all. We believe that we can only make it in the world by "Uncle Tom-ing," by a real or pretended subservience to white males.

Even when we come to understand that we, as individuals, are not secondclass, we still accept society's assessment of our group—a phenomenon psychologists refer to as Internalized Aggression. From this stems the desire to be the only woman in an office, an academic department, or any other part of the man's world. From this also stems women who put down their sisters—and my own profession of journalism has some of them. By writing or speaking of their non-conformist sisters in a disapproving, conformist way, they are essentially saying, "See what a Real Woman I am," and expecting to be rewarded by ruling-class approval and favors. That is only beginning to change.

It shouldn't be surprising that women behave this way, too. After all, Internalized Aggression has for years been evident in Negroes who criticized each other ("See what a Good Nigger I am"), or in Jews who ridiculed Jewishness ("See how I am different from the other Jews"). It has been responsible for the phenomenon of wanting to be the only black family in the block, or the only Jew in the club.

With women, the whole system reinforces this feeling of being a mere appendage. It's hard for a man to realize just how full of self-doubt we become as a result. Locked into suburban homes with the intellectual com-

panionship of three-year-olds; locked into bad jobs, watching less-qualified men get promoted above us; trapped into poverty by a system that supposes our only identity is our sex motherhood—no wonder we become pathetically grateful for small favors.

I don't want to give the impression, though, that we want to join society exactly as it is. I don't think most women want to pick up slimline briefcases and march off to meaningless, de-personalized jobs. Nor do we want to be drafted—and women certainly should be drafted: even the readers of *Seventeen* Magazine were recently polled as being overwhelmingly in favor of women in National Service—to serve in an unconstitutional, racist, body-count war like the one in Indochina.

We want to liberate men from those inhuman roles as well. We want to share the work and responsibility, and to have men share equal responsibility for the children. Probably the ultimate myth is that children must have fulltime mothers, and that liberated women make bad ones. The truth is that most American children seem to be suffering from too much mother and too little father. Women now spend more time with their homes and families than in any past or present society we know about. To get back to the sanity of the agrarian or joint-family system. We need free universal day-care. With that aid, as in Scandanavian countries, and with laws that permit women equal work and equal pay, men will be relieved of their role as sole breadwinner and stranger to his own children. No more alimony. Fewer boring wives, fewer childlike wives. No more so-called "Jewish mothers," who are simply normal, ambitious human beings with all their ambitiousness confined to the house. No more wives who fall apart with the first wrinkle, because they've been taught their total identity depends on their outsides. No more responsibility for another adult human being who has never been told she is responsible for her own life, and who sooner or later says some version of, "If I hadn't married you, I could have been a star." And let's say it one more time because it's such a great organizing tool—no more alimony. Women's Liberation really is Men's Liberation, too.

The family system that will emerge is a great subject of anxiety. Probably, there will be a variety of choice. Colleague marriages, such as young people have now, with both partners going to law school or the Peace Corps together; that's one alternative. At least they share more than the kitchen and the bedroom. Communes, marriages that are valid for the child-rearing years only . . . there are many possibilities, but they can't be predicted. The growth of new forms must be organic.

The point is that Women's Liberation is not destroying the American family, it is trying to build a human, compassionate alternative out of its ruins. Engels said that the paternalistic, 19th Century family system, was the prototype of capitalism—with man, the capitalist; woman, the means of production; children, the labor—and that the family would only change as the economic system did. Well, capitalism and the mythical American family seem to be in about the same shape.

Of course, there are factors other than economic ones. As Margaret Mead says: No wonder marriage worked so well in the 19th Century; people only lived to be fifty years old. And there are factors other than social reform that will influence women's work success. "No wonder women do less well in business," says a woman executive. "They don't have wives." But the family is the first political unit, and to change it is the most radical act of all.

Women have a special opportunity to live the revolution. By refusing to play their traditional role, they upset and displace the social structure around them. We may be subject to ridicule and suppression, just as men were when they refused to play their traditional role by going to war. But those refusals together are a hope for peace. Anthropologist Geoffrey Gorer discovered that the few peaceful human tribes had a common characteristic: sex roles were not polarized. Boys weren't taught that manhood depended on aggression (or short hair or military skills), and girls weren't taught womanhood depended on submission (or working at home instead of the fields).

For those who still fear that Women's Liberation involves some loss of manhood, let me quote from the Black Panther code. Certainly, if the fear with which they are being met is any standard, the Panthers are currently the most potent male symbol of all. In *Seize the Time*, Bobby Seale writes, "Where there's a Panther house, we try to live socialism. When there's cooking to be done, both brothers and sisters cook. Both wash the dishes. The sisters don't just serve and wait on the brothers. A lot of black nationalist organizations have the idea of regulating women to the role of serving their men, and they relate this to black manhood, but a real manhood is based on humanism, and it's not based on any form of oppression.

One final myth: that women are more moral than men. We are not more moral, we are only uncorrupted by power. But until the leaders of our country put into action the philosophy that Bobby Seale has set down—until the old generation of male chauvinists is out of office—women in positions of power can increase our chances of peace a great deal. I personally would rather have had Margaret Mead as President during the past six years of Vietnam than either Johnson or Nixon. At least, she wouldn't have had her masculinity to prove. Much of the trouble this country is in has to do with the Masculine Mystique: the idea that manhood somehow depends on the subjugation of other people. It's a bipartisan problem.

The challenge to all of us, and to you men and women who are graduating today, is to live a revolution, not to die for one. There has been too much killing, and the weapons are now far too terrible. This revolution has to change consciousness, to upset the injustice of our current heirarchy by refusing to honor it, and to live a life that enforces a new social justice.

Because the truth is none of us can be liberated if other groups are not. Women's Liberation is a bridge between black and white women, but also between the construction workers and the suburbanites, between Nixon's Silent Majority and the young people they hate and fear. Indeed, there's much more injustices and rage among working class women, than among the much-publicized white radical.

Women are sisters. They have many of the same problems, and they can communicate with each other. You only get radicalized as black activists always told us, "on your own thing." Then we make the connection to other injustices in society. The Women's Movement is an important revolutionary bridge, and we are building it.

I know it's traditional on such an occasion to talk about "entering the world." But this is an untraditional generation: You have made the campus part of the world. I thank you for it.

I don't need to tell you what awaits you in this country. You know that much better than I. I will only say that my heart goes with you, and that I hope we will be working together. Divisions of age, race, class and sex are old-fashioned and destructive.

One more thing, especially to the sisters, because I wish someone had said it to me; it would have saved me so much time.

You don't have to play one role, in this revolutionary age above all others. If you're willing to pay the price for it, you can do anything you want to do. And the price is worth it.

INNOVATIVE POLICE PRACTICES

Mr. ALLOTT. Mr. President, today's New York Times carries an interesting front-page story on some innovative police practices that are being instituted in various communities around the Nation.

I am pleased to note that the story bears the dateline of Lakewood, Colo., and that the Lakewood Public Safety Department is prominently featured in the story.

So that all Senators may inform themselves of such innovative and new police methods, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLAZERS AND SLACKS: NEW POLICE IMAGE

(By Martin Arnold)

LAKEWOOD, COLO.—They are called agents, not policemen, and all of them, including the men directing traffic, wear Navy blue blazers and gray flannel trousers.

They do not wear badges, but like prep school boys, wear patches over their left blazer pocket, which say, in light blue and gold, "Police Agent Lakewood Public Safety Department."

Recruits have to have college degrees; experienced officers joining the department must have at least two years of college.

For in an era in which "law and order" has become a rallying cry and a political issue, many cities, like this one, are re-examining the traditional police role in the community and are experimenting with their law enforcement procedures.

The Lakewood police experiment is probably the most radical in the country.

But educational standards are rising and innovations are being tried in such diverse law enforcement agencies as the police departments in Dallas and Victoria, Tex., in Dayton, Ohio, and in Syracuse, N.Y., Berkeley, Calif., and in the Multnomah County Sheriff's Office in Oregon.

While the tendency to experiment with police departments is increasing, it is still mostly confined to the smaller cities. For while standards for the police are rising in some cities, the apparent national concern with "crime in the streets" and the political pressure this concern generates have, ironically, contributed to the lowering of standards in other cities.

Thus, in New York City, for instance, where the public's demand for more uniformed policemen can seemingly never be satiated, the standards have, in some ways, been lowered, according to a recent federally financed report.

While it is true that 78 per cent of the men entering the city's police department last year had high school diplomas, against 65 per cent in 1960, the average I.Q. of the recruits has dropped.

And, the report said, there was also a significant decline last year in the social and economic backgrounds of the new policemen. Moreover, this decline had nothing to do with minority group recruitment because blacks and Puerto Ricans, the city's ghetto dwellers, were still not joining the department in significant numbers.

PHILADELPHIA IS CITED

In Philadelphia, the lowering of standards s even more dramatic. At a time when police experts and sociologists are calling for better trained, more mature police officers, a boy of 19 can become a full-fledged, sworn, uniformed, gun-carrying policeman with unlimited power to arrest.

Despite these examples from the larger urban areas, however, national standards for the police are rising and, unlike 10 or even five years ago, serious thought is being given to the problem of who should be a policeman and what the role of the police should be in a viable, democratic society.

"We are sitting around trying to figure out the role of the police," said Mark Furstenberg, associate director of the Police Foundation in Washington, funded by the Ford Foundation. "Has the police role changed in the last 10 years—or is it that we didn't really know what police work was all about? I tend to think we didn't know."

TWO BASIC CONCEPTS

Whatever the answer, nearly all police experimentation in the country is predicated on two basic concepts—that police agencies are, first, general service departments rather than mere crime control units, and that despite all the publicity given to court rulings, criminal justice starts on the streets with a cop on the beat.

It is that officer who has first contact with the public, and, therefore, the new theory goes, to attract better men to become the cop on the beat the police department of the future will have to give each man greater discretionary powers.

"Eighty per cent of police work does not involve crime at all," said Mr. Furstenberg. 'It's mainly family crisis intervention, with husband and wife fighting. Or it's fights on the corner between two people. Or it's a cat caught in a tree. Or it's just a lonely lady who calls the police station late at night. That's police work."

So here, in this politically conservative city of 100,000, adjacent to Denver, the most completely experimental police agency in the country went into operation in May.

A SLUMLESS CITY

Lakewood was created because of a police problem. Until the first of the year it was an unincorporated "bedroom" suburb depending for police protection on the able but understaffed and over-extended Jefferson County Sheriff's Office.

Although it is a white, slumless, middle-class city, with Mexican Americans and blacks comprising only one-five hundredth of a per cent of its population, its geographic position led to many problems.

Lying between Denver and the Rockies, its main thoroughfare, West Colfax Street, is mostly a garish, neon-lit potpourri of motels and bars and hamburger stands that attract troublemakers from surrounding areas. And, like other middle class urban areas, Lakewood has a drug problem.

Last year the residents started agitating for their own police force, and to get it Lakewood had to become an incorporated municipality.

One of the first persons hired by the new municipality was Ronald Lynch, 37 years old, a former lieutenant in the Dade County, Fla., sheriff's office, who had been working on the staff of the International Association of Chiefs of Police in Washington.

Mr. Lynch, the son of a retired New York City police lieutenant, grew up on the Lower West Side of Manhattan, and earned a B.A. degree and law degree from the University of Miami.

The man who interviewed him for the position was Walter C. Kane, 35, the Lakewood City Administrator.

"WE HAVE THE CHANCE"

He told the 10-man city council—nine businessmen and a professional woman—that "we have the chance to try something new.

"We don't have to overcome the built-in problems of a hundred-year-old organization. There's a lot of junky, honky-tonk, garish stuff. But still we can do something to save ourselves some of the problems of the urban sprawl," he said.

So Mr. Lynch was hired to head the Public Safety Department, and to set up a police force.

"I was always convinced the paramilitary system of most police departments had a lot of pitfalls," Mr. Lynch says. "And not just the way the policeman approaches the public, but internally within the department also.

"The public really wants a policeman to be used fully. In most areas they hire a guy, train him four months and then put him out on the street where he's not allowed to make any decisions for five to 10 years," Mr. Lynch said.

"The top people—and the sergeants and lieutenants—make all the decisions, but they are furthest from the street problems and the least qualified to make them," Mr. Lynch said. "There had to be a way to take good intelligent individuals and tell them they could go out in the streets and think and act on their own."

COLLEGE GRADUATES WANTED

The first thing Mr. Lynch did was insist that all recruits be college graduates, and all experienced men have at least two years of college—although the department has set a limit—42—on the number of agents it will accept laterally from other departments.

He then did away with the traditional police uniform. "This way the community gets the idea the man is a professional and in time of trouble will assist the agent because they respect them as professionals. And the blazer concept gives the man an image to uphold. He says to himself, "I dress like a professional. I am a professional. I must conduct myself like a pro."

There are, of course, other, equally subtle reasons for taking the policeman out of his military type of uniform: If the policeman dresses like a civilian, the theory goes, he is more likely to behave like one. At a time when a large number of Americans, particularly the young, are opposed to everything military, a civilian attitude by the police might go a long way toward reducing police-student and police-minority group confrontations.

Still, most police officials in the country cling to the historic uniform concept. This attitude springs from two beliefs. They believe that the uniform lends itself better to the paramilitary quality and the pride they think are necessary in a large urban police force, and they believe that, if all of the police are put in blazers and flannels, they have, in essence, been put in uniform.

There are no ranks such as sergeant or lieutenant in the department. Everyone is an agent, although the city was divided into two police areas, similar to precincts, and each area was placed under an Agent in Charge.

The 33 Lakewood agents are all generalists. Each patrols in a regularly marked police car, one man to a car, and each directs traffic in his own area when needed.

Unlike traditional police departments, where there are specialists in such things as robberies and homicides, each agent conducts his own robbery and homicide investigations.

Other communities, besides Lakewood, have done away with the paramilitary feature of their police.

UNIFORM IS KEPT

In Victoria, Tex., for example, a city of 40,000 persons (20 per cent are Mexican Americans and 8 per cent are black) there are no sergeants or lieutenants in the 60-member (six are women) department, although the force does wear the traditional police uniform.

The policemen and police-women (one black, four Mexican Americans) are called "public safety officers" and, after 18 months probation, are promoted to "public safety technicians."

They also are generalists, and although only five are college graduates, the manager of the Public Safety Division, which is what the police department is called, John J. Guseman, encourages his men to take all college courses they can.

Lakewood, like every community, has a gathering place for the not-too-quiet young. Here it is called Holbrook Park, where each evening, teen-agers gather on their motorcycles.

Instead of chasing them away, Agent Gary M. Lindstrom often sets up the public address system he carries in his patrol car and plays rock and roll music for them. "It pays off, too," Agent Lindstrom said.

"One night recently a kid came up to me and told me about a guy selling narcotics in the city. The kids get to trust the police here."

WAIT AND SEE ATTITUDE

If the Lakewood agents are happy with the experiment, the people in the community have a wait and see skepticism. The teenagers at Holbrook Park refer to the "groovy" cops—although all the agents wear rather short neatly trimmed hair—but Lea Leak, an owner of a Lakewood hobby and art supply store, says, "I'm a woman. When a guy swings out of that car in a uniform I feel more secure."

"I think a lot of the people tend to laugh at the blazers here. The whole idea behind the new police department is that the agents stand there and say we can't do anything about it. Too permissive," she said.

C. S. Sherman, who has been a resident of the Lakewood area for nine years, says, "It remains to be seen whether the police can command any respect without regular uniforms. It may work as far as the young people are concerned. The youth of today don't approve of uniforms and anything military."

While other police experiments around the country are not as dramatic as Lakewood's, they are generally just as important.

Starting in November, the Multnomah sheriff's office in Oregon, an enforcement agency, will only accept recruits who have had two years of college.

BLACK INTERNS SOUGHT

The educationally disadvantaged, such as Portland's ghetto blacks, will be able to enter the sheriff's office as interns and after taking 20 hours of college courses become recruits.

"We feel we can't make it too restrictive," said Sheriff J. Bard Purcell, who holds a master's degree in education. He added that "if we are restrictive a lot of disadvantaged youngsters who would make good interested police officers won't be able to get into the department.

Besides attempting to raise the educational standards of police officers, the most common police experiment seems to be aimed at giving the policeman on the beat more discretion in his work.

This is often done through what are called "crime control teams."

Syracuse has one team in operation and two more nearly ready to go.

Under the Syracuse plan, a sergeant and eight other officers, working in shifts, take responsibility for controlling crime in a single sector of the city. Other policemen working in the same area of the city handle the routine traffic and service calls. The crimes the team is concerned with are investigated from beginning to end. They are not turned over to a specialist.

"There's a lack of delay in this kind of operation," a spokesman for the Syracuse department said. "And the men on the team become known in the community. They're not here one day, gone the next. They develop personal contacts and sources which are helpful in solving the crimes, and they also take pleasure in having the responsibility of doing all the police work."

Dayton has gotten some Federal seed

money from the Law Enforcement Assistance Agency of the Justice Department to try team crime control. Police Chief Robert M. Igleburger says, "every officer on the team will be a generalist working with the community. We're not going to skim off the interesting police work and give it to specialists."

INCREASE IN BOMBINGS IN THE UNITED STATES

Mr. TOWER. Mr. President, there has been a drastic increase recently in the number of bombings within the confines of our borders, with major activity in the New York area and on the west coast. The Bureau of Mines lists only 14 States as having good to excellent laws regulating the sale of explosives. Seven States are rated as having fair laws and 23 have what are considered poor regulations or none at all.

Those States having no laws or restrictions are making it possible for terrorists to obtain dynamite and other better grade explosives, putting in jeopardy the lives of all Americans. Senators will recall that authorities discovered dynamite purchased in a New England State amidst the wreckage of the so-called bomb factory which exploded in New York City last March. The dynamite had been purchased under an assumed name.

I think it is important for States to realize the danger which unrestricted sales of explosives pose not only for their own citizens but for the rest of the Nation. A very valuable summary of this issue was published in the New York Times of August 16.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANY STATES ARE ADOPTING STIFF LAWS TO CURB TERROR BOMBINGS

WASHINGTON, August 15.—Tough new laws and regulations are being proposed and accepted in many states to combat a national increase in terror bombings.

The most common action is to impose licensing rules or requirements for permits on dealers and buyers to keep high explosives out of the hands of potential bombers. Thirty states have some form of permit or license control over the sale of explosives—nearly double the number in 1968.

But thefts of explosives from civilian and military sites are growing at a rate that offsets the curbs on sales.

Typical of comments by state officials advocating the new state controls over explosives is that of the Iowa Attorney General, Richard C. Turner.

A LOCAL RESPONSIBILITY

"If the states cannot respond effectively," he said, "law enforcement will be left more and more to Federal authorities. We will thus violate another of our basic precepts: that law enforcement is a local responsibility."

Interviews in 15 states and with Federal officials and bomb experts also found the following:

While public alarm centers on bombings attributed to the radical left and black extremists, a large number of blasts can be traced to right-wingers, white protests against Negro activities, labor disputes and individuals seeking revenge.

New York City and the West Coast are experiencing the most dramatic increase in explosive bombings. Southern Florida shows a decrease. The Middle West reports little change.

Homemade bombs can be fashioned from easily obtained chemicals. Dynamite and other explosives can be bought or stolen near most large cities, but they are much more difficult to make than firebombs.

The new regulations that the states are adopting vary from a requirement that a buyer pay $2 and sign a statement of legal intent to stricter recordkeeping by licensed dealers, and fingerprinting and investigation of potential buyers. They all seem to have some effect in helping the police trace explosives.

William L. Kinzel, a prosecutor in King County, which includes Seattle, said that a 1969 Washington law requiring a license to purchase explosives was of "invaluable assistance in the investigation of criminal cases involving explosives."

Among the other states that have recently adopted or strengthened requirements for permits are Alabama, New York, Illinois and New Jersey. Still other states, such as Michigan, Texas and Ohio, are considering similar legislation.

14 STATES CITED

The need for stricter state regulations was shown in a survey by the Bureau of Mines in April.

It listed only 14 states as having good to excellent regulatory laws. Seven states were rated fair, and 23 had what were considered to be poor regulations or none at all. Six states were not rated because of difficulties in getting satisfactory responses.

The bureau survey, conducted by Dr. Glenn H. Damon, staff director of safety research, was taken in an effort to provide Federal agencies with the first known summary of such regulations. A similar, uncompleted survey by the explosives industry says that 30 states have laws or regulations and 20 do not.

Attempts to limit sales of explosives to legitimate users have been offset by the growing number of thefts of explosives from civilian and military supplies.

California officials report that more than five tons of explosives were stolen from a northern California dam site in recent years, and the explosives were later found selling for $200 a box in the San Francisco Bay area.

Charles A. O'Brien, California's Deputy Attorney General, called the Government a major supplier of explosives to militants through thefts from military installations. He estimated that more than 70 tons of Army munitions had been stolen from California posts and from supplies heading for Vietnam.

A staff study of the Senate Permanent Investigations Subcommittee showed that dynamite thefts from construction and quarry sites had risen from 12,381 pounds in all of 1969 to 18,989 pounds in the first five months of 1970.

Some states have increased the penalties for the illegal use of explosives in an attempt to curb the bombings.

The Maryland Legislature raised the maximum jail term for illegal manufacture, transportation or possession of explosives from six months to five years within 30 days after two bombings—resulting in two deaths—that appeared to be connected with the trial of H. Rap Brown, the black militant.

The new antibomb law, which passed with little debate, also increased the maximum term for bombing from 20 years to life.

The Iowa Attorney General has asked Iowa legislators for broader authority to investigate extremists and for higher pay and modern equipment for those investigating bombings.

Other states considering raising the penalties for bombings include Massachusetts, Washington and California. The Los Angeles County District Attorney, Evelle Younger, has called for the death penalty for those who threaten or commit bombings.

Law enforcement officers and elected officials generally placed the blame for recent bombings on the radical left and black extremists.

Clarence M. Kelly, the Kansas City, Mo., Chief of Police, said: "We think we do have a pattern here. We know that shortly before the bombings we had visits from some of the national figures in the Weatherman group of the S.D.S."

Kansas City has had about twice the yearly average of seven bombings in the first six months of this year with a series of seven explosions in city government and business buildings between April 13 and April 17.

A Treasury Department study of bombings from Jan. 1, 1969, to April 15, 1970, found that the local police attribute more than half of the bombings they can trace to campus disturbances, 19 percent to black extremists and 14 percent to white extremists.

In North Carolina, which suffered the third highest property damages in the nation from bombings, according to the Treasury study, law officers have been unable to pin bombings on any extremist groups.

"Grudges" are cited by the director of the State Bureau of Investigation, Charles Dunn, as the reason for the high number of bombings in his state.

Mr. Dunn and other law enforcement officers were unable to pinpoint the reason for so many bombings but noted that thefts of explosives from the large number of military bases in North Carolina were not rare.

Florida, however, has experienced a decline in the number of bombings, especially in Dade County, which includes Miami. Figures for the county show that there were 44 explosive bombings in 1968, 15 last year, and only four so far in 1970.

According to Thomas G. Brodie, head of the county bomb squad, the decrease can be attributed in part to arrests in the last two years, "putting the bombers out of business."

NEW YORK FIGURES

The statistics for New York City show a rise in explosive bombings and a decrease in firebombings in the last two years.

There were 93 explosions in New York last year and 52 in the first five months of this year. Incendiary weapons were set off 34 times in 1969 but only six times so far this year.

The trend is being watched by city and Federal officials because the explosive bombs are felt to be a sign of sophistication. They are harder to make and they are considered to be more destructive and more dangerous in that they lack the warning time given by firebombs.

In the eight Far West states, there was an average of seven bomb "incidents" a day during the first three months of 1970, according to Maj. Carl R. Hitchcock of the Sixth Army Bomb Detachment.

He said that these incidents were cases in which his men were actually sent out and picked up or defused something.

Acknowledging some decline in the number of incidents recently, Major Hitchcock still listed 1,006 explosive-bomb incidents in the West from Jan. 1 through July 25 of this year.

The reason given for the trend toward explosive bombings is that potential bombers are realizing how easily they can buy, steal, or make bombs.

Major Hitchcock said that Army analysis of devices defused this year proved that "we are now dealing with people who have the ability to make explosives themselves."

Homemade bombs are almost as easy to make as explosives are to steal or buy and they are harder to trace. But they usually lack the purity and stability of professionally made explosives so they are more likely to backfire on their makers.

Explosive bombs are easily made from chemicals readily and cheaply sold at drugstores if the bomb maker has information

that is available in a number of military and leftist and right-wing publications.

For more exotic explosives, extremists have only to buy or steal from local chemical outlets. In one recent northern California case, militants associated with the Students for a Democratic Society were arrested in the process of making 25 pounds of nitroglycerin.

Almost all the law officers interviewed agreed that if city fire or police ordinances hampered buyers of explosives, they could go to neighboring rural counties or states and buy dynamite across the counter. In Michigan, two young United Press International reporters drove 13 miles outside of Lansing and bought 12 stocks of dynamite for $3.

The reporters wrote that at a drugstore next to the hardware store selling dynamite they were required to prove they were over 21 and sign a pharmacy drug book before they could buy a two-ounce bottle of cough syrup containing codeine.

Since at least 23 states have few restrictions or none on the sale of dynamite, according to the Bureau of Mines study, it would be equally easy to obtain the explosive in these states.

Although New York has strict regulations, the dynamite recovered from a Greenwich Village townhouse after an alleged "bomb factory" there exploded, was found to have been purchased in Keane, N.H., under an assumed name.

APPOINTMENT OF HARRY L. PARRISH AS EXECUTIVE DIRECTOR OF THE REGIONAL TRANSPORTATION DISTRICT

Mr. ALLOTT. Mr. President, the regional transportation district was created by the State Legislature of the State of Colorado and encompasses not only the city and county of Denver, but also Adams, Arapahoe, Jefferson, Boulder, Douglas, and Weld Counties.

The regional transportation district is extremely fortunate, in my judgment, to have obtained the services of Harry L. Parrish as its executive director.

Mr. Parrish was the transportation engineer for Simpson and Curtin, a Philadelphia transportation consulting firm, for 18 years and served as director of improved projects for the large southeastern Pennsylvania Transportation Authority. Mr. Parrish has worked on most of the major urban transportation developments in the United States over the past two decades and is one of the most highly respected experts in the field.

In two interviews published in both Denver Sunday newspapers on August 16, 1970, Mr. Parrish articulately expresses his vision of transportation in the Denver area in the future. I ask unanimous consent that both articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PUBLIC ATTITUDE, SHORT TIME CHALLENGE TRANSIT PLANNERS

(By Gary Gerhardt)

A bad attitude toward public transportation and lack of time are two of the most challenging factors facing the Regional Transportation District (RTD), Harry Parrish, executive director, believes.

The RDT was established by a 1969 law and is charged with the responsibility of planning and developing a public transportation system for the seven-county region surrounding and including Denver.

Parrish said the lack of time presents a challenge because the act creating the district calls for an election before July 1, 1974. The election will determine whether the district can issue bonds to finance a mass transportation system; a negative vote will dissolve the district.

"It is a real 'self-destruct' arrangement," Parrish said.

"If we can't come up with a sound, feasible plan that the voters in the district like by 1974, it's all over."

PRESENT ATTITUDE

Parrish believes one of the greatest obstacles facing the district is the present attitude of residents in the district toward public transportation.

"The private automobile is almost solely relied upon by the people and we've got to design a public transportation system which can and will compete," he said.

Parrish is a firm believer in developing a public transportation system (he doesn't like to call it a mass transit system). He has 18 years experience in the field.

He came to Denver from Philadelphia where he was director of Improvement Projects responsible for the planning and implementation of the South Eastern Pennsylvania Transit Authority's $613 million, 6-year transportation program.

Parrish was staff engineer for Simpson and Curtin Engineers, a Philadelphia transportation engineering consultant firm, and while with the company, he participated in transit consulting work in more than 30 cities.

"MAXIMUM LOAD"

"One of the big problems with exclusive use of private vehicles," he said, "is that by the time a freeway is completed, it is obsolete.

"Freeways are designed to carry a maximum load the day they open and there is no way for them to expand as the need arises."

But more important, Parrish feels public transportation is needed for ecological reasons.

"Automobiles definitely contribute to the air pollution problem and we must find other methods of travel in cities than by the gasoline engine," he said.

Parrish said he accepted the job in Denver (knowing full well it might abruptly end in four years) because "legislation here told me there was a need and, more important, a desire to do something about the problem of public transportation.

"The really great thing about Denver is this city doesn't have a sizable investment already in a system.

"This is an opportunity to plan an entirely new system.

"In Philadelphia, for example, we had to contend with existing subways and had to fit a new plan in to utilize existing facilities.

"It was a situation when we worked on BART (Bay Area Rapid Transit in San Francisco).

"HAD TO COORDINATE"

"At BART, there were two existing transit systems and we had to coordinate them and then sort of superimpose BART over them both," he said.

Parrish said studies on the Denver situation show commuters should be using the Denver Tramway system three to four times as much as they are given the size of the city's population.

He said the people must be convinced the proposed system his district is working on is for their own good.

"We don't really have an air pollution problem in Denver, yet," he said.

"But, you'd think the people here would realize it and jealously guard against destroying their atmosphere. They must understand a public transportation system could help them do that."

The district now is in a stage of major planning and the plan being developed now should be ready for implementation by the first of next year, Parrish said.

"We have to look at the big picture," he said.

"IT DOESN'T STOP

"When you think of transportation, you have to realize it doesn't stop at lines, political, county, or any other kind.

"We're not planning a public transportation system for 1970, but looking to 1980 and beyond. This doesn't mean, however, nothing is going to be done in the interim."

Parrish said one real problem is that there is a great deal of new technology now becoming available on new and better motors and engines that cut down on pollution.

"However, I think the bus will always be a means of public transportation," he said.

"Diesel fuel has far less pollutants than gasoline," he said.

Parrish said everything is in the planning stage now, but that the probable outcome might be a "fixed-facility system" with buses feeding it.

He concluded that he believes Denver and the district must have a balanced transit system and that Denver, now, is definitely out of balance.

Parrish said the district now has less than four years to design the system, find financing, and most important, to try to sell it to a generation of voters who probably will be too old to use it when completed.

Yet, he said he feels the job definitely can be done.

RTD GOAL: PREVENT TRANPORTATION CHAOS IN DENVER

(By Charles Roos)

Harry Parrish's office at 1050 Yuma St. is about 100 feet from the Valley Highway, close enough to hear the steady whine of traffic if not to smell its fumes.

Parrish's job is to try to see to it that Denver doesn't need quite so many more of these expensive, noisy freeways in the future.

Parrish, 47, came here in June from Philadelphia to be the first executive director of the Regional Transportation District (RTD), a Denver-centered public agency also responsible for Adams, Arapahoe, Boulder, Douglas, Jefferson and Weld Counties.

RTD's board of directors, representing the seven counties, is aiming toward development of a board system of public transportation to complement the area's existing auto network.

18 YEARS EXPERIENCE

Harry Parrish himself is oriented toward public transportation as a result of 18 year's experience as engineer for Simpson and Curtin, Philadelphia consulting firm, and as director of improvement projects for the large Southeastern Pennsylvania Transit Authority (SEPTA).

With Simpson and Curtin, Parrish worked in more than 30 cities in the United States and Canada. He was involved in private and public aspects of mass transportation, looking at the auto-vs-public transit question from both sides of the fence.

CHOICE IN 4 YEARS

Within four years, people of the RTD area will have a choice of which direction to take in future transportation.

"Should we continue," Parrish asked in an interview, "to devote massive amounts of money to the automobile and to the construction of facilities to serve the automobile? And if we do, what will be the total investment, the total cost?"

That total cost, he said, in addition to the obvious things must include such things

as environmental destruction and the loss of taxable property to freeways and interchanges.

"Los Angeles is a good example," he said. "They chose the route of a completely auto-oriented metropolitan area, and now they know it just is not the answer."

COMPARE COST

The alternative, he said, is to consider an investment in public transportation—"a well-designed facility that does the job"—and to compare the total community cost of the two approaches.

He's sure what the answer will be.

"It's just that I've recognized over the years, and I've worked both sides of this thing—I was in highway work as well as public transportation—and I just came to realize that this continued growth of the automobile and its facilities was not the right way to go."

It wouldn't be realistic, of course, to think of eradicating existing freeways or to expect that no new freeways will be built. They will.

REMINDER

Parrish's own job requires that he use a car.

The bustling traffic on the highway just outside his office is a constant reminder of the flexibility and popularity of the personal motor car.

But at the same time the RTD director hopes the district can have some influence on the future of the automobile in the seven-county district to bring about "a better balance in the transportation picture."

If public transit can divert only a portion of the future demand for future highways facilities, the investment will be worth it "many, many times over," he said.

"Highway facilities are designed for peak hours," he said. "That's when most traveling is done.

OUT OF ROOM

"But for every additional 2,000 to 2,500 trips that occur in a peak hour, you need to add a lane to that type of facility out there," Parrish said, motioning toward the Valley Highway.

And, as he noted, there isn't room left in the Valley right-of-way now to add much of anything.

Parrish, who's been in Denver only a matter of weeks, frankly admits one thing has impressed him here—"the real challenge we have in convincing the people of this area what public transportation can do for them."

Translation: he has discovered that traffic in the Denver area is moving surprisingly well right now in comparison with many other cities.

Congestion is a relative thing, he said, and there's certainly some congestion in Denver. Any time a motorist sees a traffic light turn green at the next corner but can't reach the corner before the light changes to red again, that's congestion, according to Parrish.

"But as I see it here," he said, "it doesn't compare with what I've seen in other places. I think that from the standpoint of mobility, Denver is very well organized. Trafficwise, it operates beautifully now.

RELATIVELY EASY

"Oh, sure, you've got some spots like this Valley Highway, certain parts of which are terribly underdesigned for the volume (of cars) using them. The interchanges for example, in many cases are very poor. But for the most part, moving about the city is relatively easy.

"In other words," said Parrish, breaking into a chuckle, "I just wasn't aware that from the standpoint of traffic, Denver was so attractive. Put it that way."

This naturally makes it a little harder to convince people they will need to make a major investment in public transportation. But Parrish is convinced that as time goes on, because of the continued increase in the use of the automobile and the increasing number of auto registrations, the situation "will deteriorate, will get much worse."

Between now and the middle of 1974, RTD's staff and board will be working on a comprehensive plan for public transit in the future. A major contract for consulting work is expected to be awarded about the end of 1970.

10 YEARS TO BUILD

If the voters approve a bond issue in 1974, it will still take 7 to 10 years to design, engineer and build a new system.

And if the voters reject RTD's bond issue in 1974, the district, by law, will simply go out of existence.

That provision in the 1969 RTD law is what Parrish calls the "self-destruct" clause.

On the one hand it certainly has a tendency to spur RTD into action. On the other hand it has a tendency to discourage recruitment of the type of technical staff Parrish is searching for.

TRANSIT STUDY

In other activities, RTD has already applied for a federal grant for a demonstration project involving electric-powered, air-cushioned "personal transportation" vehicles. They may or may not fit into the future area-wide system.

RTD is cooperating in a transit study of the Boulder Valley area and working on other common plans with the Denver Regional Council of Governments (COG).

RTD is highly interested in the city of Denver's negotiations to buy and improve the bus system of the Denver Tramway Corp.

Unfortunately for Denver, RTD can't help finance or operate any such system until the district gets approval for its own long-range plan from the voters, probably not before 1974.

Assuming the city buys Tramway and improves service, Parrish says, that system will certainly be a "major element" in development of RTD's plans for future transport in the seven-county district.

The present Tramway bus fleet won't necessarily be the backbone of RTD's future system, though.

PUBLIC ACCEPTANCE

Parrish believes the RTD board will first look for some form of fixed-line transportation—by rail, air-cushion or some other fixed guideway—to supply the fast, reliable basic service necessary to win public acceptance.

RTD also will need buses, or some other mode resembling buses, to supplement and connect the fixed-line service. But by the time RTD gets into full operation, Parrish thinks a better, more attractive type of bus may be available.

RTD officials, nevertheless, hope Denver's Tramway purchase can be completed without interruption or major cutbacks of service.

Experience in other cities has shown, Parrish said, that "every rider you lose today is just that much harder to win back the longer you wait."

NATIONAL OPPOSITION TO THE DISTRICT OF COLUMBIA CRIME BILL

Mr. ERVIN. Mr. President, the District of Columbia crime bill is now law. Despite the urgings of many Senators that the bill was bad legislation, that it played havoc with the Constitution, and that it should be defeated, a majority of this body disagreed. The President has signed the measure. However much I regret the result, Congress and the President have discharged their responsibilities to assess the legislation in terms of public policy and constitutionality. That, for the time being, ends the legislative role on the issues raised by the bill. The responsibility now rests with the courts and the law-enforcement officials of the District to apply the legislation, and to determine whether it is constitutional. I am confident that our courts will not treat preventive detention, no-knock, and other constitutional infirmities of the bill in the same cavalier manner as did the executive and legislative branches of our Government.

I am also hopeful that the debate on the bill, and the general public outrage against the violence done to constitutional principles, will result in measured and careful application by the police and the prosecutors during the time it remains on the law books. In this respect, I was greatly heartened by the remarks of Chief of Police Jerry Wilson, who recently said that he intended to use no-knock very sparingly, perhaps no more than a dozen times a year.

Chief Wilson's remarks highlight one of the points we tried to make in the debate. That is that no-knock is of limited usefulness to the police, and certainly not warranted when compared to its great opportunities for abuse, and the danger it poses both to police and citizen. We in the District may be thankful that the no-knock law will be administered by a responsible man like Chief Wilson. But we have no assurance that all future police chiefs in Washington or in the rest of the country will be as responsible as he is. Public safety and constitutional principle should not depend on the vagaries of the men on whom we confer power. Ours is, after all, a government of laws, not men.

In the few days since the Senate vote on the District of Columbia crime bill, I have received hundreds of letters. Many, of course, come from citizens living in Washington. But I have also heard from Americans all across our land. With the exception of just a few, the citizens I have heard from are unanimous in opposition to the bill. This mail belies the claim that harsh and repressive anti-crime legislation is a politically popular issue. Quite the contrary. My mail demonstrates that the Constitution and the Bill of Rights are more popular than the District of Columbia crime bill. I am convinced from the letters I have received that the citizens of our country want to do something about crime. But they want to do something truly effective. They are not interested in panaceas which promise cures for problems but accomplish nothing.

While to some people, defense of civil liberties and the Bill of Rights may be nothing more than empty rhetoric, those who have written me care about constitutional principles. They recognize that there is nothing mythical about requiring conviction of a criminal act by a jury of one's peers before imprisonment can be imposed. They recognize that more than codification of the common law is involved when police get expansive authority to break into homes like burglars. If the Attorney General wants to see the substance behind the so-called myth of repressive Federal legislation, I would suggest as a good

starting point the text of the District of Columbia crime bill.

I regret very much that Members of Congress did not have an opportunity to listen to the voice of the people before the bill came to a vote. They would have seen that liberals and conservatives, Republicans, and Democrats, Southerners, Westerners, Easterners, all people, including the so-called "silent majority," oppose this sacrifice of the Constitution. They would have seen that the bill is opposed by people living in the middle of Washington, who are the most direct victims of crime. They would have seen that the bill is opposed by people living in the Maryland and Virginia suburbs, who work in the city and who have friends who live here. They would have seen that legislation which says a man's home is no longer his castle and legislation which violates the principle that every man is innocent until proven guilty of an actual crime he has committed—legislation such as this is not only unwise and unconstitutional, but also politically foolish, not just in the Washington metropolitan area, but all over the country.

I am grateful for the many letters expressing support for those of us who opposed the bill. I applaud the many editorials opposing the bill. It is clear to me from this public response that Americans will fight any attempt to apply no-knock, preventive detention, and other such proposals to the entire country. The citizens of the District may take comfort, small as it may be, in the knowledge, that by their sacrifice they have alerted the country against such repressive anti-crime legislation. Should it be so foolishly proposed that this legislation be applied nationally, I have no doubt that it would be soundly and quickly defeated. Opponents of no-knock and preventive detention may be a minority in the Senate, but they are a majority everywhere else.

I have a high respect for the Congress of the United States, but this is one case where I say Thank God that the Congress of the United States is not the supreme ruler of the American people and that we have courts in which a man can invoke the constitutional rights which Congress and the executive branch may undertake to rob him of.

Mr. President, in order that the Senate have some idea of the breadth of national opposition to the District of Columbia crime bill, I ask unanimous consent that a series of editorials and a selection of letters be printed in the RECORD.

There being no objection, the editorials and letters were ordered to be printed in the RECORD, as follows:

[From the Mining Journal, Aug. 4, 1970]

THREAT TO FREEDOMS

"Excessive bail shall not be required," states the Eighth Amendment to the Bill of Rights.

"The right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized," states the Fourth Amendment.

Yet the U.S. Senate last week approved (54–33) a bill that denies bail entirely under certain circumstances and allows police to enter homes without knocking. Also provided in the bill is broadening of the wire-tapping practices of the government.

The measure is the District of Columbia crime bill, which is aimed at trying to reduce the excessively high crime rate in the nation's capital. The end is salutary, but the means are questionable, to say the least.

The bill provides the jailing of an accused person for up to 60 days before his trial if the judge thinks the defendant's record indicates he might be a crime risk in the interim. In other words, it denies bail completely in some cases. It also provides for "no-knock" entry, permitting law officers to enter a home without identifying themselves if they think the suspect might otherwise destroy evidence or endanger the officers' lives.

* * * * *

The vote on the bill cut across party lines and the measure found supporters and opponents together at both ends of the political spectrum. Numbered among the supporters, for instance, were several liberal Northern senators, while the principal opponent of the bill was a conservative Southerner.

The Southerner was Sen. Sam J. Ervin Jr., a North Carolina Democrat, who is regarded as the strictest constructionist in the Senate. His description of the D.C. crime bill is something to be savored:

"This . . . is as full of unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas . . . a garbage pail of some of the most repressive, near-sighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented . . . an affront to constitutional principles and to the intelligence of the people of the United States."

One does not have to search far to learn why the measure passed. Some of those who voted for the bill could find sanctuary in its provisions for reforming the crowded court system in Washington and for establishing a public defender program. Others undoubtedly were sincerely concerned with the appalling tide of crime in the District. And some must have feared that a negative vote would not have been politically expedient in this election year.

These are all understandable motives, and no one doubts that the heavy incidence of crime in Washington must be checked, but must this be done at the expense of individual freedoms that are guaranteed to Americans in their Constitution? If the D.C. crime bill were to become a model for the nation as a whole, the United States would have forsaken some of its most precious liberties. Fortunately, the bill will be tested in court, where Sen. Ervin's accusation of unconstitutionality should be proven.

[From the Independent, Anderson, S.C., July 28, 1970]

JUDGE ERVIN DRAWS A FINE BEAD ON HIGHLY DANGEROUS LEGISLATION

North Carolina Democratic Sen. Sam Ervin has described the Nixon administration's District of Columbia crime bill as "a garbage pail of some of the most repressive, near-sighted, intolerant, unfair, and vindictive legislation that the Senate has ever been presented."

Well, a garbage pail by another name would smell as foul, Attorney General John N. Mitchell to the contrary notwithstanding. Referring to one of the more fetid features of the bill—the so-called "no-knock" authority for federal agents—Mr. Mitchell suggested to the House Ways and Means Committee the other day that the name ought to be changed.

Instead of "no-knock," he said, call it "quick entry." That, he explained, would make it less misleading and prejudicial.

Positively Orwellian. War is peace. Freedom is slavery. Ignorance is strength.

But "no-knock" is still "no-knock," and it is still an invitation to death as well as an unconstitutional invasion of the rights set forth by the charter of our liberies.

It means that federal agents could break into your house without announcing themselves if they have "probable cause to believe" that evidence is likely to be destroyed or that their lives are likely to be endangered.

Attorney General Mitchell explains that no such search could be made without a search warrant obtained from a judge and that the judge would have to be "persuaded" of the existence of that probable cause. Experience with presuadable judges is hardly reassuring.

It is not out of the realm of reasonable surmise that federal agents would not have too much trouble in finding a judge who would, without too much to-do over the matter, give them the authority they requested.

Putting aside the question of the individual's rights in this regard, what about the agents themselves? Would he really be doing them a favor? Or would we not, in actuality, be exposing them to unnecessary risks of counter-attack from Criminals who would have nothing to lose or from ordinary citizens who, for understandable reasons fearful of the unannounced intruders, would defend themselves by shooting first and asking questions later?

In Nebraska, as a matter of fact, a state law, which is probably unconstitutional but has still to be tested in the courts, gives a citizen the right to kill in defense of his person or his property.

"No-knock" is a Gestapo tactic. Like other features in the proposed bill—"preventive detention," for example, which is more Orwellian nomenclature to describe the process by which accused citizens could be locked up for up to 60 days without trial, on a judge's guess that they would be dangerous loose—"no-knock" by any name has no place in a free society.

It goes without saying that crime must be countered, but the way to do so is not by a law which "Judge" Ervin correctly describes as "unconstitutional, unfair, unjust and unworkable."

[From the Durham (N.C.) Morning Herald, July 22, 1970]

DISTRICT OF COLUMBIA CRIME BILL VIOLATES RIGHTS

Granted that crime is bad in the District of Columbia, but it does not follow that the way to combat it is to enact laws which deprive people of their constitutional rights.

Certain features of the District of Columbia crime bill, the conference version of which has passed the House of Representatives and is now being debated in the Senate, do just that, deny to the residents of the nation's capital protection guaranteed by the Constitution.

The portion of the proposed law which permits police to enter a building, including a home, without knocking or announcing themselves if they have "probable cause to believe" evidence may be destroyed or their lives endangered patently contradicts the Fourth Amendment, which explicitly states:

"The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

Expanding the authority of police to tap wires to gain information also runs counter to this amendment. And the mandatory minimum sentence of five years for a person con-

victed twice of armed crimes puts that person in double jeopardy, a violation of the Fifth Amendment which prohibits, among other things, putting a person "in jeopardy of life or limb" twice for the same offense. The minimum sentence in effect punishes a person a second time for an offense of which he had previously been convicted.

Senator Ervin of this state is commendably fighting these unconstitutional provisions of the District of Columbia crime bill. That the bill has a strong chance of passing the Senate is disturbing, for these features constitute a long step toward creating a police state.

[From the Washington Post, July 16, 1970]

THE SENATE AND THE CRIME BILL

The year of maneuvering over President Nixon's anti-crime program for the District of Columbia will come to a climax within the next day or two in the Senate. It is hardly the kind of climax that anyone could have wanted, since it seems quite possible that the Senate will refuse to accept a conference report and will send the whole program, or large parts of it, back to the House for further negotiations.

The dispute between the Senate and the House, as we see it, grows out of fundamentally different approaches by the two bodies toward crime control. The House, especially its District Committee, thinks the tools needed to stop the surge in crime require undercutting individual liberties and include harsh and vindictive treatment of those who are charged with committing crime. The Senate, or at least a substantial group of its members, thinks the crime problem can be brought under control without undermining either the concepts of modern penology or individual liberties.

Unfortunately, the administration has thrown most of its weight on the side of the House in this struggle. As a result, it has helped to put the Senate into the difficult position of being asked to pass a bill containing provisions it has never fully examined or even discussed or of blocking the immediate enactment of the bill's more important and non-controversial provisions. The Senate, for instance, has never acted on preventive detention (a favorite battleground of Senator Ervin and Attorney General Mitchell but the District crime bill authorizes a preventive detention program.

Part of the problem of dealing with this issue, as well as with many others in this bill, is the massiveness of the legislation. The bill is as long as a good-sized novel. It is now in its fourth version, since the conference report differs markedly from the one that passed the House last March and from a group of individual bills that passed the Senate last year. This new version, while vastly improved over the preceding ones thanks to the effort of Senator Tydings and other senators, still covers the whole range of criminal problems—it reorganizes the local courts, changes many provisions of the criminal law, establishes a public defender system, strengthens the bail agency, authorizes preventive detention and wiretapping, and so on. There may be one or two people in Washington who now understand all that is in this bill but not many, particularly since the text of it became available only yesterday.

From our quick reading of that text, it seems to have a good many fewer "fleas," to use Senator Ervin's term for its faults, than the administration's original proposal or the House District Committee's version. But some faults are still there, and some of them are serious. We still don't understand the urgent need of local police for wiretapping authority when the FBI has it. We don't see why all 16- and 17-year-old youths charged with certain crimes must be treated as adults while others the same age—but charged with lesser crimes—may be treated as juveniles. We don't fully understand why rules about "no-knock" searches need to be written into law if they merely codify, as proponents of that section claim, what the law already is. We aren't sure that the preventive detention section contains all the protections against abuse that such legislation needs. We think the idea of mandatory minimum jail terms for specified offenses is basically wrong.

Given all these factors, we sympathize with the efforts of a substantial number of senators to defeat the conference report. But it will not be enough to defeat this report and to leave the District's war on crime suspended in mid-air for another year. The good parts of this legislation—particularly the reorganization of the local courts and the strengthening of the bail agency—are desperately needed. They must be passed by Congress this year. If the Senate rejects the bill as it now stands, a heavy responsibility will rest on each member of Congress and on the administration to work out an accommodation that is acceptable to both houses. The people of the Nation's Capital cannot be asked to endure another year of frustration and rising crime rates while court reform and other noncontroversial measures are held hostage for an assortment of crime control measures which are quite rightly the subject of intense dispute.

[From the Boston (Mass.) Morning Globe, July 17, 1970]

THE PRESIDENT'S CRIME BILL

"Here," said a U.S. Senate witness testifying against the Administration's anti-crime bill and quoting the Red Queen in Alice in Wonderland, "is the King's messenger. He is in prison now being punished and the trial does not even begin until next Wednesday. And of course the crime comes last of all."

The anti-crime bill, proposed for the District of Columbia as a model for the nation and passed by the House Wednesday 332 to 64 after only one hour of desultory debate, may not be all that bad, but it is not far from it. The bill, the product of a joint conference committee, is now up for debate in the Senate where it is expected to get more than a cursory look, as indeed it should.

Attorney General John N. Mitchell argues that the bill's passage is essential to the control of crime in Washington. There is no doubt that crime there has increased in the last 18 months, and to an alarming degree in some categories, such as muggings. There is serious question, however, as to whether the bill is the best way to fight it, and even more serious question as to the havoc it would raise with the legal rights of persons accused of crime. Sen. Sam J. Ervin Jr. (D-N.C.), former Superior Court Judge in his home state and a constitutional authority many times honored by bar associations, sees it as a possible opening of the door to a police state in America—despite the honesty of Administration intentions.

The bill is a catch-all of good and bad provisions. Of its bad ones, it is hard to say which is the worst.

Under the so-called "no-knock" section, law enforcement officers, after obtaining a warrant on the strength of their belief that evidence they want may be on a certain premises, would be permitted to enter those premises at any hour of the day or night without even announcing their presence at the door. Americans for years have been horrified by accounts of the ominous midnight knock on the door in totalitarian countries. Now, in the capital of our own country, the police would not even knock. Down the drain would go the old English common law maxim that neither the king himself nor any of his troops may cross the threshold of the humblest cottage without permission of the owner.

A man's historic right to privacy in his own home would go out the door as the police, where need be, broke it down lest an announcement of their presence would give the home occupants time to destroy, say, a small pinch of marijuana. The number of police officers who would be resisted and perhaps even shot as housebreakers has not even been considered. The Justice Department says the "no-knock" provision would discourage night searches. Its reasoning is impossible to fathom.

The preventive detention section of the bill is even less concerned with constitutional rights. It, too, perverts one of our legal traditions. It argues, in effect, that it doesn't matter how many innocent persons are unjustly punished so long as the shotgun approach assures that none of the guilty goes free.

On its face and at quick reading (which is all it got in the House), it is reasonable enough. It would apply to persons charged with "a dangerous crime," persons charged with "a violent crime" while on bail or probation, persons charged with "a violent crime" who had been convicted of "a violent crime" within the past 10 years, persons who threaten or injure prospective witnesses or jurors, and narcotic addicts charged with "a violent crime." All of this has an appealing sound.

But the definitions are subject to pretty much whatever interpretation one might find it convenient to give them. and the "substantial probability" of guilt makes a total shambles of the constitutional guarantee that all accused are to be considered innocent until they are proven guilty beyond a reasonable doubt. Out the window would go all of the carefully prescribed rules of evidence. A person could be jailed on the basis of hearsay, gossip and rumor. And in some cases this would be for a longer period (even though the maximum would be for 60 days at one whack) than would be possible were he found guilty as charged. Under the "substantial probability" doctrine a man could be punished for a crime he had not yet committed and might never commit. And Sen. Ervin pointedly asks how fair would be the subsequent trial in the case of any accused of whose guilt a court already had found "substantial probability."

The Justice Department's argument that most of the crimes the bill covers were punishable by death in our long ago does not suggest any proper appreciation of the reasons for civilizing the statutes. And the provision permitting a life sentence on third felony convictions overlooks such comparatively recent legal travesties as the life sentence given a Michigan woman convicted of possessing a pint of whiskey in violation of the prohibition law.

An unfortunate aspect of the above-listed outrages against guaranteed rights is that there is no need for them. One of the few virtues in an otherwise hysterical bill is the one that has been underplayed by its advocates. With lawful and effective police work, it goes to the root of crime. By providing for the appointment of an adequate, or at least a nearly adequate, number of judges, it would deter crime in the recommended way of deterring it—by the certainty of legal arrest and an early and fair trial in a court which neither asks nor gives illegal quarter.

[From the Courier Journal & Louisville Times, July 26, 1970]

CRIME BILL'S ENACTMENT IS OMINOUS

It is up to the courts now to preserve certain constitutional rights that are threatened by congressional enactment of the District of Columbia "crime bill." By a 54-to-33 vote the Senate has given final legislative approval to the measure, which President Nixon is expected to sign into law.

There are sections of the bill that authorize "no-knock" searches; give legal sanction to jailing suspects without bail; and broaden the use of wiretapping in law enforcement.

A number of Senators had grave reservations about these provisions, including Senators Cooper and Cook of Kentucky and Bayh of Indiana, all of whom voted against the bill. The opposition was led by Senator Ervin of North Carolina, a Southern conservative. The measure's most conspicuous supporter in the Senate was Senator Tydings of Maryland, a liberal. Thus, the ideological lines were blurred.

The controlling factor seemed to be that this is a congressional election year, and those Senators running for re-election in November were afraid to vote against what was billed as a "law and order" proposal.

EYE ON THE BALLOT BOX

The bill applies only to the District of Columbia; indeed, a commendable part of it provides the District with a needed reorganization and improvement of its judicial system. However, as Senator Ervin warned: "The Attorney General holds this bill up as a model for all the states of the nation. All Senators should know he hopes to have it imposed on all their constituents as well as the residents of the District."

Senator Cooper took the Senate floor and strongly condemned the bill's repressive features: "We saw preventive detention in Germany under the Nazi rule, and it prevails in Communist countries throughout the world . . . and in non-Communist totalitarian countries . . . (the bill) would deny the great principles for which we have stood and which are embodied in the Bill of Rights . . . (it) raises the specter . . . of the early history in England and of our colonial days of the detention of one person by the state without the process of law. . . ."

The "procedural safeguards" that supporters of the bill point to are not all that safe. If the judiciary and law enforcement agencies jointly determine to employ "no-knock" searches and preventive detention on a sweeping scale there is nothing in the bill to stop them.

Those who supported this bill are willing to erode precious constitutional rights in the name of fighting crime, and yet no convincing evidence has been produced that these techniques will in fact prevent crime. We are about to sacrifice very much for what might turn out to be very little.

VIOLATING FREEDOMS TO FIGHT CRIME

The Congress has passed and the President yesterday signed the District of Columbia crime bill. In their concern for the alarming crime rate in the capital—and perhaps with some eagerness to assert an election-year commitment to "law and order"—they have adopted a law which includes provisions that run counter to fundamental rights and to American traditions of long standing.

The reference is to the so-called "no-knock" and "preventive detention" provisions in the measure. The first enables police to burst into a house at any time of the day or night in the alleged search for narcotics evidence, without warning and without identifying themselves as police. Under the "preventive detention" provision, persons accused of crimes and deemed a threat to society could be held without bail for as long as 60 days pending trial.

The leader of the fight against the bill because of these provisions was Sen. Sam J. Ervin Jr., of North Carolina, a conservative who has long been recognized as the Senate's leading constitutional expert. The basis of his unrelenting opposition can readily be seen if one looks at pertinent passages from the Bill of Rights.

These words occur in the Eighth Amendment: "Excessive bail shall not be required . . ." One may ask: What is more "excessive" than an absolute denial of bail under certain circumstances—not because a capital crime is involved, but out of concern lest the accused might possibly commit other crimes pending his trial?

The Fourth Amendment regulates search and seizure in the following clear and definite language: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized." Ervin has persistently maintained that the "no-knock" provision clearly violates this constitutional guarantee.

None of the above should be taken to imply unconcern for the deplorable crime rate in the nation's capital, or any lack of zeal to attack crime with every legitimate weapon that can be devised. But there must be other and far better ways of fighting crime than to enact statutes which circumvent or violate the fundamental law of the land. Constitutional safeguards against unreasonable search and seizure, and constitutional guarantees of reasonable bail pending trial, have stood us in good stead for nearly two centuries. It is a foreboding day when, even with the best of intentions, we turn our backs on them.

EXPEDIENCY WINS ON CRIME BILL

The U.S. Senate has passed the District of Columbia crime bill in a triumph of expediency over judgment. The fact that it was a "law and order" bill was apparently too much to buck.

Almost everybody wants to do something against crime and reasonable solutions ought to be approved, but the D.C. crime bill is a case of throwing the baby out with the bathwater.

Sen. Sam J. Erwin Jr. (D-N.C.) had led a vain opposition to the measure, repeatedly charging that it was a step toward destroying constitutional safeguards and arguing that its efficacy in dealing with crime was very doubtful.

Among portions of the measure that were attacked as repressive or unconstitutional were authorization for "no knock searches of citizens' homes"; preventive detention, under which an accused could be jailed for two months if there is belief he "might" commit a crime if released, and such things as authorization of wiretaps by police on an almost unlimited range.

What the D.C. crime bill does is put a foot in the constitutional door for the rest of the nation as it edges toward a repressive society.

Senator Ervin is a conservative man, and he is not one who takes the problem of crime lightly. But his argument that this is the wrong approach wasn't enough to stem the tide in favor of the bill which now goes to President Nixon for signature.

"We are told," the senator observed sadly, "it is necessary for us to throw provisions of the U.S. Constitution into the judicial garbage pail in order to cope with crime in the District of Columbia.

And the question is whether this measure will cope with crime. Even if it does—which is doubtful—it will be a high price for law-abiding citizens to pay.

FLAWS IN THE CRIME BILL

A man's home under our Constitution, is supposed to be his castle.

But it will become a less vulnerable castle, at least in the nation's capital, under the provisions of the District of Columbia Crime Bill which has been approved by both houses of Congress.

This massive, far-reaching bill is the first Nixon administration crime-control measure which has been approved by Congress.

Most of the bill is good. For instance, it provides for a modernization of the District of Columbia's court system. It authorizes an additional 17 judges for D.C. courts. It creates a commission to supervise the removal of judges for disability or misconduct.

It provides—correctly, we think—for juveniles 16 or older to be tried as adults in crimes of murder, forcible rape, first-degree burglary, armed robbery or assault with the intent to commit any of these offenses.

It stiffens the mandatory sentences for second and third offenders. The bill makes it a crime to possess, make or use molotov cocktails in the District, And it says there is no justifiable reason for forcibly resisting arrest.

All this and many other provisions of the bill are good. And these provisions are expected to be a blueprint for similar laws in the various states.

But the bill also include two provisions which we think are bad and which do serious damage to the Constitution of the United States, if not in letter certainly in spirit.

One is the infamous no-knock provision which entitles policemen to enter a private home without any notice whatsoever—if the police have reason to believe that notice might result in the destruction of evidence sought, or danger to the life or safety of the police or anyone else, or lead to the escape of the person to be arrested.

The bill allows police to so intrude even when they have no authorization in a search warrant if, after they have made their raid, they encounter circumstances which would justify obtaining the authority in the first place.

What all this means is that District of Columbia police will be able to burst into a private home unannounced, and in so doing they may be greeted by a shotgun blast from some unsuspecting resident who fears for his life.

A man's home is his castle—but in Washington not entirely.

Another obnoxious provision of the bill is its preventive detention feature. A person charged with a dangerous or violent crime may be held without bond up to 60 days, without any trial whatsoever, if the judge thinks it advisable to protect the community's safety. This provision opens the way to serious miscarriages of justice, since a judge has no way prior to trial to determine who is or is not likely to respect the limitations of being freed on bond. This is bound to confine many persons to jail who have been convicted of no crime.

As Sen. Sam D. Ervin of North Carolina said, "No person except Almighty God" knows in advance who is likely to commit a crime.

If this bill serves as a blueprint, we hope future state measures will exclude these two unworthy provisions.

SENATOR ERVIN, FOE OF ANTICRIME BILL, ATTRACTS BIG FOLLOWING

(By Gregg Herrington)

WASHINGTON.—Sen. Sam J. Ervin, a homespun North Carolina Democrat, is attracting a following that stretches across the breadth and ideology of the country.

The affable 73-year-old Tar Heel, whose foremost guide is the U.S. Constitution, is receiving thousands of letters from people who tell him he is their last remaining hope against a computerized police state.

This week, while the veteran of 16 years in the Senate was fighting the District of Columbia crime bill as a document "as full of holes as a mangy dog is of fleas," the anti-computer mail continued stacking up in his subcommittee on constitutional rights.

Letter writers say they are alarmed over Army computer banks on antiwar demonstrators, federal snooping into library records to determine who is reading books on explosives, and customs agents opening personal mail from overseas.

"It is a short step to tyranny if dissent will be intimidated," a New York doctor wrote. A California woman begged him to "prevent 1984 from happening." A Delaware woman

was thankful "you Southerners know your Constitution."

"Freedom of the individual is one thing I've always fought for," Ervin said in an interview. "And, yes, I'm really concerned about us losing it."

"In the case of the District of Columbia crime bill," he said, "you've got the President of the United States wanting to repudiate a law put into effect by the First Continental Congress—the right to bail."

The reference was to preventive detention, a concept Ervin sees as clearly unconstitutional. Proponents say it is needed to keep dangerous criminals from roaming the streets while awaiting trial.

Ervin is equally contemptuous of the no-knock provision permitting warrant-armed police to break into a residence unannounced if there is reason to believe narcotics or other evidence would be destroyed if they waited for the occupants to answer the doorbell.

"It's better for a few people to get away with narcotics than to destroy the rights of all citizens," Ervin said. "I believe a man's home is his castle."

In a Senate speech against the crime bill last week Ervin said with typical emphasis "one of the great hungers of the human heart has been for a place where a man could retreat . . . to converse with his God and family without molestation."

In even the briefest of political discussion Ervin is likely to cite chapter and verse of the Constitution as the only necessary reason for supporting or opposing legislation. It is difficult to get him to go outside of that document and offer his own private reaction to a measure.

Ervin said he thinks the Supreme Court will declare the recently passed 18-year-old vote section of the voting rights act unconstitutional "unless they disregard the Constitution." He said the Constitution clearly leaves it to the states to set their own voting qualifications.

On pornography, Ervin believes local community standards should dictate, not the Supreme Court.

On Vietnam, Ervin says "you shouldn't go into a war unles you're going to win it. We could have won it long ago."

On women's liberation Ervin said he didn't want to get involved, but went on to add some feminists' demands are "about the same as requiring a man to nurse his baby."

Anyway, he said, in his own home Margaret, his wife of 46 years, "lays down the law."

Legislators Pass Buck

President Nixon got from Congress the anti-crime bill for the District of Columbia that he wanted, but in the opinion of many able authorities on constitutional law, the legislators themselves violated the law in enacting the measure, the most basic law of all, the Constitution of the United States. For most Americans, the idea that one must violate the law in order to enforce the law is completely unacceptable.

The onesidedness of the vote in both Houses of Congress reflected the political pressure that was applied by the President and the reluctance of members of Congress to vote against any proposal that has been labeled publicly as a measure to combat crime.

As a result of the congressional action, the President has made good on his campaign promise to do something about crime, and the legislators have passed the onus of killing the unconstitutional provisions of the measures to the courts, at some uncertain time in the future when, hopefully, the public will be less emotional about the crime problem.

The measure approved contains among other provisions believed to be unconstitutional, such as permitting law enforcement to force their way into a private residence without knocking and identifying themselves in advance, a provision for what euphemistically has been called "preventive detention."

The idea that a person should be punished for crimes he has not committed and which it is only suspected he might commit is contrary to the most basic concepts of justice and is in conflict with the principle on which the whole American system of criminal law is built, the presumption that a person is innocent of any crime until he has been proven guilty by due legal process.

If the idea ever comes to be accepted that a person can be held in jail at the whim of a judge or some other public official when he has not been convicted of any specific offense, or has not even been charged appropriately with having committed one, then the country will have taken a long step toward establishment of a police state and the long struggle to protect the individual citizen against governmental tyranny will have been lost.

Senator Sam J. Ervin Jr., recognized as an expert in the field of constitutional law, told his fellow senators that one secton alone of the administration's anti-crime bill for the District of Columbia contained five violations of the Constitution. His colleagues simply ignored his statement and passed it anyway, although many of those voting for it knew that some of the provisions were unconstitutional on their face. No profound knowledge of constitutional law was necessary to be aware of this.

The congressional action thus raised once more the question of the moral as well as the legal propriety of lawmakers approving legislation which they know to be unconstitutional and leaving it to the courts to throw the law out.

It is an action that is taken frequently these days, it seems, The legislators are able to appease the public clamor for governmental action, but an uncertain number of people may suffer before the constitutional issue can be brought properly before the Supreme Court and it can be nullified judicially. The practice rates as one of the most reprehensible forms of buckpassing.

It can be argued, of course, that it is a proper function of the Supreme Court to decide a constitutional question, but is it too much to expect that a lawmaker have a sufficient knowledge of the law to recognize what is constitutional and what is not? To pass the responsibility to the courts amounts to a confession of incompetence or lack of qualification on the part of the legislator.

Scrapping the Constitution

Sens. Sam Ervin and John Stennis are not radicals. They aren't even liberals. They are Southern conservatives. But they also are former judges and recognized authorities on the American Constitution. Before the Senate passed the so-called anticrime bill, both of them warned their colleagues that numerous sections of the measure were unconstitutional. But the Senate, by a vote of 54 to 33, went ahead to pass the bill anyway.

It isn't that the majority discredited what Ervin and Stennis had to say. Most of the Senate's members probably believed them. But they didn't dare not vote for the bill. They feared that they would risk being accused of coddling criminals.

And so we are to have a law that permits police to break into a dwelling, without knocking, if they think there is good reason to believe that illegal activities are taking place behind the door. The same law will permit judges to keep accused persons in jail if, in the judges' opinion, there is a danger that the accused may commit illegal acts if they are granted bail—despite the fact that as accused persons they have not yet been convicted of any crime and, in the eyes of the law, are presumed still to be innocent. The 8th Amendment to the Constitution says that "excessive bail shall not be required." What is more excessive than denying bail entirely on the flimsy pretext that a suspected person may commit a crime if released?

There is every reason for public debate on the constitutionality of the anticrime bill. It never really was debated in the minds of most of those in the House and Senate who voted for the measure. This is an election year. Crime is very much on the minds of a scared populace. The people want something done to curb crime. Passing a bill of this kind would seem to offer that promise. That it may have little if any effect in halting the rising tide of crime is widely recognized—as is the possibility that whole sections of it are likely to be thrown out by the U.S. Supreme Court when the law gets there, as it inevitably will.

But no matter. Most of the senators and representatives are on record as having voted to deal crime a mortal blow. They will be able to remind their constituents of that many times between now and November.

Ervin and Stennis might as well have saved their whistles for the wind. Votes count. The Constitution can go hang. How cynical can Congress get?

Law, Disorder

Well, the U.S. Senate went ahead and approved that crazy "law-and-order" bill this week for the District of Columbia, despite its obvious conflicts with the U.S. Constitution. Among other things, it would permit policemen armed with a warrant to batter down anybody's door without warning; and allow judges to hold people as much as 60 days without trial, on simple "suspicion" they might commit crime if released on bail.

We were happy to see that Kentucky's two senators, John Sherman Cooper and Marlow Cook, voted against it. Mr. Cooper denounced the measure on the floor of the Senate, saying it would "deny the great principles for which we have stood and which are embodied in the Bill of Rights." He charged that the bill's "preventive detention" clause "raises the specter . . . of the early history of England and of our colonial days of the detention of one person by the state without due process of law."

There was a notable reluctance among senators running for re-election this fall to vote against the bill. North Carolina's conservative Sam Ervin nailed them with this pointed comment:

"I hear the siren voice of that old devil, political expediency, whisper in my ear 'You better vote for the D.C. bill because it's a law-and-order bill. It's not politically sagacious, not politically wise, to vote against a law-and-order bill.'"

"(No) Knock Knock, Who Is There"

To their everlasting discredit, the Senate approved the controversial District of Columbia crime bill. Everybody knows that the Nixon Administration intends the D.C. bill to be the "model" for the nation.

Among the provisions of the bill are:

—Authorization for "no knock" searches by police in which police could simply break in to private dwellings without announcing their presence.

—Preventive, or pre-trial detention, under which a defendant could be jailed without bail for up to 60 days if a hearing established that he might commit a crime if he were released.

—Authorization for wire taps.

—As Senator Sam Ervin of North Carolina put it: "This bill would be legal if we first repeal the Constitution." Right on, Sam.

Hooks in the Crime Bills

Public concern over the soaring rate of serious crime in the United States is fully justified, but it does not follow that con-

stitutional safeguards against injustice must be thrown overboard to resolve the problem. Yet, in some respects, that is Atty. Gen. John N. Mitchell's rationale in pushing the "model" anticrime bills now pending in Congress.

Fortunately, Congress is showing doubts about some provisions of both the administration's anticrime bill for the District of Columbia and its proposed Organized Crime Control Act. These provisions may well violate constitutional guarantees.

The need to stop the rise in crime and roll the rate back to more manageable proportions cannot be denied. But the answer cannot deprive innocent as well as guilty of the historic safeguards against wrongful imprisonment, unwarranted search and seizure, the right to bail and other keystones of individual freedom.

The preventive-detention provision of the District of Columbia bill has been described as a "blueprint for a police state" by Sen. Ervin (D-S.C.), the eminent conservative and constitutional expert. Other provisions of this and the organized-crime measure raise similar specters.

The key to effective crime prevention, as Ervin sees it, lies in speedy trial and swift and sure punishment for the guilty. The history of civilized jurisprudence bears him out, and we need only look at Britain to see what a deterrent swift justice can be. Our own clogged courts make this virtually impossible, and so we seek meaner and more dangerous alternatives.

The country badly needs—especially at the state and local level—more courtrooms, more and better judges, bigger and more capable prosecution staffs, and above all far more and better trained police than are now available. All of these things cost money, but they would be well worth the price in terms of public security.

Meanwhile, Congress is pursuing the proper course by refusing to be pushed any further into rubber-stamping bills that clearly need more study.

ERVIN'S CHALLENGE TO DETENTION BILL

A tough "preventive detention" proposal by Atty. Gen. John Mitchell is now under scrutiny of a U.S. Senate committee.

It would allow a federal judge to deny bail for 60 days to anyone accused of a specified "dangerous or violent" crime if the judge felt there was a clear danger of additional crime by the accused.

The temper of the time is such that there is widespread belief that potential bombers, arsonists and rioters should be detained.

Even so, the idea of detention without conviction is abhorrent to the American concept of justice. Chances are that even the temper of the time will not reverse it.

Sen. Sam Ervin of North Carolina is a staunch constitutionalist who is a leading opponent of the proposal. He is certainly not one of the "liberals" in Washington. When he speaks about the Constitution, it is well to listen.

Preventive detention is "more than unconstitutional," in his vew. Aside from that, he declares, the rate of repeat crime is "very low, too low to justify preventive detention."

Sen. Ervin cites Justice Department statistics to substantiate his point. They show that 25 per cent of persons arrested for specified dangerous crimes are rearrested and 17 percent of those charged with specified crimes of violence.

These seem to be high percentages. But Sen. Ervin found that most of the rearrests were for such misdemeanors as traffic-law violations. Actually, only five per cent are rearrested for a second dangerous or violent crime; and a little more than one per cent are found guilty of a second major crime while on bail.

The probability of judicial error is great, Sen. Ervin believes.

He proposes a different solution to the target problem.

The Constitution guarantees the right to a speedy trial. Today's crowded court dockets, as well as typical defense tactics of long delay, rather mock the guarantee. Society, too, is entitled to adjudication within a reasonable time.

Sen. Ervin proposes a law that would require trials on such charges to be held within 60 days. He also would impose stiff additional penalties for crimes committed while on bail. The Ervin bill would provide pretrial service agencies to supervise people on bond.

This is a sensible approach which takes into account the public's right to have its case against a defendant presented in court without stepping into the disputed area of imprisonment before trial.

"FULL OF FLEAS"

Almost a year ago, Attorney General Mitchell hailed the Administration's legislative package for the District of Columbia as a "model anticrime program." It called for a sweeping reorganization of Washington's court system, a much stronger public defender office there, a revision of the city's juvenile code, a system of preventive detention for those awaiting trial, and some other changes in the substance of the District's criminal law. The program was, in the eyes of many observers, the first real evidence of what all the campaign rhetoric concerning the need to do something about crime really meant.

Last March, when this legislation finally passed the House of Representatives in one large omnibus crime bill, Senator Sam Ervin took one look at it and denounced it as "a garbage pail of some of the most repressive, near-sighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented." Not all of the provisions that have raised the hackles of Senator Ervin and many others are of the Administration's making. Some of them are attempts by the House District committee, perhaps the worst committee on Capitol Hill, to write into law the pet ideas of some of its members. The result, however, merits Senator Ervin's conclusion that the bill "is as full of unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas."

This is too bad because much of what is in that omnibus crime bill is good. As it stands, the bill would give the District of Columbia for the first time its own local court system, uniting under one roof activities that now occur in three separate courts and providing enough judicial manpower to allow the administration of justice to work. It would give the District a Family Court, with tools that might allow Washington to begin to make a dent on the juvenile delinquency which is about to overwhelm the city. All this is desirable. But coupled with proposals like those are preventive detention, "no-knock" search authorization, broad wiretapping provisions, mandatory minimum sentences, a reduction in the age limitations of juvenile court, elimination of the right to trial by jury for juveniles, and, of all things, a provision requiring that anyone who sues a policeman for wrongful arrest must pay the officer's fees even if the officer loses the case. These provisions have kept the bill tied up in a conference committee for three months as Senate liberals maneuver to find a way to save the bulk of the bill without having to swallow such affronts to constitutional principles. Whether they can succeed is doubtful and if they don't, the Senate will be faced with a cruel choice—letting another year slip by with nothing done to improve the administration of justice in Washington and taking the rap in an election year of killing anticrime legislation, or passing the bill with its menagerie of evils and hoping that the courts will find the worst of them unconstitutional.

OTHERS ARE SAYING—DANGEROUS PROPOSAL

Sen. Ervin (D-N.C.) is a southern conservative who spent 20 years in or close to the judiciary of his state, including service on its supreme court, before entering the Senate. He has a solid grasp of the principles and spirit of the Constitution and of individual rights under it. He chairs the Senate Judiciary Subcommittee on that subject.

It therefore comes from him with unusual authority and persuasiveness when he denounces Atty. Gen. Mitchell's "preventive detention" scheme. It is "more than unconstitutional," he says, being based in addition on mythical and false notions. It poses impossible criteria for the administration of justice by judges who are not clairvoyant, who can only guess and make more errors than hits.

The preventive detention bill would let a judge deny bail altogether and keep in jail pending trial, up to 60 days, anyone accused of a "dangerous or violent" crime. The judge would have only to raise a possibility that the accused might do something to be rearrested for if he were free on bail.

The bill assumes a high probability that persons arrested for such crimes will repeat them, if they can, while awaiting trial. By the Justice Department's own study, Ervin says, "this turns out to be wrong. The rate is very low, too low to justify preventive detention."

The department cites its study as showing that 25 per cent of persons arrested for specified dangerous crimes are rearrested while out on bail, and 17 per cent of those arrested for specified crimes of violence are rearrested. But Ervin found that most of those rearrests are for misdemeanors or traffic offenses, perhaps; only 5 per cent are rearrested for a second dangerous or violent crime, and scarcely more than 1 per cent are found guilty of two major crimes.

Nothing in the department's study or statement, Ervin noted, supports an assumption that a conscientious judge can zero in on those two or three likely repeaters out of every 200 and accurately predict that likelihood. Instead, to get any worthwhile results from preventive detention, many or most persons accused of dangerous or violent crimes would have to be denied bail and locked up until tried.

That makes it obviously unworkable with even a semblance of justice. Its assumptions are wrong, even if it might possibly be constitutional. And mandatory imprisonment without trial, except for the rare, extreme case, almost certainly is not constitutional—and had better not be if liberty has any meaning left. Congress must quash this repressive idea.

[From the Sun Times, Chicago, Ill., June 16, 1970]

OPPRESSION WILL NOT STOP CRIME

The respected National Council on Crime and Delinquency has joined in criticism of Nixon administration anticrime proposals.

The council's specific target is surely a vulnerable one—the preventive detention mechanism whereby suspects ruled potentially dangerous could be incarcerated for up to 60 days at the whim of the bench.

This bit of foolishness, which is quite likely unconstitutional, is included both in the organized crime control bill and in the crime bill designed for Washington, D.C., which is now deadlocked in Senate-House conference committee.

The council finds a good deal of fault with preventive detention. For example, procedural matters alone would serve to further clog already overburdened courts (a criticism also voiced last year by a spokesman for the American Bar Assn.).

Fundamentally, however, the council's criticism focused on the detention law's danger to civil and individual liberties guaranteed by the Constitution. And the danger is real.

Sen. Sam J. Ervin Jr., (D-N.C.), who is perhaps the leading constitutional authority in Congress, said of preventive detention:

"Fundamental to due process of law is the tenet that a man is presumed innocent until proven guilty beyond a reasonable doubt. Under our system of justice, the government cannot deprive a man of his liberty on the mere accusation or assumption that he has committed a crime or is likely to do so. In practical effect, preventive detention . . . convicts individuals of 'probable' guilt and 'dangerousness' and sentences them to 60 days' imprisonment without trial and conviction of a crime. Such flagrant violation of due process smacks of a police state."

Preventive detention is not the only aspect of the pending crime legislation that should cause shivers along the spines of believers in justice. There is, for instance, the plan to allow no-knock, no-identification raids on dwellings and offices where drug possession is suspected.

Through the heat of controversy, of course, Atty. Gen. John N. Mitchell, author of these extraordinary provisions, has remained adamant. He insists he needs such extra-constitutional tools in order to fight crime.

We believe he does not need oppressive measures which are as likely to harm the innocent as to convict the guilty.

We submit that Congress must reject all moves to thwart liberty.

[From the Free Press, Detroit, Mich., June 12, 1970]

CRIME AND PUNISHMENT

A black judge from Detroit and a white senator from North Carolina might seem a strange alliance, but they make good sense in the defense of the Constitution.

Circuit Court Judge Edward Bell told the Senate constitutional rights subcommittee, now laboring over the proposal by Attorney General Mitchell to permit "preventive detention" of a suspect for up to 60 days, that the plan was unconstitutional and a violation of individual rights. The plan would give a judge power to jail a suspect if he considered the suspect a "dangerous person."

"The accused will have been sent to jail for no act of criminality whatsoever," Judge Bell said. Until convicted he is presumed innocent.

Sen. Sam Ervin, a former North Carolina Supreme Court justice, agreed with Judge Bell. By no means is Sen. Ervin considered a liberal. On constitutional matters he fits the President's description of a strict constructionist. He is conceded to have one of the best judicial minds in the Senate.

The Bill of Rights, Sen. Ervin said, grants individual rights "which cannot be assaulted by the majority." No judge,—"no person except almighty God"—has the "prophetic powers to be able to tell" who might be dangerous.

Perhaps, as Sen. Strom Thurmond argued, good judges would use their discretionary powers wisely and would not jail suspects "unless they were convinced in their own hearts" that the suspect might commit a crime while out on bond.

But the judiciary, like all trades and professions, has its bad practitioners as well as its good ones. Which is one reason this is a nation of laws, not of men. Mr. Mitchell's proposal would make unusually bad law.

[From the Mankato (Minn.), Free Press, July 7, 1970]

INSTRUMENT OF POTENTIAL ABUSE

A great principle of Anglo-American justice, that a man is innocent until proven guilty, is in danger of being compromised by provisions of President Nixon's anti-crime bill permitting preventive detention of persons deemed dangerous to society.

Under the administration proposal, a judge could consider a defendant's "danger to the community" and the "likelihood of flight," both highly subjective factors, in setting conditions for a prisoner's release before his case comes to trial. Upon making such findings, a judge could order a detention hearing for a defendant charged with a "dangerous crime" or a "crime of violence."

For these provisions to apply, the crime would have had to have been committed while the defendant was out on bail, probation, or parole, or within 10 years of a prior conviction for a crime of violence.

Sen. Sam Ervin Jr., D-N.C., the Senate's eminent constitutional lawyer, finds this measure to be a compromise of the fundamental principles of a free system of government.

"If America is to remain a free society," says Ervin, "it will have to take certain risks. One is the risk that a person admitted to bail may flee before trial. Another is the risk that a person admitted to bail may commit crime while free on bail."

"In my judgment," he continues, "it is better for our country to take these risks and remain a free society than it is for it to adopt a tyrannical practice of imprisoning men for crimes which they have not committed and may never commit merely because some court may peer into the future and surmise that they may commit crimes if allowed freedom prior to trial and conviction."

Sen Ervin offers the obvious alternative.

"The real solution to the immediate problem of crime committed by persons on bail and, indeed, the solution to the general problem of crime, lies not in preventive detention . . . but in the speedy trial of the accused and the swift and sure punishment of the guilty."

Such a solution requires a major overhaul of the judicial system and, most important of all, an end to judicial leniency.

This approach is consistent with the principles of a free society. It makes more sense than punishing people not yet proven guilty.

[From the Chattanooga (Tenn.) Times, July 15, 1970]

DANGEROUS PROVISION

The anti-crime bill for the District of Columbia contains highly dubious if not dangerous provisions which pose a threat to the rights and liberties of all citizens of the capital city.

The measure would, for instance, permit a "no-knock" entry by police if officers have reason to suspect there is evidence that can be destroyed during the time required for normal service of a search warrant.

It would authorize detention of an arrested person for up to 60 days if the court has cause to believe the defendant might commit an offense while on bail. This is called "preventive detention." It could well prove at least a 60-day jail sentence for a person merely accused of a crime and not yet convicted.

Such provisions should not have been passed in the first place, and they wouldn't have, if constitutionalists like Sen. Sam Ervin, North Carolina Democrat, had been heeded.

But in the atmosphere of doing something—anything—which resembled an establishment of controls over "crime in the street," both the House and the Senate passed the measure. The District of Columbia is the only locale where Congress has this kind of authority, most such law enforcement being a matter constitutionally reserved to state and local governments.

The bill shouldn't have received the approval of a conference committee which worked three months to resolve the differences between House and Senate versions. But it did, and now stands only one step—approval by both houses again—short of enactment.

Surely, in the extended time the bill has been in conference, there has been opportunity for some sober second thoughts on what the controversial provisions portend. We have no doubt Sen. Ervin will refocus attention on them. This time, we hope his good sense and unquestioned integrity prevail.

[From the New York Times, July 17, 1970]

A BAD PACKAGE

After three months of consideration, a Senate-House conference committee has reported out an anti-crime bill for the District of Columbia which has been variously characterized as violative of no less than five Constitutional amendments and as "a blueprint for a police state." Twenty former Federal prosecutors have found the bill's chief provisions of "doubtful constitutionality, questionable necessity and demonstrable ineffectiveness."

The measure passed by the House has been somewhat improved in conference, notably by the deletion of an incredible provision that would have required plaintiffs to pay the attorneys of policemen they had sued for false arrest, even when the policemen lost the case. The bill also calls for a much-needed court reorganization, designed in part to speed up the calendar—a highly desirable objective in a city with a grave crime problem and a judicial logjam.

But the bill's most dangerous and unnecessary provisions remain. Policemen would be empowered to enter houses without knocking, not just in the limited and special instances where that is permissible even now, but on what might amount to no more than a hunch that evidence might be destroyed or that those inside might make an armed attack if given notice of the police presence at the door. Shades of Chicago.

The bill would allow a judge to keep defendants in jail for sixty days if on the basis of their records he thought them likely to commit other crimes while awaiting trial. It is true that high bail permits even longer detentions now, but its imposition for reasons other than its legitimate purpose is often overruled by a higher court. The proposed bill would not replace the inappropriate use of bail in any case; it would only add to the injustice. More important, it would for the first time give legal sanction to the undoing of the most fundamental principle in Anglo-Saxon law—that a man is innocent until proven guilty.

Legislation for the reorganization of the District's courts was ready within weeks of President Nixon's inauguration. It is regrettable that Administration forces saw fit to make it part of a dubious anti-crime "package" instead of getting it enacted into law at once. Opponents of the bill in its present form, led by Senator Ervin of North Carolina, hope to defeat it on the Senate floor and start over again with a bill for court reform. That would perhaps do less to gratify the emotions of the hysterical but more to reduce crime in the District.

[From the Louisville, Ky., Times, July 17, 1970]

MUST WE DESTROY JUSTICE, TOO?

A House-Senate conference committee has cleared and the House has passed a District of Columbia anti-crime bill that contains harshly repressive features and thus is an "affront to the constitution."

That description was provided by Sen. Sam Ervin, the North Carolina conservative who is as eloquent and outspoken in his defense of civil liberties as he is in his opposition to civil-rights measures. In this case, his position, expressed when the bill was originally before the Senate, is rooted in provisions for "preventive detention" of suspects considered a danger to society and "no-knock" search warrants in cases involving major crimes. The latter is designed mainly for use in narcotics cases.

Neither provision was in the bill that passed the Senate. But the House accepted the administration proposals; thus the conference committee, which toned them down slightly before finally sending them back to the House and Senate.

However, several senators have balked and say they will oppose the compromise measure. Hopefully, they will carry the day.

For the preventive detention and no-knock provisions are not the only undesirable features of what, on balance, is a bad bill. The discretion of judges is reduced by mandatory sentencing requirements; the juvenile age is lowered from 18 to 16 and, finally, there is a provision that would pay attorneys' fees for all policemen accused of making false arrests, whether innocent or guilty.

This is retrograde legislation. Moreover, it is a stalking horse for similar legislation on a national basis.

All this has come about because of the fiercely emotional, politically charged climate that has been raised around the issue of crime. It has resulted, on the one hand, in such contradictions as a plea for more laws to fight crime with and, on the other, statements that the rate of crime is now being brought down by the Nixon administration through strong executive action.

The truth, as always, lies somewhere in between. But there is at stake something more vital and much deeper. That is the course of our society. For, as Sen. Ervin has pointed out, we are in danger of being marked as a people "so zealous in their efforts to enforce the law that they would emulate the example set by Samson in his blindness and destroy the pillars upon which the temple of justice itself rests."

[From the Greensboro Daily News, June 14, 1970]

A Poor Campaign Issue

President Nixon has, in a roundabout way, called on the voters to defeat members of Congress who refuse to support the administration's omnibus anticrime bill, which includes provisions for preventive detention and a "no-knock" narcotics law.

"I do not charge partisanship in this instance," Mr. Nixon told a group of U.S. attorneys at the White House. But he added: "For the Congress to fail to act and go back to the people will be something that the people will remember."

If the people will take the trouble to examine the 13 administration anticrime bills now pending before Congress and if they value their own liberties, they may be more inclined to reject Mr. Nixon's line of reasoning. The "no-knock" provision of the narcotics bill and, most especially, the preventive detention bill are measures more suited to a totalitarian police state than to a democracy.

Sen. Sam Ervin Jr., chairman of the Senate Constitutional Rights Committee, has led the fight in Congress against both of these proposed "anticrime" laws. He says they are unconstitutional and an affront to the American people.

The "no-knock" law, which has passed the Senate, would permit police officers to raid private homes, without knocking and without warning, to search for narcotics. Clearly, the most practical method of gaining entry under such conditions is to knock down a door or smash a window. As Senator Ervin has pointed out, this would give policemen the right to do legally what burglars do outside the law.

Of the preventive detention bill, the Senator remarked that it is "more than unconstitutional—it is based on unsupported theories of criminal behavior." Briefly, this proposed law would empower a federal judge to deny bail to a suspect charged with a "dangerous crime" or a "violent felony" and hold him in jail for up to 60 days before trial.

Yet a Justice Department study—kept under wraps until Senator Ervin made it public—disclosed that only about 11 per cent of the defendants released before trial were rearrested in the interim. And the study showed that only five per cent of those charged with violent or dangerous crimes were rearrested for second crimes in those categories.

Senator Ervin believes, and we agree, that a better solution is to guarantee defendants charged with dangerous or violent crimes a quick trial—within 60 days. He is co-sponsoring, with Senator Philip Hart of Michigan, a "speedy trials" bill.

One might surmise from the remarks of the President and Vice President Spiro Agnew to the visiting U.S. attorneys that the Nixon administration plans to make law and order a leading campaign issue this fall. Both cited Federal Bureau of Investigation figures to show that crime increased by 16 per cent in 1967, 19 per cent in 1968 and 11 per cent last year.

It could be argued, however, that this regular crime rise is reflected in the annual FBI statistics, prepared under the direction of J. Edgar Hoover, is more of a reason for firing Mr. Hoover than for violating the U.S. Constitution by enacting a preventive detention law. Congress has regularly given Mr. Hoover all the money and manpower he asks for. Just as regularly, the FBI end-of-the-year reports indicate that the criminal element gained substantial yardage during the past 12 months.

Certainly there is crime in the United States today. Crime has probably increased out of proportion to the increase in the population. The streets of too many American cities are unsafe, even in broad daylight.

And it is true that it is easier to control criminals by disregarding the Bill of Rights where the rights of suspected criminals are concerned. But the next step is rigid control of the inoffensive and the law-abiding in the same way and with the same methods. Now is the time for Americans who care about their own freedom to let Congress know they are behind Senator Ervin in this fight.

[From the Philadelphia Inquirer, July 22, 1970]

Repressive and Indecent

Senator Sam Ervin of North Carolina calls it "a garbage pail of some of the most repressive, near-sighted, intolerant, unfair, and vindictive legislation that the Senate has ever been presented."

Rep. Brock Adams of Washington state says it is "a laundry list of unconstitutional provisions."

What they are referring to is the package of laws intended to crack down on crime in Washington, D.C. If anything their description of the legislation is too mild.

Its provisions for pretrial detention of defendants, and for the unannounced police break-in of a suspect's home, are especially indecent and repugnant.

Attorney General John N. Mitchell, defending the "no-knock" authority sought to strengthen police search powers, has proposed that "no-knock" be renamed "quick entry." The latter term, he said, would be less misleading and prejudicial.

It isn't what name you give to the sledgehammering of a door that counts to the persons inside, but the gestapo tactics involved.

Preventive detention, as Senator Ervin has said, violates the traditional American belief that a man is innocent until proved guilty. The provision in the bill would empower judges to jail accused persons deemed potentially dangerous for up to 60 days while they await their trials.

This would leave it up to the individual judge to determine whether a suspect is too dangerous to set free on bail. In view of the fact that many defendants have to wait a year or more before they are tried, the 60-day clause could be self-defeating.

After being held that time, without conviction, the suspects may be more dangerous than ever, resentful at losing their jobs and in urgent need of money to support their families and pay their lawyers.

The crime bill immediately before the Senate affects the District of Columbia but it could have an impact far beyond the capital city.

It could establish a precedent and become a model for other American cities struggling against crime, and inclined, perhaps, to forget the Constitutional rights that protect not only criminal suspects, but every citizen.

[From the Tennessean, July 18, 1970]

Crime Bill Full of Danger

Some features of President Nixon's crime bill now being considered by Congress would strike at basic constitutional guarantees and should be rejected.

Perhaps the most dangerous recommendation is one that would permit police in some instances to enter homes without first knocking at the door or identifying themselves.

This measure is proposed for effectiveness in the District of Columbia only, but it is being advanced as a model law, possibly to be extended to the rest of the country at a later date.

If there were any valid reason for singling out the District of Columbia for the initiation of this oppressive law, it has not been made clear what it is. Certainly there is no justification for believing the nation should begin to give up its constitutional protections for the purpose of providing short cuts to law enforcement.

The no-knock measure has its supporters and detractors on both sides of the political fence. But perhaps the most effective opponent is Sen. Sam Ervin, noted conservative from North Carolina, who calls the District of Columbia crime bill "a garbage pail of some of the most repressive, nearsighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented."

It is too early to tell whether Senator Ervin can turn the tide against this unwise bill. But he deserves the gratitude of those who believe it is still possible to have effective law enforcement in the U.S. without chipping away at the basic principles on which the nation was founded.

[From the Milwaukee (Wis.) Journal, Milwaukee, July 16, 1970]

Police State "Blueprint"

"This . . . is as full of unconstitutional unjust and unwise provisions as a mangy hound dog is full of fleas . . . a garbage pail of some of the most repressive, nearsighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented . . . an affront to constitutional principles and to the intelligence of the people of the United States."

That is what Sen. Ervin (D-N.C.) thinks of the District of Columbia crime bill that has come out of the Senate-House conference committee.

The bill was presented to Congress by Atty. Gen. Mitchell as redemption of a pledge President Nixon had made during his campaign to end crime in the "nation's crime capital." The Senate watered down the measure. The House stiffened it. The conference reported out the bill in much its original form. Among other things, here is what the measure that Ervin calls "a blueprint for a police state" would do:

Let police enter homes or other buildings in a variety of circumstances without knocking or announcing themselves. Give law en-

forcement officers broad wiretapping powers. Let police conduct chemical, scientific and medical tests upon any person found where a search warrant was being served. Allow pretrial detention of accused persons, denying them the constitutional right to bail. The American Bar Association calls preventive detention before trial unconstitutional.

The bill would be particularly destructive of the rights of juveniles. It would deny them right to jury trial. It would allow them to be found delinquent on the basis of a "preponderance of evidence"—something the Supreme Court invalidated a few days after the House bill was passed. Juveniles 15 years old charged with certain crimes could be tried as adults upon motion of the prosecutor. Once a juvenile was tried in an adult court, even if he was acquitted, he could never again be tried as a juvenile.

One of the most vindictive sections provides that if a man is convicted for the third time of a violent crime he would get a mandatory life sentence with no allowance for parole, probation or suspended sentence for 20 years. A violent crime could be a purse snatching. Anyone convicted of an "armed crime of violence" would receive an automatic sentence of three years, even if he had only a toy gun in his pocket and never produced it.

The Fourth Amendment has a guarantee that all citizens shall be "secure in their persons, houses, papers and effects against unreasonable searches and seizures." Thus on the face of it the "no-knock" and wiretapping provisions appear unconstitutional. Rep. Mikva (D-Ill.) says that "the reaction of the average American to an unexpected attempt to break into his home is to fight like hell."

The measure is everything Ervin says it is. It would be headed for almost certain invalidation in the courts. It would, as Ramsey Clark, former attorney general, says, "tinker with the rule of law, with freedom and human dignity in the name of public safety." It should be killed.

[From the New York Times, July 26, 1970]

IN THE NATION: BEYOND THE "FLAME AND RHETORIC"

(By Tom Wicker)

If they hang them all, they'll get the guilty,
That's what you say we ought to do.
If they hang them all, they'll get the guilty—
But, remember, they're gonna hang you too.
—Tom Tee Hall.

WASHINGTON.—Senator Joseph D. Tydings of Maryland, who led the successful effort to impose a punitive anti-crime bill on the District of Columbia, said after the battle that he was glad the measure had survived "all the flame and rhetoric" of its opponents.

It is true that Senator Sam J. Ervin of North Carolina, who led the opposition, is a flamboyant orator and it is equally true that some provisions of the bill evoked impassioned opposition. But this opposition and the points Senator Ervin consistently raised against the bill, however colorfully, were a good deal more than "flame and rhetoric," as the future may disclose to Mr. Tydings and the bill's other supporters, most of whom were Republicans and Southern Democrats.

(Mr. Ervin was joined, however, by three other Southerners, John Stennis of Mississippi, Everett Jordan of North Carolina and J. W. Fulbright of Arkansas, in putting the rights of the individual, even in the voteless, mostly black District, ahead of what Mr. Ervin called "the expediency of law and order.")

There was neither flame nor rhetoric, for instance, in a study by Hans Zeisel of the University of Chicago Law School. Analyzing District of Columbia pre-trial release and rearrest statistics, compiled by the Bureau of Standards at the request of the Department of Justice, Mr. Zeisel concluded that the bill's preventive-detention proposal, had it been in effect when the statistics were gathered, would have resulted in:

"1. Increasing the number of persons not released prior to trial by 46 per cent;

"2. Detaining needlessly—because they would not be rearrested if released—82 per cent of those now detained defendants;

"3. Detaining without any merit 57 per cent of these defendants because they will subsequently be acquitted of their original charge or convicted only of a misdemeanor."

LESS THAN 1 PERCENT

And what would this wholesale imprisonment of innocent people have achieved? "The reduction of the recidivism rate by 0.7 of one percentage point beyond what could be accomplished by the simple expedient of trial within 60 days."

Mr. Tydings and other proponents of the crime bill argued that the court reform needed to speed trials—as urged by Mr. Zeisel and others—could not be pushed through the conservative House of Representatives unless a bill to provide it also contained preventive detention and other stringent measures—which they insist are only minor matters, anyway.

FEAR OF REPRESSION

They could have found an answer to this in Dr. Alexander Heard's wise and courageous report to President Nixon on student and black attitudes. Though not dealing specifically with crime proposals, Dr. Heard recommended "that the President and others undertake to understand the fears of 'repression' among certain groups in our country and to understand the realities underlying those fears; that the President use the moral influence of his office in new ways designed to reduce racial tensions and help develop a climate of racial understanding."

But the D.C. crime bill now is one of those "realities" that underlie the fear of repression; and it is to the spread of that fear that the moral influence of the President—not to mention Mr. Tydings and others—has been lent. The population of the District, after all, is nearly 70 per cent black. That majority is well informed about Black Panthers dead at the hands of the Chicago police. It knows all about the indiscriminate killing of blacks last spring in Augusta, Ga., and at Jackson State; it has seen its own frequent racial clashes in Washington.

So blacks here are not likely to believe that the D.C. police and the Justice Department wanted this legislation in order to break down doors at the Watergate Apartments or to detain preventively the wealthy property owners of Georgetown. Mayor Walter Washington well understands this reaction; he has urged District residents "not to prejudge the effects of this law" but he is seriously concerned that in the six months before its worst provisions take effect, they will do just that. Already, one black leader here has said that District residents would be justified in shooting a policeman who attempted a "no-knock" entry.

But Congress has acted, President Nixon is sure to sign the bill, and Mayor Washington is right that the task now is to calm unreasonable fears and make the law work as equitably as possible. It is the bill itself, not the "flame and rhetoric" of its opponents, that makes this task so difficult.

[From the Free Press, Detroit, Mich., July 19, 1970]

ABA OBJECTS: RIGHTS, REASON ARE SACRIFICED IN CRIME BILL

(By Clayton Fritchey)

WASHINGTON.—The American Bar Association didn't improve its reputation by its indifferent inquiries into two Supreme Court appointments that were rejected by the Senate, but the ABA is now showing surprising diligence in opposing the administration's bill against organized crime.

It is not surprising that various liberal groups are disturbed by repressive provisions in the bill which threaten individual rights, and which are of doubtful constitutionality. The chronically conservative ABA, however, has now become equally critical, although its attention was called to the legislation in the first place by President Nixon himself, who besought its support in getting the bill through Congress.

This bill is flawed by so many undesirable provisions that it is hard now to believe that it could have passed the Senate by a vote of 73 to 1. The Senate, panicked by the law-and-order clamor, simply stampeded, leaving to the House the thankless job of resisting this subversion of civil liberties.

Fortunately, there is an unspoken understanding in Congress that on some issues one branch will rescue the other when such stampedes occasionally occur. Many senators who had misgivings over the organized crime bill voted for it in the confident belief that the House Judiciary Committee would flag it down, and that is what happened.

The legislation was rushed through the Senate in three days with little or no debate. One member voiced the thought of all when he said, "Everyone's afraid of being called soft on crime." The Senators could count, however, on two dedicated civil libertarians—Rep. Emanuel Celler, D–N.Y., and William McCulloch, R-Ohio—who dominate the House Judiciary Committee, to subject the bill to searching examination.

Conversely, the House itself, in a similar stampede vote, recently rushed through a separate crime bill for the District of Columbia, designed by the administration as a model for the nation. It, too, but in a different way, adds up to an assault on civil liberties. Senate conferees are now holding up its passage, just as the Celler committee is detaining the organized crime bill.

The organized crime bill has 10 provisions in all, five of which have just been disapproved by the ABA.

UNJUST AND UNWISE

Among the most dangerous provisions of the bill are the following: (1) Giving grand juries the power to denounce public officials when there is not sufficient evidence to indict; (2) Permitting grand jury witnesses to be held in jail for up to three years for refusing to testify; (3) Allowing judges to impose prison terms up to 30 years on "dangerous special offenders" on the basis of evidence that might not be admissible in an ordinary criminal trial; (4) Severely limiting a defendant's right to object to the use of evidence admittedly obtained by violating the Constitution, including wire taps, coerced confessions, and illegal searches.

The administration's "model" District of Columbia bill is even more objectionable. It introduces preventive detention, which would allow a judge to lock up a defendant pending trial if he thought (or rather guessed) he might commit another crime in the meantime. It also provides for "no-knock" police entry, which would permit police to break into a house without notice or identification.

Also, a teenager charged with a serious offense would automatically be tried as an adult. Further, a policeman could arrest without warrant any person he believed was about to commit a crime. Finally, a citizen who sues for false arrest must pay for the policeman's attorney, even if the citizen wins the case.

A southern conservative, Sen. Sam Ervin Jr., D-N.C., chairman of the constitutional rights subcommittee, describes the District bill "as full of unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas." It is, he concludes, "a garbage pail of some of the most repressive, near-sighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented."

[From the New York Times, Aug. 17, 1970]

HOME STRETCH FOR CONGRESS

After an exceptonally dilatory session last year, the 91st Congress this year has been reasonably productive. When the House of Representatives recessed Friday for nearly a month, it had acted on a lengthy list of important measures. The Senate remains in session because its prolonged debates over Vietnam, Cambodia and the Carswell nomination to the Supreme Court have used up time which otherwise could have been devoted to ordinary legislative tasks.

A half-dozen major bills have been approved by both houses and signed into law by President Nixon. Prominent among them was the renewal of the Voting Rights Act, which is crucial to the enfranchisement of Negroes in the Deep South. A rider to this bill took the historic step of lowering the voting age to eighteen, but it remains for the courts to determine whether this objective can really be achieved without a constitutional amendment.

The reorganization of the postal service was another historic accomplishment, one on which constitutionality is not in doubt. The ban on cigarette advertising on radio and television, the extension of unemployment compensation and the law tightening control of pollution from oil spills also rank as positive steps. Unfortunately, the farm lobby was once again able to exclude farm laborers from the unemployment compensation system.

Congress yielded too much to reactionaries with unworkable, old-fashioned ideas when it passed the District of Columbia crime law. Its "no knock," preventive detention and mandatory sentence provisions are harmful and regressive. However, several other Administration-sponsored crime bills are languishing in committee, which is where they deserve to stay. Money and ideas, not repressive laws, are needed to combat the difficult problem of increased crime.

The House has acted upon several significant measures which await decision in the Senate. Chief among these is the Administration's far-reaching proposal to reform the welfare system by putting a financial floor under low-income families. Also approved was an increase in Social Security benefits. Both deserve the endorsement of the Senate Finance Committee, which has considered them long enough. Senate action also is needed to move ahead a House-passed constitutional amendment providing for direct election of the President. A go-slow policy is in order, however, for another proposed constitutional amendment. This one "guarantees" equal rights for women, but the potential mousetraps it contains never got any House study before it was whooped through last week.

Despite their more productive record this year, the members of the House frequently betray a lack of self-discipline and self-respect. On Friday the leadership could not scrape up a quorum to act on the bill to regulate campaign television costs. Too many members had decided to begin their vacations a day early.

For most of last week the House dawdled over a bill to reform its own procedures, finally putting off final action until next month. The District of Columbia crime bill was passed after the House District Committee had heard very few witnesses; most Congressmen were absent when the House debated the bill and voted on it. The women's rights amendment languished untouched for nearly half a century, then passed with no committee hearings and only an hour's debate.

Democratic self-government has enough substantive problems to overcome without being weakened by the wayward, arbitrary and irresponsible actions of its elected representatives.

[From the Washington Post, July 9, 1970]

WILL MR. FLANNERY PLEASE CALL MR. MITCHELL

If you are confused now about the "no-knock" provisions of the District of Columbia crime bill which would permit police to break into houses unannounced in certain situations, the following statements ought to straighten it out for you:

Thomas A. Flannery, United States attorney for the District of Columbia, commenting on July 8 about the fact that arrests were made during only 8 of 13 gambling raids: "At each of the 13 locations searched by the FBI, agents were required to and did knock, announce their identity and purpose and give the occupant a reasonable time to answer, as required under present law. On several occasions today, they gained entry only to find pans of indistinguishable water soluble paper and charred remnants of flash paper. *Clearly, if the pending 'no-knock' legislation had been in effect, we would have been saved this evidence."*

Department of Justice, commenting on May 14 about what it called "an apparent misunderstanding" over the "no-knock" provision: "The department's proposal does not expand the current authority of police under existing law to enter private premises without knocking and announcing their identity and purpose before entering . . . Under current law, police are generally required, with or without a warrant, to knock and announce their identity and purpose before executing the search. Our proposal does not change this standard. *Current law recognizes several exceptions to this last rule of knocking and announcing prior to entry for what are called exigent circumstances. These exceptions . . . include . . . the need to prevent destruction of evidence,* particularly contraband and implements of organized crime such as narcotics and gambling equipment."

Who is kidding whom?

[From the Atlanta (Ga.), Constitution, June 23, 1970]

NO STAMPEDE ON CRIME BILL

(By Carl Rowan)

WASHINGTON.—President Nixon has fired a heavy broadside at Congress for not approving his crime control bills. A lot of Americans may buy the insinuation that for partisan political reasons a bunch of Democrats have refused to do anything about murderers, rapists, arsonists, dope peddlers, and the lot.

The truth is that these crime control measures raise some critically important constitutional issues, and a band of gutsy Congressmen refuses to be swept along in a tide of anti-crime fear and hysteria.

Sen. Sam Ervin Jr. (D., N.C.) is no raving liberal, and he has voted with the Republicans on so many matters that he can scarcely be labeled a partisan Democrat. But Ervin as much as any man has labored to prevent the Congress from hastily swallowing a crime "cure" that could turn out to be more devastating than the illness.

Consider some of the items of controversy in those 13 bills that President Nixon is trying to prod Congress into approving.

Attorney General John N. Mitchell has said that "the pre-trial release of potentially dangerous defendants constitute one of the most serious factors in the present crime wave." Thus the Administration wants the courts to be able to detain a defendant for 60 days if his release would present "a clear danger to the community."

Ervin argues that "fundamental to due process of law is the tenet that a man is presumed innocent until proven guilty beyond reasonable doubt . . . preventive detention . . . convicts individuals of probable guilt and dangerousness and sentences them to 60 days imprisonment without trial and conviction of a crime. Such flagrant violation of due process smacks of a police state."

Advocates of preventive detention argue that numerous "hard-core" criminals commit many other serious crimes while on bail awaiting trial.

Ervin cites a Justice Department study showing that only one of every 20 persons accused of a serious crime was rearrested for a similar crime while on bail. Ervin argues that the Administration proposal would keep 19 nondangerous persons in jail in order to hold a single dangerous one.

Even more disturbing to some congressmen is the proposed crime bill for the District of Columbia that Mitchell has called a "model anticrime program" that will "point the way for the entire nation."

Even more disturbing to some congressmen * * * unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas."

This bill would grant law enforcement officers broad powers for electronic surveillance, even to the point of eavesdropping on such traditionally privileged conversations as between a priest and a penitent, a lawyer and his client, or a doctor and his patient.

During a search, a policeman could seize any items he believes to be stolen, illegal, used in a crime, or useful in identifying a crime or a criminal—even though such items are not mentioned in his search warrant.

Opponents say the Fourth Amendment is violated by these broad police powers of search, seizure, and wiretapping, and by a bitterly controversial "no-knock" provision.

Mitchell's predecessor, Ramsey Clark, has been a vocal critic of those pushing the new anti-crime legislation. He says "they would violate basic principles, sacrificing liberty on the altar of fear. Safety cannot be purchased at the price of freedom. When one is lost, both are lost. It is not freedom that causes crime."

A lot of senators and representatives are pretty sure that Clark is right, so they drag their heels on the legislation Mr. Nixon is now fighting for—and could make a campaign issue.

But these same congressmen suspect that the public wants the new "tough" anti-crime laws, whatever the risks to individual liberty. So sooner or later the President will probably get his legislation. And the Supreme Court will get some Constitutional challenges.

[From the Washington Post, June 21, 1970]

CRIME CONTROL: A CASE HISTORY OF WHAT IS WRONG

"A Washington policeman shot and killed a fleeing robbery suspect at New Jersey Avenue and K Street NW," the story on Friday's front page began, adding that the officer had himself been shot twice by the suspect, according to the police. That was all that could be said in one paragraph, in a straightforward news account, and it is not until you examine the background of the dead man that the event becomes something more than a shoot-out between a policeman and a suspect—becomes, in fact, almost a model of what is wrong about our system of crime control. For the fact is that Franklin E. Moyler was more than a "suspect"; he was, from all the evidence, a hardened criminal, at liberty on a very small bond and awaiting trial for two previous offenses involving use of a dangerous weapon. In 1965 he was found guilty of robbery and assault on an officer and was imprisoned for nearly two years. After his release, he was charged with assault on several occasions. Last January he was accused of four offenses including assault with a dangerous weapon, but succeeded in regaining freedom when he put up one-tenth of a $1,500 bond in cash. On June 1 he was arrested again on charges of robbery and carrying a dangerous weapon, and this time

a bonding company put up the $2,000 required for his release.

This is a record which calls into question almost every aspect of our approach to crime and criminals and criminal suspects—the efficacy of correctional institutions and of rehabilitation programs for convicted criminals; the speed, or shocking lack of it, with which accused persons are brought to justice; and, finally, the hard question of how to protect the public from people with demonstrably dangerous criminal tendencies who are set free for prolonged periods while awaiting trial. It is impossible to say precisely what might have been done to rehabilitate Moyler over the past five years even if the most advanced techniques had been available—except that it would have been worth a try. It is also impossible to know what would have been the judgment if he had been brought speedily to trial; he might well have been found innocent of the several crimes of which he stood accused, and released each time. What seems inescapable, however, is that he would not have been at New Jersey Avenue and K Street NW last Thursday with a gun at hand, as the police say he was, if he had been detained or even subjected to close and continuing supervision after his arrest on June 1 and until he could be tried—under a greatly accelerated and reformed judicial process. And some such precaution for the sake of public security would have been justified by the known facts in this case, in our view. The record suggested a pattern of criminal activity involving acute dangers to the community. The bail agency was apparently concerned about that risk. It recommended that he be required to get a job in January, and that he be placed in someone else's custody in June, but the judge ignored both conditions of release.

The chief difficulty with the present law is that it makes no allowance for restraints designed to protect the community, except in capital cases. The conditions of release specified in the act are supposed to be used only for the purpose of assuring the appearance of the defendant at the time of his trial. We think judges should also have discretion to use conditional release and monetary bail where necessary to protect the community and that in some cases, involving extraordinary risks, preventive detention for a limited period would be the lesser of two evils. If preventive detention had been used in this case, it might have saved the life of the accused and prevented suffering and danger of death for a conscientious policeman.

Unfortunately, the Department of Justice has sought to cast too broad a net. In some wide categories of cases it would allow preventive detention to become the rule rather than the exception carefully tailored to defendants with records of violence, bail-jumping or other conduct that may menace the public. The District crime bill now in conference between the Senate and House ought to be revised so that it would give the courts new resources in dealing with known criminals of Moyler's type, without making detention before trial almost a general rule in serious cases.

[From the Washington Post, June 13, 1970]

WORDS FROM THE WISE ABOUT CRIME CONTROL

There are two reasons why the House-Senate conferees considering the District crime bills ought to give thoughtful attention to a statement on the subject issued Monday by 20 former federal prosecutors. One reason is that the statement affords an extraordinarily lucid, reasoned and compelling analysis of the bills; the opinions expressed are carefully supported by logic and experience. The second reason is that the signers of the statement are peculiarly qualified to judge the practical effect of these bills. "None of us," their analysis declares with justifiable confidence, "considers himself 'soft on crime' or a 'bleeding heart.' As members of the United States Attorney's Office we committed ourselves to the goal of effective law enforcement. We remain committed to that goal. We also believe that this community should not be subjected to measures of doubtful constitutionality, questionable necessity, and demonstrable ineffectiveness."

The statement has no fault to find with the judicial reorganization features of the crime bills. It focuses attention, however, on novel punitive and investigative provisions, particularly in the House version, which disregard the lessons and the high standards of American justice. The fundamental vice of the House approach to the crime problem lies in its apparent supposition that abandonment of civil liberty is the path to police effectiveness and that ruthlessness rather than rehabilitation is the best way to deal with criminals, even when they are no more than children.

The statement by the former prosecutors deals in detail with criminal procedure provisions of the House bill which they call "constitutionally dubious," observing that "it is no service to law enforcement to subject criminal convictions to certain constitutional attack and endless litigation." In this connection, the prosecutors cite the authorization in the House bill of appeal by the prosecution from trial rulings—and even after an acquittal of a defendant—the placing of the burden of proof on the defendant with respect to the issue of insanity, and the so-called "no-knock" provisions of the House bill. In connection with "no-knock," they point out that, apart from constitutional considerations, "it is no benefit to law enforcement officers to expose them unnecessarily to greater risks of resistance or attack by citizens."

The House bill contains a feature as absurd as it is mischievous—a provision that in any civil suit against a police officer for wrongful arrest, the court must order the plaintiff—even if he wins the case—to pay the defendant an attorney's fee." Comment from the former prosecutors: "We have never heard of such a requirement anywhere in the English-speaking world. This provision is obviously designed to deter the bringing of such lawsuits, whether they are meritorious or not."

The statement demolishes the provisions of the bills for pitiless sentencing of offenders. "Mandatory sentencing provisions," it notes, "are contrary to experience in penology and are likely to be counter-productive from the standpoint of law enforcement and corrections . . . deprive trial judges of discretion to make punishment fit the crime and the criminal . . . discourage guilty pleas and force more defendants to take their chances at trial, even though they actually are guilty . . . create serious disciplinary problems for our prison authorities"

But perhaps the ugliest features of the House bill concern the treatment of juvenile offenders. These, the prosecutors say, "would give the District of Columbia one of the most backward juvenile codes in the United States." To consign youngsters of no more than 15 to adult courts, to deny them the right of trial by jury when they are in Juvenile Court and to deprive them of important procedural protections which they would be entitled to as adults, and finally to commit kids recklessly to adult penal institutions is simply to substitute terror for justice and brutality of compassion.

The former prosecutors who prepared this analysis of the crime bills have rendered an invaluable service to the community. It is not too late for Congress to heed their solemn and earnest warning. The capital needs to give the country a model of skillful strategy in the attack on crime, not a model of a retreat to irrationality.

[From the New York Times, July 27, 1970]

NO SHORTCUT

President Nixon now has before him the omnibus District of Columbia crime bill. By reorganizing and expanding the courts, reforming the coroner's office and rationalizing many procedures, this measure should achieve a substantial improvement in the administration of justice in the nation's capital.

But the bill is impaired, and in our view fatally so, by several meretricious provisions. These defects occur in different parts of the bill, but they derive from a common mistaken premise that shortcuts are possible in coping effectively with the complex problem of crime.

The "no knock" provision enables a police officer with a warrant to enter a home or office without knocking or identifying himself if he believes that evidence may be destroyed. It is intended to prevent gamblers and drug dealers from disposing of betting slips or narcotics during police raids. Yet it is worded so broadly as to jeopardize any citizen's protection against arbitrary police intrusions. Does anyone seriously believe that gambling or drug addiction will be reduced by enabling the police to take this shortcut?

Similarly, the "preventive detention" of criminal suspects for up to sixty days to some extent merely regularizes an existing procedure by which judges have kept some defendants incarcerated by setting high bail. But, as Senator Ervin of North Carolina pointed out in his admirable fight against the bill, preventive detention is a practice reeking of the police state. In other societies, it has never suppressed crime but it has often helped stamp out liberty.

Life sentences for those who commit three or more felonies is a panacea that runs counter to everything that progressive penology has learned about managing prison inmates. A mandatory five-year sentence for a second offense involving the use of a firearm is the shortcut of a Congress and an Administration unwilling to confront the gun lobby. The wide expansion of the Police Department's authority to tap telephones to cover virtually every kind of criminal activity is another illusory shortcut.

Crime has many tangled roots. To treat any one of them requires large sums of money, but society cannot expect impressive progress against crime until it is prepared to invest that money. It is doubtful that the Administration and the Congress are prepared to provide sufficient money even to carry out all the reforms set forth in the better sections of this bill.

Let no one suppose that the mandatory sentences, dragnet wiretapping, preventive detention and "no knock" authority will measurably diminish crime. Those shortcuts which the Supreme Court does not seal off as unconstitutional, experience will show, lead only to a *cul-de-sac*.

[From the Detroit (Mich.) Free Press, July 19, 1970]

AS WE SEE IT: DISTRICT OF COLUMBIA CRIME BILL ASSAILS FREEDOM AND INTELLIGENCE

The administration's bill to combat crime in the District of Columbia is so chilling in its implications that it is incredible that it has advanced so close to passage. Though it is an unvarnished assault on basic American freedoms, it has passed the House and is moving toward approval in the Senate.

The bill includes (1) a provision that permits an accused person to be jailed for up to 60 days before his trial if his record shows in the opinion of a judge, that he would be a crime risk during the pretrial period; (2) a broadening of the wiretapping practices of government; and (3) an extension of the au-

thority of policemen to enter a house without knocking or identifying themselves.

Sen. Sam Ervin, a North Carolina Democrat and a conservative, has had the forensic last word on the bill: "This . . . is as full of unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas . . . a garbage pail of some of the most repressive, nearsighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented . . . an affront to constitutional principles and to the intelligence of the people of the United States."

Never mind the splendid hyperboles. Sen. Ervin makes his point. The bill ought to make any thoughtful American even more purple with rage than the acts of violence and crime that have made members of Congress so willing to restrict our liberties. This, indeed, is a bill to shout down from the house tops.

Are we so frightened of crime that we are willing to sacrifice the sanctity of our home to a policeman's suspicions? Do we really care so little for the privacy of conversations that we are willing to see the tapping of telephones extended? Do we really mean to give a judge the right to slap a man with a previous criminal record into jail without trial if he is considered "dangerous?"

These are questions that must be asked, and they are not academic for any of us. No American can afford to assume that such laws will be used only against clearly definable "criminal types" and not against him. Who is dangerous and who is not? Will a conservative Washington homeowner, for instance, be classed as dangerous and therefore subject to the kinds of police activities being authorized for the district? Will someone who wears his hair long?

We had always felt that the idea of the sanctity of the home would protect Americans from inordinate invasions of privacy. From colonial days we have resisted the nosy intrusions of government into our lives. We have looked on with horror at the reality and later the movie depictions of the invasions by the state into homes in Nazi Germany.

Yet here is the Congress of the United States, urged on by the attorney general and the President, about to pass a bill that is straight out of 1930 Germany. True, it only affects the crime-ridden District of Columbia. But the pattern is spreading.

Somehow it must be stopped, in Congress or in the courts. Surely we cannot approach our 200th anniversary—celebrating Mr. Jefferson and his conferees and the freedom they proclaimed—in such a spirit of repression. It is too much.

[From the New York (N.Y.) Post, July 29, 1970]

SMOG OVER CRIME

(By James A. Wechsler)

It is a time of fraud; even those cornflakes a man has been eating for so many thousands of breakfasts turn out to be nutritionally suspect. The "Southern strategy" that did not exist, as we were told so often, is now said to be under reappraisal; the recession that never was—according to official accounts—is now described as gently receding.

Now comes the great deception of the District of Columbia's "anticrime" bill, packaged as an answer to your lonely anxieties on dimly-lit streets and in unguarded homes, the dawn of a new age in which the lawless will at last concede that their number is up, a model for all states where "coddling" is allegedly the basic sin.

It was widely noted at the time of Senate and House approval of the bill that legislators facing reelection this fall generally suppressed their doubts about the Constitutionality—and rationality—of key provisions in the measure. They were apparently persuaded that a negative vote would be as hazardous as a condemnation of motherhood (or, in 1970, sisterhood). Those who had the courage to say nay were too few, but they were a distinguished company.

The crucial point—substantively and symbolically—in the Mitchell program is the concept of "preventive detention." Obviously it represents a total reversal of the doctrine of the presumption of innocence that differentiates free societies from despotism. Under this provision a defendant may be jailed without bail for up to 60 days if a judge concludes, after a hearing, that he "might" commit a crime if released.

Perhaps it is old-fashioned to object—as such conservatives as Sen. Ervin of North Carolina did—that this procedure would expose innocents to capricious interment (and even thereby transform some of the aggrieved into hostile outcasts). But even if that consideration is deemed "ritualistic," an epithet now recklessly applied to those who retain a reverence for the Bill of Rights, the detention gambit is a mindless monstrosity in the light—or darkness—of the stifling congestion of both our courts and our jails. The result of the "preventive" procedure must inevitably be a multiplication of chaos in both courts and prisons.

One of those Congressmen facing reelection who dared to vote against the Mitchell formula is Rep. Allard Lowenstein. His opponent in Nassau's Fifth District—State Sen. Norman F. Lent—has predictably accused Lowenstein of "softness" toward criminals and apathy about "the rights of helpless citizens." No doubt others who stood with Lowenstein against the rampage of unreason will be exposed to similar frenzy. As Sen. Ervin warned: "I hear the siren voice of that old devil, political expediency, whisper in my ear: 'You better vote for the D.C. bill because it's a law-and-order bill.' It's not politically sagacious, not politically wise, to vote against a law-and-order bill."

Lowenstein's vote has enhanced the national importance of his fight. Conceivably his constituency will be sufficiently sensitive and sophisticated to discern the "anti-crime" fakery and folly that thickens the oppressive summer smog.

Other controversial provisions include the "no-knock" authorization permitting police searches without warrant or identification if their is "reason to believe" that evidence inside a home may be destroyed. New York already has such a law; it seems to have had no large-scale consequences, possibly because district attorneys in this area are not prone to abuse the power. Its enactment has ugly overtones, however, for black citizens in regions where there are long histories of unrestrained police intrusion.

The saddest fact is that the move is being advertised as a significant secret weapon against crime. It isn't And it is a surrender to the delusion that the use of ancient totalitarian forms can provide serenity and security.

What is really at stake in these arguments is the issue of whether the country will once again turn away from the search for serious, costly solutions by accepting cheap, demagogic answers. That is the gap between Mitchell and his predecessor, Ramsey Clark, whom Mitchell once reproached for an undue concern with the "sociology" of crime rather than the punishment of criminals.

That happens to be the heart of the matter. Desperate drug-addicts will not suddenly abandon crime when they learn that they may be subject to "preventive detention"—nor will they emerge from prison as constructive, cheerful citizens as long as there are no massive treatment and rehabilitation programs. Parents who see drugs peddled to their kids on the streets—while cops look the other way—will derive no solace from the news that the laws are being "toughened." The rate of recidivism that disgraces our jammed, obsolete prison system will not be improved by the prospect of additional crowding.

These are not new propositions, but they remain the valid ones, and they are being obscured by the extravagant deceptions heralding the code of the primitives. We are in danger of succumbing to the madness that there is a simple, positive ratio between public safety and the overpopulation of squalid jails.

[From the Grand Rapids (Mich.) Press, Aug. 1, 1970]

CRIME AND THE CONSTITUTION

One of our readers missed entirely the point of our recent editorial, "Scrapping the Constitution," which discussed the crime-control Bill Congress has passed for the District of Columbia and President Nixon now has signed into law. This is the measure that would permit police officers to enter a home without knocking if they thought something illegal was going on behind the door and also would permit judges to keep accused persons in jail if, in the judges' opinions, they might commit other crimes if released on bail.

The point of our editorial, as the head indicated, was that the provisions of the bill probably are unconstitutional. The Senate's two leading authorities on constitutional law—Sens. John Stennis and Sam Ervin—both listed several sections they believed to be unconstitutional. Many other authorities on the Constitution made similar observations before the bill was passed. Kent County's prosecuting attorney, James K. Miller, who has as much reason as anyone to applaud so-called new weapons for battling crime, has said that he thinks provisions of the bill are unconstitutional.

Our reader, who did not sign his name, mailed us a copy of the editorial with this comment written in the margin: "Just maybe you are not reading sentiment of public—all citizens have right to walk and drive streets unmolested, which cannot do now . . ."

Obviously our reader is not concerned with observing the niceties of constitutional law. He is disregarding entirely the fact that the Constitution protects his basic rights and that if as a nation we choose to whittle away someone else's rights we shall undermine our own. At the end of that road lie the police state and dictatorship.

Crime is a serious matter in this country and The Press has said so many times. It also has lent its support to every constitutional effort made to halt the rise in crime. It would be easy to suspend the Constitution to get at the criminals. But any person who values his freedom—his right to free speech, to assemble peacefully, to fair and prompt trial before a jury, to elect officials of his own choosing—would find the price unbearable.

Resorting to unconstitutional means to combat crime would be a confession of complete failure and a total loss of faith in the Constitution. We can't believe that our correspondent is ready to admit that the American people no longer are fit to live under constitutional law.

[From the Washington Post, July 23, 1970]

HOW HIGH A PRICE FOR A CRIME BILL

Ever since the administration unveiled its anticrime program for the District of Columbia more than a year ago, it has been clear that the cost of getting the right tools for the job would be high. The things that the District needs most—court reorganization, juvenile law reform, a working bail system, a public defender—were tied then and are tied now to a host of piggy-back riders which either conflict with enlightened thinking on crime control or infringe upon fundamental civil liberties. The question before the Senate today as it votes on the grab-

bag crime bill is whether its worst features are not too heavy a price to pay for the necessary and useful tools it also contains.

In our judgment, the toll exacted against individual rights and modern penology by the bill as it now stands is too great for the Senate to accept without a fight. A Senate that really wants to do something about crime will defeat the conference report, adopt the cleaned-up versions of the least controversial aspects of that report, get to work immediately on the most controversial matters, and put the burden back on the House of Representatives for responsible, effective crime control legislation.

The trouble with the crime bill as it emerged from conference rests not in its major provisions, most of which are admirable, but in the jokers, the pet theories, tossed in by the Department of Justice and the House District Committee. Senator Tydings labored mightily in conference to strip those jokers out and in many instances he was successful. But he fell short of the goal. In exchange for things they desperately need in the fight against crime, the residents of the District are required by this bill to diminish their individual privacy, the sanctity of their homes, the safeguards provided for their children, and the flexibility allowed their judges in trying to reform their criminals.

If this were the only impact of this legislation, the Senate might be able to hold its nose and send the bill along to the President. After all, it would only affect 800,000 or so people who are plagued with crime and why should they mind a few infringements on their rights and a few misguided provisions? But that is not the only consideration involved in this bill. Those members of Congress who normally shuck their responsibilities as legislature for this city because District bills don't matter back home ought to realize that this bill does matter back home. When the administration first proposed this legislation, it hailed its work as a model for the nation. And if Congress now blesses this particular form of preventive detention, this broad scale authorization of wiretapping, this curtailment of juvenile court, this use of mandatory sentences, and this no-knock provision, it is encouraging state legislatures to follow its lead. In that sense, a vote to apply these provisions in the so-called showcase capital is a vote to apply them sooner or later, in Phoenix and Tallahassee, in Keokuk and Kalamazoo.

What, then, is wrong with this bill? Let us begin with its handling of juveniles. Quite properly, the bill makes it easier for 15, 16 and 17-year-olds to be handled as adults, requiring principally that the juvenile judge determine that there is no reasonable prospect of rehabilitating them in specialized juvenile facilities before turning them over to adult courts. But the bill disregards this standard for *every* 16- and 17-year-old charged with first-degree murder, rape, first degree burgarly, armed robbery, or assault to commit those crimes. They are, the bill says, adults, regardless of their prior records, their chances for rehabilitation if handled as juveniles, or their mental condition. Their classmates, if charged with second degree murder, second degree burglary, unarmed robbery, or plain assault, are not adults. Is this equal justice? Is it even-handed application of the principle that juveniles ought to be given the best possible, not the worst possible, chance for rehabilitation? Of course not. (This kind of provision conflicts with the federal government's own model juvenile act, the Uniform Juvenile Court Act, most state laws, the recommendations of the D.C. Crime Commission, the District government and the Department of Public Welfare.)

That is just one example. There are others. The bill holds out to juveniles the promise of speedy proceedings and does little to ensure them. It takes away a juvenile's right to a jury trial. It authorizes preventive detention for juveniles not only when the judge decides the child needs it but unless the judge specifically decides the child does not need it. It lowers the standard of proof needed to find a child "neglected" or "in need of supervision," thus making it easier to take these non-crime-committing children into custody.

We will touch only briefly on other parts of this legislation.

Wiretapping: This bill authorizes taps not only in limited fields like national security and organized crime but also when a person is believed to have committed arson, blackmail, bribery, burglary, destruction of property, gambling, grand larceny, kidnaping, murder, obstruction of justice, receiving stolen property, robbery, extortion, or drug law violations.

Mandatory prison terms: In the face of recommendations to the contrary by the National Crime Commission, the American Bar Association, the American Law Institute and a tentative new code of federal criminal laws, this bill imposes mandatory prison terms in certain instances.

Recidivists: This bill shortcuts, perhaps unconstitutionally, the procedures used in most states which have such statutes for use against three-time offenders.

Searches: The difference between the interpretations placed on the "no-knock" provision of this bill in the House debate and the Senate debate is so great that it is hard to believe anyone knows what it means.

Preventive detention: We think a bill to permit some form of detention or closer supervision of dangerous suspects in certain situations can be written. But this is not it; the language is too broad and the possibilities for abuse too great.

These, then, are some of the reasons why we believe the costs of this particular crime bill outweigh the benefits it would bestow. They are sufficient for the Senate to be justified in defeating the conference report and following the course urged by Senator Ervin. The proponents of this bill argue that if it is killed there will be no District crime bill this year. But this need not be so. Faced with a cleaned-up version of its own legislation, the House would have to decide whether it wants a decent crime bill or a campaign issue. And the administration would be faced with the same choice.

It is hard, of course, for a senator to vote against an anti-crime bill just now. The voters are eager for action and such a vote is subject to easy demagogic attack and gross misinterpretation. But the solution is simple in legislative terms and the principles are clear. The costs of this particular anticrime bill are too high—too high in terms of backward-looking penology, too high in terms of individual freedom.

JULY 25, 1970.

DEAR SENATOR ERVIN: I wanted to express my thanks to you for the fine fight you waged against the repressive measures contained in the D.C. crime bill. It is elected officials such as yourself and your fellow allies that keep my faith in government. I know you will continue to wage such attacks.

Sincerely,

VIRGINIA PHILLIPS.

KINGSTON, N.Y.

PASADENA, CALIF.,
July 23, 1970.

DEAR SIR: I should like to thank you for your vote against the Nixon Administration's crime control bill.

Altho it applies to only the District of Columbia at present there is grave danger that law enforcement agencies over the nation will adopt the same measures.

They seem to think the way to control crime is to trample on the rights of all people which only leads to more resentment and bitterness and thus works directly against what they are trying to accomplish.

With our liberties being curtailed more and more we are fast becoming a police state and if that happens, its the finish of our country.

Again with sincere thanks for your vote, I am

Yours truly,

MARIAN M. STRASSER.

JUNE 16, 1970.

DEAR SENATOR ERVIN: My husband, a Virginia attorney who practices in the District of Columbia, and I support your defense of the constitutional right of individuals to remain free on bond while awaiting trial that is currently questioned in the D.C. crime bill.

It seems to me that legislation to increase the number of judges and generally create an atmosphere in which those accused would enjoy their right to a speedy trial is the proper answer.

It is good to see a southern statesman champion this constitutional right. The unconstitutional preventive detention section carries with it racial overtones as it would most directly affect the mainly black District population.

Sincerely,

SHEILAH C. PERRIN.

ANNANDALE, VA.

JULY 30, 1970.

DEAR SENATOR ERVIN: I have just watched you on the Today Show. I have been saying for sometime too many people have forgotten we are all innocent until proven guilty beyond a reasonable doubt. In our zeal to control crime we forget this basic principle. I am glad to know some of our Senators can still understand that some guilty may go free but in this country the innocent may never be imprisoned. Thank you for your efforts for a free America.

Yours truly,

MRS. GRACE B. ANDERSON.

CHESTERTON, IND.

JULY 16, 1970.

DEAR SENATOR ERVIN: This is just to wish you well in your leadership of the opposition to some of the provisions of the District of Columbia anticrime bill. I know this has been a long-standing concern on your part, and it is very cheering to know you are there to speak up for the way individual persons should be treated by law enforcement authorities. You are striking a timely blow for human rights.

Thank you, and the best of wishes in the battle.

Sincerely,

WILLIAM A. CHRISTIAN.

HAMDEN, CONN.

JULY 30, 1970.

DEAR SENATOR ERVIN: Fortunately, I was listening to the Today program this morning and found your attitude toward the D.C. Anti-Crime bill to be one of enlightenment and fairness. I would regret to see one evil substituted for another, and, while most of us recognize the need to fight crime, I don't agree with this approach.

In any day, and particularly at this time, it is refreshing to find a leader willing to take a possible unpopular position with his constituents to stand for what he believes in. I salute you and wish you success.

Sincerely yours,

GEORGE W. FAIRFIELD.

RICHMOND, VA.

SWEET SPRINGS, MD.,
July 24, 1970.

DEAR SENATOR: Congratulations on your stand for American rights as they are being threatened in the D.C. anti-crime bill. Time

will prove your stand but the fight now is difficult. We appreciate your courage.

Dr. HELEN H. LONG.

JULY 24, 1970.

DEAR SENATOR ERVIN: As a former Southerner, now a Westerner, I want to thank you for your efforts to oppose hysteria and extremism in law enforcement methods and the abandonment of U.S. traditional rights and protections of individuals.

Sincerely,

P. HARTUNG.

TUCSON, ARIZ.

JULY 24, 1970.

DEAR SENATOR ERVIN: Thank you for your vote against the D.C. crime bill with its dangerous "no-knock" and preventive detention provisions. Even though it has been passed into law your opposition has made an impact and possibly these features will be reexamined.

Sincerely yours,

JO ANN G. WEST.

CHAPEL HILL, N.C.

JULY 30, 1970.

DEAR SENATOR ERVIN: You did well in leading Senate fight against D.C. Crime Bill. We strongly support your stand on this issue. Keep at your pursual of the enforcement of the Bill of Rights.

Dr. and Mrs. H. D. HIBBARD.

CARRBORO, N.C.

JUNE 18, 1970.

DEAR SIR: I strongly support your stand *against* the repressive anti-crime bill proposed for the District of Columbia.

Sincerely,

Mrs. C. E. JOHNSON.

HONOLULU, HAWAII.

JULY 27, 1970.

DEAR SENATOR ERVIN. I want you to know that I wholeheartedly support your fight against the unconstitutional provisions of the D.C. crime bill. You should take your position to the country.

Sincerely,

RODNEY C. BRYANT.

WOODBURY, TENN.

JULY 24, 1970.

DEAR SENATOR ERVIN: I appreciate and approve your stand against "no-knock" police entry and preventive detention and hope you succeed in your effort to prevent passage of the legislation in question.

Sincerely yours,

HELEN LAMDAN.

CHICAGO, ILL.

JULY 29, 1970.

DEAR SENATOR ERVIN: Thank you for your attempt at upholding the Constitution by your efforts to defeat the D.C. crime bill. I'm sure the Supreme Court will agree with you; I only hope it happens soon enough to prevent much injustice.

Sincerely,

JOHN BRODERICK.

CHARLOTTESVILLE, VA.

JULY 19, 1970.

DEAR SENATOR ERVIN: I wish to express support and thanks for your efforts to block the D.C. crime bill as presently constituted. The "preventive detention" section is especially dangerous to a democratic society. Keep up the good fight!

Sincerely yours,

DR. NANCY T. CLOSBY.

CORAL GABLES, FLA.

JULY 28, 1970.

DEAR SENATOR ERVIN: As an old time but many time transplanted Tar Heel (Hertford) let me applaud your fight against the D.C. crime bill and decry its passage. I admire your courage and trust that this action by your peers will in no way diminish your continued efforts against deprivation of civil liberty. I certainly share your feelings concerning the horror of increasing crime but agree that the recent crime bill is not the way to go. Keep up the good work. Many of us average folks share your views.

Sincerely,

ARTHUR R. WOODS.

COPPERAS COVE, TEX.

JULY 30, 1970.

DEAR SENATOR ERVIN: I have been extremely concerned over the D.C. crime bill and its extension to the rest of the country. Though I am not a constituent of yours, I appreciate your efforts to oppose this bill and sincerely hope you will continue to oppose it. I sincerely appreciate your efforts to protect all U.S. citizens against this infringement and threat to our basic rights as guaranteed by the U.S. Constitution.

Thank you again. I hope your efforts are successful and that more Senators and Congressmen follow your example.

Sincerely,

CHRISTINE A. REIS.

SEGREGANSETT, MASS.

JULY 30, 1970.

DEAR SENATOR ERVIN: I approve of your stand against the President's no-knock, preventive detention bill.

While our boys fight for freedom, our President recommends the erosion of our freedoms.

Why is there no movement to stop crime by getting at the causes? All of the President's emphasis is to lock the door after the horse is stolen. Has he no real compassion or knowledge of the real ways to prevent crime?

Sincerely,

FORREST D. COMFORT.

LAKE WALES, FLA.

DURHAM, N.C.,
July 16, 1970.

DEAR SENATOR ERVIN: We want you to know that we are in agreement with you in your criticism of the Nixon Anti-Crime Bill particularly in the sections giving the police and Federal Agents "no-knock" powers and in giving the judges too liberal preventive detention powers. This is a move towards an authoritarian police state such as the Fascists had and the Communists still have.

We believe in spending money to obtain and thoroughly train a greater number of local law enforcement officers such as the county and city officers. After serving on a jury recently we do believe that more judges and more courts are needed to speed up law enforcement. Prompt arrest and a speedy trial has the best deterring effect on the criminal.

The war and the resulting inflation and the recent unemployment are some of the root causes of increased criminal activity. These causes have to be attacked also.

Just passing "tough laws" will not solve these problems.

Sincerely yours,

ALDEN W. SWIFT.
MARIE J. SWIFT.

FORT WORTH, TEX.,
July 30, 1970.

DEAR SIR: Over a number of years I have had occasions to differ with your political decisions on certain bills. I do want to say now that I appreciate very much the strong fight you are putting up in Washington against the undermining of certain basic constitutional rights that appear to me to be in jeopardy.

I agree with you that more and more inroads are being made on the individual liberties of people somehow with the hope that these short cuts will prevent crime and further increase the security of our nation. Both of these, as you so well put, are improper assumptions and may well destroy that which they seek to preserve.

Very truly yours,

N. H. KURKO.

JUNE 18, 1970.

DEAR SENATOR ERVIN: My heartfelt thanks! For your fight against S. 2600 and I know your continued efforts will be always directed against similar legislation. Again thanks.

Sincerely,

GEORGE A. MOELLER.

BALTIMORE, MD.

MERION STATION, PA.
July 20, 1970.

DEAR SENATOR ERVIN: Although I am not a constituent of yours, I wish to commend you on your vigorous opposition to the Administration's Omnibus Crime Bill. The tyranny of a police state usually follows what appears to be a legitimate desire for law and order.

Very truly yours,

BARRY E. UNGAR.

JULY 24, 1970.

DEAR SENATOR ERVIN: As residents of the District of Columbia, we would like to thank you for your wholehearted, if unsuccessful attempt to defeat the recently approved Crime Bill. There seems to be no doubt that the measure will now become law.

We have only recently moved here from the South and it did not take us long to realize that great steps need to be taken toward curbing the incredible crime rate in the District. We share your reservation, however, concerning such a vast increase of police power. We simply find it hard to believe that the legislature of any State would pass the Crime Bill.

Among the many methods by which liberty errodes, that by due process of law is the saddest, even if it is the slowest, because one can see inevitably what it leads to.

Thanking you again for your stand on this issue, we remain, sincerely,

JEANETTE ALFORD,
TERRY ALFORD, Ph. D.

WASHINGTON, D.C.

ALEXANDRIA, VA.,
July 23, 1970.

DEAR SENATOR ERVIN: I seldom write letters of agreement or disagreement; however, I feel impelled to let you know that I agree wholeheartedly with your stand on the Crime Bill just passed in the Senate.

I think it is not enough to vote against the bill, but a bill should be presented as an alternative. Since it is an accepted fact by all responsible citizens, that crime is rampant in the District of Columbia, as in many other parts of the country, a very drastic approach to the problem should be taken to stop the spread of this disease in our society.

It seems to me, as has been stated by many others, that the best deterrent to crime would be a swift trial. Could not an emergency court be set up for a short period of time to take care of current offenses immediately? A period of swift punishment might show a reduction in crime. If no change were evident, the process of immediate trial and sentence could be taken as of no value. At least it would be worth a trial.

Thanking you, I remain a former resident of North Carolina now residing in Virginia.

Very truly yours,

RUBY L. HARE.

JULY 18, 1970.

DEAR SENATOR ERVIN: I wish we had a few more Sam Ervin's in the Senate.

On the controversial issues of the Washington, D.C., crime bill, I couldn't agree with you more. If the legislation passes we will be in for many problems ahead.

Our Constitution is as important to me

as the Ten Commandments and I don't know why the Nixon Administration thinks they can whittle away our Bill of Rights so easily.

Just "hang-in-there" and guard Our Constitution.

The freedom-loving Americans appreciate your efforts.

Sincerely yours,

Mrs. R. F. SCHINDELE.

ANNANDALE, VA.

SEVERNA PARK, MD.,
July 26, 1970.

Hon. SENATOR ERVIN: Though not a constituent of yours, nor even in agreement with you on most issues, I nevertheless had to write you to express my deep gratitude to you for your singlehanded efforts in protecting and watching over my civil liberties and those of my fellow citizens. I have long admired you for this and have never taken the time to tell you so before.

In the light of the recent events, however, I felt the time had come to do so. I deeply grieve the passing of the D.C. Crime bill, but grateful to you in your attempt to prevent its passage.

I hope you will continue in your work. May you enjoy a long and fruitful life and may your constituents continue to return you to your office. This country needs more men like you in office.

Sincerely,

Mrs. SELMA GOLDBERG.

GLENCOE, ILL.,
July 20, 1970.

MY DEAR SENATOR ERVIN: We congratulate you on your fight against the "no-knock" crime bill. You are right . . . these are indeed the blueprints for a police state, under the clever, convenient guise of fighting crime. Don't let them get away with it. Don't let the Justice Department eviscerate our precious freedoms. Don't let this repressive administration set such an example to our people, and indeed to the world. If a man's home is truly no longer his castle, then what have we left?

Other than writing letters, tell me what I can do.

Yours fervently,

Mrs. JOHN CHILDE.

PITTSBURGH, PA.,
July 19, 1970.

DEAR SENATOR ERVIN: We wish to thank and commend you and encourage you in your fine work in fighting the Omnibus Crime Bill for the District of Columbia in its House-passed version. We as civil libertarians are horrified that our Congress is contemplating making into law "preventive detention" and the "no-knock entry" clause. These are strong beginnings of a police state. You have our support in fighting this bad legislation.

Mr. and Mrs. ROBERT K. SAYRE.

ANNANDALE, VA.,
July 23, 1970.

SIR: Thank you for your efforts to point out to your colleagues the weaknesses in the D.C. Crime Bill. It is heartening to see an individual who will put himself on the line in order to achieve a long range goal. Your concern for the rights of all people and your efforts to protect those rights through democratic means seems to me an example of the "American way of life."

Very truly yours,

LAURA I. MCDOWALL.

VIENNA, VA.,
July 25, 1970.

DEAR SENATOR ERVIN: I am writing to commend and thank you for your stalwart and eloquent defense of the Bill of Rights against the repression of the so-called D.C. Crime Bill. It is a sad day when the Congress of the United States elects to abridge some of our most cherished liberties. Your stand will remain a bright chapter in the history of the Senate long after the outrages of this legislation have, hopefully, passed into deserved obscurity.

As an active member of the American Civil Liberties Union, my work now seems cut out for me. My hope is that I may approach my task with even a portion of the dedication and zeal with which you have approached yours.

May your voice remain strong in behalf of those individual freedoms which are now so imperiled from many quarters.

Sincerely yours,

ROBERT LOWERRE.

CINCINNATI, OHIO,
June 22, 1970.

DEAR SENATOR ERVIN: I applaud you in your efforts to oppose certain features of President Nixon's crime bill. I agree with you that such provisions as preventive detention and the "no knock" policy are dangerous and unconstitutional. May you continue in your efforts to defend the principles on which our government was based against mounting pressures from all sides.

Sincerely yours,

GREG SALTZMAN.

JULY 16, 1970.

DEAR SENATOR ERVIN: I'm just writing this note to let you know that you have my wholehearted support in your opposition to the pretrial and no-knock provisions in the D.C. crime bill. I think that even though the bill has several progressive measures providing for D.C. court reorganization *that should come into being,* they should *not* be brought into existence at the expense of rights (such as trial before decision of innocence or guilt) guaranteed to every American by the Constitution.

The only thing I can do is shout Bravo! for your stance from the sidelines as I'm not from your state (I'm a resident of Maryland) and even if I were, I'm 17 not of voting age. So Bravo!! and keep up the good work.

Sincerely,

TERRI WEST.

JULY 21, 1970.

SIR: Thank you for your effort to obtain a sound crime bill for the District of Columbia. We understand the concern that leads some people to espouse preventive detention, "no-knock" searches, and increased wiretapping. But such measures are neither wise nor just. They violate principles fundamental to this nation and are as dangerous as the crimes they are to fight.

As Americans—believing still that governments derive their "just powers from the consent of the governed"—we find it especially frustrating that such laws can be imposed on us by a government in no way accountable to us.

Having no voice of our own in Congress, we must rely entirely on men like you who will consider our rights as carefully as the rights of their constituents at home.

Sincerely,

Mr. and Mrs. WALTER L. BRYANT.

WASHINGTON, D.C.

ST. LOUIS, MO.,
June 19, 1970.

DEAR CONGRESSMAN ERVIN: May I commend you on your present stand against the Nixon-Mitchell D.C. crime bill. In his determined and misled efforts to repeal the Bill of Rights, Nixon has presented in this crime bill, which is clearly intended as a model for all cities, an illustration of the most primitive kinds of regression in crime control. And it represents another of Nixon's efforts to usurp the constitutional prerogatives of local government and the courts. Please continue your efforts to resist these incursions, which are a terrible threat to us all.

Again, my thanks for your hard-working, intelligent efforts.

Sincerely,

Mr. and Mrs. DAVID FREIVOGEL.

NASHVILLE, TENN.,

DEAR SENATOR ERVIN: I would like to congratulate you on your great stand against the new crime bill for the District of Columbia.

I am sure that we will all agree that law and order is an important part of our society but not the expense of personal liberty. I feel very strongly that this is a very dangerous law and that it should be stopped. I want to encourage you to continue your fight to kill this bill.

With warm personal regards,

Sincerely,

MICHAEL E. GLASSCOCK, III, M.D.

JULY 26, 1970.

DEAR SENATOR ERVIN: This is to show my appreciation of your battle to preserve constitutional rights, in your fight against the D.C. crime bill. Also, for your past defense of rights, for civilians, and federal workers.

You are a true statesman.

Thank you,

F. MACDONALD.

SILVER SPRING, MD.

NEWPORT NEWS, VA.,
August 3, 1970.

DEAR SENATOR ERVIN: You used to be my Senator when I was a resident of North Carolina.

Frankly, I never voted for you and even since I left the state (a mistake) I have written you in opposition to your policies.

Therefore, I think it is only fair to inform you that I support and admire your position on the recent District of Columbia crime bill.

I do not believe your doubts about the desirability of certain provisions of this bill are mere "legal theory." To the contrary, I think such a notion circumvents the entire concept of rational government.

If I had a pistol, anyone entering my house unannounced would be shot. If I were a criminal and thought my telephone was subject to being tapped, I would have it removed.

When, or if, I ever return to North Carolina and you are still running for office I may be forced to vote for you, in spite of everything.

Kindest regards,

W. J. CRANK.

FOREST PARK, GA.,
July 22, 1970.

DEAR SENATOR ERVIN: Thank you for fighting the D.C. Crime Bill. If people understood what is involved, you would receive many, many letters of thanks.

Congratulations on the powerful statement calling the bill an affront to constitutional principles and a blueprint for a police state. I wish your arguments could be given greater publicity. I did not see this statement in the Atlanta Journal.

With strongest wishes that you may be successful in the fight you are waging,

Very truly yours,

LAVINIA B. GEORGE.

JULY 27, 1970.

DEAR SENATOR ERVIN: For what it's worth. I think your stand against the D.C. crime bill was a true profile in courage. It's comforting to know that there are some people in the Senate who can separate lawnorder from law-and-order. However, it is very discomforting to know that those people are in a minority. I am gratefully yours.

JEFREY R. MITCHELL.

BALTIMORE, MD.

JULY 24, 1970.

DEAR SENATOR ERVIN: I am not a constituent of yours, but I wish I was so I could vote

for you. Your valiant and selfless effort to defeat the DC crime bill and preserve the Bill of Rights deserves the highest praise. Throughout the years you have been a staunch defender of our constitutional rights and here I want to take the opportunity to thank you. You are a courageous man who fights short-sighted "panaceas" to the serious crime problem. I applaud your action and realize the courage it took as you represent a state that is largely conservative and for "law and order." I too favor law and order, but not repression. Once we twist the Constitution for mere temporary expediency as has just been done, we are in serious trouble as a nation. Thanks again, Senator, and please realize that there are many more like me who are grateful for men like you who safeguard our liberties even if it means a loss of popularity to some. Please keep up the good work.

Sincerely,

HOWARD FLEISCHMAN.

ADELPHI, MD.

JULY 24, 1970.

DEAR SENATOR ERVIN: Thank you for your long and hard fight against the D.C. crime bill and in behalf of individual rights.

Needless to say I am quite concerned about the bill's passage, however, there is one flicker of hope left—the courts.

Thank you again.

Sincerely,

Mrs. DAVID R. TAXIN.

HILLCREST HEIGHTS, MD.

SILVER SPRING, MD.,
July 24, 1970.

DEAR SIR: I commend you for your forthright stand taken against the District of Columbia Crime Bill of 1970. I had written about its "no-knock" provisions in a term paper I did on the erosion of our Bill of Rights but I had no idea of how bad some parts of it really were until I read your speech in the July 20 *Congressional Record*. It was very interesting to learn, as I did from your speech, that a defendant could be held in jail for an indeterminate time under the bill's provisions.

I thank you for your past efforts to preserve our rights especially those efforts concerning this bill—which I understand was even worse in the original form as passed by the House of Representatives—and hope that through the efforts of you and other concerned people, I will never have to write another chilling paper as the one I wrote before.

If there is any way I can help in preserving the Bill of Rights, please let me know.

Sincerely,

MARK GRUENBERG.

JULY 20, 1970.

DEAR SENATOR ERVIN: I am writing to you to express my appreciation as a District of Columbia resident and as a Southerner for your noble defense of the fundamental principles of American liberty.

The threat of a "1984"-style society is the most serious problem which America faces today—notwithstanding that the headlines so often go to other dangers. Future generations of free Americans will owe you a debt of gratitude for warning against the incipient totalitarianism which some of the provisions of the D.C. Crime Bill reveal.

Sincerely,

S. BOBO DEAN.

WASHINGTON, D.C.

WASHINGTON, D.C.,
July 24, 1970.

DEAR SENATOR ERVIN: As a resident of the District of Columbia for the past five years, I would like to thank you for your efforts to defeat the D.C. Crime Bill.

The District of Columbia is sorely in need of understanding and support from members of both the Senate and the House, and your leadership in defending our rights is a fine example for other members of the houses.

I join with you in hoping that the questionable provisions of the act will be brought to the courts quickly. I look forward to more constructive legislation from Congress dealing with the problems of our system of justice, particularly with the proper functioning of our correctional institutions.

Once again, thank you for your leadership in our defense. The citizens of the last colony are in your debt.

Yours truly,

ANTHONY TIGHE.

ORDER FOR ADJOURNMENT TO 8:30 A.M. TOMORROW, THURSDAY, AUGUST 27, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in adjournment until 8:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR KENNEDY TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow morning, immediately following the disposition of the reading of the Journal, the able Senator from Massachusetts (Mr. KENNEDY) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of the remarks tomorrow by the able Senator from Massachusetts (Mr. KENNEDY), there be a period for the transaction of routine morning business with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

NO CALL OF LEGISLATIVE CALENDAR TOMORROW

Mr. BYRD of West Virginia. Mr. President, I am authorized by the able majority leader to say that there will not be a call of unobjected-to items on the legislative calendar tomorrow morning.

ORDER FOR RECOGNITION OF SENATOR BROOKE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of the remarks tomorrow morning by the able senior Senator from Massachusetts (Mr. KENNEDY), the distinguished junior Senator from Massachusetts (Mr. BROOKE) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of the special orders for recognition of Senators tomorrow, there be a period for the transaction of routine morning business with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

The PRESIDING OFFICER. The Chair notes that the Senator from West Virginia changed his request. Would the Senator restate the request in the proper order.

Mr. BYRD of West Virginia. Mr. President, under the unanimous-consent request, the able senior Senator from Massachusetts (Mr. KENNEDY) will be recognized immediately after the disposition of the reading of the Journal tomorrow for not to exceed 30 minutes; and at the conclusion of his statements the able junior Senator from Massachusetts (Mr. BROOKE) will be recognized for 15 minutes; and at the conclusion of the special orders for recognition there will be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. I thank the Senator.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM—THE NELSON-GOODELL AMENDMENT TO BE LAID BEFORE SENATE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of the period for the transaction of routine morning business tomorrow, the amendment to be offered by the able Senator from Wisconsin (Mr. NELSON) and the Senator from New York (Mr. GOODELL), concerning which an agreement has already been reached limiting the time thereon to 40 minutes, be laid before the Senate and made the pending business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR AMENDMENT BY MR. PERCY TO BE MADE PENDING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at the conclusion of the vote on the amendment to be offered by the able Senator from Wisconsin (Mr. NELSON) and the able Senator from New York (Mr. GOODELL) on tomorow, the amendment to be offered by the able Senator from Illinois (Mr. PERCY), be laid before the Senate and made the pending business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, it is my understanding that a request has already been agreed to with respect to a 1-hour limitation on the amendment to be offered by the Senator from Illinois (Mr. PERCY).

ADJOURNMENT TO 8:30 A.M.

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move that the Senate stand in adjournment, in accordance with the previous order.

The motion was agreed to; and (at 4 o'clock and 35 minutes p.m.) the Senate adjourned until tomorrow, Thursday, August 27, 1970, at 8:30 a.m.

NOMINATIONS

Executive nominations received by the Senate August 26 (legislative day of August 25), 1970:

DIPLOMATIC AND FOREIGN SERVICE

William B. Buffum, of New York, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Lebanon.

U.S. NAVY

Adm. Ephraim P. Holmes, U.S. Navy, for appointment to the grade of admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

Having designated Vice Adm. Charles K. Duncan, U.S. Navy, for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, I nominate him for appointment to the grade of admiral while so serving.

EXTENSIONS OF REMARKS

HAYWARD'S TOPFLIGHT FIRE CHIEF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MILLER of California. Mr. Speaker, the city of Hayward, Calif., one of the most progressive in California, has as its fire chief Matt Jimenez. Chief Jimenez recently was selected as president of the International Association of Fire Chiefs at a meeting which took place in Seattle, Wash.

Matt Jimenez is a man dedicated to his job and one who has made a great contribution in the field of fire prevention in this country.

I include herewith an article from a recent issue of the Oakland, Calif., Tribune giving a short history of Matt's activities:

HAYWARD'S TOPFLIGHT FIRE CHIEF

(By Don Demain)

HAYWARD.—Twenty-five years ago, a young professional boxer gave up a promising career in the ring and decided to become a Hayward policeman.

It was about the only thing that Matt Jimenez set out to do that he didn't accomplish.

At that time shortly after World War II was over, there was no opening on the Hayward Police Department. So the young boxer decided instead to take a "temporary" position with the fire department.

The opening in the police department was slow to arrive, and when it did Jimenez had a change of heart. Firefighting was to become his life work and he set out to be a champion fireman just as he had been a champion fighter.

Seven years later, in 1952, Matt Jimenez was named chief of Hayward's 14-man department.

Under his guidance, the Hayward Fire Department became one of the most modern and efficient firefighting organizations in the country. It has won many awards and citations for its fire prevention work. Today the department numbers 104 in six fire stations.

Jimenez stresses two things in his department, intensive training for his men and widespread public education on fire prevention.

Jimenez has become a popular figure during his 18 years as chief, not only in his own community but throughout the country, because of his travels as a member of the International Association of Fire Chiefs.

As such he developed into a sort of ex officio "ambassador at large" for the city of Hayward. As a result, Hayward has become a popular stopover for traveling firemen from all over the world.

Last Wednesday, in Seattle, Wash., Jimenez attained just about the highest rank a fireman can aspire to.

He took office as president of the international association, pretty good indicator of the esteem held for him by fire chiefs from all over the United States and 31 foreign countries who elected him to the office.

Becoming "World fire chief" was not exactly what Jimenez expected. As a nine-year-old boy, he had shined shoes and sold newspapers on Hayward street corners nearly 40 years ago.

A member of a large Mexican-American family with very modest means whose father worked in the cannery and whose mother could speak no English, young Matt Jimenez at that time was more concerned with survival.

And it was about that time that he decided to become a prize fighter. He was already getting some hard experience fighting, at school and in the streets where the art of self defense had top priority.

Jimenez managed to continue his high school education and was graduated from Hayward High, and then went on to San Mateo Junior College. But World War II erupted and he left college to go to work in the shipyards, then was drafted into the Navy.

Athletic and a physical fitness exponent, Jimenez caught the eye of welterweight Joe Bernal while working out in the gym at Treasury Island.

That started his fighting career. Jimenez entered amateur boxing and then won the 1944 Amateur Athletic Union Pacific Coast Navy heavyweight championship.

This led to a bout with the Coast Guard champion, with Jack Dempsey as referee. Jimenez won, then turned professional and of 22 fights won 19, lost two and had one draw.

By now his ardor for the ring was flagging, a situation abetted by his mother and his fiance, Bernice, who became his wife in September of 1945.

Jimenez readily hung up his gloves, a decision he's never regretted. "If I'd stayed with it, I might still be hearing bells today, but not fire bells."

That's when he decided he'd like to become a policeman. And that's when, fortunately for the Hayward Fire Department, and unfortunately for the police department, there were no openings.

Jimenez, 48, now lives with his wife at their Hayward home at 24844 Canyon View Court. They have four children: Vivi, 9; Valerie, 15; Victoria, 29, a San Jose State College student, and Matt Jr., now in the U.S. Navy.

Jimenez, following his installation as international fire chief is on a tour of Canada and midwestern states.

After he arrives home, he will receive another tribute, a Matt Jimenez testimonial dinner at 6:30 p.m., Aug. 29, at the Holiday Bowl in Hayward. It's to be a toast to the "firemen's fireman."

SENATOR PROUTY'S RECORD OF ASSISTANCE TO EDUCATION

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1970

Mr. SCOTT. Mr. President, my friend, the distinguished Senator from Vermont (Mr. PROUTY), is known as a hard worker. One would have to work hard to do all that he has done to provide educational opportunities for all Americans. His education record is impressive, but he does not stop. He keeps working. I ask unanimous consent that a summary of his record be printed in the Extensions of Remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SENATOR WINSTON PROUTY AND EDUCATION—A PROUD RECORD

If you mention education in Congress, one is first apt to think of Senator Winston Prouty. In his years as ranking Republican on the Education Subcommittee, he has forged the programs that have vastly expanded federal support for education.

He has not done this alone, but rather through his ability to work with his colleagues, regardless of party, toward the goal of a quality education for all Americans.

It is interesting to note that another Vermonter, Senator Justin Morrill, first moved Congress to expand the educational opportunities of our nation's young men and women. In 1962, one hundred years after

Justin Morrill's Land Grant College Bill was enacted, Congress began a rapid expansion of Federal aid to education. Again a Vermonter led the way, and Senator Prouty continues to lead the way as Congress seeks to build on the educational experiences of the 1960s "the decade of education".

Senator Wayne Morse, a Democrat from Oregon, was the Chairman of the Education Committee when the Higher Education Amendments of 1968 passed the Senate. Toward the end of the debate he noted "the students of this country owe the Senator from Vermont (Mr. Prouty) a great debt of gratitude." The bill included the most far-reaching programs of student assistance and support for educational institutions in the nation's history.

Whatever students owe Winston Prouty is not important to him for he feels the nation owes the students more support, greater opportunity, more educational options. He continues to work.

HIGHER EDUCATION

Senator Prouty was serving in the House of Representatives when the National Defense Education Act of 1958 was enacted. He supported it vigorously. The next year he came to the Senate and immediately began to press for expanded support for higher education.

As the ranking Republican on the Education Subcommittee, he was in a position to act. He moved in many directions. He pressed for expanded loan and scholarship programs. He worked for broad assistance to education institutions. He sought a tax credit for college expenses incurred by parents and students.

In announcing that he would vote to override the President's veto of the Education Appropriations Act, Senator Prouty put it this way: "I cannot think of a better way to invest a dollar than to use it to educate our young people."

The vetoed bill provided $4.4 billion in federal funds for education. More than $1.2 billion of the funds appropriated are for higher education.

BUILDINGS AND EQUIPMENT

Some of the funds build and equip college facilities and thanks to Senator Prouty's lonely but determined stand in 1963, the arts and humanities, as well as the sciences, are included in construction and equipment programs.

That year, he stood nearly alone in his fight to include the arts and humanities in a federal construction program. He won a partial victory that year and since then he has won a series of victories and expanded federal assistance for a broad curriculum.

LOANS, GRANTS, AND SCHOLARSHIPS

Since entering the Senate, Senator Prouty has sought to expand on the National Defense Education Act student assistance programs.

Bill after bill introduced by Senator Prouty were enacted into law after law, and provided federal support for many of the nation's 7.1 million undergraduate and graduate students.

The student assistance programs, developed with Senator Prouty's guidance, include educational opportunity grants for financially needy undergraduate students; work-study grants for part-time jobs during the school year and full-time summer jobs for students in need of financial assistance to continue their education; insured loans and direct loans to college students.

In the fall of 1969 when many students seeking insured loans were being caught in the tight money squeeze, Senator Prouty co-sponsored the Insured Student Loan Emergency Amendments to provide federal incentive payments to break the tight money grip.

Senator Prouty has not only been a key drafter of student assistance programs, he has also sought to use them imaginatively.

His concept of loan forgiveness has been adopted in several forms.

Originally loan forgiveness was used to cancel the debts incurred by deceased or disabled veterans. Then Senator Prouty sought to head off the teacher shortage by having enacted a loan cancellation provision for teachers to counter the teacher shortage. He later extended this forgiveness provision to private as well as public school teachers, at a rate of 10% of the loan for each year of teaching service up to 50% of the loan.

To alleviate a critical shortage of teachers of the handicapped and teachers in poverty areas, Senator Prouty proposed loan forgiveness provisions to forgive up to 100% of a loan at a rate of 15% per year of service. The program, like other forgiveness programs, has provided an extra incentive for young people to assist the handicapped and disadvantaged.

This year, Senator Prouty's provision for cancelling a portion of a veteran's student loan for service in the Armed Forces became law, thus reducing the burden placed on veterans who borrow funds for their education before entering the service.

TAX RELIEF TO STUDENTS OR PARENTS OF STUDENTS IN COLLEGE

Six years ago Senator Prouty first advocated a tax credit for college expenses incurred by parents and students. He has fought alone and with other Senators to see this concept become law. In 1967 and 1969, the Senate passed such a provision, but in both years the tax credit for college expenses was dropped in conference with the House of Representatives. Senator Prouty continues to press for this proposal.

EDUCATION PROFESSIONS DEVELOPMENT

Senator Prouty supported the Education Professions Development Act of 1967. This Act responded to the critical needs for adequately trained education personnel through grants to states and educational institutions, and local school districts. Some 45,000 persons will participate this year in programs set up by the Act.

Regrettably his amendments to the bill to provide special programs for teachers of the handicapped did not succeed. However, Senator Prouty was later to find other approaches to provide for teachers of the handicapped.

An amendment to the bill offered by Senator Prouty and the late Senator Robert Kennedy to provide funds for Teacher Corps members to counsel youthful first offenders prior to their release from prison was defeated. It was 1970 before such a program was instituted with the Teacher Corps Corrections Education Act.

HIGHER EDUCATION IN VERMONT

Senator Prouty works closely with Vermont's institutions of higher education. He is proud of Vermont's Colleges and Universities and seeks the advice of administrators, faculty and students. He wants to know what is happening on the campuses and how the federal government can best respond to the needs and aspirations of students and faculty alike.

For example, he has worked closely with the College of St. Joseph the Provider to expand its special education program. At present, students learning how to respond to the needs of handicapped children are serving as paraprofessionals throughout the state. As they learn, they also help alleviate the shortage of personnel able to provide the special education approaches our handicapped children need. Senator Prouty is never too busy to lend a hand in assisting Vermont schools in developing programs and seeking federal assistance. He continues to keep in close contact so that he knows what's happening on Vermont campuses.

He's also aware of what's happening on campuses across the nation. He has watched the number of junior colleges double since 1960, while their enrollment tripled. For many areas of the country, the junior college offers young people another option after high school.

Senator Prouty wants to expand the options available and co-authored the Comprehensive Community College Act of 1969, which proposed to provide a three-year $6 billion program of assistance to developing and supporting community colleges across the nation.

ELEMENTARY AND SECONDARY EDUCATION

When he first ran for Congress back in 1950, Senator Prouty advocated federal support for local schools. He kept pressing for such a program, but fifteen years passed before the landmark Elementary and Secondary Education Act of 1965 was enacted.

The principal thrust of the Act was to to aid the educationally deprived child. Senator Prouty contended that the Act missed the mark in a number of areas.

Unfortunately, the majority party, carrying out the wishes of President Johnson, ruled out any amendments to the Act.

While the measure had Senator Prouty's support, he expressed several doubts as to its effectiveness.

He felt that the program evaluation criteria demanded of the state by the Act would excessively burden rural school districts. He was correct.

Senator Prouty contended that the poverty income level for a family of $2,000 was unrealistically low. He recommended a broadening of the program to include children from families with up to $3,000 income. The level has since been raised to this level and is scheduled to go to $4,000.

Senator Prouty feared that upon receipt of federal funds, some school districts would cut back local expenditures. This did happen. After five years of Senator Prouty's prodding, the Act was amended in 1970 to prevent local school districts from supplanting their local funds with federal funds.

During the Senate debate on the Act, he repeatedly expressed his concern about the undue amount of federal control written into the bill by neglecting the role of the state. Senator Prouty particularly wanted a state role for Supplementary Education Centers and Services. This was finally obtained in 1969.

Other problems were soon to develop in the Elementary and Secondary Education Act. The slowness of Congress in appropriating school funds led to chaos in the local school districts. Not knowing how much federal money they would receive, they could not plan or hire effectively. In 1966 Senator Prouty proposed an advance funding mechanism. His proposal was accepted in the Labor and Public Welfare Committee, but later rejected. In 1967 he was successful and school districts now are able to plan ahead, thanks to Senator Prouty's "advance funding" formula. In 1968, Senator Prouty succeeded in applying a similar mechanism to Higher Education programs as well.

PRIVATE AND PAROCHIAL SCHOOLS

Senator Prouty believes that whenever possible under the Constitution, non-public schoolchildren should share the benefits of federal aid to education.

He has pressed for construction loans for non-public schools. He succeeded in extending loan forgiveness to teachers in non-profit schools.

He succeeded in extending the Guidance and Counseling Institutes and Language Institutes to teachers from private and parochial schools.

This year Senator Prouty was able to provide in law that wherever private and parochial school children participate in Supplementary Centers and Services, officials of the private schools should be included in the program.

Most important to Senator Prouty is the workability at a local level of the programs he designs in Congress.

An example of this is in the assistance he provided public and parochial school children in the Swanton-Highgate Area.

In 1967, Senator Prouty helped local officials in the area revitalize their educational programs. He offered assistance in developing a public-parochial school complex to serve several communities. The three existing public schools and one parochial school joined together.

The major result of the combination was the construction of a new education facility and an adjacent religious facility. In order to meet the Constitutional requirements for separation of church and state, all funds for the religious facility were raised separately and not out of public funds. Area voters approved the bond issue for the complex and indicated their desire to use their resources more efficiently through a cooperative public-parochial concept.

BILINGUAL EDUCATION

During the 90th Congress, a bill was introduced to set up bilingual education programs for Spanish-speaking students. Its scope would probably not have been expanded unless Senator Prouty had pushed to include other foreign languages in the program. Senator Prouty succeeded in expanding the program and increasing the authorization. Therefore, French-speaking young people in Vermont can be included in the program.

This March, after some initial difficulties, the Orleans-Essex North Supervisory Union School received funds under the funds to assist French-speaking students in the Northeast Kingdom. Senator Prouty worked closely with local and federal officials in working out the program. He was able to see his legislative concept implemented in his home area.

EDUCATION FOR THE HANDICAPPED

In 1969, Senator Prouty received the Legislative Statesmanship Award of the Council for Exceptional Children. It reads: "The Council for Exceptional Children extends its sincerest appreciation to Senator Winston Prouty of Vermont for his long support and sponsorship of programs to make education a reality for exceptional children throughout this nation. We are especially appreciative of his efforts to bring about a wide range of services which exceptional children so badly need, among them research, personnel and education programs. His interest and constant stimulation brought to fruit the Handicapped Children's Early Education Assistance Act. Senator Prouty's commitment to exceptional children and their parents represents a model to which the Council for Exceptional Children Membership aspires."

When Senator Prouty accepted the award, he didn't mention his accomplishments—he only talked about the tasks undone.

One in every ten school children is handicapped. Each requires special education. In the 1960's as federal aid to education expanded vastly, these handicapped children were not overlooked—thanks to Senator Prouty.

Using his skill with the amendment process, Senator Prouty included handicapped children under provisions for educationally deprived children in the Elementary and Secondary Education Act. He made sure that 15% of the funds for Supplementary Centers and Services would be used for handicapped children. He made sure that 10% of vocational education funds would be put to use to help handicapped young people learn skills.

He also pressed for the creation of the Model High School for the Deaf as an adjunct of Gallaudet College in Washington, D.C. He cosponsored a bill, which is now law, to set up a National Center for Education Medias and Materials for Education of the Handicapped and successfully pressed for a separate Bureau of Education of the Handicapped within the Offices of Education in the Department of Health, Education, and Welfare. This Bureau is now rated the most effective division within the Office of Education.

Education does not begin in kindergarten or first grade, and the handicapped child in particular needs a pre-school education.

In May of 1968, Senator Prouty introduced his bill "The Handicapped Children's Early Education Asistance Act of 1968." Introducing the bill, Senator Prouty told his colleagues: "There is no child who deserves a First Chance, a helping hand, more than the child who enters this world with dim vision, with faint hearing, with difficulty in comprehending the nature of this world, or with any of the myriad disabilities which affect our handicapped children."

His colleagues agreed, and with unprecedented speed Senator Prouty's bill was signed into law just over four months later.

Under Senator Prouty's bill, the Office of Education has been able to create model centers for the development of early childhood education programs for the handicapped. The programs offer youngsters the "First Chance" Senator Prouty sought for them.

These programs will form the basis for an expansion of efforts for handicapped preschool age children.

Senator Prouty is aware that much remains to be done. He asked President Nixon to convene a White House Task Force to consider the problems that remain and how best to resolve them.

Two Task Forces were organized, one for the physically handicapped, the other for the mentally handicapped.

The work of the Task Force is now being reviewed and will form the basis for further efforts to assist the handicapped.

Senator Prouty will continue his efforts and insure that special education for the handicapped is provided within the community rather than having the young person removed from the community.

He will continue to press for his goal of a quality education for every handicapped child. It is a big goal, but Senator Prouty has diligently laid the groundwork for reaching it and he's a hard worker.

VOCATIONAL EDUCATION

On March 28, 1963, Senator Prouty addressed the Vermont State Legislature. He talked about the problem of skill shortages and unemployment and said: "Vocational education will not solve all of our problems, but it should be more vigorously pushed, more adapted to the times and more fully financed." He has pushed, he has sought relevance in vocational education programs, he has fought for higher appropriations for vocational education.

Eight months after his speech, the Vocational Education Amendments of 1963 were enacted. Senator Prouty helped draft the legislation and fought to insure that vocational education funds were allocated to the states on a per capita income formula, rather than a population basis. It was a hard fight against Senators and Representatives from larger and wealthier states, but Senator Prouty won.

He also fought to allow federal vocational education construction funds to be used for divisions of schools teaching vocational education, rather than only to schools devoted solely to this purpose. Again, Senator Prouty won out.

He also won his fight to include semiskilled occupations in programs previously restricted to skilled occupations.

Senator Prouty raised the maximum amount of National Defense Education Act loans a school could give. He was able to extend federal support for guidance and counselling services down through the 7th grade. At the same time he increased the minimum state allotment for such services from $20,000 to $50,000.

Senator Prouty did not let up in his fight for wider course offerings and a fuller school system. In 1968 he engineered with others a complete overhaul of vocational education programs.

He realized the need to set aside funds for research, innovative and special emphasis programs for the handicapped and the disadvantaged. However, he warned against these set asides unless extra funds were forthcoming.

In an attempt to insure adequate funds for all education programs, The Vocational Education Amendments of 1968 contained a Prouty-supported provision exempting education programs from any statutory spending ceiling. In this way, Senator Prouty set a top priority on education. Although this exemption has come under attack, it remains law. This year Senator Prouty joined a majority of his colleagues on the Health Subcommittee in drafting a similar exemption for most health programs. This too is law. Once again, Senator Prouty's priorities are clear.

Senator Prouty's struggle for more vocational education funds coincides with his determination to make maximum use of the money spent. He advocated creation of a National Advisory Council on Vocational Education, as well as state advisory councils. He urged a cataloging of all education programs so a student could know how the many options open.

To bring vocational education into the mainstream of education, he supported merger of the Vocational Loan Program with the Guaranteed Loan Program. He also provided for coverage of private training schools under the National Defense Education Act assistance programs and Education Opportunity Grants.

Senator Prouty strongly supports the career education concept of providing greater federal support to help all schools develop two-year courses. Such courses, Senator believes, will provide greater flexibility for young persons. Senator Prouty puts it simply: "More educational options means more educational opportunities."

LIBRARIES

Senator Prouty was serving in the House of Representatives when the Library Services and Construction Act of 1956 was enacted. He supported it then and since he came to the Senate he has been a chief architect of the Act's extension and revisions. Senator Prouty has consistently worked to insure interlibrary cooperation, innovation in library services, particularly in rural areas.

With his continued concern for the handicapped, Senator Prouty worked to insure special support programs for library services to the physically handicapped.

The need for innovation to meet the "information explosion" is great. A bill supported by Senator Prouty to create a National Commission on Libraries and Information Science has become law. This Commission will spearhead efforts to find new ways of utilizing our ever-increasing wealth of information.

PRESCHOOL EDUCATION

Senator Prouty has been one of the prime movers in the field of early childhood development. He has long recognized the relationship between adequate early exposure to learning experiences and later success in school and social development.

He has proposed and pressed for pre-school education and day-care programs. He de-

veloped a separate pre-school program for handicapped youngsters.

Senator Prouty has continually insisted that preschool programs be comprehensive and not piecemeal. He believes that food and medical services should be adjuncts to educational programs to insure that children do not suffer handicaps in learning either permanently through neglect of health or temporarily through lack of food and medical attention.

In 1966, many feared that money might be taken from Head Start and switched to other "poverty" programs. Senator Prouty's amendment set aside the funds specially for Head Start. Head Start was thus given the chance to develop and grow.

As a key architect of manpower training programs, Senator Prouty realizes the need for day-care services to free potential workers from their home chores.

This year Senator Prouty introduced the most comprehensive day care bill to date. Called the "Head Start Child Development Act of 1970", the bill proposes to consolidate and improve operation of existing day-care programs. It would upgrade custodial day-care programs to educational programs. To do this, Senator Prouty's bill proposes statewide coordination and adoption of minimum standards, stressing the need to provide comprehensive services to young children.

Senator Prouty's day care bill has been widely acclaimed. Work on the measure is proceeding.

CONCLUSION

It is no more easy to separate Senator Prouty's record on education from his overall record of service than it is to separate learning from life. Learning is life.

Senator Prouty's concern for education extends to adult education veterans education, programs, health professions, environmental education, educational television. He is also the ranking Republican on the Special Subcommittee on the National Science Foundation, which oversees the Foundation's programs of support for science research and education totalling a nearly half billion dollars annually. He continues to press for more funds for the National Science Foundation. He seeks to create a new arm of Congress—the Office of Technology Assessment—to insure that we use our burgeoning technology correctly.

It is not enough that one determine a need or propose a solution. One must press for solutions and this takes hard work. As ranking Republican on the Education Subcommittee, Senator Prouty works hard to insure that the programs he advances will not just promise, but perform. He checks each word and phrase, each section and title to insure that our education laws best lead us to his goal of a quality education for every American.

He realizes his vital role in meeting his goal and is mindful of the observation of his predecessor, Justin Morrill, that:

"In other lands and under other forms of government, education may be option, with us, it is indispensable. Untaught and unprincipled men may be governed, but they cannot govern."

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

OLD GLORY FLIES AT NIGHT AT INTER-LAKES HIGH SCHOOL, MEREDITH, N.H.

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1970

Mr. COTTON. Mr. President, Scott King is a 17-year-old Meredith, N.H., youth whose dedication to a cause and whose stubborn persistence are in keeping with the finest traditions of the Granite State and of the United States of America.

A few weeks ago, in student council assembly, Scott proposed that the American flag be flown 24 hours a day year around at the Inter-Lakes High School, where he will be a junior this fall. He was informed, correctly, by school officials that this only could be done by special dispensation.

Undismayed, he spent $23.69 of his earnings on a telegram to the President, asking that the Inter-Lakes School be authorized to fly a lighted flag at night so that the stars and stripes could be displayed 24 hours a day.

He wired:

When it is nighttime here and the flags aren't flying, it is daytime in Vietnam where our boys are dying.

The office of the Secretary of Defense has since notified Scott and school officials that, by special permission of the President of the United States, Old Glory may now be flown at Inter-Lakes High School 24 hours a day.

Mr. President, I ask unanimous consent to place in the RECORD a newspaper story from the Lakes Region Trader, published weekly in Laconia, H.N., which properly commends Scott King for his successful and heartwarming efforts in behalf of his Nation and his school.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENT GOES TO TOP: DEFENSE DEPARTMENT ALLOWS INTER-LAKES HIGH SCHOOL TO FLY FLAG AT NIGHT

MEREDITH.—Scott King, 17, Star Route, Meredith, is a very patriotic and civic minded young man. Disturbed for quite a while that his school, Inter-Lakes, only displayed the flag from Monday to Friday, from 8:00 a.m. to 5:00 p.m., he decided to do something about it, even if it meant spending a lot of hard earned cash.

Two weeks before school ended, during a student council assembly of which he is a member, he approached the subject of the American flag flying year-round on a 24 hour basis at the school, but was told by school officials that it was not possible as it can only be done by special dispensation. Young Scott was not daunted in the least, but instead decided to do something about it. He sent a telegram to the President of the United States which cost him $23.69. Here is part of Scott's telegram:

Dear Mr. President:

I am presently a sophomore at Inter-Lakes High School, Meredith, N.H. I am on the student council, and am very concerned with what goes on in our country and around the world.

I support you and the war in Indo-China. We had a cousin in the Marines who was killed in the war, and presently have a brother on his second hitch, in Vietnam, as a squad leader in the Marines. I plan to follow in their footsteps and go in the Marines as soon as I graduate. Communism must not spread, and I must do everything in my power to see that it does not.

To get to the purpose, Mr. President, it has to do with the flying of the American flag. In these hard times I feel very strongly that the flag be flown as often as possible. We have a flag in our front yard and it flies 24 hours a day. The light protecting it as if a soldier were on guard with a rifle. Our school wanted to put a flag up that would fly 24 hours a day, seven days a week, but we had to choose between being patriotic, or breaking the law.

I have looked it up and the flag can only be flown 24 hours a day in three places in our country. It is like setting a time when you can be patriotic and when not to be. You have the authority to say where the flag can be flown and how long. I would like you to give our school permission to fly a lighted flag at night. As I sit here I think when it is nighttime here and the flags aren't flying, it is daytime in Vietnam where our boys are dying.

Please don't let us down, Mr. President.

Request reply at earliest convenience.

After many days of waiting the reply to young Scott arrived.

1. On behalf of President Nixon I am replying to your recent telegram requesting offcial authorization to display the national flag continuously at your high school.

2. There would be no official objection to flying the flag continuously at the site of your school to honor members of the Armed Forces serving in Southeast Asia, provided it is always illuminated from sunset to sunrise and provided local school authorities desire to institute such a practice. However, we believe the practice should not be attempted if there is any substantial risk of mishap to the flag for any reason during the hours when the school is unattended.

3. The President noted with satisfaction your reference to the current service of your brother in Vietnam and your own intention to serve in the armed forces following your graduation from school. Best wishes to you and your brother.

Signed: L. Niederlehner, Office of the General Counsel, Office of the Secretary of Defense, Washington, D.C. 20301.

The wheel was in motion, and Scott got busy. School officials were notified, White Mountain Power offered to install the lights at no charge.

Next Monday will be a big day for Scott King, Star Route, Meredith, when his dream becomes reality. By special permission from the President of the United States, every day of the year, night and day, Old Glory will fly proudly at Inter-Lakes High School.

In Scott's own words, "I felt strongly that in these hard times the flag should be flown as often as possible, and I hope that this will have a snowballing effect so that all schools in the state of New Hampshire will do the same, and I wanted Inter-Lake to be first."

Scott is the son of Mr. and Mrs. Norman King, and will be a junior this fall. His brother, Sgt. Natt King, 21, is serving with a battalion in the 1st Marine Division in Vietnam as a squad leader, presently on his second tour of duty. He also has a sister working with United Airlines, and an older brother, Eric, 18.

He is working this summer as a mason's tender for his father. Although poor at present because of the cost of the telegram, he feels his $23.69 was certainly well spent.

NEW MARKET—FIELD OF HONOR

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MARSH. Mr. Speaker, the valor of the cadets of Virginia Military Institute, hurried into service at the Battle of New Market, often has been cited with admiration by writers in the field of military history.

Now, the story is becoming more widely known by mounting visitation to New Market Battlefield Park in Virginia's Shenandoah Valley.

Under leave to extend my remarks, I include an account of the preservation and interpretive development of this historic site which appears in the August issue of the Veterans of Foreign Wars magazine, as follows:

NEW MARKET—FIELD OF HONOR—CIVIL WAR PARK IS TRIBUTE TO YOUTH AND VETERANS

(By Helen C. Milius)

The New Market Battlefield Park, opened three years ago as the first battlefield park in the spectacularly beautiful Shenandoah Valley of Virginia, seems to hold a special fascination for veterans.

It was conceived by a veteran as a memorial to veterans. And it may be that veterans have the background for enjoying the peaceful landscape and feeling its significance better than lifelong civilians.

The late George R. Collins, its originator, was a successful businessman of Charleston, W. Va., who had graduated from the Virginia Military Institute at Lexington in 1911, in time to place his engineering skills at the disposal of his country in World War I. He volunteered as a private. Later commissioned, he served in France as a second lieutenant in the artillery.

With a military education and military experience, Collins understandably developed an intense interest in the Civil War. The Battle of New Market, fought on May 15, 1864, particularly intrigued him. In this relatively minor conflict a Union army of 6,000 under Maj. Gen. Franz Sigel was stopped in its southward push through the Shenandoah Valley by 4,500 Confederates under Maj. Gen. John C. Breckenridge. Saturday night skirmishes grew into a full-scale engagement on Sunday in a lashing rainstorm. Though outnumbered, the Confederates turned back the Union troops.

The unique feature of this battle, however, was the participation of a college cadet corps from Collins' alma mater, VMI—an episode unmatched in U.S. history. Their valor under fire for the first time was so soldierly that neither friend nor foe withheld praise. Tribute to "that parcel of young fellows' magnificent fight against the veterans" was heard even within the walls of the U.S. Capitol.

In 1944 Collins bought the 160 acres of Valley farmland that had seen the battle's hottest fighting. The original antebellum farmhouse of the Bushong family, which had been a battle landmark for the VMI cadets, still presided over the farm. At his death in 1964, his will conveyed the real estate to VMI, along with an endowment of $2,900,000. A sentence of the will in his own firm handwriting directed VMI to perpetuate the property "as a memorial of the Battle of New Market and to place improvements thereon for educational purposes . . ."

Accordingly, to its own great surprise, the venerable old college of VMI now operates, as a non-profit enterprise, what is probably the most beautiful battlefield park in all Virginia. Some ex-servicemen may think of VMI principally in terms of its 67 alumni reaching general or flag rank in World War II. Many of these officers' names, starting with Gen. George C. Marshall, still may cause an automatic snap to attention—Generals Brett, Buckner, Burress, Gerow, Handy, Pate, Patton, Puller, Shepherd, Walker. But the park is a serene and relaxing place.

Its 160 acres of refreshingly green fields undulate between the blue wall of Massanutten Mountain on the east and the winding North Fork of the Shenandoah River on the west.

Bordering the park on the east, the historic old Valley Turnpike is now U.S. 11, paralleled by Interstate 81. Visitors find the park conveniently accessible at I–81's New Market exit.

Paths along which children romp lead to other points of interest in the green expanse. Visitors stroll comfortably over terrain where, in the Battle of New Market, soldiers were stuck in the mud under fire. Men of the 28th Ohio Infantry had to tug their boots out of knee-deep mud; many started the long retreat barefooted. VMI cadets recalling their ordeal at postwar reunions referred to one area as the "Field of Lost Shoes."

The park's present visitor center occupies the original Bushong farmhouse, air-conditioned now and handsomely refurbished. Here the whole battle story is summarized in graphic exhibits and in a sparklingly vivid color motion picture, "New Market-Field of Honor," which has won two international awards.

Nearby is the monumental Hall of Valor housing the only comprehensive Civil War museum in existence, fulfilling Collins' wish for "improvements for educational purposes."

One cannot escape the impression that his prime educational purpose was subtly to inculcate a love of country. The veteran, in fact, with an experienced outlook on battlefields, can detect three lessons in patriotism.

First is the patriotism of combat troops ordered into battle in their nation's service. On this level New Market commemorates more than 10,000 veterans from nine states who endured conflict here.

Sigel's Union units came largely from Ohio, Connecticut, Massachusetts, Pennsylvania, New York, Maryland and West Virginia. Breckinridge scraped his Confederates together principally from Virginia and Maryland commands with a detachment from Missouri. Whether from north or south, these troops supplied innumerable examples of valor. The 34th Massachusetts Infantry, for example, within 55 hours fought an intermittent overnight battle, suffered heavy casualties in a prolonged daylight conflict and marched 52 miles.

The VMI cadets demonstrated love of country on a different, more ardent level. They were not combat troops but a well-drilled corps of some 247 college students, with homework to finish and exams to study for. After marching 80 miles from Lexington, they were tucked away behind the Confederate troops as reserves. Their average age was 18, but many cadets were 17 or 16 and three were 15.

Breckinridge hoped to keep them in the rear, using their four companies to convey an impression of greater manpower than he actually had. But the fortunes of war and the cadets upset his plan, for they were Virginians, and Virginia was being invaded.

When a gap in the front line appeared, the cadets moved up on the double. They started fighting. Casualties mounted above 20%. Ten were killed or mortally wounded. Their steadiness under fire made them indistinguishable from veterans.

Captured Union men were amazed to learn they had been fighting not seasoned soldiers but "little devils."

Lessons in a less fiery brand of patriotism also are here. In a joint willingness to respect the sincerity of these cadets—and each other—North and South have found a healing harmony.

For example, consider a half-forgotten act of reconciliation dramatic enough to be a play, improbable as soap opera.

Act I of the drama would begin three weeks after the Battle of New Market, as Gen. David Hunter's Union troops occupied VMI's hometown, Lexington, with virtually no resistance. Most Conferderate troops and VMI cadets had been withdrawn to defend Lynchburg.

Nevertheless, Hunter ordered the destruction of VMI, though some of his younger officers questioned the military necessity of this move. They suspected his motive might be an angry reprisal against the hard-fighting cadets. Barracks, classrooms, library, laboratories and some professors' homes went up in flames.

Two young officers in particular went through the next few decades with this destruction weighing on their conscience.

Then one of them, Capt. Henry A. Du Pont, formerly of the 5th U.S. Artillery, was elected senator from Delaware. His battery had covered the Union retreat from the Battle of New Market. He personally had set fire to a bridge over the Shenandoah to delay Confederate pursuit, but three weeks later sickened at the deliberate burning of VMI.

In April 1913, Du Pont introduced a bill requiring the U.S. government to pay VMI $100,000 in compensation for unjustified wartime destruction. For months he solicited his Capitol collegues' support. The second of those conscience-burdened Union officers, Col. J. M. Schoonmaker, journied from Pennsylvania to back up Du Pont in committee hearings. The Senate passed the bill unanimously.

In the House, however, opposition arose. An Illinois Congressman objected that if a general officer ordered destruction, the destruction was not unjustified and the government was not liable. A Virginia Congressman insinuated that even generals might show bad judgment. The ruckus between the gentleman from Illinois and the gentleman from Virginia started a furor.

When order was restored, calmer Congressmen spoke up to indicate support for the bill from all parts of the nation—Vermont, Texas, Washington. Representatives from Ohio and Pennsylvania called for a "fair and judicious spirit." One of them pointed out that VMI, if helped by the U.S., could in turn help the U.S. with military personnel for defense in national emergencies.

And how prophetic that was! The college contributed more than 4,000 men to the armed services in World War II alone. Eventually the bill became law by a five to one majority in March, 1915.

More than a half-century had elapsed since the Battle of New Market. Few of its 10,000 combatants lived to remember it. But survivors, their families and the public hailed Du Pont's restitution measure as an occasion for burying old hostilities. It helped unite all sections of the nation in a patriotism that could transcend sectionalism.

SENATOR PROUTY'S RECORD OF SUPPORT FOR OLDER AMERICANS

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1970

Mr. COOPER. Mr. President, I know of no one who has fought longer or harder on behalf of our older citizens than my friend, the Senator from Vermont (Mr. PROUTY). I have seen him win

battles for the elderly and lose battles. Win or lose, he continues to fight. His record of support for older Americans is a proud one, and I ask unanimous consent that a summary of his record be included in the Extensions of Remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SENATOR WINSTON PROUTY AND OLDER AMERICANS ALLIED IN A FIGHT FOR DIGNITY

Older Americans have had more than their share of promises. Many are disillusioned. However, most elderly people look to Winston Prouty with a hope sustained by his accomplishments.

In the United States Senate he has served as their champion. In part with oratory, but mostly through hard work. In an age when the focus is on youth, he has not let his colleagues forget our nation's elderly. The ranking Republican on the Special Committee on Aging, he continues to be the conscience of the Senate in regard to our older citizens.

This March in introducing his "Older Americans Income Assurance Act of 1970," Prouty faced the problem squarely:

"Three out of ten people age 65 and older are living in poverty, and many of them did not become poor until they became old.

"I say this is shocking, because here is a group of Americans living in poverty and the shadow of death while we know the solution to their plight.

"The solution is not education.

"The solution is not job training.

"The solution is not make-work.

"The solution is simply cash income."

His bill would simply assure all Americans 65 or over an annual income of $1,800 for an individual and $2,400 for a couple. Senator Prouty realizes that is not sufficient income for older Americans to live with but at least it is the first step. Hopefully, it is a step others in Congress will soon be willing to take.

Of course, he is ahead of his time. He has been for ten years. Over nine years ago, he advocated minimum Social Security benefits of $70 per month. His foresight is highlighted when we consider that as late as 1969 Congress enacted only a $64 minimum. This year he is working for a $100 minimum payment, along with other needed reforms. Most of the major reforms contained in the 1970 Social Security Act Amendments were initially urged by Senator Prouty years ago. Here is his record, year by year:

1960: He co-sponsored Senator Javits' bill to establish a national voluntary health insurance plan for older Americans. This bill would have given older persons several optional health insurance plans, to be financed out of federal revenues and partly from premiums, and it would have utilized private insurance plans. This imaginative measure was three years before President Kennedy made his plea for Medicare and five years before Medicare became a reality. On August 23, 1960 Senator Prouty made a major speech outlining the problems of the aged and supporting the Javits bill.

1961: This was the year Senator Prouty began his long fight for a decent minimum Social Security benefit. He and Senator Javits cosponsored a bill to raise minimum benefits to $70, to increase widows' benefits and to expand eligibility for coverage. This bill did not succeed.

1962: He was appointed as member of the Senate Special Committee on Aging, a fact-finding and investigating committee which has amassed the hard facts and figures on every aspect of problems of the elderly necessary for shaping effective legislation. Senator Prouty is now the ranking Republican on the Committee which continues its active formulation of policy recommendations.

In 1962 Senator Prouty became a major supporter of the Saltonstall medical insurance plan, which was similar to the 1961 bill. He made a major address in the Senate in support of adequate medical insurance for the aged on July 12, 1962.

1963: The proponents of Medicare, including Senator Prouty, decided that too much opposition remained for passage of a health insurance act in 1963, and decided to defer the issue until support could be united. Senator Prouty then set his staff to work to draw up a comprehensive social security reform package, stressing the need for higher minimums, and for increased widows' benefits. Prouty also began in 1963 to formulate his famous "blanketing in" amendment to provide benefits to older persons not covered under the Social Security System. He continued to investigate the needs of the elderly for such reforms by his participation in Committee on Aging hearings.

1964: In August 1964 Senator Prouty assumed the leadership in the fight for better retirement income by introducing an amendment to (1) raise mimimum benefits from $40 to $70; (2) to increase widow's benefits from 82½% to 100% of the deceased spouse's entitlement and (3) to blanket in, with minimum benefits, those over 70 not covered.

Also in 1964 Senator Prouty: (1) introduced an amendment to prevent veterans from losing pension benefits due to social security increases. This amendment was adopted by the Senate Finance Committee but was stricken in Conference and (2) cosponsored bills with Scott, Keating and Randolph to stimulate employment for older workers.

1965–66: Senator Prouty voted in favor of HR 6675, the historic Medicare bill, on July 9, 1965. Previously Senator Prouty joined Medicare proponents in staving off opposition attempts to kill the bill by procedural tactics.

In 1965, and again in 1966, Senator Prouty introduced and fought for Social Security amendments. On March 2, 1966 Senator Prouty introduced his famous amendment to give minimum Social Security benefits to all persons over age 70 not eligible for regular benefits. He strategically attached his amendment to the 1966 Tax Adjustment Act, and it was adopted by the Senate. In Conference Committee, however, the age when benefits were to fall due was raised to 72 and the benefit to be received was $35 per month. The benefit was increased in 1969 to $46. The "Prouty Payment" law has benefited almost two million older Americans. Senator Prouty fought for the 1965 Older Americans Act providing grants to states for Community service projects. This landmark legislation responded to those many older persons who are anxious to lead more active lives through community service. Since 1965 the Older Americans Act programs have benefited hundreds of thousands of older persons and has given them useful lives once again.

On October 12, 1966 Senator Prouty set forth a 7-point action program designed to improve Social Security and Medicare benefits. In addition to leading the fight for higher minimum benefits, Prouty submitted a bill to (1) permit older employed persons to elect to make no further contribution to Social Security; (2) reduce to age 70 the time after which earnings would not reduce benefits; (3) raise the earnings level exempt from benefit reduction to $2400 and (4) eliminate the limitation on Medicare eligibility to Social Security recipients so as to allow participation in Medicare by all persons 65 and over.

1967: This year brought enactment of Social Security benefit increases, including a $55 minimum. As always, Senator Prouty fought for a $70 minimum, and he also spoke out for his other reform measures. He made several major speeches and introduced several amendments during the floor debate on the 1967 Act. The Senate adopted his amendment to prevent reduction of veterans' benefits on account of Social Security increases. His amendment to eliminate payroll tax increases and to finance any net annual deficit out of general revenues was defeated. His amendment to extend for one year the cut-off date for special age-72 benefits was also rejected.

1968: Senator Prouty has maintained for several years that the time must eventually come when some of the income needs of the elderly must be met from the general federal revenues. Payroll taxes on workers' wages cannot rise indefinitely and can never sustain fully adequate old age benefits. Yet millions of older Americans live below the poverty line (6 million in 1970) and have income needs which the system cannot meet. Basically their needs require more of a welfare-oriented system than a pension system.

Accordingly, on June 18, 1968 Senator Prouty unveiled his imaginative Older Americans Income Act, to assure every individual age 65 or over a minimum annual income of $1200 per year and to provide $1800 to an aged couple. He made a comprehensive speech upon introducing the measure, reviewing the hard facts of the plight of the poverty-stricken elderly. Subsequently, the concept of a guaranteed minimum income has gained wide acceptance. President Nixon's sweeping welfare reform measure embodies this concept in the Family Assistance Act.

1969: Congress once again learned in 1969 that a $55 minimum Social Security benefit was woefully inadequate to meet rising prices. In December Social Security benefits were increased by 15%, providing for a $64 minimum. During debate on this bill, Senator Prouty argued for at least a $70 minimum, and he supported and voted for the Mansfield Amendment to provide a $100 minimum. As in previous years, Senator Prouty fought for a liberalized earnings test and waiver of coverage for workers over 65.

Also in 1969 Senator Prouty and Senator Aiken introduced a bill, S. 110, to expand Medicare benefits by eliminating deductible and coinsurance features; extending coverage to prescription drugs, eyeglasses and dental work; lowering women's eligibility from 65 to 62; and permitting easier access to extended care facilities.

1970: After nine years of efforts to achieve meaningful reform, Senator Prouty believes that Congress in 1970 will have the chance to pass a comprehensive Social Security and Medicare reform bill (HR–17550) containing many of the reforms that he has long sought. The minimum benefit as passed by the House of Representatives is $67.20, with a 5% across-the-board increase. The retirement test is liberalized to $2000 per year and only a $1 for $2 benefit reduction; widows' benefits are raised to 100% and the special Prouty payment is increased to $48.30. Most significantly, the House has passed a provision for automatic increases in benefits in any year that the cost of living rises by 3%.

Senator Prouty welcomes these reform measures, but he is not completely satisfied. Nine years after he urged a $70 minimum, the 1970 bill is inching it up to only $67.20. Senator Prouty introduced 3 amendments to HR–17550. The first would increase minimum benefits to $100, and would provide scaled increases up the line from 10% at the lower level to 1% at the highest level. The second would increase exempted earned income to $2400 annually; the third increases the Prouty amendment by 10% to $50. Once again Senator Prouty is in the advance guard on the Social Security front. Although he accepts the automatic-increase feature, he expresses concern lest such a measure cover up the real need for higher minimum benefits.

This year Senator Prouty has taken a deep interest in the planning for the 1971 White

House Conference on Aging, to insure the Conference's success as a public forum for developing priorities.

In 1970 Prouty also reintroduced the Older Americans Income Assurance Act, with benefit levels set at $1800 for an individual and $2400 for a couple. He continues to speak out on all of the problems of the aged—health, housing, transportation, employment and community service needs.

He hit hard at provisions in the House-passed Social Security bill which would cut Medicaid funds by one-third after a patient had stayed 90 days in a nursing home or mental institution and 60 days in a general hospital and urged the Senate Finance Committee to delete these provisions.

He joined an effort to save the loan interest Federal loan program for housing for the elderly under Section 202 of the Federal Housing Act. Neither the House of Representatives nor the Senate Appropriations Committee appropriated funds for Section 202 housing. Senator Prouty co-sponsored a successful amendment to add $25 million for Section 202 housing.

In conference with the House the Senate figure was turned to $10 million, but at least this move by Senator Prouty and others focused attention on the need to continue this vital program.

Realizing that only 42 percent of older Americans have drivers licenses and that public transportation is often unavailable, inaccessible, inconvenient or physically difficult to use, Senator Prouty has co-sponsored "The Older Americans Transportation Services Development Act" to provide research and demonstration programs in transportation to the elderly.

He continues to press for new ways to open up employment and community service opportunity for the elderly. As he said in his address to the American Association of Retired Persons Convention in Pittsburgh in September 1968: "The old cliché that retirement is putting the individual 'out to pasture' is dead. Retirement is not an escape from living. Instead, it is graduation into the 'now' generation where your skills and experience can be fully shared with your fellow man."

Senator Prouty's approach to the problems of our older citizens is not cold and statistical. It is rather warm and feeling. He sees our elderly not as a forgotten mass, but as individuals who seek an active and involved life with dignity. Above all Senator Prouty's fight has been a fight for dignity for those who have given our country so much. He will continue to fight. The victories have come slowly, but the momentum is building. Senator Prouty is a vigorous fighter.

END TO INJUSTICE IN NORTHERN IRELAND

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. OTTINGER. Mr. Speaker, the road to tyranny is paved with repressive measures. The Special Powers Act of Northern Ireland is such a measure.

This repressive statute, delegating extraordinary powers to the Minister of Home Affairs on a temporary basis to reinstate law and order in riot-torn Ulster, was approved by the Northern Ireland Parliament in 1922, 2 years after the partition of Ireland. The act suspended virtually all legal rights of the citizens and gave the Home Secretary dictatorial powers. Freedom of speech, of the press, and of the right to assemble were severely limited, and the police were given almost unlimited search-and-seizure powers.

The obvious danger of enacting such measures in a time of turmoil is that neither the emergency nor the suspension of rights will be temporary. Unfortunately for the Ulster Irish, their country has become a classic illustration of that danger. Not only was the 1922 act never repealed, but it was actually rendered permanent by new legislation in 1933 after having been kept on the statute books through annual review and approval by the Northern Ireland Parliament.

In 1943 an additional Special Powers Act was passed, and though some of the provisions were revoked in subsequent years, renewed violence from 1954 through 1957 resulted in a broad reinstatement of the most repressive features. Consequently, most of the 1922 legislation remains in effect today.

Mr. Speaker, Northern Ireland in 1970 is a divided country, as it has been through most of its brief history. It is clear that the differences between Protestant and Catholic, between those loyal to England and those who want Irish reunification, are exacerbated by the repression of civil rights under the Special Powers Act. The cure has become part of the malady. To keep such a lid clamped on the cauldron that is Northern Ireland can only intensify the pressures already straining the bonds of national unity. Thus the emergency continues and will not abate until the civil liberties of all the citizens of Ulster are restored. Charges of disenfranchisement, discrimination in housing, prejudice in obtaining and holding employment cannot be answered with further deprivation of rights.

Mr. Speaker, Northern Ireland must find the answers to its own problems, but it is obvious that its citizens must be given the means to reconciliation before peace can be restored in their troubled streets. Surely a part of the solution is repeal of the Special Powers Act and restoration of the rights that the rest of the United Kingdom take for granted. Lacking the right to intervene in Northern Ireland's affairs, we must exert pressure on world opinion to provide the impetus for the Ulster and British parliaments to rectify the grievances which have caused such recurring chaos and destruction.

Surely, civil peace in Northern Ireland and the traditional guarantees of British common law are important enough to us all, as members of the community of English-speaking nations, for us to call for those reforms which alone can resolve this explosive situation. Not only are many lives at stake, but the very fabric of Northern Ireland's social order is threatened. I urge nothing less than a complete revocation of the Special Powers Act and across-the-board reinstatement of the civil liberties of all Northern Irishmen, without regard to religion or political beliefs.

The durable principles of English law as a model for the world are weakened so long as these necessary reforms remain uneffected.

SENATOR PROUTY'S RECORD OF ASSISTANCE TO VETERANS

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1970

Mr. ALLOTT. Mr. President, my good friend the distinguished Senator from Vermont (Mr. PROUTY) has devoted much time to assisting those who have fought for his country. Senator PROUTY has an impressive record of deeds on behalf of our Nation's veterans.

I ask unanimous consent that a summary of his record be printed in the Extensions of Remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

U.S. SENATOR WINSTON PROUTY: "FOR THOSE WHO HAVE BORNE THE BATTLE"

On June 27, 1970 Senator Winston Prouty received the highest award of the Veterans of Foreign Wars Department of Vermont. The citation which accompanied the Award of Commendation read:

"In recognition of devoted service to the veterans of Vermont and in sincere appreciation of your whole-hearted cooperation and undying efforts of advancing programs of the Veterans of Foreign Wars, this silver medal and citation of commendation is given."

Three weeks later the Vermont Department of the American Legion adopted a resolution commending Senator Prouty for "his continuing devotion to the principles, in our opinion, as established by our founding fathers," and his service to the "community, state, and nation in increasing responsibilities."

Senator Prouty accepted such praise humbly. He feels he has only done his job, which requires working closely with our nation's veterans. He listens to our veterans and has been their staunch ally. Others have talked more about veterans affairs, but few have worked as hard for veterans as Senator Prouty. He knows our veterans, their families and heirs deserve action, not words.

In Congress, Senator Prouty has been in a position to act for our veterans. In the House of Representatives, he served on the Veterans Affairs Committee. In the Senate, he is the second ranking Republican on the Labor and Public Welfare Committee, which has jurisdiction over most legislation affecting veterans.

While this key position has strengthened his ability to serve our veterans, Senator Prouty feels from his service on the House Veterans Affairs Committee that there should be a comparable Committee in the Senate. He has consistently supported moves to create such a Committee in the Senate.

VETERANS' EDUCATION

In his role as ranking Republican on the Senate Education Subcommittee, Senator Prouty is well known for his efforts and achievements in expanding educational opportunities for all Americans, with particular emphasis on those who have served their country in the Armed Services.

Senator Prouty pressed for passage of the Cold War G.I. Bill for years before he was ultimately satisfied with the signing of this historic piece of legislation, Public Law 89–358, on March 3, 1966.

While this law provided a new chance for countless numbers of veterans of the Cold War era and Vietnam to obtain education and training, Senator Prouty's satisfaction was not long lasting.

It soon became apparent that the allowance rates provided in the Cold War G.I. Bill

were not paying the same proportion of the cost of education as the rates provided by the Korean Conflict program, the allowances received accounted for 98 percent of the average tuition, board and room costs at institutions of higher learning, while the allowance paid under the Cold War G.I. Bill covered only 67 percent. It was evident to Senator Prouty that this inequitable situation was preventing many veterans from using their benefits.

To remedy this problem, Senator Prouty supported efforts to place the veterans of the Cold War and Vietnam era on an equal footing, by increasing education and training allowances by 46 percent. The measure providing this increase was approved by the Labor and Public Welfare Committee and the Senate in October of 1969. The House of Representatives only provided a 27 percent increase. The compromise increase signed into Law was 34.6 percent.

This measure also included Prouty-supported provisions for a new flight program to permit a veteran to obtain a low-interest loan for the purpose of receiving a pilot's license and a new farm cooperative training program similar to the one established under the Korean Conflict G.I. Bill.

In addition to his strong support for post-service benefits, Senator Prouty has been concerned because no provision has been made to help veterans repay educational debts contracted before they entered the service. The Senate has twice passed a Prouty proposal to "forgive" a portion of an individual's federally-sponsored student loan for his service in the Armed Services. This year Senator Prouty's forgiveness provision became law and a veteran's National Defense Education Act loan will be cancelled at a rate of 12½ percent for each year of service in the armed service up to a maximum cancellation of half the loan.

Senator Prouty continues to seek new ways to help our veterans help themselves and thus our nation.

On Memorial Day 1969, Senator Prouty outlined a new approach. He suggested that our returning veterans be offered special opportunities for voluntary service in the fight against our domestic ills. He said our young veterans are an important resource for "all have proven their maturity, self-discipline and dedication."

In his Vergennes speech, Senator Prouty noted that 35,000 men separated from the Service each year have some paramedical experience. Two months later, Senator Prouty introduced with Senator Javits the widely-acclaimed "Veterans in Allied Health Professions and Occupations Act of 1969". The bill seeks to alleviate the nation's critical shortage of trained medical personnel with a new program to recruit and train veteran "medics" for civilian health positions.

This proposal has been incorporated into measures to extend the Allied Health Professions Personnel Training Act of 1966.

MEDICAL AND HOSPITAL CARE FOR VETERANS

Few veterans will forget Senator Prouty's 1965 battle against the shutdown of fifteen Veteran's Administration facilities and cut backs at seventeen regional offices.

Senator Prouty took a bold stand; he sought to block the confirmation of W. J. Driver to be Administrator of Veterans Affairs. He had nothing against Mr. Driver, but he wanted to force President Johnson to reconsider the VA cut-backs. Senator Prouty's motion to postpone consideration of the nomination was defeated but he made his point—he is willing to fight for our veterans.

Today as a member of the Senate Health Subcommittee, Senator Prouty is actively seeking solutions to the nation's health crisis. He followed closely an investigation by the Senate Veterans Affairs Subcommittee into the care of wounded Vietnam veterans.

This study revealed that the hospital at the White River Junction Veterans Administration Center and the nation's other V.A. hospitals are under-funded and understaffed. Revelation of these inadequacies led Senator Prouty to join with his colleagues to press for passage of a supplemental appropriation for V.A. hospitals. With Senator Prouty's urgings, the Senate appropriated an additional $100 million though the extra funds were trimmed by $20 million in conference with the House of Representatives.

It was a partial victory and Francis Stover, Director, National Legislative Service of the V.F.W. wrote Senator Prouty:

"You have the sincere thanks and deep appreciation of the Veterans of Foreign Wars for the significant and vital role you played in having the Senate approve this badly needed additional money, which will help provide the V.A. with the personnel and services it needs to extend the highest quality medical care for returning wounded Vietnam veterans and disabled veterans of previous wars."

In meeting our health crisis, Senator Prouty has placed top priority on treatment of our veterans.

He has fought for measures to expand nursing home care and nursing care facilities for veterans. In 1964 he pressed for passage of a bill to extend the paraplegic housing program to blind veterans who hase suffered the loss or use of a leg.

In the 89th Congress, Senator Prouty vigorously supported legislation which increased the compensation paid disabled veterans by 10 percent and increased the number of beds in veterans hospitals. This bill became Public Law 89–311 in October of 1965.

During the first session of the 91st Congress, Senator Prouty was active in his support of six bills to improve health care for veterans. All were approved by the Labor and Public Welfare Committee and the Senate.

One creates a rebuttable presumption that disabilities suffered by former prisoners of war are service connected. Another eliminates the requirement that a veteran who receives a V.A. pension sign a "pauper's" affidavit to receive hospital care for non-service connected disability. Another Prouty-supported measure authorizes community nursing home care for unlimited periods of time for veterans with service-connected disabilities. Still another measure authorizes medical care to veterans with service-connected disabilities regardless of whether the care is for that particular disability or some other. Another raises the federal per diem pay for each veteran hospitalized in a State veterans home from $3.50 to $7.50 and authorizes $5 million in matching funds for remodeling of State veterans homes. The sixth bill authorizes the V.A. to enter into sharing agreements with other private and public hospitals for the use of vital medical resources.

For Vermont veterans, Senator Prouty has successfully fought endeavors to remove veterans facilities from White River Junction. He has succeeded in this fight and in his efforts to obtain funds for a new hospital building at White River Junction. The funds are in the fiscal year 1971 budget requests and Senator Prouty will make sure they are appropriated and that all funds necessary to build the 204-bed annex and remodel existing facilities are made available as needed. Senator Prouty has worked closely with the Vermont Soldier's Home to obtain a $449,535 V.A. participation in the new 40 bed Nursing home care addition to the Soldier's Home.

PENSIONS AND INSURANCE

Those who know Winston Prouty realize that his concern for, and activities on behalf of, our older citizens are unparalleled in Congress. He understands the plight of our older veterans and is determined to do something about it.

Several times Senator Prouty's amendments have insured that social security benefits increases should not be counted in computing the veteran's annual income.

One of the greatest injustices that exists in the present veterans pension laws is that only 10 percent of a veteran's social security benefits are excluded from the calculation of annual income for determining eligibility and the amounts of their pensions. Consequently, the recently passed 15 percent increase in social security benefits will, in the case of many veterans, be more of a burden than benefit by increasing the veteran's annual income to such a level as to cause him to lose a portion of his veteran's pension. In some cases this would result in a net loss to the veteran. In other cases, the social security increase will cause veterans to lose their pensions entirely. Senator Prouty is at work to remedy this situation as he has in the past. He successfully amended the Railroad Retirement Act of 1970 to insure that the 15 percent increase on railroad pensions would not count as income in figuring veterans pensions. This amendment was dropped in conference with the House only after Senator Prouty received assurances its provisions would be enacted in separate legislation.

In the House Veterans Affairs Committee, he served as Chairman of the Subcommittee which watches over the insurance program of the Veterans Administration and the law he sponsored made it possible for thousands of veterans to keep their G.I. insurance.

In the Senate, on two occasions Senator Prouty sponsored bills to re-open the National Service Life Insurance Program, and, although these passed the Senate, they met roadblocks in the House of Representatives.

A NATIONAL CEMETERY IN VERMONT

Much remains to be done for our veterans and Senator Prouty is fully aware of the tasks undone. He believes it is wrong that there is no national cemetery in Vermont or even in New England for that matter. He does not believe that a Vermont veteran should be buried on Long Island, New York, if he wishes interment in a national cemetery. He knows, too, that the Long Island cemetery will be filled by 1975.

Senator Prouty wants a national cemetery in Vermont and has introduced legislation to create such a cemetery in the Green Mountain State. His efforts will continue.

NO TASK TOO SMALL

The legislation which Senator Prouty has proposed, prodded and pushed for veterans has affected the lives of millions of American veterans, but Senator Prouty does not think in terms of numbers, but in terms of individuals.

Each Vermont veteran, dependent or veteran's heir who turns to Senator Prouty receives his personal attention. If a pension check is lost or a medical record misplaced, Senator Prouty tracks it down.

No problem is too small or too large for Senator Prouty. In nineteen years in Congress, he has learned how to get things done.

THE KGB IN 1970

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CRANE. Mr. Speaker, the San Diego Union columnist, Dumitru Daniel-

opol, has recently written a very interesting column which considers the activities of the Soviet secret police. While this subject might seem melodramatic to today's generation which has had its own assortment of various television spies, the problem is a very real one, and the danger which the KGB presents is also very real.

I commend this column to my colleagues:

[From the San Diego Union, Aug. 7, 1970]

MOSCOW FEARS ANTI-RED GROUP IN WEST GERMANY

(By Dumitru Danielopol)

MUNICH.—Three days after I visited the house at Zeppeliner Strasse 67, it was attacked with poison gas bombs.

It was the third such attack in recent years. No one has been arrested but the German authorities believe Communists or KGB (Soviet Secret Police) agents in Germany are involved.

The Reds hate that gray, shuttered, businesslike building with good reason.

It is the headquarters of the toughest, most dynamic anti-Communist, anti-Soviet group in the West—the Anti-Bolshevik Bloc of Nations and the Organization of Nationalist Ukrainians. It also houses the editorial and printing offices of the Ukrainian newspaper Shlyak Peremohy, and the ABN Correspondence and several other anti-Communist magazines and newspapers.

ABN, founded in 1943 in the Ukraine, and the Organization of Ukrainian Nationalists are a sharp thorn in the Kremlin's side. They are well organized and have strength not only in the free world but inside the Soviet Union.

This the Kremlin can hardly tolerate.

For years Moscow has been trying to crush this opposition and intimidate or eliminate its leaders.

Eleven years ago, Stephan Bandera, the Ukrainian Nationalist leader, was murdered here with a cyanide gun. Bogdan Stachynsky, a member of the KGB Murder Inc. branch called SMERSH, followed Bandera as he left his office at Zeppeliner Strasse 67 and killed him at the door of his apartment.

Doctors considered it a natural death until Stachynsky defected to the West and divulged the whole plot that he said was planned higher up in the Kremlin by Deputy Premier Alexander Shelepin.

Sentencing Stachynsky as an accessory, a German court found the Soviet government "guilty" of the murder of Bandera.

While mourning their leader, the Ukrainians continued to fight even more resolutely.

The present leader is Jaroslav Stetsko, who for a while in 1941 was prime minister of the short-lived free government established in the Ukraine as the Soviet retreated before the Nazis. He is now head of the Free Ukrainian government in exile.

"Bandera and Stetsko," says Stachynsky, "are considered, both in Russia and in the Ukraine, as symbols of the aims of the independence for the Ukraine movement."

No wonder, Stetsko, too, has been on the KGB black list for a long time.

When you talk to these Ukrainian patriots you realize they are hardly the type to be intimidated by bombs, kidnapers or murderers.

"If the KGB thinks it can frighten the nationalists with poison gas bombs or other terrorist methods, it has again made a miscalculation," said ABN Correspondence soon after the bombing attempt.

"How terrifying our ideals and our actions in the free world must be to Moscow when it needs bombs to seal our lips."

SOUTH AFRICAN SECURITY FORCES KIDNAP AMERICAN?

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FRASER. Mr. Speaker, strange things evidently are happening in South Africa. The Observer of London recently published an article about the kidnaping of an American naval attaché. This report may or may not be accurate, but the nature of and past performance of the South African Government make the report credible. The article follows:

ATTACHÉ "KIDNAP" ROW

(By our Commonwealth Correspondent)

American and South African relations, which are already strained by President Nixon's attitude to resuming arms sales to South West Africa, could be seriously damaged if the CIA can confirm its growing suspicions that a United States Naval Attaché in Cape Town, Lt.-Col. Walt Limbach, was kidnapped by Mr. Vorster's security forces.

Walt Limbach—a Vietnam airman hero—walked into Sea Point police station at Cape Town on 29 May and reported that he had been abducted 20 hours before. His story was publicly discounted by Brigadier H. Lambrechts, the head of Cape Town CID.

This denial threw a cloud over the young diplomat's career. If it was the intention to discredit him, for any reason, it looked at first as if this might prove successful.

Limbach, however, fought back, forcing the South African Commissioner of Police, General P. J. Gouws, to step in and announce that the "episode is now closed." But it was, in fact, only just beginning.

Faced with strong diplomatic pressure from the U.S. Embassy, the South African security police suddenly produced leaflets allegedly from the liberal-minded National Union of South African Students on whom they proceeded to throw suspicion for the kidnapping. The leaflets were semi-literate, hardly the work of students, and clearly clumsy forgeries.

For several days Limbach was taken by secret agents around the campus of the University of Cape Town to try to identify his abductors. He was then flown back to Washington, where the CIA debriefed him.

There is a strong likelihood that Limbach might have been the CIA's agent in South Africa and in this role may have come into conflict with Mr. Vorster's own agents who keep a careful eye on Western—and especially American—diplomats.

It seems improbable that Limbach's abduction was planned to help the Vorster Government's campaign to discredit the students' union, as the initial response was to deny completely the kidnapping had ever happened.

The ploy of blaming the students seems to have come only because Limbach would not be shaken from his story.

A statement made available to the CIA—allegedly from a senior South African intelligence officer, after hearing that Limbach reported to the police 20 hours after his abduction—says: "Already? He wasn't to be released for 24 hours."

Even though President Nixon's new Texan Ambassador to South Africa will wish to repair the damaged relations between the two countries, it seems unlikely that the CIA will be willing to let the South African secret service get away with their possible maneuvers against Limbach. Certainly, this fighter pilot—he was involved in the Cuban missile crisis and won 10 medals in Vietnam—is determined to fight the issue.

WOMAN SUFFRAGE DAY PROCLAMATION BY HON. WALTER PETERSON, GOVERNOR OF NEW HAMPSHIRE

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1970

Mr. COTTON. Mr. President, I am happy to comply with a request received from the New Hampshire Federation of Women's Clubs by asking unanimous consent to have printed in the RECORD the proclamation of Hon. Walter Peterson, Governor of New Hampshire, on Woman Suffrage Day.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

A PROCLAMATION: WOMAN SUFFRAGE DAY

Whereas, fifty years ago the 19th amendment to the Federal Constitution extending suffrage to women was proclaimed by the Secretary of State on the 26th of August, 1920, following passage by Congress and the necessary thirty-six state legislatures, of which New Hampshire was proud to be one;

Whereas, I hereby declare that the 26th of August, 1970, be designated and suitably honored in the State of New Hampshire as Woman Suffrage Day;

Whereas, The passage of this amendment culminated a long campaign which started in 1878 when it was introduced by Senator Sargent of California at the request of Susan B. Anthony, Elizabeth Cady Stanton and other pioneer suffrage leaders;

Whereas, Long before this, however, agitation for women's rights had been conducted in conventions at Seneca Falls, N.Y., and Worcester, Mass., by Lucretia Mott, Lucy Stone and others; and reference was made to the "Unalienable Rights of Equality" guaranteed by the Declaration of Independence;

Whereas, During more recent years we have seen the increasing participation of women in our own legislature, our courts, our town governments and our school systems;

Whereas, They have exercised a constructive and cleansing influence of which we have constant need. The times call for a great widening of this influence in keeping down anarchic violence, finding peaceful solutions in a greatly disturbed world, and rigidly cleaning our polluted environment;

Whereas, In this very month it is heartening to see the action of Congress in respect to a supplemental amendment guaranteeing full women's rights under the law with no discrimination on account of sex;

Now, therefore, I, Walter Peterson, Governor of the State of New Hampshire, do hereby proclaim August 26, 1970 as Woman Suffrage Day in New Hampshire and urge that all citizens join in the observance of Woman Suffrage Day in our State.

Given at the Executive Chambers in Concord, this twentieth day of August in the year of Our Lord one thousand nine hundred and seventy, and of the Independence of the United States of America, the one hundred and ninety-fifth.

By His Excellency, The Governor:

WALTER PETERSON,
Governor.

Attest:

ROBERT L. STARK,
Secretary of State.

SENATE—*Thursday, August 27, 1970*

The Senate met at 8:30 a.m. and was called to order by Hon. ROBERT C. BYRD, a Senator from the State of West Virginia.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

"New mercies each returning day,
Hover around us as we pray;
New perils past, new sins forgiven,
New thoughts of God, new hopes of heaven."

—JOHN KEBLE.

Eternal Father, whose grace is sufficient for all our need, take this day of our lives into Thy keeping. Inform our minds with Thy divine truth. Direct all our energies that no good gift from Thee be wasted. Help us to husband all our resources for constructive work. Strengthen our wills to do Thy will. Keep our eyes fixed on Thy beauty. Make our mouths eloquent in testimony to Thy love. Make this a day of spiritual joy and peace which moves this troubled world a bit nearer to the reality of Thy kingdom.

In the name of Him who came to all mankind as a servant. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 27, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. ROBERT C. BYRD, a Senator from the State of West Virginia, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. BYRD of West Virginia thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. KENNEDY. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, August 26, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. KENNEDY. Mr. President, I ask unanimous consent that all committees be permitted to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under previous order, the Senator from Massachusetts is recognized for 30 minutes.

Mr. SCOTT. Mr. President, will the Senator yield briefly?

Mr. KENNEDY. Mr. President, I yield to the distinguished Senator from Pennsylvania without losing my right to the floor.

PUBLISHING AS A SENATE DOCUMENT TRIBUTES TO MARK TRICE

Mr. SCOTT. Mr. President, on August 19, 1970, and subsequently, a number of speeches were made on the floor of the Senate in recognition of 50 years of service to the Senate by Mark Trice.

On behalf of the distinguished majority leader and myself, I ask unanimous consent that certain congratulatory letters received by him be printed in the RECORD.

I also ask unanimous consent that the speeches made on the floor and the letters be gathered and published as a Senate document, and that Senators shall have 10 days in which to insert additional material if they so desire.

The ACTING PRESIDENT pro tempore. Without objection, the several requests of the able minority leader are granted.

Mr. SCOTT. I thank the Senator from Massachusetts.

The letters ordered to be printed in the RECORD are as follows:

THE WHITE HOUSE,
Washington, August 13, 1970.

Mr. J. MARK TRICE,
Secretary for the Minority,
U.S. Senate,
Washington, D.C.

DEAR MARK: The satisfaction you must derive as you look back on your impressive career is shared by all who have known you—and particularly by your fellow Republicans.

Your long years on Capitol Hill are as great in number as they are in accomplishment; from Senate Page to Secretary for the Minority is a most noteworthy advancement. You have set standards that will remain an inspiration for all who succeed you.

With warmest personal regards from a President who continues to cherish your friendship and your support,

Sincerely,

RICHARD NIXON.

THE VICE PRESIDENT,
Washington, August 19, 1970.

Mr. MARK TRICE,
Secretary to the Minority,
U.S. Senate,
Washington, D.C.

DEAR MARK: I had very much hoped to be able to participate in the celebration of your 50th Anniversary on Capitol Hill; but, as you may know, the President has called a Cabinet meeting for this evening. This, coupled with those things which must be done before I leave for the Far East, make it impossible for me to join with you and your many friends.

However, I do wish to commend you for your many years of meritorious service to the Party and to the United States Senate. Also, you have my sincere thanks for your valuable assistance to me as President of the Senate.

Sincerely,

TED.

THE SECRETARY OF STATE,
Washington, August 19, 1970.

Mr. J. MARK TRICE,
Secretary for the Minority,
U.S. Senate.

DEAR MARK: I should like to join your many friends in expressing my sincere congratulations on your record of dedicated service in the Senate and to the nation. Few can aspire to and still fewer attain the achievement which is being marked today. The tributes are justly deserved and I second them without qualification.

With warm regards,

Sincerely,

WILLIAM P. ROGERS.

AUSTIN, TEX.,
July 24, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: I have envied very few men in my life, but I do envy your fifty years of service in the United States Senate. Some of the happiest days of my career were spent in the Senate—and some of the most satisfying as well.

One of those satisfactions was my close working relationship with you. We represented different parties—and you served the Republican Party proudly and well—but first and foremost, we represented America. You always had my respect, my admiration and my affection.

Congratulations on passing this milestone. I wish you many more years of success. And I salute the years of service you have given to your government.

Sincerely,

LYNDON B. JOHNSON.

INDEPENDENCE, MO., *July 29, 1970.*

Mr. J. TRICE,
U.S. Senate,
Washington, D.C.

DEAR MR. TRICE: I have just learned that you are now in your fiftieth year of service in the United States Senate, and I join with much pleasure your many friends in congratulating you on this momentous occasion in your life, and of so long a dedication to public service.

With every good wish and high regard.

Sincerely yours,

HARRY S. TRUMAN.

JULY 23, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: Congratulations on fifty years of service to the United States Senate.

You have demonstrated over those years a dedication and devotion to your country, your Party, and the Senate itself. Your unselfishness and spirit of cooperation have gained for you the respect and admiration of Vice Presidents, Senators, and former Senators.

I share with you a love for the Senate and hope to return there next year to shake your hand and offer my congratulations to you in person. In the meantime, my very best wishes to you and your family.

Sincerely,

HUBERT H. HUMPHREY.

COLUMBUS, OHIO, *July 24, 1970.*

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: You have long been a most valuable person on the staff of the Senate. When returning, I have always looked you up because of my deep affection for you and your great help to me during my service in

the Senate. It does not seem possible that you have been there fifty years, for you are so full of energy and always so cheerful. I know yours has not been an easy job at times.

Your contribution to the Senate and your Country has been a great one.

Sincerely,

JOHN W. BRICKER.

MR. J. MARK TRICE,
U.S. Senate.

DEAR MARK: It seems hardly possible that you are completing fifty years of service in the Senate. You are a young looking man to have a Golden anniversary.

However, since the fact is upon us, I hasten to send you a word of congratulation. To this I add a word of appreciation of all that you have done for our Senators over these many years. I attest that you were extremely helpful to me personally and for that I have always been grateful.

I like to look back too upon the happy hours spent in your offices during night sessions, having a glass of bourbon with perhaps a piece of New Hampshire cheddar which Norris Cotton would provide . . . waiting for the bell to summon us back to the floor for a vote. Yes, happy hours they were when friendships became warmer, and we could talk unguardedly safe in the confidence and company of good friends.

I wish you the best, Mark. With warm appreciation of our friendship, I am

Faithfully,

PRESCOTT BUSH.

JOHN M. BUTLER,
BALTIMORE, MD.,
July 26, 1970.

DEAR MARK: I have just learned through the good offices of Senator Smith of Maine that you are now in your fiftieth year of service in the United States Senate. What a great privilege has been yours over so many years, more especially in the latter years of your service, to be the friend, confident and in many instances the advisor of the men and women who shaped and are now in large measure shaping the destiny of the Republic. Yours has indeed been the privilege not only to know them and work with them but to be known and respected by them as a man of the highest integrity and intelligence and unerring judgment. And Mark, my dear and enduring friend, you are a great asset to the great institution that is the United States Senate and to us whose privilege it has been to serve in the Senate during your tenure.

Sincerely yours,

JOHN.

JULY 30, 1970.

MR. J. MARK TRICE,
U.S. Senate.

DEAR MARK: Lady Margaret of Maine has written to astound me by saying that you are about to conclude half a century of service to the Senate of the United States.

I saw you most recently on the day when the Senate took affirmative action on the Cooper/Church Amendment, and it couldn't then occur to me that you had served so long. You looked and were acting as though another 50 years of duty was easily attainable. Yours has been an extraordinary achievement to this point in time. It is an understatement for me to wish you well during the years that lie ahead.

We first met in late 1945 when I became a member of the Senate from Washington State. You recognized me as being a neophyte with a minimum understanding of where I was. You, together with Carl L and Winnie B, were patient and unusually considerate in shortening my apprenticeship. I was grateful to you then, and the passage of time has not diminished my respect for you as a public servant of the highest order. In addition, I have long considered you to be my personal friend. One of my few regrets is that I have been too seldom in your company in recent years.

Again, I salute you for the constructive manner in which you have served our beloved country and assisted the political party to which we belong. The Senate, in its entirety, has a precious asset in your good self.

Admiringly,

HARRY P. CAIN.

P.S.—My prediction: The future is certain to treat you well in many ways. It could, and I hope does, see you operate again as Secretary for the Majority. Hasten that day!

INDIANAPOLIS, IND.,
July 27, 1970.

HON. J. MARK TRICE,
U.S. Senate, Washington, D.C.

DEAR MARK: There is an old saying, Mark, that to know a man you must work with him.

We worked together, as you well know, for 18 years. During that time I learned to have great respect for your integrity, ability and particularly your outstanding personality.

We need more men such as you in government.

I wish you the greatest success and happiness.

Sincerely,

HOMER E. CAPEHART.

CONCORDIA, KANS.,
July 24, 1970.

MR. J. MARK TRICE,
U.S. Senate

DEAR MARK: During my eighteen years in the U.S. Senate, I can think of no one that I was more indebted to than you for advice and personal favors.

This is a note to express my sincere thanks for those many favors. Your kindness and your ever willingness to help will never be forgotten.

Again many thanks.

Sincerely,

FRANK CARLSON.

KANSAS CITY, KANS.,
July 30, 1970.

MR. J. MARK TRICE,
Secretary for the Minority,
U.S. Senate, Washington, D.C.

DEAR MARK: It is a distinct honor and pleasure for me to be included among your many friends who are extending you their warmest congratulations and best wishes in honor of your Golden Anniversary in the Senate where you have served so capably and faithfully as Secretary for the Minority as well as in other beneficial capacities.

I know that you are greatly thought of by all who have been associated with you in the Senate and also by many other friends and associates in Congress. Those of us who worked with you in the past as well as those who work with you now and in the future will alway remember your many thoughtfulnesses and kindnesses.

I'll never forget the fine job you did during 1949 and 1950 while I was there. Your competence, friendship, loyalty and cooperation were certainly a great asset, and I'm glad to have this opportunity to thank you for your devoted interest in and dedication to your work—you're to be commended on a very productive fifty years.

Mrs. Darby joins me in wishing you an abundance of good health and many more years of happiness and success.

Sincerely,

HARRY DARBY.

U.S. SENATE,
Washington, D.C., July 27, 1970.

HON. AND MRS. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK AND MARGARET: The saying goes "behind every wonderful man is a lovely woman" and I think this is true in your circumstance, so I address this to the both of you.

Mark, words are so inadequate to express the respect and affection which Everett and I shared about you. Whenever he had a sticky problem or something that bothered him we would get out the little black book and call you. Whether it was Sunday or a holiday you would be there to help.

Your long years of service and your devotion to your country and the Senate which you serve has earned you the admiration from Republicans and Democrats alike. May the years that lie ahead bring you peace and tranquility and may you find satisfaction in a job well done. With every good wish,

MRS. EVERETT M. DIRKSEN.

U.S. COURT OF MILITARY APPEALS,
Washington, D.C., August 7, 1970.

MR. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: Your many years of service in the Senate and the many kindnesses, and your dedication to the United States through your service in the Senate, certainly warrants an appreciation which words alone will not adequately express. But it is the best which I can do in a letter. You were always ready to give advice and through your knowledge of the workings of the Senate were a great aid to me when I first arrived and as I continued through my years as Senator from Michigan.

May you have many more years there and I certainly wish you health and happiness while you are continuing to serve our Government.

Sincerely,

HOMER FERGUSON.

DOVER, DELAWARE,
July 24, 1970.

MR. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: Although nearly ten years have passed since it was my cherished privilege to serve as a United States Senator, the memories and recollections of my association with you continue to be vivid and refreshing.

To visit with you in your office was always interesting, educational and relaxing. The girls at the Secretaries desks reflected your sincerity in their welcome. The colleagues disclosed their philosophies in amplified tones. You could, without undue persuading, add many personal comments in an extremely enjoyable manner—such as having to use the ladder to get into your home. I could not have enjoyed all these things had it not been for your close friendship.

Personal congratulations for fifty years of FULL service to the United States Senate. The members of the Senate and the people of the United States are indebted to you for a lifetime of continuous and devoted assistance.

It is an honor for me to say, "Mark Trice is a true friend."

Most sincerely,

ALLEN.

CHEVY CHASE, MD.,
July 23, 1970.

MR. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: It seems that the years roll around faster than any of us appreciate but there is a special compensation for service rendered, and your half-century of service to the United States Senate is one of the great records of that body. I am proud that, up to the time I retired, I had served with you for a little over half the period of time you

had served, and I benefited from your friendship and advice.

I don't know what has happened to the Twilight Lodge, but I sometimes wonder if its unity has not been fractured just a little, for various reasons not of your making.

In any event, for your half-century of service to the Senate, the country and to all of us who served with you, please accept my congratulations and my best wishes for many future happy years.

Sincerely yours,

BOURKE B. HICKENLOOPER.

INDIANAPOLIS, IND.,
July 31, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: Word has reached me that you are in your 50th year of service in the United States Senate.

Honestly, I don't know whether to congratulate you or extend you deep, heartfelt sympathy. How have you stood it?

Seriously, Mark, I would say that you deserve a medal, and I hope they will present you with one!

I shall always treasure our friendship and most pleasant association during my years in the United States Senate, and certainly I want to be counted among your many, many friends expressing their appreciation for all your kindnesses and gracious assistance.

Janet joins me in sending you our warmest good wishes.

Sincerely,

WILLIAM E. JENNER.

EMBASSY OF THE UNITED STATES OF AMERICA,
New Delhi, India, July 22, 1970.

DEAR MARK: Although, due to the lack of vision of the New York electorate, it looks as if I would not be able to complete fifty years of service in that body, I certainly was astonished when I learned that anyone as young looking and vigorous as you had rounded out a half century of devoted service to the Senate and to the country. I am happy to have been afforded the opportunity to join in a tribute to you for your dedication and to express my deep gratitude for the many, many ways in which you were so helpful to me during my tenure. If I run again and am elected in 1980 or 1990, I know I can count on you for your continued cheerful cooperation. I wish you many years of happiness and deep satisfaction from the knowledge that you are held in such high and respectful regard by the Members of the Senate of all parties and colorations of viewpoint. Warm personal regards,

Very sincerely yours,

KENNETH B. KEATING.

OAKLAND TRIBUNE,
Oakland, Calif., July 30, 1970.

Hon. J. MARK TRICE,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR MARK: I have learned that you are about to celebrate your 50th anniversary of service to the United States Senate. As one who had the opportunity to serve as a United States Senator for 13½ years and as both Majority and Minority Leader of the Senate, I want to join your many other friends in extending my best wishes.

I hope that you will have many more years of service. I know that the individuals who have been privileged to serve in the United States Senate, the staff of that institution, the government and people of the United States are in your debt for all that you have done during this half century of time.

With warm personal regards, I remain

Sincerely yours,

WILLIAM F. KNOWLAND.

WYMAN, BAUTZER, FINELL, ROTHMAN & KUCHEL,
Washington, D.C., July 24, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: With all your friends, I share your family's pride as you have reached a unique and imposing milestone of faithful service to the American people. To have served in the United States Senate, on the Republican side, for a half century, to have participated during that time as an important part of the nation's legislative machinery, and to have discharged your duty with devotion and honor and tact is a singular achievement, perhaps unmatched in all the history of the Congress. At any rate, it surely is most unusual in its duration, and I personally trust it will not be concluded for many years and until many additional milestones are reached.

One of the remarkable things about your career is that you have made so many friends, and have kept so many friendships, in a sometimes highly emotional legislative atmosphere which depends on division and dispute in seeking to make progress.

Betty joins me in sending to you and Margaret our prayers and best wishes for long and happy years ahead.

Sincerely,

THOMAS H. KUCHEL.

BEVERLY, MASS.,
August 5, 1970.

Hon. J. MARK TRICE,
U.S. Senate, Washington, D.C.

DEAR MARK: You have a right to look back on your fifty years of service in the United States Senate with deep satisfaction. During my more than thirteen years as a Senator, I had almost daily opportunties to see you at work and to benefit by the talented and valuable services which you rendered. You were always intelligent, always polite and always helpful. Few can equal such a record and none can surpass it. In extending my congratulations to you on this Fiftieth Anniversary, I also send you my warm personal wishes for health and happiness in the future.

With warm regards,

As ever yours,

HENRY CABOT LODGE.

LAS CRUCES, N. MEX.,
July 20, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: A thoughtful person has reminded me that you will be finishing 50 years of service to the Senate soon. You must have been quite large for your age when you went to work.

My short time on the Hill was made much more pleasant and rewarding by the fine service you rendered and the many acts of friendship you performed for me.

I just hope that your reign is much longer and that we can address you before long as the Clerk of the Majority.

Sincerely,

E. L. MECHEM.

LOUISVILLE, KY.,
July 22, 1970.

Mr. J. MARK TRICE,
U.S. Senate.

DEAR MARK: I am proud to be among your many friends who salute you for fifty years of faithful service in the United States Senate.

I suppose congratulations are in order but frankly, I think the United States Senate and particularly the Republican members thereof are to be congratulated for all that you have done over the years.

You and the members of your staff certainly were of untold help to me when I first went to the Senate and in the twelve years that followed. I have no regrets about leaving the Senate except that I miss all of those with whom I enjoyed a delightful camaraderie. My friendship with you is something that I shall treasure always.

Belle Clay asked me the other day what I missed most about Washington. My reply was three-fold: The Finance Committee, The Senate Gym and the Twilight Lodge.

With best wishes always,

Sincerely yours,

THRUSTON B. MORTON.

WALDOBORO, MAINE,
July 31, 1970.

Hon. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: As one who has had the extreme good fortune to have had a rather close and wonderful relationship with you during my service in the Senate of the United States, it is with the greatest of pleasure that I know you now have been wed to that body for 50 years, and are celebrating your Golden Anniversary this year.

My most sincere congratulations to you on attaining a distinction shared by few persons in the history of that most "Exclusive Club".

Mark, no person has ever been more highly dedicated to his work than you. No individual could have possibly extended greater courtesy and kindness to the many members of the United States Senate over the years than you. Every wish or desire has been handled with ease, tact and a great sense of devotion, regardless of whether it came from one high or low on the "totem pole". With you, it was always a question of trying to be of real help and service. Nothing else mattered.

Some of the most pleasant hours of my service there, were due to your friendship, hospitality and patience. You taught me the ways of the Senate and what to do and what not to do. Your door was always open, and during lengthy sessions lasting into late evening, your quarters seemed to be a "haven" for some of us who enjoyed "good fellowship" and a chance to be spared a bit of the lengthy oratory taking place on the floor of the Senate.

Yes, Mark, I have prized and always shall your friendship and all the wonderfully kind and thoughtful things you did for me and many like me. It is simply my one hope now, that I may live to see you again Secretary to the Majority.

Mrs. Payne joins with me in sending our very best, to one of the greatest persons we have ever known. May the next "50" be just as wonderful as the last.

Sincerely,

FREDRICK G. PAYNE.

POTTER & KORNMEIER INTERNATIONAL,
July 22, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: I wish to join with your host of friends in extending my congratulations to you for fifty years of service in the United States Senate.

Mark, you have been privileged to have witnessed hundreds of men and women who have sat in the United States Senate during your one-half century of duty. I am sure your thoughtfulness and willingness to be helpful is deeply appreciated by all of those who have had the privilege of working with you.

Betty joins me in wishing Margaret and yourself our best wishes for your continued health and success.

Kind personal regards on this memorable occasion.

Sincerely,

CHARLES E. POTTER.

FROSTBURG, MD.,
July 24, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: I want to join with your multitude of friends from all over the United States in congratulating you on the completion of 50 years service in the United States Senate.

You can quite deservedly look back with pride on a career of dedicated service to our Country, the Senate and the Republican Party.

I consider myself extremely fortunate to have been able to work with you for 12 of those 50 years.

With many thanks for your help in the past, and with every good wish for the future, I am

Sincerely yours,

J. GLENN BEALL.

OLD SAYBROOK, CONN.,
July 29, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: A half century of service in the United States Senate is a record of which one can properly be proud but years only is a small measure of your service. Your dedication to your duties and the cheerful and friendly manner in which they were discharged by you meant much. Even more meaningful than the years served are the friendships given and received. The thoughtful, kind help always willingly extended by you are fond memories of my service with you.

Mark, in my book, you are one GREAT GUY and so my sincere congratulations to you on this 50th Anniversary.

Sincerely,

WILLIAM A. PURTELL.

BOSTON, MASS.,
July 20, 1970.

Mr. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MARK: As one of your good friends over the twenty-two years that I served with you in the United States Senate, I want to join with your many friends to tell you how much I appreciated the many thoughtful little acts that you did to help me over those years and your extraordinary memory of details that made our actions more helpful in present day problems. Certainly, I hope that your 50th year mark will just be a new step forward for more years of service not only to members of the Senate, but to the nation.

May I add that I have some idea how much Mrs. Trice was of assistance to you and through you to us all. I recall particularly the many telephone calls to your home and to the other occasions on which Mrs. Saltonstall and I had such pleasant meetings with you both.

Congratulations and the best of luck!

Sincerely yours,

LEVERETT SALTONSTALL.

CONCORD, N.H.,
August 11, 1970.

Hon. J. MARK TRICE,
U.S. Senate,
Washington, D.C.

DEAR MR. TRICE: It was my privilege to serve in the U.S. Senate in 1954 having been appointed to fill the vacancy created by the death of Senator Tobey and during my service was grateful to you for your personal consideration and kindness. I failed re-election at the primary held in September and had no opportunity to say farewell. I have recently learned through the Senator from Maine that you have now served the Senate for fifty years and I decided to congratulate both you and the Senate. I take this opportunity to express my appreciation with thanks for your dedicated service and trust that it may long continue.

With my best wishes, I am

Very truly yours,

ROBERT W. UPTON.

S. 4297—INTRODUCTION OF THE HEALTH SECURITY ACT

Mr. KENNEDY. Mr. President, on behalf of Senator YARBOROUGH, Senator COOPER, Senator SAXBE, and myself, as well as Senators MCGOVERN, MONDALE, PELL, YOUNG of Ohio, HART, CRANSTON, HUGHES, BAYH, METCALF, MUSKIE, and MCCARTHY, I introduce the Health Security Act, a legislative proposal to establish a program of comprehensive national health insurance to provide better health care for all our people. We commend this legislation to our colleagues in the Senate for favorable consideration and early action.

Today in the United States, it is widely recognized that the American people are confronted with a crisis in the availability and the delivery of essential health services. In spite of the broad agreement that our population has a right to health care, the evidence is overwhelming that this right cannot be adequately exercised by most of our people. The nature and the dimensions of our national need for a system of better health care are well known. If we are to avoid the collapse of our health services and the disastrous consequences that would ensue for tens of millions of our people, we must take action.

We therefore offer today a health security program that will enable our Nation to make the right to health care not merely a principle or a social goal, but a living and functioning reality.

The primary purpose of our legislation is to establish a program to serve all who need health care and all who are qualified to provide the needed health services. Through a system of national health insurance, the program will guarantee orderly, budgeted, and stable financing of health services. In addition, a major part of the program will help to guarantee that the necessary national resources are available for the delivery of health care. Finally, through a program of innovative supports and incentives, the legislation will generate urgently needed improvements in both the organization and delivery of health care.

The health security program will emphasize the maintenance of health as well as the treatment of illness. By improving the efficiency of organization and by strengthening professional and financial controls, the program will restrain the steeply mounting costs of health care, while providing fair, reasonable, and adequate compensation and support to the individuals and the institutions that furnish health services.

One of the most useful and valuable innovations of the health security program is the resources development fund, which is part and parcel of the overall plan. During the 3 years before the benefit program becomes operational, the resources development fund will generate over 1 billion Federal dollars to improve and strengthen our health care system and to assure the availability and the effectiveness of the covered services when the benefit program begins. The fund will increase manpower and resources, and create new programs of organized health care throughout the Nation.

The goal of the program is to insure that all persons residing in the Nation have the opportunity to receive good health care—without barriers to the care they need, and without the crushing financial burdens that too often accompany the delivery of health services today. We believe that the health security program is a major step toward accomplishing that goal.

CURRENT PROBLEMS

America faces many serious and critical domestic problems, but none is more pervasive or more difficult than the deterioration of our once proud system of health care. In the United States of 1970, health care is the fastest growing failing business in the Nation—a $63 billion industry that fails to meet the urgent needs of our people. In spite of the dramatic recent increases in the Federal health budget and the large amounts we are all now spending for health care, there is almost no one today who believes that the Federal Government and the private citizen are getting full value for their health dollars.

The need for better health care is felt by every individual and family in the Nation. It cuts across all political, social, economic, and geographic lines—rich and poor, black and white, old and young, urban and rural.

As a nation, we have long been committed to fulfilling the potential of good health care for all our people. Yet, despite the dedication of many persons, despite large efforts and enormous expenditures, good health care is not yet even available to millions of people, and it is not actually being received by tens of millions more each year.

At the same time, we are devoting an increasing share of our national economic resources to health care. The cost is increasing, but the quality is declining. Our rates of sickness, disability, and mortality already lag far behind the potential of modern health care and the reality of such care in many foreign nations. Our record is getting no better. It may be getting worse. The consequences are serious. The challenge can no longer be denied.

We know very well the dismal health record of the United States compared to the other major industrial nations of the world. Year after year, the statistics tell us how little progress we have been making in health care in recent decades.

In spite of the fact that our vaunted research and technology is unequalled by any other nation in the history of the world, America is an also-ran in the delivery of health care to our people. In the midst of the rising cost of health care, we have endured a decline in the overall quality of the care we give our citizens. The figures are shocking:

In infant mortality, among the major industrial nations of the world, the United States today trails behind 12 other countries, including all the Scan-

dinavian nations, most of the British Commonwealth, and East Germany.

We trail six other nations in the percentage of mothers who die in childbirth.

Tragically, the infant mortality rate for nonwhites in the United States is twice the rate for whites. And nearly five times as many nonwhite mothers die in childbirth as white—shameful evidence of the ineffective prenatal and postnatal care our minority groups receive.

The story told by other health indicators is equally dismal. The United States trails 17 other nations in life expectancy for males, 10 other nations in life expectancy for females and 15 other nations in the death rate for middle-aged males.

Almost every family knows the cruel burden of worry, frustration, and disappointment that mark our search for better health care. The average American citizen lives in dread of illness and disability. He lives with the uncertainty of not knowing whether to seek medical care, or when to seek it, or how to obtain it. He lives with postponements and delays.

Above all, he lives in fear of the cost of health care. How many millions of Americans have gambled with their health to avoid the high cost of care they need? How many have endured suffering that might have been relieved? How many have had to sacrifice their hopes and plans because of the high price they had to pay for the care they received?

Despite massive sales of private health insurance, most of the expenditures for personal health services must still be borne out of pocket by the patient at the time of illness or as a debt thereafter. Nearly all private health insurance is partial and limited. In 1968, in spite of the fact that health insurance was a giant $12 billion industry, benefit payments in the aggregate met only about one-third of the private costs of health care, leaving two-thirds to be paid outside the framework of health insurance.

Private health insurance—through a thousand private carriers competing with each other, and through a bewildering array of insurance policies—had done no more than this to ease the impact of the cost of medical care on American families.

The private health insurance industry has failed us. It provides sickness insurance, not health insurance; acute care, not preventive care. It gives partial benefits, not comprehensive benefits. It fails to control costs. It fails to control quality. It ignores the poor and the medically indigent.

Far too often, the catastrophe of serious illness is accomplished by the very real fear of financial ruin. Health insurance coverage in America today is more loophole than protection. In 1968, of the 180 million Americans under 65, 20 percent had no hospital insurance, 22 percent had no surgical insurance, 34 percent had no inpatient medical insurance, 50 percent had no outpatient X-ray and laboratory insurance, 57 percent had no insurance for doctors' office visits or home visits, 61 percent had no insurance against the cost of prescription drugs, 97 percent had no dental care insurance.

These problems are not the problems of some small sector of our society. They are not the problems of only the poor, the disadvantaged, the handicapped, or the chronically ill. They are not the problems of only those in the inner city, or in the small towns or the rural areas.

These are the problems of families throughout the Nation. They do not have to read the statistics to know the crisis of our unmet needs. They know the problems firsthand, and they look to us for preventive measures and for remedies.

In our effort to achieve the goal we set today, I believe we will have the strong support of an increasing number of the providers of health care. We know the dedication of the health professions, the heroic efforts of hospitals and other institutions, the conscientious efforts of Federal, State, and local governmental agencies and their health personnel. We know the limitations under which they struggle today to meet the national need for health care. We know that at its best, medical care in the United States is second to none in the world, but we also know that the best is completely inaccessible to the vast majority of our people. More important, we know that if we are to succeed in our effort to improve the quality of health care for all, we must have the active support and assistance of all the health professions.

Our primary concern is not with allocating praise for what is good or blame for what is bad in our current health care system. Our primary concern is with identifying the needs and designing a program capable of meeting the needs we find.

There are three causes of our current health crisis that dominate all the rest:

There is a national shortage of health manpower and institutions.

Rising costs are pricing medical care beyond reach.

There are serious inadequacies in the system by which we organize and deliver health care.

If we are to meet the health needs of the Nation, we must insure that we have the needed health manpower, hospitals, and other institutions. We must keep the costs within reasonable bounds. And, we must develop a system which provides more efficient use of our existing health resources, and which encourages the availability of increased resources for the future.

If we are to succeed in alleviating our health crisis, however, we must attack each of these three problems simultaneously. Producing more health manpower or more hospitals or other institutions without improving the financing and organization of health care would simply exacerbate the already serious problem of the misallocation of our health resources. Changing the financing system alone by pouring more purchasing power into the existing channels would simply escalate the costs still further. And, attempting to deal with the organization system alone would be an invitation to decades of lag and disappointment. Such divided and categorical approaches have been tried under governmental or private sponsorship in the past, and they have met with uniform frustration and defeat. We propose that we should not repeat those mistakes.

Instead, we offer a comprehensive program that is intended to be a balanced and well-proportioned attack on each of the basic problems we face. At every point, we will provide professional and administrative protections and controls to limit the cost and safeguard the high quality of the health care services that will be made available.

NATIONAL HEALTH INSURANCE IN THE PAST

Proposals for national health insurance have a long history in the United States. The need for such a program was recognized at least two generations ago. At that time, medical care was becoming increasingly effective and valuable. Specialization was multiplying. Hospital services were becoming highly complex. Most important, the rising cost of adequate health care was threatening to price good care beyond the reach of millions of people.

It is not surprising, therefore, that health benefits were considered as a part of the original Social Security Act in 1935. Although these benefits were not included at the time, they were reserved for possible future extension of the social security program.

Additional proposals for national health insurance were made in Congress in the late 1930's and in the 1940's. These proposals were extensively studied and debated, but the time was not yet ripe for action. The earliest bills advocated Federal grants for State programs of health insurance. Nothing came of these proposals except the gradual provision of Federal support for State public assistance plans to pay for the costs of medical care—first for indigent persons and later also for medically indigent persons.

As our social security program grew in popularity and demonstrated its successful operation, the proposals in the Congress took the form of recommendations to include health benefits as an integral part of the Social Security Act. These proposals were also extensively studied and debated—over a period of more than 20 years. Out of those studies and debates eventually came, in 1965, the enactment of medicare as a limited program of national health insurance for persons 65 and over, and medicaid as a Federal-State medical care program on a means-test basis for indigent and medically indigent persons.

In those enactments of 1965, and in their subsequent amendments, Congress was guided by a policy of providing Federal financial support for the cost of private medical services. This partnership—governmental financial support and private provision of services—was sound in concept but deficient in practice.

The experience of medicare and medicaid has demonstrated that money alone and medical care insurance alone are no longer adequate to deal with the health care needs of the Nation. So long as the resources are insufficient and the organizational arrangements are inadequate, money alone will only make the problem worse. National health insurance is still necessary, but it must now and for the

years ahead be part of a broader program of health security.

THE NEED FOR NATIONAL HEALTH INSURANCE NOW

Today, the United States is the only major industrial Nation in the world that does not have a national health service or a program of national health insurance.

We know from recent experience that changes in the organization and delivery of health care in the United States will come only by an excruciating national effort. Throughout our society today, there is perhaps no institution more resistant to change than the organized medical profession. Indeed, because the crisis is so serious in the organization and delivery of health care, there are many who argue that we must make improvements in the organization and delivery system first, before we can safely embark on changing the financing system through national health insurance.

I believe the opposite is true. We must use the financing mechanism to create strong new incentives for the reorganization and delivery of health care. Thomas Paine declared at the founding of our American Republic, echoing the words of the ancient Greeks, "Give us a lever and we shall move the world." I say, give us the lever of national health insurance, and together we shall move the medical world and achieve the reforms that are so desperately needed.

The fact that the time has come for national health insurance makes it all the more urgent to pour new resources into remaking our present system. The organization and delivery of health care are so obviously inadequate to meet our current health crisis that only the catalyst of national health insurance will be able to produce the sort of basic revolution that is needed if we are to escape the twin evils of a national health disaster or the federalization of health care in the seventies.

To those who say that national health insurance will not work unless we first have an enormous increase in health manpower and health facilities and a revolution in the delivery of health care, I reply that until we begin moving toward national health insurance, neither Congress nor the medical profession will ever take the basic steps that are essential to reorganize the system. Without national health insurance to galvanize us into action, I fear that we will simply continue to patch the present system beyond any reasonable hope of survival.

The need for comprehensive national health insurance and concomitant changes in the organization and delivery of health care in the United States is our single most important issue of health policy today. If we are to reach our goal of bringing adequate health care to all our citizens, we must have full and generous cooperation between Congress, the administration, and the health profession. We already possess the knowledge and the technology to achieve our goal. All we need is the will. The challenge is enormous, but I am confident that we are equal to the task.

PROPOSALS FROM THE COMMITTEE FOR NATIONAL HEALTH INSURANCE

Recently, a new chapter began in the long history of national health needs and social policy. Walter Reuther was among the first to see that financing programs like medicare and medicaid, or extensions of private health insurance, could not resolve the crisis of disorganization and the spiraling costs of health care. Walter Reuther understood that the Nation needed to take a bold step forward. In November 1968, he announced the formation of the Committee of One Hundred for National Health Insurance. As he said, in establishing the mandate of the committee:

> I do not propose that we borrow a national health insurance system from any other nation. No nation has a system that will meet the peculiar needs of America. I am confident that we have in America the ingenuity and the social inventiveness needed to create a system of national health insurance that will be uniquely American—one that will harmonize and make compatible the best features of the present system, with maximum freedom of choice, within the economic framework and social structure of a national health insurance system.

Joining Walter Reuther on that committee were Dr. Michael E. DeBakey, Mrs. Mary Lasker, Mr. Whitney M. Young, Jr., and other outstanding citizens from the fields of medicine, public health, industry, agriculture, labor, education, the social services, youth, civil rights, religious organizations, and consumer groups. I have had the honor of serving on that committee along with my Senate colleagues, RALPH YARBOROUGH, JOHN SHERMAN COOPER, and WILLIAM SAXBE.

In its efforts over the past 2 years, the committee has worked to develop a sound program for improving the organization, financing, and delivery of health services to the American people. The committee's deliberations were based upon the premise that progress toward a more rational health system should be orderly and evolutionary. They felt that a better system of health care for America should rest upon the positive motivations and interests of both consumers and providers of health services. They believed that no system could succeed if it were imposed by fiat through rigid legislation and administrative regulations.

The bill that we introduce today is based on the recommendations of the committee. Throughout its deliberations, the committee was guided by the work of its distinguished technical subcommittee, chaired by Dr. I. S. Falk, professor emeritus of public health of Yale University and the most eminent authority in the field of health economics in the Nation. The committee consulted extensively with representatives of professional associations, consumer organizations, labor unions, management, and many other interested groups. The plan that the committee has proposed for a national health security program gives careful consideration to the recommendations of all of these groups.

The tragedy of Walter Reuther's death is compounded by the knowledge that he was on the threshold of presenting the committee's program, one of his greatest social visions. Now, as we transfer the debate from the halls of the universities to the hearing rooms of Congress, the committee is fortunate to have the able leadership of Leonard Woodcock. We know, therefore, that the strong and forceful guidance of the committee will continue as its work enters this new stage of activity.

MAJOR PROVISIONS OF THE PROPOSED LEGISLATION

The Health Security Act is intended to be comprehensive and extensive. At the conclusion of my remarks, I shall include a section-by-section analysis of the bill and the text of the bill itself, so that the details of its provisions may be widely available to all.

At this time, however, I would like to call attention to the major principle on which the bill is premised, and to summarize its main provisions.

First. Three basic principles have served as guidelines for this legislation, and they deserve special notice:

The health security program does not envisage a national health service, in which Government owns the facilities, employs the personnel, and manages the finances of the health system. On the contrary, the program proposes a working partnership between the public and private sectors. There will be Government financing and administrative management, joined with private provision of personal health services through private practitioners, institutions, and other providers.

The health security program will be carried out in a gradual process, moving in an evolutionary course from where we are today to the goals we have set for the future.

The comprehensive services covered by the health security program will be financed on a budgeted basis. Funds will be provided from a pool of national resources, with reasonable limitations on the hitherto unlimited expenditures demanded from the national economy.

Second. The benefits of the health security program will be available, with only minor exceptions, to all persons residing in the country, beginning in the middle of 1973. Eligibility will require neither an individual contribution history as in social security nor a means test as in medicaid.

Third. The benefits of the program are intended to embrace the entire range of services required for personal health, including services for the prevention and early detection of disease, for the care and treatment of illness, and for medical rehabilitation. With only four exceptions, there are no restrictions on needed services—no cutoff points, no coinsurance, no deductibles, and no waiting periods. The four exceptions are dictated by inadequacies in existing resources or in management potentials; they deal with nursing home care and other custodial care, psychiatric care, dental care, and certain medicines and appliances.

Fourth. Providers of health services will be compensated directly by the health security program. Individuals will not be charged for covered services.

Hospitals and other institutional providers will be paid on the basis of approved prospective budgets. Independent practitioners, including physicians, dentists, podiatrists and optometrists, may be paid by various methods which they elect: By fee-for-service, by capitation payments, or in some cases by retainers, stipends, or a combination of methods. Comprehensive health service organizations may be paid by capitation, or by a combination of capitation and methods applicable to payments to hospitals and other institutional services. Other independent providers, such as pathology laboratories, radiology services, pharmacies, and providers of appliances, will be paid by methods adapted to their special characteristics.

Fifth. The financial and administrative arrangements are designed to move the medical care system toward organized programs of health services, with special emphasis on teams of professional, technical, and supporting personnel. The resources development fund—containing up to 5 percent of the total amount in the trust fund—will be available to support the most rapid practicable development toward this goal of strengthening and improving the Nation's health resources. Federal law will supersede State statutes which restrict or impede the development of group practice plans. Thus, the program will do its best to assure increased availability of covered health services. It will not be content with merely contributing further strains on our already overburdened resources.

Sixth. The health security program includes various provisions to safeguard the quality of health care. The program will establish national standards more exacting than medicare for participating individual and institutional providers. Independent practitioners will be eligible to participate if they meet licensure and continuing education requirements. Specialty services will be covered if, upon referral, they are performed by qualified persons. Hospitals and other institutions will be eligible for participation if they meet national standards, and if they establish utilization review and affiliation arrangements.

Seventh. In the area of health manpower, the health security program will supplement existing Federal programs. It will provide incentives for comprehensive group practice organizations. It will encourage the efficient use of personnel in short supply. It will stimulate the progressive broadening of health services. It will provide funds for education and training programs, especially for members of minority groups and those disadvantaged by poverty. Finally, it will provide special support for the location of needed health personnel in urban and rural poverty areas.

Eighth. Various Federal health programs will be superseded, in whole or in part, by health security. Since all persons 65 and over will be covered by the program, medicare under the social security system will be terminated. Federal aid to the States for medicaid and other Federal programs will also be terminated except to the extent that benefits under such programs are broader than under health security. However, the bill does not revise the current provisions for personal health services under the Veterans' Administration, temporary disability, or workmen's compensation programs.

Ninth. The administration of the health security program will be concerned primarily with the availability of services, the observance of high quality standards, and the containment of costs within reasonable bounds. Policy and regulations will be established by a five-member full-time Health Security Board, appointed by the President with the advice and consent of the Senate. Members of the Board will serve 5-year terms, and will be under the authority of the Secretary of Health, Education, and Welfare.

A statutory National Advisory Council will assist the Board on general policy, the formulation of regulations and the allocation of funds. Members of the Council will include representatives of both providers and consumers of health care.

Administration of the program will be carried out through the 10 existing HEW regions as well as through the approximately 100 health subareas that now exist as natural medical marketplaces in the Nation. Advisory councils on matters of administration will be established at each of these levels. Through its regulations, the Board will guide the overall performance of the program. It will coordinate its activities with State and regional planning agencies, and it will account for its activities to Congress.

Tenth. The program will be financed through a health security trust fund similar to the social security trust fund. Income to the fund will derive from three sources: 40 percent from Federal general revenues, 35 percent from a tax of 3.5 percent on employers' payrolls, and 25 percent from a 2.1-percent tax on individual income up to $15,000 a year.

Employers may pay all or part of their employees' health security tax, and they would be expected to preserve obligations under existing collective-bargaining agreements.

Each year, the Board will make an advance estimate of the total amount needed for expenditure from the trust fund to pay for services, for program development, and for administration. The Board will allocate funds to the several regions, and these allocations will be subdivided among categories of services in the health subareas. Advance estimates, constituting the program budgets, will be subject to adjustments in accordance with guidelines in the act. The allocations to regions and to subareas will be guided initially by the available data on current levels of expenditures. Thereafter, they will be guided by the program's own experience in making expenditures and in assessing the need for equitable health care throughout the Nation.

Eleventh. On the basis of data from fiscal year 1969, the most recent year for which complete statistics are available, the health security program we are proposing would have paid for a total of $37 billion in personal health care services in the United States. Had the program been in existence in 1969, therefore, it would have paid approximately 70 percent of the $53 billion in total personal health expenditures for that year, or about twice the percentage that existing forms of public and private health insurance now pay.

Overall, expenditures under the health security program will not create a new round of Federal health expenditures, layered on top of existing public and private expenditures for health care. Instead, the health security program is designed to achieve a rechanneling of expenditures already being made, so that existing funds may be allocated more efficiently. In essence, health security expenditures will replace the large amount of wasteful and inefficient expenditures already being made by private citizens, by employers, by voluntary private agencies, and by Federal, State, and local governments. Only in this way can we begin to guarantee our citizens better value for their health dollar.

CONCLUSION

In sum, the Health Security Act we submit to the Senate and to the people of the United States differs from all previous proposals for national health insurance. It is not just another proposal for insurance. It is not just another design for pouring more purchasing power into our already over-strained and overburdened "nonsystem" for the delivery of medical care. It is not just another proposal to generate more professional personnel or more hospitals and clinics, without the means to guarantee their effective utilization.

Ours is a proposal to give us a national system of health security. Under this program, the funds we make available will finance and budget the essential costs of good medical care for the years ahead. At the same time, these funds will be building new capacity to bring adequate, efficient, and reliable medical care to all families and individuals in the Nation.

I invite all members of the Senate to study this proposed legislation and to join with us in seeking its early enactment.

I ask unanimous consent that the bill and a section-by-section analysis of its provisions be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and the analysis will be printed in the RECORD, in accordance with the Senator's request.

The bill (S. 4297) to create a health security program, introduced by Mr. KENNEDY (for himself and other Senators), was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 4297

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Health Security Act."

DECLARATION OF PURPOSE

SEC. 2. The purpose of this Act is—

To create a national health security program which, through a system of national health insurance, will make health services available to all residents of the United States, and

Through the operation of the program, to effect modifications in the organization and methods of delivery of health services which will increase the availability and continuity of care, will emphasize the maintenance of health as well as the treatment of illness and, by improving the efficiency and the utilization of services and by strengthening professional and financial controls, will restrain the mounting cost of care while providing fair and reasonable compensation to those who furnish it.

INITIATION OF HEALTH SECURITY PROGRAM

SEC. 3. Health security taxes will become effective on January 1, and health security benefits on July 1, of 1973. Except for the benefit and related fiscal provisions, title I of this Act is effective upon enactment. Certain Federally financed or supported health programs will be terminated or curtailed when health security benefits become available. Effective dates of the several provisions of this Act are set forth in sections 142, 203, 213, 301, 302, and 303.

TABLE OF CONTENTS

Sec. 1. Short Title.
Sec. 2. Declaration of Purpose.
Sec. 3. Initiation of Health Security Program.

TITLE I—HEALTH SECURITY BENEFITS

PART A—ELIGIBILITY FOR BENEFITS

Sec. 11. Basic Eligibility.
Sec. 12. Agreements for Eligibility of Other Persons.
Sec. 13. Study of the Provision of Health Benefits to United States Citizens in Other Countries.

PART B—NATURE AND SCOPE OF BENEFITS: COVERED SERVICES

Sec. 21. Entitlement to Have Payment Made for Benefiits.
Sec. 22. Physician Services.
Sec. 23. Dental Services.
Sec. 24. Institutional Services.
Sec. 25. Drugs.
Sec. 26. Devices, Appliances, and Equipment.
Sec. 27. Miscellaneous and Supporting Services.
Sec. 28. Exclusion from Covered Services.

PART C—PARTICIPATING PROVIDERS OF SERVICES

Sec. 41. In General; Agreements with the Board.
Sec. 42. Professional Practitioners.
Sec. 43. General Hospitals.
Sec. 44. Psychiatric Hospitals.
Sec. 45. Skilled Nursing Homes.
Sec. 46. Home Health Service Agencies.
Sec. 47. Comprehensive Health Service Organizations.
Sec. 48. Other Health Service Organizations.
Sec. 49. Miscellaneous Providers.
Sec. 50. Utilization Review.
Sec. 51. Transfer and Affiliation Agreements.
Sec. 52. Newly Constructed Facilities.
Sec. 53. Consideration of Professional Association Standards.
Sec. 54. Compliance with Directions for Better Organization and Coordination of Services.
Sec. 55. Exclusion: Federal Providers of Services.
Sec. 56. Restrictive State Laws Inoperative.

PART D—TRUST FUND; ALLOCATION OF FUNDS FOR SERVICES

Sec. 61. Health Security Trust Fund.
Sec. 62. Annual Determination of Fund Availability.
Sec. 63. Health Services Account, Health Resources Development Account, and Administration Account.
Sec. 64. Regional Allocations from Health Services Account.
Sec. 65. Division of Regional Funds by Classes of Services.
Sec. 66. Funds for Health Service Areas.
Sec. 67. Modification of Fund Allotments.

PART E—PAYMENT TO PROVIDERS OF SERVICES

Sec. 81. In General.
Sec. 82. Methods and Amount of Payment to Professional Practitioners.
Sec. 83. Payment to General Hospitals.
Sec. 84. Payment to Psychiatric Hospitals.
Sec. 85. Payment to Skilled Nursing Homes and to Home Health Service Agencies.
Sec. 86. Payment for Drugs.
Sec. 87. Payment to Comprehensive Health Service Organizations.
Sec. 88. Payment to Other Providers.
Sec. 89. Methods and Time of Payment.

PART F—PLANNING; FUNDS TO IMPROVE SERVICES AND TO ALLEVIATE SHORTAGES OF FACILITIES AND PERSONNEL

Sec. 101. Purpose of Part F; Availability of Funds.
Sec. 102. Planning.
Sec. 103. General Policies and Priorities.
Sec. 104. Organizations for the Care of Ambulatory Patients.
Sec. 105. Recruitment, Education, and Training of Personnel.
Sec. 106. Special Improvement Grants.
Sec. 107. Loans under Part F.
Sec. 108. Relation of Parts E and F.

PART G—ADMINISTRATION

Sec. 121. Establishment of the Health Security Board.
Sec. 122. Duties of the Secretary and the Board.
Sec. 123. Executive Director; Delegation of Authority.
Sec. 124. Regions and Health Service Areas.
Sec. 125. National Health Security Advisory Council.
Sec. 126. Regional and Local Advisory Councils.
Sec. 127. Professional and Technical Advisory Committees.
Sec. 128. Dissemination of Information; Studies and Evaluation; Systems Development.
Sec. 129. Experiments and Demonstrations.
Sec. 130. Determinations; Hearings and Judicial Review.
Sec. 131. Directions by the Board for the Better Organization and Coordination of Services.

PART H—MISCELLANEOUS PROVISIONS

Sec. 141. Definitions.
Sec. 142. Effective Dates of Title I.
Sec. 143. Existing Employer-Employee Health Benefit Plans Unaffected.

TITLE II—HEALTH SECURITY TAXES

PART A—PAYROLL TAXES

Sec. 201. Rates and Coverage.
Sec. 202. Conforming and Technical Amendments.
Sec. 203. Effective Dates of Part A.

PART B—TAX ON NON-WAGE INCOME

Sec. 211. Imposition of Tax.
Sec. 212. Conforming and Technical Amendments.
Sec. 213. Effective Dates of Part B.

TITLE III—REPEAL OR AMENDMENT OF OTHER ACTS

Sec. 301. Repeal of Medicare and Federal Employee Health Benefit Statutes.
Sec. 302. Medicaid Statute.
Sec. 303. Vocational Rehabilitation Act; Maternal and Child Health and Crippled Children's Services.

TITLE I—HEALTH SECURITY BENEFITS

PART A—ELIGIBILITY FOR BENEFITS

BASIC ELIGIBILITY

SEC. 11. Every resident of the United States and every non-resident citizen thereof is eligible, while within the United States, to receive the benefits of the health security system created by this Act; except that an alien employee of a foreign government, of an instrumentality of a foreign government exempt from the tax imposed by section 3111 (b) of the Internal Revenue Code of 1954; or of an international organization is eligible only in accordance with an agreement under section 12. An alien admitted as a permanent resident and living within the United States, or an alien admitted for employment and employed within the United States, is for the purposes of this title a resident of the United States.

AGREEMENTS FOR ELIGIBILITY OF OTHER PERSONS

SEC. 12. The Health Security Board (hereafter referred to as "the Board"), with the approval of the Secretary of Health, Education, and Welfare and the Secretary of State, is authorized to enter into agreements with foreign governments, international organizations, or other entities to extend the benefits of this title to persons within the United States not otherwise eligible therefor, in consideration of payment to the United States of the estimated cost of furnishing the benefits to such persons, or of an undertaking to furnish in a foreign country similar benefits to citizens of the United States, or of a combination of payment and such an undertaking.

STUDY OF THE PROVISION OF HEALTH BENEFITS TO UNITED STATES CITIZENS IN OTHER COUNTRIES

SEC. 13. The Secretary of Health, Education, and Welfare, in consultation with the Secretary of State and the Secretary of the Treasury, shall study (a) the practicability and the means of making prepaid health services (or prepaid indemnification for the cost of health services) available, more widely than can be done under section 12, to citizens of the United States who are resident in other countries or are temporarily visiting such countries, by supplementing the authority for reciprocal arrangements under section 12 with authority for payments from the Health Security Trust Fund, and (b) means of equitably financing such services (or indemnification) through the extension of health security taxes; and not later than June 30, 1975, shall report to the Congress his findings and recommendations.

PART B—NATURE AND SCOPE OF BENEFITS: COVERED SERVICES

ENTITLEMENT TO HAVE PAYMENT MADE FOR SERVICES

SEC. 21. Every eligible person is entitled to have payment made by the Board for any covered service furnished within the United States by a participating provider if the service is necessary or appropriate for the maintenance of health or for the diagnosis or treatment of, or rehabilitation following, injury, disability, or disease Covered services are the services described in this part (subject to the exclusions stated in section 28); participating providers are providers described in part C.

PHYSICIAN SERVICES

SEC. 22. (a) Professional services of physicians, furnished in their offices or elsewhere, are covered services except to the extent otherwise provided in this section and section 28. Covered physicians' services include services and supplies of kinds which are commonly furnished in a physician's office, without separate charge, as an incident to his professional services.

(b) Covered physicians' services consist of (1) primary medical services, which are the

services (as defined in regulations, but including preventive services) ordinarily furnished by physicians (whether general practitioners or specialists) engaged in general or family practice for adults or the children or for both, and (2) specialized services. Major surgery and other specialized services designated in regulations are covered services only if they are furnished by an appropriately qualified specialist and, to the extent specified in regulations, on referral by a physician engaged in general or family practice, or if they are emergency services.

(c) Psychiatric (mental health) service to an ambulatory patient is a covered service (1) only if it constitutes an active preventive, diagnostic, therapeutic, or rehabilitative service with respect to emotional or mental disorders, and (2) only to the extent of 20 consultations during a spell of illness (as defined in regulations); but the limitation in clause (2) is not applicable if the service (A) is furnished by a comprehensive health service organization, by a hospital to an outpatient, or by a community mental health center or other mental health clinic which furnishes comprehensive services, or (B) is furnished to a patient of a day care service approved by the Board for this purpose.

DENTAL SERVICES

SEC. 23. (a) Professional services (described in subsection (b)) of a dentist, furnished in his office or elsewhere, are (subject to the provisions of section 28) covered services if they are furnished to a person born after June 30, 1958; or if they are furnished—after June 30, 1974, to a person born after June 30, 1957; after June 30, 1975, to a person born after June 30, 1956; after June 30, 1976, to a person born after June 30, 1955; after June 30, 1977, to a person born after June 30, 1954; or after June 30, 1978, to a person born after June 30, 1953.

Covered services include services, materials, and supplies which are commonly furnished in a dentist's office, without separate charge, as an incident to his professional services.

(b) Covered dental services are preventive services (including personal dental health education), diagnostic services, therapeutic services (exclusive of orthodontic services other than for handicapping malocclusion), and services required for rehabilitation following injury, disability, or disease.

(c) It is the intention of the Congress that the coverage of dental services under this title be extended to persons born before July 1, 1958, as rapidly as the availability of funds and of facilities and personnel makes possible, and the Board, in its annual reports to the Congress on the administration of this Act, shall review the operation of this section and recommend extension of the entitlement specified in this section as rapidly as the Board deems feasible. Not later than January 1, 1980, the Board shall submit its recommendation with respect to the scope and conditions of availability of covered dental services to all persons not already entitled thereto.

INSTITUTIONAL SERVICES

SEC. 24. (a) Inpatient and outpatient hospital services, skilled nursing home services, the service of home health service agencies, and other institutional health services approved by the Board, which are ordinarily furnished by the institution to patients for the purposes stated in section 21, are covered services except to the extent otherwise provided in this section and section 28. Covered services include services furnished generally to the patients served by an institution, including pathology and radiology services and all other necessary services, whether they are furnished by the institution or by others under arrangement with the institution. To the extent provided in regulations, inpatient services of a Christian Science sanatorium are covered services.

(b) Covered services do not include personal comfort items or, unless required for medical reasons, the additional cost of accommodations more expensive than semiprivate accommodations; and do not include domiciliary or custodial care, or institutional care of a person while he is not receiving active medical treatment.

(c) Covered services do not include care in a skilled nursing home for more than 120 days in a spell of illness (as defined in regulations), except that the Board is authorized to liberalize or eliminate this limitation whenever it finds that adequate funds and resources are available therefor and that such action will not lead to excessive utilization of skilled nursing home services.

(d) Covered services do not include institutional care of a person as a psychiatric patient while the patient is not receiving active treatment for an emotional or mental disorder; and do not include care of a person as a psychiatric patient for more than 45 consecutive inpatient days in either a psychiatric or a general hospital during a spell of illness (as defined in regulations).

(e) Covered services do not include institutional care of an inpatient unless a physician has certified to the medical necessity of the patient's admission to the institution, and do not include such care (during a continuous stay in the institution) after such period (if any) as may be specified in regulations unless a physician has certified to the continued medical necessity of such care. Regulations may specify the classes of cases in which certification of continued necessity is required, may specify different periods for different classes of cases, and may permit retroactive certification under such circumstances and to such extent as the Board deems appropriate.

(f) Covered services do not include the services of a general or psychiatric hospital or a skilled nursing home, during a spell of illness (as defined in regulations), after the third day following receipt by the institution and the patient of notice of a finding by a utilization review committee pursuant to section 50(e) that further stay in the hospital or further stay in the nursing home, as the case may be, is not medically necessary.

DRUGS

SEC. 25. (a) The Board, with the approval of the Secretary, shall establish and disseminate (and review, and if necessary revise, at least annually) (1) a list of drugs for use in participating institutions and comprehensive health service organizations, and (2) a list (for use outside such institutions and organizations) of diseases and conditions for the treatment of which drugs may be furnished as a covered service, and a specification of the drugs that may be so furnished for each disease or condition listed. Subject to the provisions of subsections (b) and (c) and of section 28, the furnishing of a drug to an eligible person is a covered service if it is furnished by or on prescription of a participating physician or dentist, or by or on prescription of a physician or dentist acting on behalf of a participating institutional or other provider.

(b) The list of drugs referred to in subsection (a)(1) shall be designed to provide physicians and dentists with an armamentarium necessary and sufficient for rational drug therapy incident to comprehensive medical services or incident to covered dental services. The furnishing of a drug on this list is a covered service if it is furnished to a person who is enrolled in a participating comprehensive health service organization, or is administered within a participating hospital to an inpatient or an outpatient, or is administered to an inpatient of a participating skilled nursing home having in effect an affiliation agreement in accordance with section 51(b).

(c) The list of diseases and conditions referred to in subsection (a)(2) shall include those chronic diseases and conditions for which drug therapy, because of its duration and cost, commonly imposes substantial financial hardship; and may include other diseases and conditions for which the Board finds exceptionally costly drug therapy to be commonly required and effective. To assure proper utilization of drugs for specific diseases or conditions, the Board may require that the physician or dentist furnishing or prescribing a listed drug be a specialist qualified to diagnose and treat that disease or condition. The furnishing of a drug (although not to a person or under circumstances described in subsection (b)) is a covered service if (1) the physician or dentist furnishing or prescribing it identifies the disease or condition for which it is furnished or prescribed, and the disease or condition is one appearing on the Board's list, (2) the physician or dentist meets specialist qualifications, if any, required by the Board, and (3) the drug is specified on the Board's list as one available for treatment of the disease or condition identified by the physician or dentist.

(d) The Board shall not list a drug under this section unless (1) the Secretary has found that it is safe and efficacious for the purposes for which it is recommended and (on the list established under subsection (c)) for the treatment of each disease or condition for which it is specified on the list, and (2) the Board finds that it is available at a reasonable cost (considering, among other factors, the existence or absence of competition in the production, distribution, and sale of the drug). Drugs shall be listed by their established names (as defined in section 502(e) of the Federal Food, Drug, and Cosmetic Act) and also, to the extent the Board deems appropriate, by trade names.

(e) In reviewing and revising lists established under this section the Board shall take into consideration (1) current information about the safety and efficacy of listed drugs, and about their cost, (2) the results of review of drug utilization under this title, (3) experience bearing on the determination of what diseases and conditions meet the criteria stated in subsection (c), and (4) such other factors as the Board deems pertinent. Drugs shall be added to or eliminated from the lists as the Board finds best calculated to effectuate the purposes of this section.

DEVICES, APPLIANCES, AND EQUIPMENT

SEC. 26. (a) The Board, with the approval of the Secretary, shall establish and disseminate (and review, and if necessary revise, at least annually) lists of the therapeutic devices, appliances, and equipment (or classes thereof) which it finds are important for the maintenance or restoration of health or of employability or self-management. The Board shall take into consideration the efficacy, reliability, and cost of each item listed, and shall attach to any item such conditions as it deems appropriate with respect to the circumstances under which or the frequency with which the item may be prescribed. In establishing and revising lists under this section the Board shall seek to avoid a rate of expenditure for the furnishing of devices, appliances, and equipment in excess of 2 percent of the rate of expenditure for all covered services.

(b) The furnishing of a device, appliance, or equipment prescribed by a participating physician or dentist, or by a physician or dentist on behalf of a participating institutional or other provider, is (subject to the provisions of section 28) a covered service if the item appears on a current list of essential items and the prescription falls within any conditions attached to the prescribing of that item on the list. The furnishing of any other device, appliance, or equipment so prescribed is also a covered service if, in accordance with regulations, the furnishing of it has been approved in advance by the

Board. Regulations under this section may list items or classes of items which, because of lack of efficacy or reliability or because of cost, the Board has determined may not be furnished as covered services.

MISCELLANEOUS AND SUPPORTING SERVICES

Sec. 27. (a) To the extent provided in regulations (but subject to the provisions of section 28) the following are covered services:

(1) the professional service of optometrists in refractive measurement of the eye and in prescribing eyeglasses;

(2) the professional services of podiatrists;

(3) the diagnostic services of independent pathology laboratories, and diagnostic and therapeutic radiology furnished by independent radiology services;

(4) the care of a psychiatric patient in a mental health day care service (A) for not more than 60 full days (or its equivalent) during or following a spell of illness (as defined in regulations), when furnished by a hospital or a service affiliated with a hospital, or (B) if furnished by a comprehensive health service organization or by a community mental health center or other mental health center which furnishes comprehensive services; and

(5) ambulance and other emergency transportation services.

(b) Supporting services (such as psychological, physiotherapy, nutrition, social work, or health education services) are covered services when they are a part of institutional services or when, with the approval of the Board, they are furnished by a comprehensive health service organization meeting the requirements of section 47, or by an organization, agency, or center with which the Board has entered into an agreement pursuant to section 48 (a), (b), or (c).

EXCLUSIONS FROM COVERED SERVICES

Sec. 28. (a) Health services furnished or paid for under a workmen's compensation law of the United States or a State, or legally required to be so furnished or paid for, are not covered services. Such services, if furnished by a participating provider, shall nevertheless be treated as covered services in accordance with this part unless and until a determination has been made pursuant to the workmen's compensation law that the services are covered by that law, and any resulting overpayment under this Act shall be recouped in the same manner as other overpayments.

(b) Health services furnished in a primary or secondary school are not covered services.

(c) Surgery performed solely for cosmetic purposes (as defined in regulations), and hospital or other services incident thereto, are not covered services.

(d) The furnishing of a drug otherwise than in accordance with section 25 is not a covered service. The furnishing of a device, appliance, or equipment otherwise than in accordance with section 26 is not a covered service unless it is furnished, in accordance with section 22(a) or section 23(a), as an incident to professional services.

(e) The Board may by regulation exclude from covered services medical or surgical procedures (and services incident thereto) which it finds are essentially experimental in character and which, because of cost or because of shortage of qualified personnel or facilities, it finds cannot practicably be furnished on a nationwide basis.

(f) Except as provided in regulations, services are not covered services if (1) they are furnished by another provider to a person enrolled in a comprehensive health service organization, and are within the range of services which the organization has undertaken to furnish, or (2) they are primary physicians' services or covered dental services and are furnished by another provider to a person on the list of a physician or a dentist who has elected to be paid by the capitation method.

(g) The services of a professional practitioner are not covered services if they are furnished in a hospital which is not a participating provider.

PART C—PARTICIPATING PROVIDERS OF SERVICES

IN GENERAL; AGREEMENTS WITH THE BOARD

Sec. 41. A person, corporation, or other entity furnishing any covered service is a participating provider if he or it (a) meets such qualifications and conditions as are established by or pursuant to this part for providers of that service, (b) furnishes the service as an independent provider and not (as employee or otherwise) on behalf of another provider entitled under part E to payment for the service, and (c) has filed with the Board an agreement (1) that services to eligible persons will be furnished without discrimination on the ground of race, color, or national origin, (2) that no charge will be made for any covered service other than for payment authorized by this title, and (3) that the provider will furnish such information as may be reasonably required by the Board for utilization review by professional peers, for the making of payments under this title, and for statistical or other studies of the operation of the title, and will permit such examination of records as may be necessary for verification of information on which payments are based.

PROFESSIONAL PRACTITIONERS

Sec. 42. (a) A physician, dentist, optometrist, or podiatrist, legally authorized on June 30, 1973, to practice his profession in a State, is a qualified provider of covered services within the State; subject, however, to the provisions of subsections (c) and (d). A practitioner first so authorized by a State after June 30, 1973, is a qualified provider if, in addition, he meets national standards established by the Board (taking into consideration the criteria applied by any recognized national testing organization) for the practitioner's profession. A practitioner who is a qualified provider in one State, if he meets the national standards, is also in any other State (in accordance with section 56 (a)(1)) a qualified provider of services which (1) are covered services to persons entitled thereto under this title, and (2) are of a kind which such other State authorizes to be furnished by practitioners of his profession.

(b) For the purposes of this title—

(1) A doctor of osteopathy legally authorized to practice medicine and surgery in a State is a physician.

(2) A dentist qualified in accordance with subsection (a) is a physician when performing oral surgery or other procedures which, in accordance with generally accepted professional standards, may be performed by either a physician or a dentist.

(c) Not later than July 1, 1975, the Board shall establish for professional practitioners such requirements of continuing education (taking into consideration standards approved by appropriate professional organizations) as it finds reasonable and necessary to maintain and enhance the quality of professional services to eligible persons. A professional practitioner who fails to meet a requirement established under this subsection shall, if the deficiency persists after notice and a reasonable opportunity to correct it, cease to be a qualified provider.

(d) A physician qualified in accordance with subsection (a) is not qualified to perform major surgery as a covered service, or to furnish as covered services other specialized services designated in regulations, unless he holds a certificate from the appropriate national specialty board or possesses the qualifications requisite to such certification; except that a physician may be found qualified to furnish any specialized services as covered services if (1) prior to July 1, 1973, he has engaged in furnishing such services as a specialist or as a substantial part of his medical practice, (2) he meets standards established by the Board, and (3) where appropriate, a finding that he is so qualified is recommended by a participating hospital in which he has engaged substantially in furnishing such services.

GENERAL HOSPITALS

Sec. 43. Subject to the provisions of section 52, a general hospital is a qualified provider if it is an institution which—

(a) is primarily engaged in providing to inpatients (other than mentally ill persons) diagnostic, therapeutic, and rehabilitation services, furnished by or under the supervision of physicians, for medical diagnosis, treatment, care, and rehabilitation of injured, disabled, or sick persons;

(b) maintains adequate clinical records on all patients;

(c) has bylaws in effect with respect to its staff of physicians, and has filed with the Board an agreement that in granting or maintaining medical staff privileges it will not discriminate on any ground unrelated to professional qualifications;

(d) has a requirement that every patient must be under the care of a physician;

(e) provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse, and has a licensed practical nurse or registered professional nurse on duty at all times;

(f) has a pharmacy and drug therapeutics committee which establishes policies for the selection, acquisition, and utilization of drugs;

(g) has in effect a hospital utilization review plan which meets the requirements of section 50;

(h) meets all applicable requirements of the law of the State in which it is situated; and

(i) meets such other requirements as the Board finds necessary in the interest of the quality of the care and the safety of patients in the institution.

PSYCHIATRIC HOSPITALS

Sec. 44. Subject to the provisions of section 52, a hospital which is primarily engaged in furnishing psychiatric services to inpatients who are mentally ill is a qualified provider if it (or a distinct part of it) is an institution—

(a) in which diagnostic, therapeutic, and rehabilitative services with respect to mental illness are furnished by or under the supervision of physicians;

(b) which satisfies the requirements of subsections (b) through (i) of section 43;

(c) which, on the basis of staffing and other factors it deems pertinent, the Board finds is qualified to furnish active treatment;

(d) which maintains such records as the Board finds necessary to determine the degree and intensity of the treatment furnished; and

(e) which is accredited by the Joint Commission on the Accreditation of Hospitals.

SKILLED NURSING HOMES

Sec. 45. Subject to the provisions of sections 51 and 52, a skilled nursing home is a qualified provider if it (or a distinct part of it) is an institution which—

(a) is primarily engaged in providing to inpatients (other than mentally ill persons) skilled nursing care and related services for patients who require medical and nursing services;

(b) has written policies, which are developed (and reviewed from time to time) with the advice of a group of professional personnel, including one or more physicians and one or more registered professional nurses, to govern the services it provides;

(c) has a physician, a registered professional nurse, or a medical staff responsible for the execution of such policies;

(d) operates under the supervision of an administrator licensed by the State in which such institution is situated;

(e) has a requirement that the health care of every patient be under the supervision of a physician, and provides for having a physician available to furnish necessary medical care in case of emergency;

(f) maintains adequate clinical records on all patients;

(g) provides twenty-four-hour nursing service sufficient to meet nursing needs in accordance with the policies developed as provided in subsection (b), and has at least one registered professional nurse employed full time;

(h) provides appropriate methods and procedures for the dispensing and administering of drugs;

(i) has in effect a utilization review plan which meets the requirements of section 50;

(j) meets all applicable requirements of the law of the State in which it is situated, and (unless the Board finds that such law provides equivalent protection) meets the provisions of the Life Safety Code of the National Fire Protection Association applicable to nursing homes; and

(k) meets such other requirements, including requirements relating to the physical facilities, as the Board may find necessary in the interest of the quality of care and the safety of patients in the institution.

HOME HEALTH SERVICE AGENCIES

SEC. 46. Subject to the provisions of section 51, a home health service agency is a qualified provider if it is a public agency or a nonprofit private organization, or a subdivision of such an agency or organization, which—

(a) is primarily engaged in furnishing, on an intermittent and visiting basis in patients' homes, skilled nursing and other therapeutic services to patients (other than mentally ill persons) who are under the care of physicians;

(b) has policies developed (and reviewed from time to time) by a group of professional personnel associated with the agency or organization, including one or more physicians and one or more registered professional nurses, to govern the services which it furnishes, and provides for supervision of such services by a physician or registered professional nurse;

(c) maintains adequate clinical records on all patients;

(d) meets all applicable requirements of the law of the State in which it furnishes services; and

(e) meets such other requirements as the Board may find necessary in the interest of the quality of care and the safety of patients of the agency or organization.

COMPREHENSIVE HEALTH SERVICE ORGANIZATIONS

SEC. 47. A comprehensive health service organization is a qualified provider of covered services if—

(a) the organization furnishes health services to an identified population (enrolled in the organization) in or near a specified service area, through arrangements which embody prepaid group practice (as defined in regulations) or other definitive arrangements which the Board finds will so far as practicable provide to enrollees the benefits of prepaid group practice;

(b) the furnishing of services is assured through a contract between the Board and a nonprofit provider of all the services to be furnished by the organization, or through a contract between the Board and a nonprofit provider of some of the services and subcontracts or other arrangements between such provider and providers (profit-making or nonprofit) of the other services;

(c) the organization furnishes, as a minimum, all covered services described in part B (including such supporting services as the Board may have approved under section 27(b)), other than institutional services, mental health services, or dental services; and with the approval of the Board it may furnish covered services which it is not required by this subsection to furnish, and may furnish health services not covered by this title;

(d) the organization furnishes services in such manner as to provide continuity of care and (when services are furnished by different providers) ready referral of patients to such services and at such times as may be medically appropriate, and to the maximum extent feasible makes all services readily accessible to enrollees who live in the specified service area;

(e) all eligible persons, living in or near a specified service area, are eligible to enroll in the organization, except that (1) the number of enrollees may be limited to avoid overtaxing the resources of the organization, and (2) such restrictions upon enrollment may be imposed as are approved by the Board as necessary to prevent undue adverse selection;

(f) the organization provides for periodic consultation with representatives of its enrollees regarding the policies and operation of the organization;

(g) the organization encourages health education of its enrollees and the development and use of preventive health services, and provides that a committee or committees of physicians associated with the organization promulgate medical standards, oversee the professional aspects of the delivery of care, perform the functions of a pharmacy and drug therapeutics committee, and monitor and review the utilization and quality of all health services (including drugs);

(h) the organization, to the extent practicable and consistent with good medical practice employs allied health personnel and subprofessional and lay persons in the furnishing of services;

(i) premiums or other charges by the organization for any services not paid for under this title are reasonable; and

(j) the organization undertakes, to the extent required by regulations, to arrange for reciprocal out-of-area services by other comprehensive health service organizations, or to pay for health services furnished to its enrollees by other participating providers, in emergencies, within or outside the specified service area of the organization.

OTHER HEALTH SERVICE ORGANIZATIONS

SEC. 48. Pursuant to an agreement with the Board containing such terms and conditions with respect to the qualifications of personnel and other matters as the Board may deem appropriate, any of the following is a qualified provider of such services as are specified in the agreement—

(a) a public or other nonprofit agency or organization which furnishes health services as comprehensive as those specified in section 47(c), but does not meet all other requirements of section 47;

(b) a public or other nonprofit center which (1) furnishes, as a minimum, the services of two or more physicians engaged in general or family practice, the services of nurses and supporting personnel, and basic laboratory services, which the Board finds sufficient for the primary medical care of a substantial population living in the vicinity of the center, and (2) has arrangements with other providers of services which the Board finds assure to the population served by the center, on a coordinated basis, all components of health services as comprehensive as those specified in section 47(c);

(c) a public or other nonprofit mental health center or mental health day care service; or

(d) a State or local public health agency furnishing preventive or diagnostic services, a medical or dental group practice or clinic, a diagnostic and treatment center, or another organization or agency furnishing health services to ambulatory patients.

MISCELLANEOUS PROVIDERS

SEC. 49. (a) An independent pathology laboratory is a qualified provider of diagnostic pathology services if (whether or not it is engaged in transactions in interstate commerce) it meets the requirements established by or pursuant to section 353 of the Public Health Service Act. An independent radiology service is a qualified provider of diagnostic and therapeutic radiology if it meets all applicable requirements of the law of the State in which the services are furnished, and such other requirements as the Board finds necessary in the interest of the quality of care and the safety of eligible persons.

(b) A provider of drugs, devices, appliances, or equipment is a qualified provider if he meets all applicable requirements of the Federal Food, Drug, and Cosmetic Act and of the law of the State in which the provider is situated, and such other requirements as the Board finds necessary in the interest of the quality of care and the safety of eligible persons.

(c) A provider of ambulance services is a qualified provider if he meets all applicable requirements of the law of the State in which the services are furnished, and such other requirements as the Board finds necessary in the interest of the quality of care and the safety of eligible persons.

(d) A Christian Science Sanatorium is a qualified provider of services specified in regulations prescribed under section 24(a) if it is operated, or listed and certified, by the First Church of Christ, Scientist, Boston, Massachusetts.

UTILIZATION REVIEW

SEC. 50. A utilization review plan of a general or psychiatric hospital or a skilled nursing home shall be considered sufficient if it provides—

(a) for the periodic review on a sample or other basis (and the maintenance of adequate records of such review) of admissions to the institution, the duration of stays, and the professional services (including drugs) furnished, (1) with respect to the medical necessity of the services, and (2) for the purpose of promoting the most efficient use of available health facilities and services; and provides for periodic reports, to the institution and the medical staff (and, when requested, to the Board), of statistical summaries of the review;

(b) in the case of a general or psychiatric hospital, for such review to be made either (1) by a staff committee of the hospital composed of two or more physicians with or without participation of other professional personnel, or (2) by a group outside the hospital which is similarly composed and which, if practicable, is established by the local medical society and hospitals in the locality, or is established in such other manner as may be approved by the Board; but clause (1) of this subsection shall be inapplicable to any hospital where, because of its small size or for such other reason as may be specified in regulations, it is impracticable for the hospital to have a properly functioning staff committee for the purposes of this section;

(c) in the case of a skilled nursing home, for such review to be made by a committee, composed as provided in subsection (b), established by the State or local public health agency pursuant to a contract with the Board, or by such a committee established by the Board;

(d) for such review, in each case of inpatient hospital services or skilled nursing home services furnished to a patient during a continuous period of extended duration, as of such days or such period (which may differ from different classes of cases) as may be specified in regulations, with such review to be made as promptly as possible after

each day so specified, and in no event later than one week following such day; and

(e) for prompt notification to the institution, the patient and his attending physician of any finding (made after opportunity for consultation to such attending physician) by the physician members of such committee or group that any admission, further stay, or furnishing of particular services in the institution is not medically necessary.

TRANSFER AND AFFILIATION AGREEMENTS

SEC. 51. (a) A skilled nursing home is a qualified provider only if it has in effect (or there is in effect a finding under subsection (c) temporarily dispensing with) a transfer agreement with at least one participating hospital, providing for the transfer of patients and of medical and other information between the institutions as medically appropriate.

(b) After June 30, 1975, a skilled nursing home or a home health service agency will be a qualified provider only if it has in effect (or there is in effect a finding under subsection (c) temporarily dispensing with) an affiliation agreement with a participating hospital or a participating comprehensive health service organization, under which the medical staff of the hospital or organization (or a committee thereof) will furnish, or will assume responsibility for, the professional services in the skilled nursing home, or the professional services furnished by the home health agency, as the case may be.

(c) The requirement of a transfer agreement under subsection (a), or of an affiliation agreement under subsection (b), shall not be applicable in any case if there is in effect a finding by the Board that the lack of a suitable hospital or organization within a reasonable distance makes such an agreement impracticable, and that the services of the skilled nursing home or the home health agency are essential to the furnishing of adequate services to eligible persons. Such a finding shall be reviewed periodically, and shall be revoked whenever the Board finds it practicable to do so.

NEWLY CONSTRUCTED FACILITIES

SEC. 52. A general or psychiatric hospital or a skilled nursing home the construction or substantial enlargement of which (whether or not in replacement of another institution) was undertaken (as defined in regulations) after December 31, 1970, is not a participating provider unless the construction or enlargement has been found, by a State agency designated by the Governor of the State for this purpose, or has been found by the Board, to be needed for the furnishing of adequate services to persons residing in the area to be served by the institution.

CONSIDERATION OF PROFESSIONAL ASSOCIATION STANDARDS

SEC. 53. In establishing requirements necessary in the interest of the quality of care and safety of eligible persons, pursuant to section 43(i), 45(k), 46(e), 49(a), 49(b), or 49(c), the Board shall take into consideration standards or criteria established or recommended by any appropriate professional or other association or organization.

COMPLIANCE WITH DIRECTIONS FOR BETTER ORGANIZATION AND COORDINATION OF SERVICES

SEC. 54. If the Board finds that any participating provider of services (other than an individual professional provider) has, without reasonable cause, failed to comply with a direction issued pursuant to section 131, the provider shall, at such time as may be specified by the Board, cease to be a participating provider.

EXCLUSION: FEDERAL PROVIDERS OF SERVICES

SEC. 55. No institution of the Department of Defense, no institution of the Veterans Administration, no institution of the Department of Health, Education, and Welfare engaged in the provision of services to merchant seamen or to Indians or Alaskan natives, and no employee of any of the foregoing acting as employee, is a participating provider. The Board shall, however, reimburse the proper appropriation for any services furnished by any such institution or employee to an eligible person who is not, under any Act other than this Act, eligible to receive the service from the institution or employee.

RESTRICTIVE STATE LAWS INOPERATIVE

SEC. 56. (a) In the furnishing of covered services to eligible persons (any law of a State or political subdivision to the contrary notwithstanding)—

(1) A physician, dentist, optometrist, or podiatrist who is legally authorized by a State to practice his profession and who meets national standards established by the Board pursuant to section 42(a) is hereby authorized to furnish in any other State, either as an independent participating provider or on behalf of an institutional or other participating provider, the services which such other State authorizes to be furnished by practitioners of his profession.

(2) A professional nurse, or a practitioner of another health profession or occupation designated in regulations, who meets national standards established by the Board for his profession or occupation is hereby authorized to furnish in any State, on behalf of participating providers of services, the services which that State authorizes or permits to be furnished by practitioners of his profession or occupation. National standards applicable to professional nursing, or to any other profession or occupation the practice of which is subject in all States to licensure or similar authorization, shall contain a requirement of licensure or authorization by at least one State.

(3) In a participating public or other nonprofit hospital or a participating comprehensive health service organization, a practitioner of any health profession other than medicine or dentistry or of any nonprofessional health occupation who meets national standards established by the Board for his profession or occupation, and meets any additional qualifications established by the Board for the performance of particular acts or procedures, is hereby authorized to perform, under the supervision and responsibility of a physician or dentist, such of the acts which might lawfully be performed by the physician or dentist as are specified in regulations.

(4) A participating public or other nonprofit hospital or a participating comprehensive health service organization is hereby authorized (whether or not the arrangement may be deemed to constitute corporate practice of a profession) to employ physicians, dentists, or other professional practitioners, or to obtain and compensate their services in any other manner, and the practitioners are authorized to serve such a hospital or organization as employees or in any other manner; but only if the employment or other arrangement is not of a kind which the Board finds is likely to cause lay interference with professional acts or professional judgments.

(b) If the Board finds that a proposed corporation will meet the requirements of section 47 for participation as a comprehensive health service organization (or as the principal contractor for such an organization), but that it cannot be incorporated in the State in which it proposes to furnish services because the State law requires that a medical society approve the incorporation of such an organization, or requires that physicians constitute all or a majority of its governing boards, or requires that all physicians in the locality be permitted to participate in the services of the organization, or makes any other requirement which the Board finds incompatible with the purposes of this title, the Board may issue a certification of incorporation to the organization, and it shall thereupon become a body corporate. The powers of the corporation shall be limited to the furnishing of services under this title, and the doing of things reasonably necessary or incident thereto. So far as the Board finds to be compatible with the purposes of this title, the certificate of incorporation shall accord with, and the corporation shall be subject to, provisions of the State law which are applicable to non-profit corporations generally.

PART D—TRUST FUND; ALLOCATION OF FUNDS FOR SERVICES

HEALTH SECURITY TRUST FUND

SEC. 61. (a) Section 1817 of the Social Security Act (creating the Federal Hospital Insurance Trust Fund and appropriating to the fund the proceeds of the hospital insurance payroll taxes and the hospital insurance self-employment tax) is amended—

(1) By striking out the section heading, and the name of the trust fund appearing in subsection (a), and in each case inserting in lieu thereof: "Health Security Trust Fund";

(2) By striking out paragraph (2) of subsection (a) (appropriating to the trust fund the proceeds of the self-employment tax for hospital insurance) and inserting in lieu thereof:

"(2) The taxes imposed by section 1403 of the Internal Revenue Code of 1954 with respect to health security non-wage income reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of such Code."

(3) By striking out subsections (g) and (h) and inserting in lieu thereof:

"(g) On July 1, 1973, there shall be transferred to the Trust Fund all of the assets and liabilities of the Federal Supplementary Medical Insurance Trust Fund. The Trust Fund shall remain subject to the liabilities of the Federal Hospital Insurance Trust Fund existing immediately prior to July 1, 1973.

"(h) In addition to the sums appropriated by subsection (a), there are authorized to be appropriated to the Trust Fund from time to time, out of any moneys in the Treasury not otherwise appropriated, a Government contribution equal to 66⅔ percent of the sums appropriated by subsection (a). There shall be deposited in the Trust Fund all recoveries of overpayments, and all receipts under loans or other agreements entered into, under title I of the Health Security Act.

"(i) The Managing Trustee shall pay from time to time from the Trust Fund such amounts as the Health Security Board certifies are necessary to make payments provided for by title I of the Health Security Act, and the payments with respect to administrative expenses in accordance with section 201(g)."

(b) Section 201(g) of the Social Security Act (providing for annual authorization by the Congress of payment, from the respective trust funds, of the cost of administering the several national systems of social insurance) is amended—

(1) By striking out in paragraph (1)(A) "the Federal Hospital Insurance Trust Fund and the Federal Supplementary Medical Insurance Trust Fund" and inserting in lieu thereof: "the Health Security Trust Fund";

(2) By striking out the words "title XVIII" wherever they appear in the subsection and inserting in lieu thereof: "title I of the Health Security Act".

ANNUAL DETERMINATION OF FUND AVAILABILITY

SEC. 62. (a) For each fiscal year the Board shall, not later than March 1 next preceding the beginning of the fiscal year, fix the maximum amount wihch may (except as provided in subsection (c)) be obligated during the

fiscal year for expenditure from the Trust Fund. The amount so fixed—

(1) shall not exceed 166⅔ percent of the expected net receipts during the fiscal year (as estimated by the Secretary of the Treasury) from the taxes imposed by sections 1403, 3101(b), and 3111(b) of the Internal Revenue Code of 1954, and

(2) for any fiscal year beginning after June 30, 1974, shall not exceed the aggregate obligations (as estimated by the Board) incurred and to be incurred by the Trust Fund during the fiscal year current at the time when the determination is made, adjusted to reflect (A) any estimated change expected in the consumer price index, (B) the expected change in the number of eligible persons, (C) any expected change in the number of participating professional providers, or in the number or capacity of institutional or other participating providers, and (D) any change in the cost of administration of this Act indicated in the President's budget estimate pursuant to section 201(g) of the Social Security Act.

(b) In fixing the amount available for obligation during a fiscal year, pursuant to subsection (a)—

(1) if and to the extent that (A) the Board estimates that the amount in the Trust Fund at the beginning of the fiscal year will be less than one-quarter of the obligations incurred and to be incurred during the fiscal year current at the time when the determination is made, and (B) the Board finds that restriction of the amount available for obligation will not materially impair the adequacy or quality of services to eligible persons, the amount fixed under subsection (a) shall be less than the maximum stated in paragraph (1) of that subsection; and

(2) if and to the extent that the Board finds that improvement in the organization and delivery of services or in the control of their utilization has lessened their aggregate cost (or has lessened an increase in their aggregate cost), the amount fixed under subsection (a) shall be less than the maximum stated in paragraph (2) of that subsection.

(c) The amount available for obligation during a fiscal year, fixed pursuant to subsection (a), may be modified before or during the fiscal year if the Secretary of the Treasury finds that the tax receipts referred to in subsection (a)(1) will differ from the estimate by 1 percent or more, or if the Board finds that any of the factors of expected change referred to in subsection (a)(2), or action on the budget estimate for the cost of administration, will differ from the estimate by 5 percent or more; or if an epidemic, disaster, or other occurrence increases the need for health services to an extent which the Board finds requires the expenditure of additional funds. If the amount fixed pursuant to subsection (a) is increased, the Board, through the Secretary, shall promptly report its action to the Congress with a statement of the reasons therefor.

HEALTH SERVICES ACCOUNT, HEALTH RESOURCES DEVELOPMENT ACCOUNT, AND ADMINISTRATION ACCOUNT

SEC. 63. (a) There shall be established in the Trust Fund a Health Services Account, a Health Resources Development Account, and an Administration Account.

(b) For each fiscal year there shall be transferred to the Health Resources Development Account the following percentage of the amount available for obligation during that year (as determined pursuant to section 62(a)): for the fiscal year ending June 30, 1974, and for the next succeeding fiscal year, 2 percent; for each of the next two succeeding fiscal years, 3 percent; for each of the next two succeeding fiscal years, 4 percent; and for each fiscal year beginning after June 30, 1979, 5 percent. Funds in the Health Resources Development Account shall be used exclusively for the purposes of part F, and shall remain available for such uses until expended.

(c) The remainder of the amount available for obligation during a fiscal year, after deducting the amount of the President's budget estimates for the cost of administering this Act, shall be transferred to the Health Services Account. Funds in the Health Services Account shall be used exclusively for making payments for covered services in accordance with part E, and shall remain available for such payments until expended.

(d) When the amounts available for a fiscal year for the administration of this Act have been determined by the Congress, the amount available for the administration of this title shall be transferred to the Administration Account, and any necessary adjustments shall be made in the amount transferred to the Health Services Account and in allocations previously made from that Account.

REGIONAL ALLOCATIONS FROM HEALTH SERVICES ACCOUNT

SEC. 64. (a) For each fiscal year the Board shall, not later than March 1 next preceding the beginning of the fiscal year, make allocations to the regions of the Department from the funds available for the fiscal year in the Health Services Account. The allocation to each region shall be equal to the aggregate expenditures for services described in part B as covered services, in the most recent twelve-month period for which reliable data are available, adjusted to reflect the factors of change referred to in clauses (A), (B), and (C) of section 62(a)(2), and further adjusted in accordance with subsections (b) and (c) of this section.

(b) It shall be the objective of the Board to reduce gradually, and ultimately to eliminate substantially, existing differences among the regions in the average per capita cost of health services, except as such differences reflect regional differences in the consumer price index. To this end the Board shall modify the allocations determined under subsection (a) in order (1) to reduce, or to lessen any increase in, the cost of covered services in regions in which the average per capita cost is higher (to an extent greater than the difference in the consumer price index) than the national average per capita cost, to such extent as the Board finds practicable without impairing materially the adequacy or quality of services to eligible persons, and (2) to stimulate, to such extent as the Board finds practicable and desirable, increase in the availability and utilization of covered services in regions in which the average per capita cost is lower (to an extent greater than the difference in the consumer price index) than the national average per capita cost.

(c) If the sum of the regional allocations determined pursuant to subsections (a) and (b) is greater than the amount available (after withholding such reserve for contingencies as the Board deems necessary) in the Health Services Account, the allocations shall be reduced proportionately.

(d) Allocations under this section may be modified before or during a fiscal year if the amount available for obligation is modified pursuant to section 62(c). Either from the contingency reserve or from additional funds made available for obligation, one or more allocations may be increased if an epidemic, disaster, or other occurrence increases the need for health services to an extent which the Board finds requires the expenditure of additional funds.

DIVISION OF REGIONAL FUNDS BY CLASSES OF SERVICES

SEC. 65. (a) For each fiscal year the Board shall, not later than April 1 next preceding the beginning of the fiscal year, divide the allocation to each region into funds available, respectively, to pay the cost within the region of the following classes of services: (1) institutional services, (2) physician services, (3) dental services, (4) the furnishing of drugs, (5) the furnishing of devices, appliances and equipment, and (6) miscellaneous services.

(b) The content, for purposes of the division of funds, of each class of services shall be defined in regulations. Within the funds available for miscellaneous services, the regulations shall establish sub-funds available, respectively, for the making of incentive payments not otherwise provided for, for supporting services described in section 27(b), for payments to optometrists, for payments to podiatrists, and for such other purposes as the Board may determine.

(c) The amounts assigned to the several funds and sub-funds in each region shall be determined in accordance with regulations, which shall take into account, in addition to the factors considered in making the regional allocations, trends in utilization of the several services and, to the extent the Board finds it practicable, the creation of incentives to the improved utilization thereof.

FUNDS FOR HEALTH SERVICE AREAS

SEC. 66. (a) for each fiscal year the Board shall, not later than April 1 next preceding the beginning of the fiscal year, allot among the health service areas in each region, each of the funds established for the region pursuant to section 65 for a class of services. If an interstate health service area lies partly in each of two or more regions, appropriate allotments of funds from each region shall be made to it.

(b) The amount allotted to each health service area from each regional fund shall be equal to the aggregate expenditures in the area for services of the class for which the fund is available, as determined (or, if necessary, estimated) by the Board for such 12-month period as may be specified in regulations; modified to take account of the factors considered in making regional allocations and in dividing such allocations by classes of services (including modifications designed to further the objective of equalization within each region, in the manner set forth in section 64(b) with respect to interregional equalization).

(c) Payment for services, in accordance with part E, shall be made in each health service area by such officer of the Board as it may designate for the purpose. There shall be established in each area such accounts as the Board may find convenient for making payment to providers of more than one class of services (such as an account for payment to hospitals, or an account for payment to comprehensive health service organizations), in which shall be deposited the appropriate portions of the funds for the several classes of services to be furnished by such providers.

MODIFICATION OF FUND ALLOTMENTS

SEC. 67. Before or during a fiscal year the division of funds by classes of services pursuant to section 65, or the allotment of funds to health service areas pursuant to section 66, may be modified if the amount available for obligation or the regional allocations are modified, or if the Board finds that newly acquired information makes modification essential.

PART E—PAYMENT TO PROVIDERS OF SERVICES IN GENERAL

SEC. 81. Payment shall be made to participating providers, in accordance with this part, for covered services furnished to eligible persons (or, in the case of dental services, furnished to persons entitled thereto under section 23). Payments shall be made from the amounts allocated from the Health Services Account in the Trust Fund, in accordance with part D, for the respective areas and purposes.

METHODS AND AMOUNT TO PROFESSIONAL PRACTITIONERS

SEC. 82. (a) Every independent professional practitioner shall be entitled, at his election, to be paid by the fee-for-service method, consisting of the payment of a fee for each separate covered service.

(b) Every physician engaged as an independent practitioner in the general or family practice of medicine, and every dentist engaged as an independent practitioner in the furnishing of covered dental services, shall be entitled, at his election, to be paid by the capitation method if he has filed with the Board an agreement (1) to furnish all necessary and appropriate primary medical services (as defined in regulations) or covered dental services, as the case may be, to persons on a list of persons who have chosen to receive all such services from the practitioner, (2) to maintain arrangements for referral of patients to specialists, institutions, and other providers of covered services, and (3) to maintain such records and make such reports of services furnished as may be required by regulations for purposes of medical audit. A practitioner electing the capitation method is entitled to be paid by the fee-for-service method for services furnished to persons who are not on his list.

(c) When the Board deems it necessary in order to assure the availability of services or for other reason, the Board (1) may pay an independent practitioner a full-time or part-time stipend in lieu of or as a supplement to the foregoing methods of compensation, and it may reimburse a practitioner for special costs of continuing professional education and of maintaining linkages with other providers of services (such as costs of communication and of attendance at meetings or consultations), and (2) may pay for specialized medical services (including services referred to in section 42(b)(2)) a stated amount per session or per case or may utilize a combination of the methods authorized by this section.

(d) The capitation method of payment for a specified kind and scope of covered services consists of the payment, to a provider of such services, of an annual capitation amount for each person who has chosen to receive all such services from the provider.

(e) The amounts allotted for a fiscal year pursuant to part D for each health service area for physician services, for dental services, for optometrist services, and for podiatrist services, respectively, shall each be used (1) to provide for payments for professional services (made either directly to practitioners or as reimbursement to hospitals or other providers for the compensation of practitioners) to be made by the Board on a budget or stipend basis or any basis other than capitation, fee-for-service, or per case, and (2) from the remainder, to make available (for each kind of professional services) an equal per capita amount for each person resident in the area who is entitled to such services. In any area in which the Board finds that a substantial volume of services is furnished to nonresidents, it may reduce the per capita amount to such extent as it finds necessary to effect an equitable distribution of funds. The per capita amount shall constitute the annual capitation amount for purposes of payment to an organization or other provider furnishing all covered services (described in part B) of the kind for which the allotment is available. Lesser capitation amounts shall be fixed (on the basis of the relative cost of the services) for primary medical services and, as may be required, for any scope of services (less than comprehensive) which is furnished by any institutional or other provider. The remainder referred to in clause (2) of this subsection shall, after providing for capitation payments, be available for making fee-for-service and per case payments.

(f) The amounts of fees payable to independent professional practitioners shall be determined by fee schedules or relative value scales prescribed by the Board after consultation with representatives of the respective professions in the region or the area, and the amounts of payments per case shall be prescribed by the Board after such consultation as it finds appropriate. If at any time during the fiscal year it appears that the aggregate of fees and per case payments for the year will exceed the amount available therefor in the health service area, all fees and payments for services furnished thereafter shall be reduced, proportionately, to such extent as the Board finds necessary to avoid a deficit for the year. The Board may, on such terms as it deems appropriate, delegate to a professional society or to an agency designated by representatives of a profession in the region or the area the payment of fees and per session amounts.

(g) The Board may, on an experimental or demonstration basis, enter into an agreement with a statewide or local professional society or other organization representative of independent professional practitioners to substitute another method of compensation for those set forth in this section (either for all such practitioners, or for all who have elected the fee-for-service, the per case, or the per session method of payment), if the Board is satisfied that the substitute method will not increase the cost of services and will not encourage overutilization or underutilization of covered services. The Board shall review from time to time the operation of such an agreement, and shall, after reasonable notice, terminate it if the Board finds it to have led to increased cost or to overutilization or underutilization of covered services.

PAYMENT TO GENERAL HOSPITALS

SEC. 83. (a) A participating general hospital shall be paid its approved operating costs (determined in accordance with regulations) in the furnishing of covered services to eligible persons, as such approved costs for a fiscal year are set forth in a prospective budget approved by the Board. Regulations under this section shall specify the method or methods to be used, and the items to be included, in determining costs, and shall prescribe a nationally uniform system of cost accounting.

(b) The costs recognized in each hospital budget shall be those, determined in accordance with subsection (a), of furnishing the covered services ordinarily furnished by the hospital to inpatients or outpatients, and of performing any other function ordinarily performed by the hospital, except as the scope of services or of other functions may be modified by agreement of the Board and the hospital or by direction of the Board pursuant to section 131. The budget shall recognize any increase or decrease of cost resulting from a modification of the scope of services or of other functions, or resulting from compliance with any other direction issued pursuant to section 131.

(c) The costs recognized in the budget shall include the cost of reasonable compensation to (and other costs incident to the services of) pathologists, radiologists, and other physicians and other professional or nonprofessional personnel whose services are held out as generally available to patients of the hospital or to classes of its patients, whatever the method of compensation of such physicians and other personnel, and whether or not they are employees of the hospital.

(d) The Board shall review, through such of its officers and employees or through such boards, and in such manner, as may be provided in regulations, proposed budgets prepared and submitted to it by hospitals, and may provide for participation in such review by representatives of the hospitals in the region or in the health service area in which the hospital is situated. Each officer of the Board charged with final action on hospital budgets shall receive and consider written justifications of budget proposals, and may provide oral hearings thereon.

(e) A hospital budget approved under this section for a fiscal year may, in such manner as is provided in regulations, be amended before, during, or after the fiscal year if there is a substantial change in any of the factors relevant to budget approval.

PAYMENT TO PSYCHIATRIC HOSPITALS

SEC. 84. A participating psychiatric hospital which is primarily engaged in furnishing covered services shall be paid in the same manner as a general hospital. Any other participating psychiatric hospital shall be paid an amount determined in accordance with regulations for each patient day of covered services to an eligible person. Such regulations shall take into account, with respect to any distinct part of the hospital which meets the requirements of section 44, the factors to be considered in the approval of the budgets of general hospitals, but with such adjustments as are necessary to provide equitable compensation to the hospital.

PAYMENT TO SKILLS NURSING HOMES AND TO HOME HEALTH SERVICE AGENCIES

SEC. 85. (a) A participating skilled nursing home or home health service agency shall be paid, in the same manner as a general hospital except as provided in subsection (b) of this section, its approved operating costs in the furnishing to eligible persons of skilled nursing home services or home health services, as the case may be.

(b) Regulations under this section shall, for skilled nursing homes and for home health service agencies, respectively, specify the method or methods to be used, and the items to be included, in determining costs; may, to the extent the Board deems desirable, specify nationally uniform systems of cost accounting; and, taking into account the prevailing practices of such homes or such agencies, may specify services which will be recognized in budgets and services which will not be so recognized.

PAYMENT FOR DRUGS

SEC. 86. (a) For each drug appearing on either of the lists established pursuant to section 25, the Board shall from time to time determine a product price or prices which shall constitute the maximum to be recognized under this title as the cost of the drug to a provider thereof. All product prices shall be so fixed as to encourage the acquisition of drugs in substantial quantities, and differing product prices for a single drug may be established only to reflect regional differences in cost or other factors not related to the quantity purchased.

(b) Payment for a drug furnished by an independent pharmacy shall consist of its cost to the pharmacy (not in excess of the applicable product price) plus a dispensing fee. The Board, after consultation with representatives of the pharmaceutical profession, shall establish (and from time to time review and revise) schedules of dispensing fees, designed to afford reasonable compensation to independent pharmacies after taking into account variations in their cost of operation resulting from regional differences, differences in the volume of drugs dispensed, differences in services provided, and other factors which the Board finds relevant.

PAYMENT TO COMPREHENSIVE HEALTH SERVICE ORGANIZATIONS

SEC. 87. (a) Payment to a comprehensive health service organization, other than for hospital or skilled nursing home services, shall consist of basic capitation payments plus additional payments (if any) determined in accordance with subsection (d).

(b) The basic capitation payment shall consist of a basic capitation rate multiplied

by the number of eligible persons enrolled in the organization. The basic capitation rate shall be the sum of the appropriate capitation rate or rates for professional services (determined under section 82(e)) and a capitation rate fixed by the Board, on the basis of the average reasonable and necessary cost per enrollee, for each other service or class of services (exclusive of hospital and skilled nursing home services) to be furnished by the organization in accordance with section 47(c).

(c) If the organization furnishes hospital or skilled nursing home services through one or more institutions operated by it, payment for those services shall (subject to the provisions of subsection (e)) be made in accordance with section 83 or section 85. If with the approval of the Board the organization furnishes such services through arrangements with other providers to which the organization undertakes to make payment for the services, the Board may reimburse the organization for such payments on the basis of patient-days of service utilized by persons enrolled in the organization.

(d) If it appears to the satisfaction of the Board (1) that the average utilization of hospital and skilled nursing home services by eligible persons enrolled in the organization (whether or not such services are furnished by the organization, either directly or through other providers) has, during a fiscal year, been less than the average utilization of such services under comparable circumstances by comparable population groups not enrolled in comprehensive health service organizations, and (2) that the services of the organization have been of high quality and adequate to the needs of its enrollees, the Board shall (subject to the provisions of subsection (e)) make an additional payment to the organization equal to 75 per centum of the amount which the Board finds has been saved to the Trust Fund by such lesser utilization of hospital and skilled nursing home services.

(e) In lieu of payments under subsections (c) and (d), the Board may pay the comprehensive health service organization on a capitation basis for hospital services, or for hospital and skilled nursing home services. The capitation amount for such services shall be determined by the Board on the basis of the average cost of such services under comparable circumstances to comparable population groups not enrolled in comprehensive health service organization, reduced by such amount as the Board finds (on the basis of past experience of the organization) is calculated to yield to the Trust Fund 25 per centum of any saving resulting from average utilization of hospital and skilled nursing home services by persons enrolled in the organization which is less than the average utilization of such services by such comparable population groups.

(f) The amount of any additional payment under subsection (d), or the excess of aggregate payments under subsection (e) over the cost of furnishing hospital and skilled nursing home services to eligible persons enrolled in the organization, may be used by the organization for any of its purposes, including the applications of such amounts to the cost of services not covered by this title.

PAYMENT TO OTHER PROVIDERS

SEC. 88. (a) An agency, organization, or other entity with which the Board has entered into an agreement under section 48 shall be paid by such method (other than the fee-for-service method) as, in accordance with regulations, may be set forth in the agreement.

(b) An independent pathology laboratory or an independent radiology service shall, at its election, be paid by the fee-for-service method in accordance with a fee schedule approved by the Board, or on the basis of a budget so approved, or on such other basis as may be specified in regulations.

(c) Payment for devices, appliances, and equipment, payment for ambulance or other emergency transportation services, and payment for the services of a Christian Science sanatorium shall be made on such basis as may be specified in regulations.

METHODS AND TIME OF PAYMENT

SEC. 89. The Board shall periodically determine the amount which should be paid under this part to each participating provider of services, and the provider shall be paid, from the Health Services Account in the Trust Fund, at such time or times as the Board finds appropriate (but not less often than monthly) and prior to audit or settlement by the General Accounting Office, the amounts so determined, with adjustments on account of underpayments or overpayments previously made (including appropriate retrospective adjustments following amendment of approved institutional budgets). Payment may be made in advance in such cases and to such extent as the Board finds necessary to supply providers with working funds, on such terms as it finds sufficient to protect the interests of the United States.

PART F—PLANNING; FUNDS TO IMPROVE SERVICES AND TO ALLEVIATE SHORTAGES OF FACILITIES AND PERSONNEL

PURPOSE OF PART F; AVAILABILITY OF FUNDS

SEC. 101. (a) The purpose of this part is—

(1) prior to July 1, 1973, to inaugurate a program of strengthening the Nation's resources of health personnel and facilities and its system of delivery of health services, in order to enable the providers of health services better to meet the demands on them when health security benefits become available, and to that end (A) to expand and intensify the health planning process throughout the United States, with primary emphasis on preparation of the health delivery system to meet the demands of the health security program, and (B) to provide financial and other assistance in alleviating shortages and maldistributions of health personnel and facilities in order to increase the supply of services, and in improving the organization of health services to increase their accessibility and effective delivery; and

(2) after June 30, 1973, to reenforce the operation of the health security program as a mechanism for the continuing improvement of the supply and distribution of health personnel and facilities and the organization of health services, and to that end (A) to coordinate the health planning process throughout the United States with a view to the continuing development of plans for maximizing capabilities for the effective delivery of covered services, and (B) to assist in meeting those costs of improvement of personnel, facilities, and organization that are not met either through the normal operation of the health security program or from other sources of public or private assistance.

(b) For the purposes of subsection (a)(1), there are hereby authorized to be appropriated $200,000,000 for the fiscal year ending June 30, 1971, $400,000,000 for the fiscal year ending June 30, 1972, and $600,000,000 for the fiscal year ending June 30, 1973. Funds appropriated under this subsection shall remain available until expended.

(c) For the purposes of subsection (a)(2), the Board is authorized to make expenditures from the Health Resources Development Account in the Trust Fund, established pursuant to section 63.

PLANNING

SEC. 102. (a) In collaboration with State comprehensive health planning agencies approved under section 314(a) of the Public Health Service Act, the Secretary shall promote and support, and as necessary shall conduct within the Department of Health, Education, and Welfare, a continuous process of health service planning for the purpose of improving the supply and distribution of health personnel and facilities and the organization of health services. Except for planning with respect to the national supply of professional health personnel, the planning shall proceed primarily on a State-by-State basis but without excluding more particularized planning for portions of States, for metropolitan or interstate areas, or with respect to health facilities, health manpower development, or other particular aspects of health care. If a State comprehensive health planning agency does not undertake and carry out the responsibility for utilizing and coordinating all health planning activities within the State (including coordination with planning for interstate areas), and for coordinating health planning with planning in related fields, the Secretary shall assume the responsibility for correlating the product of such planning activities within the State.

(b) Prior to July 1, 1973, the planning process shall give first consideration to identification of the most acute shortages and maldistributions of health personnel and facilities and the most serious deficiencies in the organization for delivery of covered services, and to means for the speedy alleviation of these shortcomings. Thereafter, it shall be directed to the continuing development of plans for maximizing capabilities for the effective delivery of covered services.

(c)(1) Section 314(a) of the Public Health Service Act (authorizing grants for comprehensive State health planning) is amended—

(A) by striking out "and" before the phrase "$15,000,000 for the fiscal year ending June 30, 1970" in subsection (a)(1), and inserting immediately after that phrase, $30,000,000 for the fiscal year ending June 30, 1971, and for each of the succeeding four fiscal years, so much as may be necessary"; and

(B) by redesignating paragraphs (D) through (K) of subsection (a)(2) as paragraphs (E) through (L), respectively, and by inserting immediately after paragraph (C) a new paragraph:

"(D) provide that the State agency will place emphasis on the achievement, in collaboration with the Secretary, of the purposes set forth in section 102 of the Health Security Act, and will utilize and coordinate all local or particularized health planning activities within the State (including coordination with planning for insterstate areas), and coordinate health planning with planning in related fields;"

(2) Section 314(b) of the Public Health Service Act (authorizing project grants for areawide health planning) is amended—

(A) by inserting immediaely after the second sentence, "In approving grants under this subsection the Secretary shall take into consideration the extent to which the agency or organization will supplement or otherwise contribute to the effectiveness of the planning conducted by the State agency pursuant to paragraph (D) of subsection (a)(2);" and

(B) by striking out "and" before the phrase "$15,000,000 for the fiscal year ending June 30, 1970" in the last sentence, and inserting immediately after that phrase, "$30,000,000 for the fiscal year ending June 30, 1971, and for each of the succeeding four fiscal years, so much as may be necessary."

GENERAL POLICIES AND PRIORITIES

SEC. 103. (a) In providing assistance under this part, the Board shall give priority to improving and expanding the available resources for, and assuring the accessibility of, services to ambulatory patients which are furnished as part of coordinated systems of comprehensive care. To this end the Board shall encourage and assist (1) the development or expansion of comprehensive health service systems meeting the requirements of

section 47, (2) the development or expansion of agencies, organizations, and centers described in section 48(a) or (b) (including centers established by public and other nonprofit hospitals) to furnish services to persons in urban or rural areas who lack ready access to such services, (3) the recruitment and training of professional personnel to staff such organizations, agencies and centers, (4) the recruitment and training of subprofessional and nonprofessional personnel (including the development and testing of new kinds of health personnel) to assist in the furnishing of such services, to engage in education for personal health maintenance, and to furnish liaison between such organizations, agencies, or centers and the people they serve, and (5) the strengthening of coordination and linkages among institutional services, among noninstitutional services, and between services of the two kinds, in order to improve the continuity of care and the assurance that patients will be referred to such services and at such times as may be medically appropriate.

(b) In administering financial assistance under this part the Board shall be guided so far as possible by findings and recommendations of appropriate health planning agencies.

(c) Funds available to carry out this part shall not be used to replace other Federal financial assistance, or to supplement the appropriations for such other assistance except to meet specific needs of the health security system (such as the training of physicians or medical students for the general or family practice of medicine). In administering other programs of Federal financial assistance the Secretary and other officers of the Executive Branch, on recommendation of the Board, shall to the extent possible utilize those programs to further the objectives of this part. To this end the Board, on such terms as it finds appropriate, may lend to an applicant or grantee not more than 90 per centum of the nonfederal funds required as a condition of assistance under any such program, and may pay all or part of the interest in excess of 3 percent per annum on any loan made, guaranteed, or insured under any such program.

ORGANIZATIONS FOR THE CARE OF AMBULATORY PATIENTS

SEC. 104. (a) The Board is authorized to assist, in accordance with this section, the establishment, expansion and operation of (1) comprehensive health service organizations which meet or will meet the requirements of section 47, and (2) public or other nonprofit agencies and organizations, described in section 48(a) and (b), which furnish or will furnish care to ambulatory patients.

(b) The Board is authorized to make grants (1) to any public or nonprofit agency or organization (whether or not it is a provider of health services), for not more than 90 percent of the cost (excluding costs of construction) of planning, developing, and establishing an organization or agency described in subsection (a), or (2) to an existing organization or agency described in subsection (a), for not more than 80 percent of the cost (excluding costs of construction) of planning and developing an enlargement of the scope of its services or an expansion of its resources to enable it to serve more enrollees or a larger clientele. In addition to grants under this subsection, or in lieu of such grants, the Board is authorized to provide technical assistance for the foregoing purposes.

(c) The Board is authorized to make loans to organizations and agencies described in subsection (a) to assist in meeting the cost of constructing (or otherwise acquiring, or improving or equipping) facilities which the Board finds will be essential to the effective and economical delivery, or to the ready accessibility, of covered services to eligible persons. No loan to a newly established agency or organization shall exceed 90 percent, and no loan to any other agency or organization shall exceed 80 percent, of such cost, or of the nonfederal share if other Federal financial assistance in meeting such cost is available.

(d) The Board is authorized to contract with an organization or agency which is described in subsection (a) and which has been either newly established or substantially enlarged, to pay all or a part of any operating deficits, for not more than five years in the case of an organization described in subsection (a)(1), and until not later than June 30, 1973, in the case of an agency or organization described in subsection (a)(2). Any such contract shall condition payments upon the contractor's making all reasonable effort to avoid or minimize operating deficits and (if such deficits exist) making reasonable progress toward becoming self-supporting.

RECRUITMENT, EDUCATION, AND TRAINING OF PERSONNEL

SEC. 105. (a) In consultation with State comprehensive health planning agencies, the Board shall promptly establish (and from time to time review and, if necessary, revise) schedules of priority for the recruitment, education, and training of personnel to meet the most urgent needs of the health security system. The schedules may differ for different parts of the United States.

(b) The Board is authorized to provide to physicians and medical students training for the general or family practice of medicine and training in any other medical specialty in which the Board finds that there is, for the purposes of this title, a critical shortage of qualified practitioners.

(c) The Board shall provide education or training for those classes of health personnel (professional, subprofessional, or nonprofessional) for whom it finds the greatest need, if other Federal financial assistance is not available for such education or training; and if other assistance is available but the Board deems it inadequate to meet the increased need attributable to the health security system, it may, with the approval of the Secretary, provide such education or training pending action by the Congress on a recommendation promptly made by the Secretary to increase the authorization of appropriations (or, if the authorization is deemed adequate, to increase the appropriations) for such other assistance.

(d) The training of personnel authorized by this section includes the development of new kinds of health personnel to assist in the furnishing of comprehensive health services, and also includes the training of persons to provide education for personal health maintenance, to provide liaison between the residents of an area and health organizations and personnel serving them, and to act as consumer representatives and as members of advisory bodies in relation to the operation of this title in the areas in which they reside. The Board may make grants to public or other nonprofit health agencies, institutions, or organizations (1) to pay a part or all of the cost of testing the utility of new kinds of health personnel, and (2) until June 30, 1973, to pay a part of the cost of employing persons trained under this subsection who cannot otherwise readily find employment utilizing the skills imparted by such training.

(e) Education and training under this section shall be provided by the Board through contracts with appropriate educational institutions or such other institutions, agencies, or organizations as it finds qualified for this purpose. The Board may provide directly, or through the contractor, for the payment of stipends to students or trainees in amounts not exceeding the stipends payable under comparable Federal education or training programs.

(f) The Board shall undertake to recruit and train professional practitioners who will agree to practice, in urban or rural areas of acute shortage, in comprehensive health service organizations referred to in section 47 or in agencies or organizations referred to in section 48 (a) or (b). A practitioner who agrees to engage in such practice for at least five years and who enters upon practice in the area before July 1, 1973, may until that date be paid a stipend to supplement his professional earnings, and in an appropriate case the Board may make a commitment to compensate the practitioner after that date in accordance with section 82(c).

(g) In administering this section the Board shall seek to encourage the education and training, for the health professions and other health occupations, of persons disadvantaged by poverty, inadequate education, or membership in ethnic minorities. To this end the Board may, through contracts in accordance with subsection (e), provide to such persons remedial or supplementary education preparatory to or concurrent with education or training for the health professions or occupations, and may (directly or through such contracts) provide to such persons stipends adequate to enable them to avail themselves of such education or training.

SPECIAL IMPROVEMENT GRANTS

SEC. 106. (a) The Board is authorized to make grants to public or other nonprofit health agencies, institutions, and organizations to pay part or all of the cost of establishing improved coordination and linkages among institutional services, among noninstitutional services, and between services of the two kinds.

(b) The Board is authorized to make grants to organizations and agencies described in section 104(a) to pay part or all of the cost of installation of improved utilization review, budget, statistical, or records and information retrieval systems, including the acquisition of equipment therefor, or to pay part or all of the cost of acquisition and installation of diagnostic or therapeutic equipment.

LOANS UNDER PART F

SEC. 107. Loans authorized under this part shall be repayable in not more than 20 years, shall bear interest at the rate of 3 percent per annum, and shall be made on such other terms and conditions as the Board deems appropriate. Amounts paid as interest on any such loan or as repayment of principal shall, if the loan was made before July 1, 1973, be covered into the Treasury as miscellaneous receipts, and if the loan was made after June 30, 1973, be deposited in the Trust Fund to the credit of the Health Resources Development Account.

RELATION OF PARTS E AND F

SEC. 108. Payments under this part pursuant to any grant or loan to, or any contract with, a participating provider of services shall be made in addition to, and not in substitution for, payments to which the provider is entitled under part E.

PART G—ADMINISTRATION

ESTABLISHMENT OF THE HEALTH SECURITY BOARD

SEC. 121. (a) There is hereby established in the Department of Health, Education, and Welfare a Health Security Board to be composed of five members to be appointed by the President, by and with the advice and consent of the Senate. During his term of membership on the Board, no member shall engage in any other business, vocation, or employment. Not more than three members of the Board shall be members of the same political party.

(b) Each member of the Board shall hold office for a term of five years, except that (1)

a member appointed to fill a vacancy occurring during the term for which his predecessor was appointed shall be appointed for the remainder of that term, and (2) the terms of office of the members first appointed shall expire, as designated by the President at the time of their appointment, at the end of one, two, three, four, and five years, respectively, after the date of enactment of this Act. A member who has served for two consecutive five-year terms shall not be eligible for reappointment until two years after he has ceased to serve.

(c) The President shall designate one of the members of the Board to serve, at the will of the President, as Chairman of the Board.

(d) (1) Section 5315 of title 5, United States Code (relating to executive pay rates for positions at level IV), is amended by adding at the end thereof the following new clause:

"(94) Chairman of the Health Security Board, Department of Health, Education, and Welfare."

(2) Section 5316 of title 5, United States Code (relating to executive pay rates for positions at level V), is amended by adding at the end thereof the following new clause:

"(130) Members of the Health Security Board, Department of Health, Education, and Welfare."

DUTIES OF THE SECRETARY AND THE BOARD

SEC. 122. (a) The Secretary of Health, Education, and Welfare, and the Board under the supervision and direction of the Secretary, shall perform the duties imposed upon them, respectively, by this title. Regulations authorized by this title shall be issued by the Board with the approval of the Secretary, in accordance with the provisions of section 553 of title 5, United States Code (relating to the publication of and opportunity to comment on, proposed regulations).

(b) The Board shall have the duty of continuous study of the operation of this Act and of the most effective methods of providing comprehensive personal health services to all persons within the United States and to United States citizens elsewhere, and of making, with the approval of the Secretary, recommendations on legislation and matters of administrative policy with respect thereto. The Board shall make, through the Secretary, an annual report to the Congress on the administration of the functions with which it is charged. The report shall include, for periods prior to July 1, 1973, an evaluation by the Board of progress in preparing for the initiation of benefits under this title, and for periods thereafter, an evaluation of the operation of the title, of the adequacy and quality of services furnished under it, and of the costs of the services and the effectiveness of measures to restrain the costs.

(c) In performing his functions with respect to health education and research, environmental health, disability insurance, vocational rehabilitation, the regulation of food and drugs, and all other matters pertaining to health, as well as in supervising and directing the administration of this title by the Board, the Secretary shall direct all activities of the Department toward complementary contributions to the health of the people. He shall include in his annual report to the Congress a report on his discharge of this responsibility.

(d) The Secretary shall make available to the Board all information available to him, from sources within the Department or from other sources, pertaining to the functions of the Board.

EXECUTIVE DIRECTOR; DELEGATION OF AUTHORITY

SEC. 123. (a) There is hereby established the position of Executive Director of the Health Security Board. The Executive Director shall be appointed by the Board with the approval of the Secretary (without regard to the provisions of title 5, United States Code, governing appointments in the competitive service) and shall receive a salary at the rate fixed for Level V of the executive pay schedule. The Executive Director shall serve as secretary to the Board, and shall perform such duties in the administration of this title as the Board may assign to him.

(b) The Board is authorized to delegate to the Executive Director or to any other officer or employee of the Board or, with the approval of the Secretary (and subject to reimbursement of identifiable costs), to any other officer or employee of the Department, any of its functions or duties under this title other than (1) the issuance of regulations, or (2) the determination of the availability of funds and their allocation, under sections 62, 63, and 64.

REGIONS AND HEALTH SERVICE AREAS

SEC. 124. This title shall be administered by the Board through the regions of the Department and, within each region, through such health service areas as the Board may establish. Each health service area shall consist of a State or a part of a State, except as the Board finds that patterns of the organization of health services and of the flow of patients make an interstate area a more practical unit of administration.

NATIONAL HEALTH SECURITY ADVISORY COUNCIL

SEC. 125. (a) There is hereby established a National Health Security Advisory Council, which shall consist of the Chairman of the Board, who shall serve as Chairman of the Council, and twenty members, not otherwise in the employ of the United States, appointed by the Secretary on recommendation of the Board, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service. The appointed members shall include persons who are representative of providers of health services, and of persons (who shall constitute a majority of the Council) who are representative of consumers of such services. Each appointed member shall hold office for a term of four years, except that (1) any member appointed to fill a vacancy occurring during the term for which his predecessor was appointed shall be appointed for the remainder of that term, and (2) the terms of the members first taking office shall expire, as designated by the Secretary at the time of appointment, five at the end of the first year, five at the end of the second year, five at the end of the third year, and five at the end of the fourth year after the date of enactment of this Act. Members of the Council who are representative of providers of health care shall be persons who are outstanding in fields related to medical, hospital, or other health activities, or who are representative of organizations or associations of professional health personnel; members who are representative of consumers of such care shall be persons, not engaged in and having no financial interest in the furnishing of health services, who are familiar with the needs of various segments of the population for personal health services and are experienced in dealing with problems associated with the furnishing of such services.

(b) The Advisory Council is authorized to appoint such professional or technical committees, from its own members or from other persons or both, as may be useful in carrying out its functions. The Council, its members, and its committees shall be provided with such secretarial, clerical, or other assistance as may be authorized by the Board for carrying out their respective functions. The Council shall meet as frequently as the Board deems necessary, but not less than four times each year. Upon request by seven or more members it shall be the duty of the Chairman to call a meeting of the Council.

(c) It shall be the function of the Advisory Council (1) to advise the Board on matters of general policy in the administration of this title, in the formulation of regulations, and in the performance of the Board's functions under part D, and (2) to study the operation of this title and the utilization of health services under it, with a view to recommending any changes in the administration of the title or in its provisions which may appear desirable. The Council shall make an annual report to the Board on the performance of its functions, including any recommendations it may have with respect thereto, and the Board, through the Secretary, shall promptly transmit the report to the Congress, together with a report by the Board on any administrative recommendations of the Council which have not been followed, and a report by the Secretary of his views with respect to any legislative recommendations of the Council.

(d) Appointed members of the Advisory Council and members of technical or professional committees, while serving on business of the Council (inclusive of travel time), shall receive compensation at rates fixed by the Board, but not exceeding $100 per day; and shall be entitled to receive actual and necessary traveling expenses and per diem in lieu of subsistence while so serving away from their places of residence.

REGIONAL AND LOCAL ADVISORY COUNCILS

SEC. 126. (a) The Board shall appoint for each of the regions of the Department and for each health service area a regional or local advisory council, consisting of the regional or local representative of the Board as chairman and (in such numbers as the Board may determine) representatives of providers of health services and representatives (who shall constitute a majority of the members of each council) of consumers of such services. It shall be the function of each such council to advise the regional or local representative of the Board, as the case may be, on all matters directly relating to the administration of this title in the region or area.

(b) The provisions of section 125(d) shall be applicable to the members of councils appointed under this section.

PROFESSIONAL AND TECHNICAL ADVISORY COMMITTEES

SEC. 127. (a) The Board shall appoint such standing professional and technical committees as it deems necessary to advise it on the administration of this title with respect to the several classes of covered services described in part B. Each such committee shall consist of experts (in such number as the Board may determine) drawn from the health professions, from medical schools or other health educational institutions, from providers of services, or from other sources, whom the Board deems best qualified to advise it with respect to the professional and technical aspects of the furnishing and utilization of, the payment for, and the evaluation of, a class of covered services designated by the Board, and of the relationship of that class of services to other covered services.

(b) The Board is authorized to appoint such temporary professional and technical committees as it deems necessary to advise it on special problems not encompassed in the assignments of standing committees appointed under subsection (a).

(c) Committees appointed under this section shall report from time to time to the Board, and copies of their reports shall be transmitted by the Board to the National Advisory Council.

(d) The provisions of section 125(d) shall be applicable to the members of committees appointed under this section.

DISSEMINATION OF INFORMATION; STUDIES AND EVALUATIONS; SYSTEMS DEVELOPMENT

SEC. 128. (a) The Board shall disseminate, to providers of services and to the public,

information concerning the provisions of this title, the persons eligible to receive the benefits of the title, and the nature, scope, and availability of covered services; and to providers of services, information concerning the conditions of participation, methods and amounts of compensation to providers, and other matters relating to their participation. With the approval of the Secretary, the Board may furnish to all professional practitioners information concerning the safety and efficacy of drugs appearing on either of the lists established under section 25, the indications for their use, and contraindications.

(b) The Board shall make, on a continuing basis after June 30, 1973, a study and evaluation of the operation of this title in all its aspects, including study and evaluation of the adequacy and quality of services furnished under the title, analysis of the cost of each kind of services, and evaluation of the effectiveness of measures to restrain the costs.

(c) The Board is authorized, either directly or by contract—

(1) to make statistical and other studies, on a nationwide, regional, State, or local basis of any aspect of the operation of this title, including studies of the effect of the title upon the health of the people of the United States and the effect of comprehensive health services upon the health of persons receiving such services;

(2) to develop and test methods of providing, through payments for services or otherwise, additional incentives for adherence by providers to standards of adequacy and quality; methods of peer review of the utilization of drugs, and of services not subject to utilization review under section 50; and methods of peer review of the quality of services;

(3) to develop and test, for use by the Board, records and information retrieval systems and budget systems for health services administration, and develop and test model systems for use by providers of services;

(4) to develop and test, for use by providers of services, records and information retrieval systems useful in the furnishing of health services, and equipment (such as equipment for the monitoring of patients' functions, or for multiphasic screening) useful in the furnishing of preventive or diagnostic services;

(5) to develop, in collaboration with the pharmaceutical profession, and test, improved administrative practices or improved methods for the reimbursement of independent pharmacies for the cost of furnishing drugs as a covered service; and

(6) to make such other studies as it may consider necessary or promising for the evaluation, or for the improvement, of the operation of this title.

EXPERIMENTS AND DEMONSTRATIONS

SEC. 129. The Board is authorized, pursuant to agreement with providers of services, to undertake experiments for the purpose of developing and testing alternative methods of compensating providers (in lieu of the methods otherwise prescribed by this title) which offer promise, through financial incentives or otherwise, of improving the coordination of services, improving their quality or their accessibility, or decreasing their cost; and to undertake demonstrations of the results of such experiments. Any such experiment or demonstration with respect to independent professional practitioners shall be undertaken only on the manner specified in section 82(g).

DETERMINATIONS; HEARINGS AND JUDICIAL REVIEW

SEC. 130. (a) Determinations of entitlement to benefits under this title, determinations of who are participating providers of services, determinations whether services are covered services, and determinations of amounts to be paid by the Board to participating providers, shall be made by the Board in accordance with regulations. If the Board finds that a participating provider of services no longer meets the qualifications established by or pursuant to part C for services of the kinds furnished by him (or for some classes of such services), or that he has intentionally violated the provision of this title or of regulations, or that he has failed substantially to carry out the agreement filed by him pursuant to section 41(c), the Board may issue an order terminating the participation of the provider (or terminating it with respect to particular classes of services); but unless the Board finds that eligible persons are endangered, no such order shall be effective until after the provider has been afforded a hearing, or an opportunity therefor, under subsection (b).

(b) A person who is dissatisfied with a determination that he is not an eligible person or that a service furnished him is not a covered service, or a provider of services who is dissatisfied with a determination that he is not a participating provider or with an order terminating his participation (in whole or in part), or a participating provider who alleges that the amount of a payment to him by the Board is less than the amount required by this title and regulations prescribed under it, shall be entitled to a hearing in accordance with section 205(b) of the Social Security Act. A person or provider who is dissatisfied with the decision after such a hearing shall be entitled to judicial review in accordance with section 205(g) of the Social Security Act.

DIRECTIONS BY THE BOARD FOR THE BETTER ORGANIZATION AND COORDINATION OF SERVICES

SEC. 131. (a) The Board is authorized, in accordance with this section, to issue to any participating provider of services (other than an individual professional provider) a direction, as a condition to the provider's continuing after a specified future date to be a participating provider, that the provider shall—

(1) discontinue (for purposes of payment under part E) one more service which the provider is currently furnishing;

(2) initiate one or more covered services which the provider is not currently furnishing;

(3) initiate the furnishing of one or more covered services at a place where the provider is not currently furnishing the services; or

(4) enter into arrangements with one or more other providers of services (A) for the transfer of patients and medical records as may be medically appropriate, (B) for making available to one provider the professional and technical skills of another, or (C) for such other coordination or linkage of covered services as the Board finds will best serve the purposes of this Act.

(b) If the Board finds (1) that the services furnished by a provider of services (other than an individual professional provider) are not necessary to the availability of adequate services under this title and that their continuance as covered services is unreasonably costly, or (2) that the services are furnished inefficiently and at unreasonable cost, that efforts at correction have proved unavailing, and that necessary services can be more efficiently furnished by other providers, the Board may issue a direction that on a specified future date the provider shall cease to be a participating provider.

(c) No direction shall be issued under this section except on the recommendation of, or after consultation with, the State health planning agency (referred to in section 102(a)) of the State in which the direction will be operative. No direction shall be issued under subsection (a) unless the Board finds that it can practicably be carried out by the provider to whom it is addressed.

(d)(1) No direction shall be issued under this section until the Board has published notice, in the service area of the provider or providers affected, describing in general terms the proposed action, giving a brief statement of the reasons therefor, and inviting written comment thereon. The notice shall be published in at least one newspaper circulating in the area, and the Board shall use such other means as it finds calculated to inform residents of the area of the proposed action.

(2) If objection to the proposal is made by any interested provider of services (other than an individual professional provider) or by an interested health planning agency or by a substantial number of interested professional providers or of residents of the area, the Board shall call a public hearing at which it shall present evidence in support of the proposal, and any interested provider of services or health planning agency or any other interested person shall be entitled to participate in the hearing and to present evidence or argument or both. On the basis of evidence presented at the hearing the Board shall make findings of fact, and shall make a final determination either to issue the proposed direction, to modify and issue it, or to withdraw the proposal.

(e) Within thirty days after the issuance of the Board's final determination, any interested provider, planning agency, or person who participated in the hearing may file, with the United States court of appeals for the circuit within which is situated any provider of services affected by the determination, a petition for review of the determination. The second and third sentences of paragraph (3), and paragraphs (4) and (5), of section 1116 of the Social Security Act shall apply to the proceedings in the court of appeals (except that references therein to the Secretary shall be deemed to relate to the Board).

PART II—MISCELLANEOUS PROVISIONS

DEFINITIONS

SEC. 141. When used in this title—

(a) The term "State" includes the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa.

(b) The term "United States" when used in a geographical sense means the States, as defined in subsection (a).

(c) The term "Secretary", except when the context otherwise requires, means the Secretary of Health, Education, and Welfare.

(d) The term "Department" means the Department of Health, Education, and Welfare, except when the context otherwise requires.

(e) The term "Board" means the Health Security Board established by section 121.

EFFECTIVE DATES OF TITLE I

SEC. 142. Entitlement to health security benefits under this title shall commence on July 1, 1973, and no service or thing furnished prior to that date shall constitute a covered service. Part D shall be effective with respect to fiscal years beginning after June 30, 1973, except that action pursuant to section 201(g) and section 1817(h) of the Social Security Act, as amended by section 61 of this Act, to make funds available on and after July 1, 1973, is authorized to be taken by the Congress prior to that date. In all other respects this title is effective upon enactment.

EXISTING EMPLOYER-EMPLOYEE HEALTH BENEFIT PLANS UNAFFECTED

SEC. 143. (a) No provision of this Act, and no amendment of the Internal Revenue Code of 1954 made by this Act, shall affect or alter any contractual or other nonstatutory obligation of an employer to provide health services to his present and former employees and their dependents, or to any of such persons, or the amount of any obligation for payment (including any amount payable by an em-

ployer for insurance premiums or into a fund to provide for any such payment) toward all or any part of the cost of such services.

(b) If notwithstanding subsection (a) the availability after June 30, 1973, of benefits under this title shall result in a diminution in the cost to an employer of his aggregate obligations (including his liability for taxes imposed by section 3111(b) of the Internal Revenue Code of 1954, as well as any contractual or other undertaking to pay the taxes imposed on his employees by section 3101(b) of the Code) to provide or pay for health services to persons referred to in subsection (a), it is the sense of the Congress that, at least to the extent of such diminution in costs, and at least for the duration of any non-statutory obligation to provide health benefits subsisting on June 30, 1973, equity and fair dealing require the employer to undertake an equivalent cost, either by paying without deduction from their remuneration part or all of the taxes imposed by section 3101(b) of the code on his employees, or by increasing their remuneration, or by providing other benefits to them, or by a combination of these methods, as may be agreed between the employer and his employees or their representatives.

TITLE II—HEALTH SECURITY TAXES

PART A—PAYROLL TAXES

RATES AND COVERAGE

SEC. 201. (a) Section 3101(b) of the Internal Revenue Code of 1954 (imposing a hospital insurance tax on employees) is amended by striking out all that follows clause (1) and inserting in lieu thereof:

"(2) with respect to wages received after December 31, 1972, the rate shall be 2.1 percent."

(b) Section 3111(b) of the Code (imposing a hospital insurance tax on employers) is amended by striking out all that follows clause (1) and inserting in lieu thereof:

"(2) with respect to wages paid after December 31, 1972, the rate shall be 3.5 percent."

(c) Section 3121 of the Code (containing definitions applicable to payroll taxes) is amended by adding at the end thereof the following subsections:

"(r) WAGE BASE FOR PURPOSES OF HEALTH SECURITY TAXES.—For the purpose of section 3101(b), the term 'wages' shall have the meaning set forth in subsection (a) of this section except that in applying paragraph (1) of that subsection the figure '$15,000' shall be substituted for the figure '$7,800'. For the purpose of section 3111(b); the term 'wages' shall have the meaning set forth in subsection (a) of this section except that paragraph (1) of that subsection shall not be applied.

"(s) EMPLOYMENT FOR PURPOSES OF HEALTH SECURITY TAXES.—For the purposes of sections 3101(b) and 3111(b), the term 'employment' shall have the meaning set forth in subsection (b) of this section except that—

"(1) the exclusions contained in the following paragraphs of subsection (b) shall not be applied: paragraph (1) (relating to foreign agricultural workers), paragraphs (5) and (6) (relating to employment by the United States or its instrumentalities) other than paragraph (6)(C)(i) (relating to the President, the Vice President, and members of Congress) and paragraph (6)(C)(iii) through (v) (relating to certain minor employments), paragraph (8) (relating to employment by charitable and similar organizations), paragraph (9) (relating to employment covered by the railroad retirement system), and paragraph (17) (relating to employment by subversive organizations),

"(2) subsection (m) of this section (including services by members of the uniformed services in the term 'employment') shall not be applied, and

"(3) for the purposes of section 3101(b), the exclusion contained in paragraph (7) of subsection (b) of this section (relating to employment by States and their political subdivisions and instrumentalities) shall not be applied, other than paragraph (7)(C)(i) through (iv) (relating to certain minor employments by the District of Columbia)."

CONFORMING AND TECHNICAL AMENDMENTS

SEC. 202. (a) Subsection (b) of section 3101 and subsection (b) of section 3111 of the Code are further amended by striking out "HOSPITAL INSURANCE" in the headings and inserting "HEALTH SECURITY TAX" in lieu thereof, and by striking out "section 3121(a)" and "section 3121(b)" in each subsection and inserting in lieu thereof "section 3121(r)" and "section 3121(s)", respectively.

(b) Section 3121(1) of the Code (relating to the coverage of services performed in the employ of foreign subsidiaries of domestic corporations) is amended by striking out "sections 3101 and 3111" in paragraph (1)(A) and inserting in lieu thereof "sections 3101(a) and 3111(a)", and by inserting at the end of the subsection the following paragraph:

"(11) Notwithstanding the provision of any agreement entered into under this subsection, no domestic corporation shall be under any obligation to pay to the Secretary, with respect to services covered under the agreement and performed after December 31, 1972, amounts equivalent to the taxes which would be imposed by sections 3101(b) and 3111(b) if such services constituted employment as defined in section 3121."

(c) Sections 3122 and 3125 of the Code are amended by striking out "section 3111" wherever it appears and inserting in lieu thereof "section 3111(a)".

(d) Section 6413(c)(1)(D) of the Code is amended by inserting "(i)" immediately after "(D)", by striking out "section 3101" and inserting "section 3101(a)" in lieu thereof, and by inserting immediately before the period at the end thereof: "; and (ii) during any calendar year after the calendar year 1972, the wages received by him during such year exceed $15,000, the employee shall be entitled (subject to the provisions of section 31(b)) to a credit or refund of any amount of tax, with respect to such wages, imposed by section 3101(b) and deducted from the employee's wages (whether or not paid to the Secretary or his delegate), which exceeds the tax with respect to the first $15,000 of such wages receives in such calendar year".

(e) Section 218 of the Social Security Act (relating to agreements for the coverage of services performed in the employ of States and their political subdivisions and instrumentalities) is amended—

(1)(A) by striking out, in subsection (e)(1)(A), "sections 3101 and 3111" and inserting in lieu thereof, "sections 3101(a) and 3111(a)";

(B) by adding at the end of subsection (e) the following paragraph:

"(3) Notwithstanding the provisions of any agreement entered into under this section, no State shall be under any obligation to pay to the Secretary of the Treasury, with respect to service covered under the agreement and performed after December 31, 1972, amounts equivalent to the taxes which would be imposed by sections 3101(b) and 3111(b) of the Internal Revenue Code of 1954 if such service constituted employment as defined in section 3121 of such Code."; and

(2) by striking out in subsection (h)(1), "and the Federal Hospital Insurance Trust Fund", and striking out in such subsection "subsection (a)(3) of section 201, subsection (b)(1) of such section, and subsection (a)(1) of section 1817, respectively" and inserting in lieu thereof "subsections (a)(3) and (b)(1) of section 201".

EFFECTIVE DATES OF PART A

SEC. 203. The amendments made by section 201, and the amendments made by subsections (c) and (d) of section 202, shall be effective only with respect to remuneration received, and remuneration paid, after December 31, 1972, and section 3121(s) of the Internal Revenue Code of 1954 (as added by section 201(c) of this Act) shall be applicable only with respect to remuneration for services performed after that date. The amendments made by section 202(a) shall be effective on January 1, 1973. The amendments made by subsections (b) and (e) of section 202 shall be effective only with respect to remuneration for services performed after December 31, 1972.

PART B—TAX ON NON-WAGE INCOME

IMPOSITION OF TAX

SEC. 211. (a) Subsection (b) of section 1401 of the Internal Revenue Code of 1954 (imposing a hospital insurance tax on self-employment income) is repealed.

(b) Section 1403 of the Code is redesignated as section 1404, and the following new section is inserted immediately after section 1402:

"SEC. 1403. (a) HEALTH SECURITY TAX.—In addition to other taxes, there shall be imposed for each taxable year beginning after December 31, 1972, on the income of every individual residing in the United States whose health security non-wage income (as defined in subsection (b)) for the taxable year is $400 or more, a tax equal to 2.1 percent of the amount of such health security non-wage income for such taxable year.

"(b) DEFINITION OF HEALTH SECURITY NON-WAGE INCOME.—The term 'health security non-wage income' means an amount determined by deducting from the adjusted gross income of an individual for the taxable year any part of such income in excess of $15,000, and deducting from the remainder any part of the adjusted gross income which—

"(1) consists of wages taxable under section 3101(b), or

"(2) consists of remuneration for services performed in the employ of the United States as President or Vice President of the United States or as a Member, Delegate, or Resident Commissioner of or to the Congress, or as a member of a uniformed service on active duty, or

"(3) consists of remuneration (not taxable under section 3101(b)) for service performed by an alien in the employ of a foreign government, an instrumentality of a foreign government, or an international organization, or

"(4) consists of payments excluded by section 3121(a)(6) from wages taxable under section 3101(b)."

CONFORMING AND TECHNICAL ADMENDMENTS

SEC. 212. (a) The heading and the table of contents of chapter 2 of subtitle A of the Internal Revenue Code of 1954 are amended to read as follows:

"CHAPTER 2—TAXES ON SELF-EMPLOYMENT INCOME AND NON-WAGE INCOME

"SEC. 1401. Rate of tax on self-employment income

"SEC. 1402. Definitions relating to self-employment income

"SEC. 1403. Tax on health security non-wage income.

"SEC. 1404. Miscellaneous provisions."

(b) Section 1401 of the Code, as amended by section 211(a) of this Act, is further amended by striking out the heading of the section and inserting in lieu thereof, "SEC. 1401. RATE OF TAX ON SELF-EMPLOYMENT INCOME," and by striking out "(a)" at the beginning of the section.

(c) Section 1404 of the Code (as redesignated by section 211(b) of this Act) is amended by striking out "Self-Emplyoment Contributions Act of 1954'" and inserting in lieu thereof, "'Self-Employment and Health Security Contributions Act'".

(d) Section 6015 of the Code (relating to declarations of estimated income by individuals) is amended by striking out in sub-

section (c)(2) "the amount of the self-employment tax imposed by chapter 2" and inserting in lieu thereof "the amount of the taxes imposed by chapter 2".

(e) Section 6017 of the Code is amended—

(1) by striking out the heading of the section and inserting in lieu thereof, "SEC. 6017. SELF-EMPLOYMENT AND HEALTH SECURITY TAX RETURNS.";

(2) by inserting, immediately after the first sentence of the section, the following sentence: "Every individual residing in the United States and having health security nonwage income of $400 or more for the taxable year shall make a return with respect to the health security nonwage income tax imposed by chapter 2."; and

(3) by striking out "the tax" in the second sentence of the section and inserting in lieu thereof, "the taxes," and by inserting immediately before the period at the end of that sentence, ", or on the separate health security nonwage income of each spouse, as the case may be."

EFFECTIVE DATES OF PART B

SEC. 213. The amendments made by section 211 and section 212(d) and (e) shall be effective with respect to taxable years beginning after December 31, 1972. The amendments made by section 212(a), (b), and (c) shall be effective on January 1, 1973.

TITLE III—REPEAL OR AMENDMENT OF OTHER ACTS

REPEAL OF MEDICARE AND FEDERAL EMPLOYEE HEALTH BENEFIT STATUTES

SEC. 301. (a) Effective July 1, 1973—

(1) Title XVIII of the Social Security Act, except section 1817 thereof, is repealed.

(2) The Act of September 28, 1959 (5 U.S.C., Chap. 89) and Public Law 86-724 are repealed.

(b) Subsection (a) shall not affect any right or obligation arising out of any matter occurring before July 1, 1973, or any admintrative or judicial proceeding (whether or not initiated before that date) for the adjudication or enforcement of any such right or obligation.

MEDICAID STATUTE

SEC. 302. After June 30, 1973, no State (as defined in section 1101(a)(1) of the Social Security Act) shall be required, as a condition of approval of its State plan under title XIX of that Act, to furnish any service which constitutes a covered service under title I of this Act, and any amount expended for the furnishing of any such service to a person eligible for services under title I of this Act shall be disregarded in determining the amount of any payment to a State under such title XIX. The Secretary of Health, Education, and Welfare shall by regulation prescribe the minimum scope of services required (in lieu of the requirements of section 1902(a)(13) of the Social Security Act) as a condition of approval, after June 30, 1973, of a State plan under such title XIX. Such minimum scope of services shall, to the extent the Secretary finds practicable, be designed to supplement the benefits available under title I of this Act, with respect to the duration of skilled nursing home services during a spell of illness and with respect to the furnishing of dental services and of drugs (appearing on the list established under section 25(b) of this Act) to persons not entitled to such services, or not entitled to such drugs, under title I of this Act.

VOCATIONAL REHABILITATION ACT; MATERNAL AND CHILD HEALTH AND CRIPPLED CHILDREN'S SERVICES

SEC. 303. Funds made available under the Vocational Rehabilitation Act or under title V of the Social Security Act shall not be used, after June 30, 1973, to pay for personal health services available under title I, of this Act; but they may, in accordance with regulations of the Secretary of Health, Education, and Welfare, be used (a) to pay for institutional services which are either more extensive or more intensive than the services recognized in institutional budgets approved under title I of this Act, or (b) to pay for special medical or other procedures peculiar to vocational rehabilitation, or peculiar to the correction or amelioration of defects or chronic conditions of crippled children, as the case may be.

The section-by-section analysis presented by Mr. KENNEDY is as follows:

HEALTH SECURITY ACT—SECTION-BY-SECTION ANALYSIS

TITLE I

Part A—Eligibility for benefits

(Sections 11-12-13)

Every resident of the U.S. (and every non-resident citizen when in the U.S.) will be eligible for covered services. Reciprocal and "buy-in" agreements will permit the coverage of groups of non-resident aliens, and in some cases benefits to U.S. residents when visiting in other countries. Further provision for U.S. residents in other countries will be studied.

Part B—Nature and scope of benefits: Covered services

(Section 21)

Every eligible person is entitled to have payments made by the Board for covered services provided within the United States by a participating provider.

(Section 22)

All necessary professional services of physicians, wherever furnished, are covered including preventive care, with two important restrictions:

(1) specialist services are covered only when performed by a qualified specialist—except in emergency situations—and generally only on referral from a primary physician. This is intended to protect the public from inadequately trained practitioners and to restore the primary or family practitioner to the role of the manager of health services.

(2) Psychiatric services to an ambulatory patient are covered only for active preventive, diagnostic, therapeutic or rehabilitative service with respect to mental illness. If the patient seeks care in an organized setting (such as a comprehensive health service organization, a hospital out-patient clinic, a community mental health center or other mental health clinic) there is no limit on the number of consultations. In these kinds of organized settings, peer review and budgetary controls can be expected to curtail unnecessary utilization. If the patient is consulting a solo practitioner, there is a limit of 20 consultations per spell of illness.

(Section 23)

Comprehensive dental services (exclusive of most orthodontia) are covered for children under age 15, with the covered age group increasing by two years each year until all those under age 25 are covered. This benefit is limited initially because, even with full use of dental auxiliaries, there is insufficient manpower to provide dental benefits for the entire population. It is the declared intention, however, to extend dental benefits to older persons as rapidly as this becomes feasible.

(Section 24)

Inpatient and outpatient hospital services, and services of a home health agency are covered without arbitrary limitation. Pathology and radiology services are specifically included as parts of *institutional* services, thus reversing the practice of Medicare. Domiciliary or custodial care is specifically excluded in any institution, thus necessitating the two important restrictions on payments for institutional care:

(1) Payment for skilled nursing home care is limited to 120 days per spell of illness. It is not practical to assume that the majority of nursing homes and extended care facilities in the country will be able to implement effective utilization review and control plans in the first years of Health Security. The demand for essentially domiciliary or custodial care in nursing homes is so overwhelming, that an initial arbitrary limit on days of coverage is necessary. Extension of the benefit is authorized when this becomes feasible.

(2) Many state hospitals do not provide optimal active treatment to their psychiatric patients but rather maintain them in a maintenance or custodial setting. If Health Security provided unlimited coverage for patients in these hospitals, it might tend to freeze the current level of care instead of stimulating these institutions to upgrade their medical-care performance. Therefore the psychiatric hospital benefit is limited to 45 consecutive days of *active treatment* during a spell of illness.

(Section 25)

The bill provides coverage for two categories of drug use: prescribed medicines administered to inpatients or outpatients within participating hospitals, or to enrollees of comprehensive health service organizations, and drugs necessary for the treatment of specified chronic illnesses or conditions requiring long or expensive therapy. This will provide coverage of most drug costs for individuals who require costly drug therapy.

The bill requires the Board and the Secretary of HEW to establish two lists of approved drugs, taking into account the safety, efficacy and cost of each drug. There will be a broad list of approved medicines available for use in institutions and by comprehensive health service organizations and a more restricted list which is available for use outside such organized settings. The restricted list shall stipulate which drugs on it shall be available for treatment of each of the specified chronic diseases. No such restrictions shall be placed upon drug therapy within an institutional setting.

Use of the restricted list will meet the most urgent needs for drug therapy while restraining unnecessary utilization. The benefit is more liberal where adequate control mechanisms exist.

(Section 26)

The appliances benefit is similar in concept and operation to the drug benefit, subject to a limitation on aggregate cost. The Board shall prepare lists of approved devices, appliances or equipment which it finds are important for the maintenance or restoration of health, employability or self-management (taking into consideration the reliability and cost of each item). The Board will also specify the circumstances or the frequency with which the item may be prescribed at the cost of the Health Security program.

(Section 27)

The professional services of optometrists and podiatrists are covered, subject to regulations, as are diagnostic or therapeutic services furnished by independent pathology laboratories and radiology services. The care of a psychiatric patient in a mental health day care service is covered for up to 60 days per spell of illness (day care benefits are unlimited if furnished by a comprehensive health service organization or by a community mental health center). Ambulance and other emergency transportation services are covered.

Supporting services such as psychological, physiotherapy, nutrition, social work and health education are covered if they are part of institutional services or are furnished by a comprehensive health service organization. This establishes the important principle that these and other supporting services should be provided as part of a coordinated program of health maintenance and care. Psychologists, physical therapists, social workers, etc. will not be permitted to establish independent

practices and bill the program on a fee-for-service basis. This is intended to assure that whenever services of this nature are provided they are under appropriate medical supervision and are germane to the over-all care of the patient.

(Section 28)

Health services furnished or paid for under a workmen's compensation law are not covered. Reimbursement for loss of earnings is so closely interlocked with the health services aspects of workmen's compensation that absorption of the health services portion of workmen's compensation by Health Security could have the effect of delaying findings of eligibility for income payments. Also, health services furnished in a primary or secondary school are excluded, being generally organized, administered and financed through the education systems.

The Board may exclude from coverage medical or surgical procedures which are essentially experimental in nature. Individuals who enroll in a comprehensive health service organization or enroll themselves with a primary practitioner accepting capitation payments are not entitled to seek covered services from other providers of services (except as specified in regulations). Surgery primarily for cosmetic purposes is excluded from coverage.

The services of a professional practitioner are not covered if they are furnished in a hospital which is not a participating provider. This is intended to discourage physicians from admitting patients to hospitals which cannot or will not meet standards for participation in the program.

Part C—Participating providers of services

(Section 41)

Participating providers are required to meet standards established in this title or by the Board. In addition, they must agree to provide services without discrimination, to make no charge to the patient for any covered service, and to furnish data necessary for utilization review by professional peers, statistical studies by the Board, and verification of information for payments.

(Section 42(a))

Professional practitioners licensed when the program begins are eligible to practice in the State where they are licensed. All newly licensed applicants for participation must meet national standards established by the Board in addition to those required by his State. While stopping short of creating a Federal licensure system for health professionals, this will guarantee minimum national standards. A State-licensed practitioner who meets national standards will be qualified to provide Health Security covered services in any other state. (See also Section 56(a)(1)).

(b) For purposes of this title a doctor of osteopathy is a physician, as is a dentist when performing procedures which, in generally accepted medical practice, may be performed by either a physician or a dentist.

(c) Participating professional providers shall be required to meet continuing education requirements established by the Board (in consultation with appropriate professional organizations.)

(d) Major surgery and certain other specialty services shall be covered only when provided by a board certified or board eligible physician (except in emergency circumstances). Physicians who do not meet these standards but who are providing such services as a substantial part of their practice when the program begins may be found qualified if they meet standards established by the Board and, where appropriate, if recommended by a participating hospital.

(Section 43)

This section establishes conditions of participation for general hospitals similar to those required by Medicare. Two requirements not found in the Medicare program are: (1) that the hospital must not discriminate in granting staff privileges on any grounds unrelated to professional qualifications; and (2) that it establish a pharmacy and drug therapeutics committee for supervision of hospital drug therapy. Medicare allows any hospital accredited by the Joint Commission on the Accreditation of Hospitals (if it provides utilization review) to participate in the program, thus in effect delegating to the Commission the determination whether the standards are met. This title requires all participating hospitals to meet standards established by the Board.

(Section 44)

Psychiatric hospitals will be eligible to participate only if the Board finds that the hospital (or a distinct part of the hospital) is engaged in furnishing *active* diagnostic, therapeutic and rehabilitative services to mentally ill patients. Psychiatric hospitals are required to meet the same standards as those prescribed for general hospitals in Section 43, and such other conditions as the Board finds necessary to demonstrate that the institution is providing active treatment to its patients. These standards will exclude costs incurred by state mental institutions to the extent they serve domiciliary or custodial functions. In addition, psychiatric hospitals must be accredited by the Joint Commission on the Accreditation of Hospitals. (As in Medicare, accreditation is an *additional* requirement in the case of psychiatric hospitals, as further assurance that they meet the requirements of an active treatment program.)

(Sections 45 and 46)

Section 45 establishes conditions of participation for skilled nursing homes similar to those established for extended care facilities under Medicare. Important differences, however, are the requirement for affiliation by 1975 with a participating hospital or comprehensive health service organization (see Section 51(b)) and changes in the requirements for utilization review (see Section 50). Under section 46 participation by home health agencies will be limited to public agencies and non-profit private organizations—proprietary home health agencies are specifically excluded.

(Section 47)

This section describes a comprehensive health service organization which undertakes to provide an enrolled population either with complete health care or, at the least, with complete Health Security services (other than institutional services, mental health or dental services) for the maintenance of health and the care of ambulatory patients. The bill, in its aim to improve the methods of delivery of health services, places much emphasis on the development of new organizations of this kind and the enlargement of old ones.

The section is designed to accommodate forms of organization typical of existing prepaid group practice plans, but also to be flexible enough to permit experimentation with somewhat different forms. In some urban or rural areas, for example, it may be impracticable to bring all of the various services together in one place, and the section has been designed to encompass what has been described as "comprehensive group practice without walls"; the basic essential is the assumption of responsibility for a reasonably comprehensive range of services (including health maintenance), on a continuing and coordinated basis, to a group of persons who have chosen to receive all or nearly all their health care from the organization.

Other requirements are spelled out in this section: The organization must furnish services through the prepaid group practice of medicine, or as near an approximation to prepaid group practice as is feasible. It must be a nonprofit organization, or if several providers share in the furnishing of services the prime contractor with the Board must be nonprofit. All persons living in or near a specified service area will be eligible to enroll, subject to the capacity of the organization to furnish care and subject to minimal underwriting protections. Services must be reasonably accessible to persons living within the specified service area. Periodic consultation with representatives of enrollees is required. Professional policies and their effectuation, including monitoring the quality of services and their utilization, is to be the responsibility of a committee or committees of physicians. Health education and the use of preventive services must be stressed, and lay persons are to be employed so far as is consistent with good medical practice. Charges for any services not covered by Health Security must be reasonable. Finally, the organization must agree to pay for services furnished by other providers in emergencies, either within the service area of the organization or elsewhere, but may meet this requirement to the extent feasible through reciprocal service arrangements with other organizations of like kind.

(Section 48)

This section deals with several classes of health organizations that vary widely, even within a single class, in their structure and in the scope of the services which they offer. Because statutory specifications cannot well be tailored to so many variables, the section sets forth only a general statement of the kinds of organizations to which it relates and leaves participation of each organization to a case-by-case decision of the Board.

Subsection (a) permits the participation of community health centers or the like which, though furnishing services as comprehensive as are required by section 47, do not serve an enrolled or otherwise predetermined population and may not meet some other requirements of section 47. Subsection (b) authorizes the Board to deal separately with the primary care portion of a system of comprehensive care where it is necessary to rely on arrangements with other providers, rather than on a unified structure, to round out the other elements of the system. Where organizations meeting the extensive requirements of section 47 are not available, these two subsections will give the Board flexibility in furthering one of the bill's prime objectives, the development and broad availability of comprehensive services furnished on a coordinated basis.

Because of the extent to which mental health services are separated from other health care, subsection (c) permits the Board to contract directly with public or other nonprofit mental health centers and mental health day care services.

Subsection (d) deals with a miscellany of other health care organizations, public, nonprofit, or proprietary. If a State or local public health agency is providing preventive or diagnostic services, such as immunizations or laboratory tests, the Board may contract with it for the continuance of these services. In the field of private practice, physicians or dentists or other practitioners may group themselves in a clinic, nonprofit or proprietary, or in any number of other ways, and it may be more convenient both to them and to the Board to regard them as an entity than to deal with each practitioner separately. The Board will have wide discretion in contracting with such entities subject only to the limitation that, like other organizations described in section 48, the entity may not (under section 88(a)) be paid on a fee-for-service basis. Practitioners who elect that method of payment may of course pool their bills for submission to the Board, but there is no reason to contract with a unit for the payment of fees to it.

(Section 49)

This section specifies the broad and general conditions under which independent

pathology laboratories, independent radiological services, providers of drugs, devices, appliances, equipment, or ambulance services may qualify as providers under Health Security. As under Medicare, a Christian Science Sanatorium qualifies if operated, or listed and certified, by the First Church of Christ, Scientist, Boston.

(Section 50)

The requirements of utilization review in hospitals and skilled nursing homes are in the main similar to those which Medicare has, since 1966, imposed with respect to services to aged patients. In Health Security the requirements will of course apply to the entire patient population. As in Medicare, the review is designed to serve a dual purpose: identification of certain specific misuses of the institutional services with a view to their termination, and a focusing of continuing attention and concern of the medical staff on the necessity for efficient utilization of institutional resources. Section 50(a) strengthens the educational aspect of the process by requiring specifically that records of reviews be maintained and statistical summaries of them be reported periodically to the institution and its medical staff (and, on request, to the Board). As under Medicare, the review committee will consist of two or more physicians, with or without other professional participation; and in the case of hospitals, will normally be drawn from the medical staff unless for some reason an outside group is required. For skilled nursing homes, on the other hand, section 50(c) departs from Medicare by requiring that the committee be established by the State or local public health agency under contract with the Board, or failing that, by the Board. Like Medicare, section 50(d) calls for review of specific long-stay cases as required by regulations, and section 50(e) for notice to the institution, the attending physician, and the patient when a decision adverse to further institutional services is made.

(Section 51)

Subsection (a) of Section 51 is also like Medicare in requiring a participating skilled nursing home to have in effect an agreement with at least one participating hospital for the transfer of patients and medical and other information as medically appropriate. Subsection (b) introduces a requirement, applicable by 1975 to both skilled nursing homes and home health service agencies, of affiliation with a participating hospital or comprehensive health service organization. Unless the medical staff of the hospital or organization undertakes to furnish the professional services in the nursing home or the professional services of the home health service agency, that medical staff or a committee of it must assume responsibility for these services. Subsection (c) allows the Board to waive the application of either of these requirements to a skilled nursing home or a home health agency which the Board finds essential to the provision of adequate services, if (but only for as long as) lack of a suitable hospital or organization within a reasonable distance makes a transfer or an affiliation agreement impractable.

(Section 52)

If the construction or substantial enlargement of a hospital or skilled nursing home has been undertaken after December 31, 1970, without prior approval by a planning agency designated by the governor of the state or the Board, section 52 precludes the institution from participating in the Health Security program. This should greatly strengthen state and local planning authorities.

(Section 53)

This section requires the Board in fixing, for institutional and other providers, standards beyond those specified in the statute, to take into consideration criteria established or recommended by appropriate professional organizations.

(Section 54)

If the Board issues a direction, as it is authorized by section 131 to do after opportunity for a hearing, that any provider of services (other than an individual practitioner) should expand, curtail, or otherwise modify the covered services which it furnishes, this section stipulates that failure of the provider to comply with the direction will terminate its entitlement to participate in the program.

(Section 55)

Institutions of the Department of Defense and the Veterans Administration, and institutions of the Department of Health, Education, and Welfare serving merchant seamen or Indians or Alaskan natives, are excluded by section 55 from serving as participating providers, as is also any employee of these institutions when he is acting as an employee. The Board will, however, provide reimbursement for any services furnished (in emergencies, for example) by these institutions or agencies to eligible persons who are not a part of their normal clientele.

(Section 56)

This section overrides, for purposes of the Health Security program, State laws of several kinds which inhibit the utilization or the mobility of health personnel, cloud the legality of so-called "corporate practice" of health professions, or restrict the creation of group practice organizations. The authority of Congress to do this, in conjunction with a program of Federal expenditure to provide for the general welfare, flows from the Supremacy Clause of the Constitution and seems now to be clearly established. (*Ivanhoe Irrigation District* v. *McCracken*, 357 U.S. 275 (1958); *King* v. *Smith*, 392 U.S. 309 (7968).)

The first three paragraphs of subsection (a), while stopping short of creating a system of Federal licensure for health personnel, will greatly facilitate both the interstate mobility of State licensees and the effective use of ancillary personnel in the furnishing of health care. The dispensations contained in these paragraphs will be available to persons who meet national standards established by the Board.

Paragraph (1) permits a physician, dentist, optometrist, or podiatrist, licensed in one State and meeting the national standards, to furnish Health Security benefits in any other state, the scope of his permissible practice being governed by the law of the State in which he is practicing. This paragraph obviates the difficulty and cost which a practitioner may encounter, especially where reciprocity of licensure is not available, in taking up practice in a State in which he has not been licensed.

Paragraph (2) grants a similar authority to other health professional and nonprofessional personnel. For occupations such as pharmacy and professional nursing, which are subject to licensure in all States, a person can avail himself of this paragraph only if he is licensed in one State and meets the national standards; in other cases, where licensure is not universally required, compliance with national standards is sufficient. Here again, impediments to mobility created by existing licensure laws will be removed.

The restrictions which many professional practice acts impose on the use of lay assistants, and the legal uncertainties which often deter such use, discourage practices that can increase greatly, without sacrifice of safety, the volume of services which professionals can render. Accordingly, paragraph (3) of subsection (a) enables the Board to permit physicians and dentists, participating in public or nonprofit hospitals and comprehensive health service organizations, to use ancillary health personnel, acting under professional supervision and responsibility, to assist in furnishing Health Security benefits. Such assistants may do only things which the Board nas specified, and may be used only in the context of an organized medical staff or medical group. Persons employed as assistants must not only meet national standards for their respective occupations, but must also satisfy special qualifications that the Board may set for particular acts or procedures.

In the interest of encouraging salaried practice and the integration of professional practitioners into well-structured organizations for the delivery of health services, paragraph (4) of subsection (a) does away with the "corporate practice" rule insofar as concerns participating public or other nonprofit hospitals and comprehensive health service organizations. These institutions may employ physicians or make other arrangements for their services, unless in the unlikely event that lay interference with professional acts or judgments should be threatened. No conflict of interest results from such arrangements; in the nonprofit setting loyalty to employer and loyalty to patient run parallel.

Some state laws place restrictions of one kind or another on the incorporation of group practice organizations. When these restrictions prevent the State incorporation of an organization meeting the strict requirements of the Health Security Act, section 56 (b) empowers the Secretary to incorporate it for purposes of the Act. Except for the special restrictions, State law will govern the corporation.

Part D—Trust fund; allocation of funds for Services Health Security Trust Fund

(Section 61)

This section establishes the Health Security Trust Fund, to receive the net assets of existing (Medicare) funds taken over by the Health Security program, the yield of the Health Security taxes, and the Government's contribution from general revenues amounting to 66⅔% of the yield from these taxes.

Accordingly, this section amends the Social Security Act to convert the present Hospital Insurance Trust Fund (Medicare, Title XVIII, Part A) into the Health Security Trust Fund, and to provide that the appropriations that would have gone into the former (increased by the new tax provisions) shall go into the latter. In addition, on July 1, 1973, the assets and liabilities of the Federal Supplementary Medical Insurance Trust Fund (Medicare, Title XVIII), Part B) will be transferred to the Health Security Trust Fund. Also, a Government contribution to the new Trust Fund is authorized to be appropriated, equal to 66⅔% of the aggregate yield from the payroll taxes on employees and employers and the tax on non-wage income (including self-employment and unearned income), imposed for Health Security under Title II of this Act. The Fund will also receive recoveries of overpayments, and receipts from loans and other agreements. To implement the role of the Trust Fund, the Managing Trustee (the Secretary of the Treasury) will make payments from the Trust Fund provided for under Title I, as the Board certifies, and with respect to administrative expenses as authorized annually by the Congress.

(Section 62)

The Health Security program is intended to operate on a budget basis overall. Accordingly, subsection (a) requires the Board to determine for each fiscal year the maximum amount which may be available for obligation from the Trust Fund. The amount so determined in advance (by March 1 preceding each fiscal year) shall not exceed the smaller of two stated limitations. The first limit is fixed on 166⅔% of the expected net receipts from all the Health Security taxes (i.e., the tax receipts augmented by 66⅔%

thereof, to be appropriated into the Fund from general revenues of the Government.) The second limit, applicable to each fiscal year after June 30, 1974 (i.e., after a year's availability of covered services), is an amount equal to the estimated obligations of the current year (within which the estimate is being made), subject to certain adjustments. Such adjustments will reflect change expected in: (A) the consumer price index; (B) the number of eligible persons; (C) the number of participating professional providers, or the number or capacity of institutional or other participating providers so far as such changes are not already adequately reflected; and (D) the expected cost of program administration.

In the interest of prudent fiscal management, subsection (b) requires the Board to restrict its estimate of the amount available for obligation in the next fiscal year (in accordance with subsection (a)) if the Board estimates that the amount in the Trust Fund at the beginning of the next fiscal year will be less than one-quarter of the total obligations to be incurred for the current year, and that such restriction will not impair the adequacy or quality of the services to be provided. Also, the Board is required to reduce its alternative estimate of the maximum amount to be available if it finds that the aggregate cost to be expected has been reduced (or an expected increase has been lessened) through improvement in organization and delivery of service or through utilization control.

Subsection (c) provides against various other contingencies which may result in increase or decrease in the estimate of the maximum amount to be available for obligation in a next fiscal year. The amount may be modified before or during the fiscal year: if the Secretary of the Treasury finds that the expected Health Security tax receipts will differ by 1 percent or more from the estimate used under subsection (a); or if the Board finds that either its factors of expected change or the cost of administration is expected to differ from the estimate by 5 percent or more; or if an epidemic, disaster or other occurrence compels higher expenditure than had been expected. If, as a result, the maximum estimate has to be increased (rather than being decreased), the Board (through the Secretary) shall promptly report its action to the Congress with its reasons.

(Section 63)

Subsection (a) provides that three separate accounts shall be established in the Health Security Trust Fund—a Health Service Account, a Health Resources Development Account, and an Administration Account. Subsection (b) provides that in each of the first two years of program operation, 2% of the Trust Fund shall be set aside for the Health Resources Development Fund; and the allocation shall increase by 1% at two-year intervals to 5% within the next 6 years. The money in this account will be used exclusively for the planning and system improvement purposes described in part F.

(c) (d) After deducting the amount appropriated by the Congress into the Administration Account, the remainder of the monies shall be allocated to the Health Services Account, and shall be used exclusively for making payment for services in accordance with part E.

(Section 64)

This section provides for allocation of the Health Services account among the regions of the country. (a) The allocation to each region shall be based on the aggregate sum expended during the most recent 12-month period for covered services (with appropriate modification for estimated changes in the consumer price index, the expected number of eligible beneficiaries, estimated change in the number of participating providers). (b) In allocating funds to the regions the Board shall seek to reduce, and over the years gradually eliminate, existing differences among the regions in the average per capita amount expended upon covered health services (except when these reflect differences in the consumer price index). To accomplish this, the Board will curtail increases in allocations to high expenditure regions and stimulate an increase in the availability and utilization of services in regions in which the per capita cost is lower than the national average. (c) If funds available are inadequate, allocations will be reduced pro rata. (d) Allocations may be modified before or during a fiscal year if the Board finds this is necessary.

(Section 65)

The Board will divide the allocation to each region into funds available to pay: institutional services; physician services; dental services; furnishing of drugs; furnishing of devices, appliances, equipment; and miscellaneous services. The percent allocated to each category of service may vary from region to region. In determining allocation to these funds they will be guided by the previous year's expenditures for each category of service but also take into account trends in the utilization of services and the desirability of stimulating improved utilization of resources. They will encourage a shift from heavy reliance on institutional care to better utilization of preventive and ambulatory services.

(Section 66)

These regional funds will be subdivided among the health service areas in each region, primarily upon the basis of the previous year's expenditure for each kind of service. Again, the Board will gradually attempt to achieve the equalization of services within each region by restraining the increase of expenditures in high cost areas and channeling funds into health services areas with a low level of expenditures.

(Section 67)

Before or during a fiscal year, the division of regional funds by classes of service or the allotments to health service areas may be modified if necessary or if indicated by newly acquired information.

Part E—Payment to providers of services

(Section 81)

Payments for covered services provided to eligible persons by participating providers will be made from the Health Service Account in the Trust Fund.

(Section 82)

This section delineates methods of paying professional practitioners. Every independent practitioner (physician, dentist, podiatrist, or optometrist) shall be entitled to be paid by the fee-for-service method (subsection (a)), the amounts paid being in accordance with fee schedules or relative value scales prescribed after consultation with the professions (subsection (f)). Each physician engaged in general or family practice of medicine in independent practice may elect to be paid by the capitation method if he agrees to furnish individuals enrolled on his list with all necessary and appropriate primary services, make arrangements for referral of patients to specialists or institutions when necessary, and maintain records required for medical audit; and independent dentist practitioners may elect the capitation method of payment similarly (subsection (b)).

The requirements in this section are intended to assure that the physician (or dentist) provides to his patients all professional services within the range of his undertaking and secures other needed services by referral. Through regular medical audits, the Board will monitor the level and quality of care provided.

When necessary to assure the availability of services in a given area, the Board may pay an independent practitioner a full-time or part-time stipend in lieu of or as a supplement to other methods of compensation. This method of payment will be used selectively by the Board, mainly to encourage the location of practitioners in remote or deprived areas. Practitioners may also be reimbursed for the special costs of continuing education required by the Board and for maintaining linkages with other providers—for example, communication costs. Incentives operative under this provision will encourage physicians to improve the quality and continuity of patient care, even if the physician does not participate in a group practice. The Board may pay for specialized medical services on a per session or per case basis, or may use a combination of methods authorized by this section.

Subsection (e) of this section describes the method to be used in applying, as between practitioners electing the various methods of payment, the monies available in each health service area for payment to each category of professional providers. From the amount allocated to each service area, the Board will earmark funds sufficient to pay practitioners receiving stipends and for the professional services component of institutional budgets, such as hospitals. The remainder of the money will be divided to compute the amount available per capita in the eligible population of the area for each category of service (i.e. physicians, dentists, podiatrists, optometrists). This per capita amount in each category will fix the capitation payments to organizations that undertake to provide the full range of services in that category to enrolled individuals. Lesser amounts will be fixed for more limited services. For example, if the per capita amounts available for physician, dental and optometric services are $65, $25, and $5 respectively, primary physicians accepting capitation payments will receive the percentage of that $65 which is allocated for primary services, and a comprehensive health service organization which undertakes to provide all physician, dental and optometric services to enrolled individuals will receive $95 for each enrolled individual. After per capita allocations have been made to physicians and dentists who have elected to be paid on a capitation basis and to comprehensive health service organizations, the remainder of the money will be available in each category to pay fee-for-service and per case bills, subject to proration if the aggregate bills exceed the amounts available. This assures that comprehensive health service organizations and individual practitioners accepting capitation payments or a stipend, and professional practitioners on salary in an institutional setting, will not be in jeopardy of having their income diminished by the exhaustion of their service fund by reason of fee-for-service or per case payments.

Subsection (g) authorizes the Board to experiment with other methods of reimbursement so long as the experimental method does not increase the cost of service or lead to overutilization or underutilization of services.

(Section 83)

Hospitals will be paid on the basis of a predetermined annual budget covering their approved costs. To facilitate review of these budgets, the Board will institute a national uniform accounting system. Subsection (b) stipulates that the costs recognized for purposes of the budget will be those incurred in furnishing the normal services of the institution except as changed by agreement, or by order of the Board under section 131. This will enable the Board, on the basis of State and local planning, to eliminate gradually any wasteful or duplicative services, and also to provide for an orderly expansion of hospital services where needed.

Physicians and other professional practi-

tioners whose services are held out as available to patients generally (such as pathologists and radiologists) will be compensated through the institutional budget, whatever the method of compensation of such practitioners and whether or not they are employees of the hospital. This departs from the practice in Medicare which allowed independent billing by such physicians. Hospital budgets will be reviewed by the regional administrative agency of the Board, which may permit participation by representatives of the hospitals in each region. Budgets may be modified before, during, or after the fiscal year if changes occur which make modification necessary.

(Section 84)

If an entire psychiatric hospital is found by the Board to be providing active treatment to its patients, and the institution is therefore primarily engaged in providing covered services to eligible beneficiaries, it will be paid on the same basis as a general hospital (on the basis of an approved annual budget). Otherwise the Board will negotiate a patient-day rate to be paid for each day of covered service provided to an eligible beneficiary.

(Section 85)

This section provides that skilled nursing homes and home health agencies will be paid in the same manner as a general hospital (on an approved annual budget basis). The Board may specify use of nationally uniform systems of accounting and may prescribe by regulation the items to be used in determining approved costs and the services which will be recognized in budgets.

(Section 86)

Reimbursement for drugs will be made to the dispensing agent on the basis of an official "product price" for each drug on the approved list plus a dispensing fee. The official product price will be set at a level which will encourage the pharmacy to purchase substantial quantities of the drug (this should result in significant reductions in the unit cost of each drug). The official price may be modified regionally to reflect differences in costs of acquiring drugs. The Board will establish dispensing fee schedules for reimbursing independent pharmacies. These schedules will take into account regional differences in costs of operation, differences in volume, level of services provided and other factors.

(Section 87)

A comprehensive health service organization will be paid for other than hospital or skilled nursing home services, on the basis of a fixed capitation rate multiplied by the number of eligible enrollees. The amount of the capitation rate will be determined by the per capita amounts available for the several professional services in the area, and a rate fixed by the Board as the average reasonable and necessary cost per enrollee for such other covered services as the organization undertakes to provide (exclusive of hospital and skilled nursing home services) such as physical therapy, nutrition, etc.

A comprehensive health service organization which undertakes to provide for hospital or skilled nursing home services for its enrollees may be paid on an approved annual budget basis or on a capitation basis. An organization which arranges for such services through other providers may be reimbursed on the basis of patient days of service utilized by enrollees. The organization will also be entitled to share in up to 75% of any savings which are achieved by lesser utilization of such institutional services. Entitlement to such savings is conditional upon a finding by the Board that the services of the organization have been of high quality and adequate to the needs of its enrollees, and that the average utilization of hospital or skilled nursing services by enrollees of the comprehensive health service organization is less than use of such services by comparable population groups under comparable circumstances. This money may be used by the comprehensive health service organization for any of its purposes, including the provision of services which are not covered under the Health Security Program.

(Section 88)

Subsection (a) provides that organizations or agencies with which the Board has entered into an agreement under section 48 (such as a neighborhood health center, a nonprofit mental health center, or a state or local health agency furnishing preventive or diagnostic services) may be paid by any method agreed upon other than fee-for-service. Subsection (b) provides that independent pathology or radiology services may elect reimbursement by fee-for-service (with a fee schedule approved by the Board), an approved budget or other basis. Subsection (c) leaves the method of payment for other types of miscellaneous providers of service to be specified in regulations.

(Section 89)

All participating providers will be paid from the Health Services Account in the Trust Fund at such time or times as the Board finds appropriate (but not less often than monthly). The Board may make advance payment to supply providers with working funds when it deems advisable.

Part F—Planning; funds to improve services and to alleviate shortages of facilities and personnel

(Section 101)

This section sets forth the general purposes of Part F and authorizes appropriations, and subsequently expenditure from the Trust Fund, for these purposes. The part envisages a substantial strengthening of the health planning process throughout the country with an eye, first, to the special needs for personnel, facilities, and organization which inauguration of the Health Security program will entail, and thereafter, to continuing improvement of the capabilities for effective delivery of health services. Beyond this, the part enables the Board, through selective financial assistance, to stimulate and assist in the development of comprehensive health services, the education and training of health personnel who are in especially short supply, and the betterment of the organization and efficiency of the health delivery system. For the three-year "tooling-up" period, appropriations of $200, $400, and $600 million are authorized for financial assistance. Beginning in 1973, percentages of the Trust Fund expenditures will be earmarked for such assistance (section 63). From 1973 on, the leverage of these expanding funds will supplement and reinforce the incentives, which are built into the normal operation of the Health Security program, for improvement of the organization and methods of delivery of health services.

(Section 102)

This section directs the Secretary, in collaboration with State comprehensive health planning agencies, to institute a continuous process of health service planning. Prior to July 1, 1973, the planning process must give first consideration to the most acute shortages and needs for delivery of covered services under this Act. Thereafter, planning shall be focused on maximizing continuing capability for delivery of these services.

This section places primarily on the State agencies the responsibility for coordinating the work of the many health planning agencies within the States, and for coordination with interstate agencies and with agencies planning in other fields related to health, but charges the Secretary with this function in any State that fails to meet the responsibility. The section amends the Public Health Service Act to increase the authorized appropriations for State and for local health planning ($30 million in each case for fiscal 1971, as against $15 million authorized for fiscal 1970), and to condition grants upon collaboration for these national purposes. Thus the section, strengthening State planning agencies, focuses in them a responsibility, visualized in the "partnership-for-health" legislation but in many States not yet an operating reality, for pulling together all health planning efforts within their territories. The task will not be easy, but it is one that is lent new urgency by the Health Security program. It belongs more properly to the States than to the national Government, but if any State proves unequal to the task it must and will be assumed by the Secretary.

(Section 103)

In administering part F, this section stipulates, the Board will give priority to improving comprehensive health services for ambulatory patients through the development or expansion of organizations furnishing such services, the recruitment and training of personnel, and the strengthening of coordination among providers of services. Financial assistance will be dispensed, so far as possible, in accordance with recommendations of the appropriate health planning agencies. Funds will not be used to replace other Federal financial assistance, and may supplement other assistance only to meet specific needs of the Health Security program. Other Federal assistance programs are to be administered when possible to further the objectives of part F, and the Board may provide loans or interest subsidies to help the beneficiaries of other programs to meet the requirements for non-Federal funds.

(Section 104)

Help of several kinds will be available under this section for the creation or the enlargement of organizations and agencies providing comprehensive care to ambulatory patients—either organizations to serve an enrolled population on a capitation basis, or agencies such as neighborhood health centers which need not require enrollment in advance. Grants may be made to any public or other nonprofit organization (which need not be a health organization) to help meet the cost, other than construction cost, of establishing such a health service organization, and to existing health service organizations to help meet the cost of expansion; the maximum grants being, in the former case 90 percent of the cost, in the latter 80 percent. The Board may also provide technical assistance for these purposes. Loans may be made for the cost of necessary construction, subject to the same 90 and 80 percent limitations on amount. Finally, start-up costs of operation of these organizations may be underwritten, for five years in the case of organizations which must build up an enrollment to assure operating income, and in other cases until the Health Security program begins payment for services in 1973. The effect of these several provisions is to reduce sharply, if not eliminate, the financial obstacles which have heretofore impeded the growth of comprehensive group practice organizations.

(Section 105)

This section contains a series of provisions to assist in the recruitment, education, and training of health personnel. The Board will establish priorities to meet the most urgent needs of the Health Security system, but the priorities will be flexible both as between different regions and from time to time. Professional practitioners will be recruited for service in shortage areas, both urban and rural, and in comprehensive health service organizations, and such practitioners may be given income guarantees. Other Federal assistance for health education and training will be availed of, but the Board may supplement the other assistance if the Board

believes it inadequate to the needs, until Congress has had opportunity to review its adequacy. The training authorized includes the development of new kinds of health personnel to assist in furnishing comprehensive services, and the training of area residents to participate in personal health education and to serve liaison functions and serve as representatives of the community in dealing with health organizations. Grants may be made to test the utility of such personnel, and to assist in their employment before 1973. Education and training are to be carried out through contracts with appropriate institutions and agencies, and suitable stipends to students and trainees are authorized. Finally, special assistance may be given, both to institutions and to students, to meet the additional costs of training persons disadvanaged by poverty, membership in minority groups, or other cause.

(Section 106)

This section authorizes special improvement grants: first, to any public or other nonprofit health agency or institution to establish improved coordination and linkages with other providers of services; and, second, to organizations providing comprehensive ambulatory care, to improve their utilization review, budget, statistical, or records and information retrieval systems, to acquire equipment needed for those purposes, or to acquire equipment useful for mass screening or for other diagnostic or therapeutic purposes.

(Section 107)

This section provides that loans under Part F are to bear 3 percent interest and to be repayable in not more than 20 years. Other terms and conditions are discretionary with the Board. Repayment of loans made before 1973 from general appropriations will go to the general fund of the Treasury; repayment of later loans will revert to the Health Resources Development Account in the Trust Fund.

(Section 108)

This section specifies that payments under Part F shall be in addition to, and not in lieu of, payments to providers under Part F.

Part G—Administration

This part of the bill creates an administrative structure within the Department of Health, Education and Welfare with exclusive responsibility for administration of the Health Security program. Program policy will be made by a five-member Board serving under the Secretary of HEW. The Board will be assisted by a National Health Security Advisory Council which will recommend policy and evaluate operation of the program, and an Executive Director who will serve as Secretary to the Board and chief administrative officer for the program. Administration of the program will be greatly decentralized among the HEW Regional Offices. Regional and local health services advisory councils will advise on all aspects of the program in their regions and local areas. The Board may also appoint such professional or technical committees as it or the National Advisory Council may deem necessary.

(Section 121)

This section establishes a five-member full-time Health Security Board serving under the Secretary of Health, Education, and Welfare. Board members will be appointed by the President, with the advice and consent of the Senate, for five-year overlapping terms. Not more than three of the five appointees may be members of the same political party. A member who has served two consecutive terms will not be eligible for reappointment until two years after the expiration of his second term. One member of the Board shall serve as chairman at the pleasure of the President.

(Section 122)

This section charges the Secretary of HEW and the Board with responsibility for performing the duties imposed by this title. The Board shall issue regulations with the approval of the Secretary. It is required to engage in the continuous study of operation of the Health Security program; and, with the approval of the Secretary, to make recommendations on legislation and matters of administrative policy, and to report to the Congress annually on administration and operations of the program. The report will include an evaluation of adequacy and quality of services, costs of services and the effectiveness of measures to restrain the costs. The Secretary of HEW is instructed to coordinate the administration of other health-related programs under his jurisdiction with the administration of Health Security, and to include in his annual report to the Congress a report on his discharge of this responsibility.

(Section 123)

This section creates the position of an Executive Director, appointed by the Board with the approval of the Secretary. The Executive Director will serve as secretary to the Board and shall perform such duties in administration of the program as the Board assigns to him. The Board is authorized to delegate to the Executive Director or other employees of HEW any of its functions or duties except the issuance of regulations and the determination of the availability of funds and their allocations.

(Section 124)

This section provides that the program will be administered through the regional offices of the Department of Health, Education, and Welfare. It also requires the establishment of sub-regional (service area) offices. These will in most instances be a state or a part of a state except where patterns in the organization of health services and the flow of patients indicate that an interstate area would provide a more practical administrative unit.

(Section 125)

Subsection (a) establishes a National Health Security Advisory Council, with the Chairman of the Board serving as the Council's Chairman and 20 additional members not in the employ of the Federal Government. A majority of the appointed members will be consumers who are not engaged in providing and have no financial interest in the provision of health services. Members of the Council representing providers of care will be persons who are outstanding in fields related to medical, hospital or other health activities or who are representatives of organizations or professional associations. Members will be appointed to four-year over-lapping terms by the Secretary upon recommendation by the Board.

Subsection (b) authorizes the Advisory Council to appoint professional or technical committees to assist in its functions. The Board will make available to the Council all necessary secretarial and clerical assistance. The Council will meet as frequently as the Board deems necessary, or whenever requested by seven or more members, but not less than four times each year.

Subsection (c) provides that the Advisory Council will advise the Board on matters of general policy in the administration of the program, the formulation of regulations and the allocation of funds for services. The Council is charged with responsibility for studying the operation of the program, and utilization of services under it with a view to recommending changes in administration or in statutory provisions. They are to report annually to the Board on the performance of their functions. The Board, through the Secretary, will transmit the Council's report to the Congress together with a report by the Board on any administrative recommendations of the Council which have not been followed, and a report by the Secretary of his views with respect to any legislative recommendations of the Council.

(Section 126)

To further provide for participation of the community, the Board will appoint an advisory council for each region and for each sub-region. Each such council would have a composition parallel to that of the National Council; and each will have the function of advising the regional or local representative of the Board on all matters directly relating to the administration of the program.

(Section 127)

The Board is authorized to appoint standing committees to advise on the professional and technical aspects of administration with respect to services, payments, evaluations, etc. These committees will consist of experts drawn from the health professions, medical schools or other health educational institutions, providers of services, etc. The Board is also authorized to appoint temporary committees to advise on special problems. The committees will report to the Board, and copies of their reports are to be made available to the National Advisory Council.

(Section 128)

Subsection (a) charges the Board with responsibility for informing the public and providers about the administration and operation of the Health Security program. This will include informing the public about entitlement to eligibility, nature, scope, and availability of services. Providers would be informed of the conditions of participation, methods and amounts of compensation, and administrative policies. In support of the program's effort to improve drug therapy, the Board is authorized, with the approval of the Secretary, to furnish all professional practitioners with information concerning the safety and efficacy of drugs appearing on either of the approved lists (Section 25), indications for their use and contraindications. Information of this nature is not currently available to practitioners.

Subsection (b) requires the Board to make a continuing study and evaluation of the program, including adequacy, quality and costs of services. Subsection (c) authorizes the Board directly or by contract to make detailed statistical and other studies on a national, regional, or local basis of any aspect of the title, to develop and test incentive systems for improving quality of care, methods of peer review of drug utilization and of other service performances, systems of information retrieval, budget programs, instrumentation for multiphasic screening or patient services, reimbursement systems for drugs, and other studies which it considers would improve the quality of services or administration of the program.

(Section 129)

This section authorizes the Board to enter into agreements with providers to experiment with alternative methods of reimbursement which offer promise of improving the coordination of services, their quality or accessibility.

(Section 130)

This section grants authority to the Board, in accordance with regulations, to make determinations of who are participating providers of service, determinations of eligibility, of whether services are covered, and the amount to be paid to providers. The Board is granted authority to terminate participation of a provider who is not in compliance with agreements or regulations. But unless the safety of eligible individuals is endangered, the provider shall be entitled to a hearing before the termination becomes effective.

This section establishes procedures for appeals in accordance with Section 205(b) and 205(g) of the Social Security Act.

(Section 131)

This section has one of the bill's most important provisions with respect to achieving improvement in coordination, availability, and quality of services. It greatly strengthens state and local planning agencies and gives the Board authority to curtail inefficient administration of participating institutional providers.

The Board is authorized to issue a direction to any participating provider (other than an individual professional practitioner) that, as a condition of participation, the provider add or discontinue one or more covered services. For example, if two community hospitals are operating maternity wards at low occupancy rates, the Board may require that one hospital cease to provide such service. A provider may be required to provide services in a new location, enter into arrangements for the transfer of patients and medical records, or establish such other coordination or linkages of covered services as the Board finds appropriate.

In addition, if the Board finds that services furnished by a provider are not necessary to the availability of adequate services, under this title, that their continuance is unreasonably costly, or that the services are furnished inefficiently (and that efforts to correct such inefficiency have proved unavailing) the Board may terminate participation of the provider.

No direction shall be issued under this section except upon the recommendation of, or after consultation with, the appropriate state health planning agency. And no direction shall be issued under this section unless the Board finds that it can be practicably carried out by the provider to whom it is addressed. The Board is required to give due notice and to establish and observe appropriate procedures for hearings and appeals, and judicial review is provided.

Part H—Miscellaneous provisions

(Section 141)

This section contains definitions of certain terms used in the title.

(Section 142)

This section stipulates that the effective date for entitlement for benefits will be July 1, 1973.

(Section 143)

Subsection (a) provides that an employer will not be relieved, by the enactment of the Health Security Act, of any existing contractual or other non-statutory obligation to provide or pay for health services to his present or former employees and their families. Subsection (b) expresses the sense of Congress that if, nevertheless, inauguration of the Health Security Program lessens the cost of an employer's aggregate obligations for health services to such persons, the savings should, at least for the period of any contract subsisting on June 30, 1973, be applied to the payment of the employees' health security taxes, to wage increases, or to other employee benefits.

TITLE II

Part A—Payroll taxes

(Section 201)

Subsections (a) and (b) abolish the Medicare hospital insurance taxes on employers and employees, and substitute a 2.1 percent (employee) tax on wages received after December 31, 1972 and a 3.5 percent (employer) tax on payroll after December 31, 1972. Subsection (c) raises the wage base for purposes of the Health Security employee tax to $15,000 (from $7,800) and eliminates the corresponding ceiling for the employer tax; it broadens the definitions of covered employment to include foreign agricultural workers, employees of the U.S. and its instrumentalities (other than members of the armed forces, and the President, Vice-President, and Members of Congress), employees of charitable and similar organizations, railroad employees, and (for the employee tax only) employees of States and their political subdivisions and instrumentalities.

(Section 202 and 203)

Section 202 makes a number of conforming and technical amendments. Chief among these are provision for refund of excess taxes collected from an employee, who has held two or more jobs, on wages aggregating more than $15,000 in a year; exclusion of Health Security contributions from agreements with State governments for the social security coverage of State and municipal employees (since these employees will contribute to Health Security through payroll taxes); and exclusion of Health Security contributions from agreements for the coverage of United States citizens employed by foreign subsidiaries of United States corporations (since these employees will not benefit directly from Health Security in its present form). Section 203 makes Part A applicable to wages paid after December 31, 1972, but the changes in coverage will apply only if the services are performed after that date.

Part B—Tax on nonwage income

(Section 211)

Subsection (a) abolishes the hospital insurance tax on self-employment income and imposes a 2.1 percent tax on all non-wage income (unless such income is less than $400 a year). Subsection (b) defines "health security non-wage income" as any adjusted gross income up to $15,000 a year which has not already been taxed as wages for health security purposes (excluding certain taxes which are specifically exempted from the health security tax on employees).

(Section 212)

This section makes appropriate changes in nomenclature and in the requirements of tax returns, including reports of estimated tax liability by non-wage-earners.

(Section 213)

This section makes part B effective on January 1, 1973, or for taxable years beginning on or after that date.

TITLE III

(Section 301)

Subsection (a) repeals Medicare, effective July 1, 1973, but stipulates that this shall not affect any right or obligation incurred before July 1, 1973.

(Section 302)

This section requires that after June 30, 1973, no State shall be required to furnish any service covered under Health Security as a part of its State plan for participation under Medicaid, and that the Federal government will have no responsibility to reimburse any State for the cost of providing a service which is covered under Health Security. After June 30, 1973, the Secretary of HEW shall prescribe by regulation the new minimum scope of services required as a condition of State participation under Title XIX. To the extent the Secretary finds practicable, the new minimum benefits will be designed to supplement Health Security—especially with respect to skilled nursing home services, dental services and the furnishing of drugs.

(Section 303)

This section provides that funds available under the Vocational Rehabilitation Act or the Maternal and Child Health title of the Social Security Act shall not be used to pay for personal health services after June 30, 1973, except (to the extent prescribed in regulations by the Secretary of HEW) to pay for services which are more extensive than those covered under Health Security.

Mr. YARBOROUGH. Mr. President, I want to thank the very distinguished Senator from Massachusetts for his great diligence and his faithful attendance on the committee. He is a hard working Senator. His imprint is on every bill that we report. That is true not only on the Health Subcommittee, on which he has shown probably the greatest interest of all, but also on the Education Subcommittee as well.

I first served on that subcommittee in 1958. That has been nearly 13 years now. During his years on the Committee on Labor and Public Welfare, the distinguished Senator from Massachusetts has put in a great deal of time on the Health and Education Subcommittees, as has the distinguished occupant of the Chair, the distinguished Senator from Montana (Mr. METCALF). The Senator from Montana was a member on those subcommittees before he left the full committee. We know of his great leadership in the House on education and in his home State of Montana before he came to Congress. We miss him on that committee and wish he were back with us. Since I am leaving, not voluntarily, I wish the occupant of the chair would come back on that committee next year as I am sure he will find able Senators, such as the Senator from Massachusetts (Mr. KENNEDY) to help him. I hope that other very able Senators will come on that committee to replace those of us leaving. We need ability on that committee because it is an active committee. I think that committee is more active than any other in the Senate.

I remember a few years ago, when President Johnson was signing one of the health bills, he turned around to me and said—

> That committee you are on reports out 80 percent of all the New Frontier and Great Society legislation—including measures concerning health, education, labor, migratory labor, and Indian education, the hearings on this latter matter which were so ably chaired by the late Senator Robert F. Kennedy.

Mr. President, the committee is preparing its 100-year history. We are proud of the fact that on our committee have served such men as the Democratic nominee for the President in 1960, the Republican nominee for the President in 1964, and the great, late Senator from Illinois, Mr. Dirksen. I served with him, and also with the distinguished Senator from Arizona (Mr. GOLDWATER), with the three Kennedy brothers, and with the distinguished Senator from Kentucky, JOHN SHERMAN COOPER, who helped write the National Defense Education Act of 1968. One of the great privileges of my service in the Senate has been to serve on the Committee on Labor and Public Welfare.

Mr. President, I jointly introduce with the distinguished senior Senator from Massachusetts (Mr. KENNEDY) the Health Security Act, the measure for a national health insurance program. First as a member of the Subcommittee on Health and now as chairman of both the Health Subcommittee and full Labor and Public Welfare Committee. I have long been concerned with the massive health problems which plague this country. Of equal interest and importance to me has

been the improvement of health delivery systems. Throughout my public career, I have sought, as did my predecessor on the Health Subcommittee, Lister Hill, to make adequate health care at a reasonable cost for every citizen, a national goal.

Before becoming chairman of the Subcommittee on Health, I urged and worked for the passage of such major programs as the Hill-Burton hospital amendments, the Health Research Facilities Act, both of the 85th Congress; the Public Health Service Training Act and the International Health Research Act during the 86th Congress; the Nurse Training Act of the 88th Congress; the Heart Disease, Cancer, and Stroke—Regional Medical Program Act and the Child Nutrition Act of the 89th Congress; and the Family Planning Services Act and the Health Manpower Act of the 90th Congress.

Now as chairman of the Health Subcommittee, I have sponsored or cosponsored bills covering virtually every dimension of the health field. In the 91st Congress alone, as chairman, I have worked in the subcommittee for such major pieces of health legislation as community mental health center laws, medical school construction assistance laws, communicable disease control laws, hospital construction authorizations, the medical libraries law, the migrant health law, and the grants to schools of public health law.

During my 2 years as chairman of the Health Subcommittee, we have acted on such measures as the Family Planning Act, the Developmental Disabilities Act, the heart disease, cancer, stroke, and kidney disease amendments, the Training of Personnel in Allied Health Professions Act, a resolution in support of the international biological program, and a resolution authorizing the Committee on Labor and Public Welfare to study research activities on cancer. Furthermore, and in addition, during these 2 years, we have held hearings and reported on bills to amend the Randolph-Sheppard Act to aid the blind, to offer comprehensive control of narcotic addition and drug abuse, to set up a prescription drug identification system, to bolster family practice, and to extend provisions of the Wagner-O'Day Act to severely handicapped individuals who are not blind.

Mr. President, I now rise to cosponsor the most significant, and, I might add, the most imperative piece of health legislation in the history of this country, the National Health Security Act of 1970.

Despite the accomplishments which we have made in the past decade, our Nation is currently facing a health crisis of major proportions. Compared with other industrial countries, the health of the majority of Americans today is worse than it was 15 or 20 years ago. With regard to infant mortality during the first year of life, in the list of nations we rank 13th; we rank seventh with the industrial countries in the percentage of mothers who die in childbirth; we are no better than 18th in the life expectancy of males; and we stand at a lowly 14th among all the countries of the world in infant mortality rates. In all instances, the United States ranked better 15 or 20 years ago.

The United States, Mr. President, has a gross national product of nearly $1 trillion a year. There is no reason—no reason whatsoever—why we cannot do better for our people's health needs. We spend in the thirties of billions of dollars yearly in Vietnam; we purchase a useless ABM system. Why, in the face of this can we not provide decent health to our own citizens? Why must we pour $110 billion into Vietnam in 10 years, but in those 10 years slip backward in terms of life expectancy in comparison with the other industrialized nations?

Our failings in health care are not due to scrimping on the part of our citizens. Americans paid some $63 billion out of their pockets for health care in 1969—about 7 percent of the gross national product. This expenditure exceeded 1950 figures by over 500 percent. Since 1950, when health spending amounted to $12 billion, the total health expenditures have risen at an average of 8.8 percent per year—an average of 12.2 percent in the past 3 years.

This increase in spending does not indicate any improvement in health care. Rather, it reveals exactly the opposite, a deterioration of the ability of the health delivery system to provide adequate care at a reasonable cost.

Hospital costs, in the past few years, have gone up 100 percent faster than the cost of living increase; doctors' fees have gone up 50 percent faster. It has been estimated that unless we have large-scale reforms for the health care delivery system, it will cost us twice as much for health insurance by 1975 as it cost us in 1969.

It seems that we can no longer afford to be sick. How can, and moreover, how will, Americans be able to pay for the luxury of health treatment in the coming years? Hospital rooms will cost $400 to $600 a day by the end of the decade, unless there are drastic improvements in our health care system. Who but the wealthiest of us would be able to get hospitalization at these enormous costs?

Mr. President, the first part of any solution to this awesome problem must be a recognition of the waste that a part of the $63 billion which Americans pay represents. Fourteen billion dollars of that figure, experts maintain, is sheer waste. In the current system where insured medical payments are only insured and paid if you are in a hospital, we hospitalize far too many people who would be treated as well, or even better on an outpatient basis. Hospital overuse runs from 25 percent upward. Testing and acute treatment could be done in many cases outside of the hospital at a tremendous savings to patients. Group practice organizations have also yielded savings to patients by coordinating more efficiently, and more effectively, the dissemination of health services. Health advisers tell us that hospital reforms alone would have saved us $4.5 billion last year.

Mr. President, we are, then, a Nation in poor health, relative to our resources, and a Nation spending tremendous amounts of money for that poor health. We must reverse this trend. We must provide decent health care for all Americans; we must provide an adequate system to bring good health for all Americans; and we must accomplish this goal at a cost which this country can afford without overburdening our citizens.

The Health Security Act of 1970 is a plan originally, in substance, developed by the Committee for National Health Insurance, a committee of 100 set up in 1968 under the leadership of the late Walter Reuther, Dr. Michael DeBakey and others. I am proud to have served for some time as a member of this committee of 100, and I believe that this proposal offers the types of solutions needed to meet our health requirements.

The major advantage of this act would be the provision, through a system of national health insurance, of health services to all residents of the United States. The maintenance of health, the improvement of those health standards to which I referred earlier, would be emphasized as strongly as the treatment of illness. Modification and improvement of the organization and methods of delivery of health services will enable us to reach these ends by improving the efficiency and the utilization of services and by strengthening professional and financial controls. By motivating proper medical care, treatment commensurate with the nature of the medical problem, we will be able to create a positive, successful delivery system. Thus, we should expect by the end of this decade, when this act will have been in effect for 10 years, quality health treatment for all of our people.

The benefits of national health security will be manyfold. Physician, hospital and institutional, psychiatric, dental, and miscellaneous services, plus the use of various medicines and certain types of therapeutic devices and equipment—all will be covered by this program.

Thus, instead of the average American spending close to $300 a year for health, he would spend now less than $200, and the coverage in terms of insurance would be remarkably better.

A brief look at the figures dealing with gaps in current health insurance programs substantiates the degree of improvement that the Health Security Act would bring to health treatment in this country. Of the 177 million noninstitutional civilians in the United States in 1968 under 65, 36.3 million, or 20.5 percent had no hospital insurance; 38.8 million had no surgical insurance; 61 million had no in-the-hospital medical expense insurance; 102 million had no insurance for visits to doctor's offices or doctor visits to their homes. The figures go on and on, but the fact remains the same: most people in this country, even accounting for the huge amounts spent on health, have little or no health insurance coverage.

Not only, then, is it true that few Americans hold the necessary health insurance, but it is also the case that the small amount of insurance meets only a small percent of consumer health expenditures. According to the Department of Health, Education, and Welfare, only 36 percent of consumer health expendi-

tures were covered by health insurance in 1968.

Mr. President, it is my conviction, as a citizen and as a public official who has dealt with health matters for most of his public life, that the passage of this health security program will bring about a reversal in recent health trends. Instead of spending exorbitant amounts for mediocre coverage, we will be able, through the mechanics of this measure, to spend a more reasonable sum for excellent health coverage and a fine, serviceable health delivery system.

We will be able to replace medicare, medicaid, the civilian health and medical program of the uniformed services, certain maternal and child health programs, and certain aspects of the temporary disability program. We will be able to eliminate the vast quantity of programs that today overlap, underlap, or form serious gaps and, thus, provide, with this act, comprehensive health benefits to all citizens in a systematic, advantageous and comprehensive program. For instance, new group practice programs, which have proven effective in this country, would be encouraged which would allow fewer doctors in some instances to service the health needs of a larger population. Furthermore, we would be approaching our health problems and the delivery of care in a systematic way, rather than a piecemeal attempt to patch and shore up a deteriorating system which produces medical care at an ever-increasing cost.

The need for reform is, by now, absurdly obvious. And the advantages and benefits of the health security program are equally clear. The obtaining of health care must be brought to the point that it is a right, not a privilege of only the advantaged.

The poor of this country have no or little accessibility to health facilities today. The life expectancy of a nonwhite American is 7 years less than that of a white. Part of that difference is due undoubtedly to the economic unavailability of medical services to some of our American citizens.

But, the problem is not isolated to lower-income people. The middle class is beginning to feel the pinch. Dissatisfaction with the archaic, ineffective, and costly system spreads throughout all classes, all races, and all types of people in this country. We must have reform and significant change. And we must have it immediately.

Mr. President, I intend, as long as I am a Member of the Senate and as long as I remain on this good earth, to fight for the day when good health care for all Americans will be a reality. I cannot do it alone, nor can the Congress do it alone. But, with the support of the people of this great land, we can take a major step toward that goal with the enactment of this Health Security Act.

When the framers of our Constitution had the insight to realize that their actions had implications for themselves as well as their posterity, they demonstrated admirable foresight and wisdom. We, today, must look far into the future and understand that our action, or inaction, will have a distinctive impact on our posterity. The life and health of tomorrow's America depends on our substantial action today.

Mr. President, let us as a nation, and as men, win this race for life.

Again I commend the Senator from Massachusetts for his work on the health and education subcommittees, for his diligence, and for his faithfulness in attendance. He is always there. That is the way we pass legislation by being there, on the job, and knowing what is in the legislation and being able to work it out.

Mr. COOPER. Mr. President, I rise to commend the senior Senator from Massachusetts and the senior Senator from Texas upon the statements they have made this morning with respect to the objectives of the Health Security Act. I am glad to be associated with them and with my colleague on this side of the aisle, the junior Senator from Ohio (Mr. SAXBE).

I look forward to the hearings on this bill, and I hope that we will be able to make substantial progress this year.

Mr. KENNEDY. I thank the Senator from Kentucky.

As we mentioned earlier, the distinguished Senator from Kentucky served on the committee of 100 that has done a great deal of the work in the development of this program. The distinguished Senator from Texas (Mr. YARBOROUGH), who now is the chairman of the Health Subcommittee, also served on the committee, as did the Senator from Ohio (Mr. SAXBE).

So, Mr. President, the measure we introduce today has gone through the process of much consideration and much deliberation. I am sure that there will be improvements and that the proposed legislation will be strengthened in the process of hearings and debate in the Senate.

This measure was given great thought prior to the time of its introduction. Similar legislation is pending in the House of Representatives, and I know it will receive wide hearing and wide interest in the other Chamber.

Other health insurance programs have been introduced recently by the Senator from New York (Mr. JAVITS) and other Members of this body. Although their proposals differ in their approach to the problem, they help to focus attention on one of the very desperate needs in our society and our country today—the need to reorganize the health delivery system and to mobilize more health manpower.

Mr. President, I could not conclude at this time without recognizing the extraordinary contributions that have been made in the entire field of health by the distinguished chairman of the Subcommittee on Health, the Senator from Texas (Mr. YARBOROUGH).

During the time that I have had the opportunity to serve under the chairmanship of Senator YARBOROUGH, the Subcommittee on Health has handled some of the most important pieces of health legislation that have ever been passed by this body. This year alone, I think of the mental health bill, the mental retardation bill, and a number of other health measures. They have gone through the Senate with virtually no dissent. I think this record is a great tribute to the work Senator YARBOROUGH has done and to the bipartisan approach of the members of the health subcommittee in the development of legislation.

As we begin the long and difficult road toward achieving national health insurance, we are going to miss the extraordinary wisdom, understanding, and comprehension that the distinguished Senator from Texas has brought to the many health measures before this body during the period of his service. But we are gratified that the legislation we are introducing today will alway bear his imprint. I want to commend him for his interest in this program, and I know that he will continue to support it. I also want to say how much we appreciate the strong efforts of the distinguished Senator from Kentucky (Mr. COOPER), the distinguished Senator from Ohio (Mr. SAXBE), and other cosponsors in support of this legislation, and how much we will rely upon them in its future development.

Mr. CRANSTON. Mr. President, our country and its people face countless crises today—and not the least of these is in medical care.

Soaring costs of private care now put this portion of preventive and curative medicine totally beyond the reach of tens of millions of our fellow citizens.

Skyrocketing costs of public programs—like medicare—are absolutely staggering.

We are in a health crisis for endless reasons—and no one is expert enough to predict how much worse the crisis can get because wholly unfathomable factors are involved. Who knows, for example, what health hazards we really face today, and will face tomorrow, because of the poisons and pollutions that endanger the air, water and food we depend upon for our very lives?

I join in sponsoring this health insurance legislation because we must come to grips with this crisis.

Undoubtedly this measure will be revised in many small and large ways before it finally becomes the law of the land. It must be given the most detailed and careful study and scrutiny. Surely, there will be many suggestions, some of them sound, some of them unsound, regarding ways to improve the financial and medical aspects of this bill.

Our final objective must be to insure the best possible medical care for the people of our United States and the least possible cost.

I trust that today the U.S. Senate is launching an effort that will lead our Nation to that end.

Mr. BROOKE. Mr. President, I cannot let this opportunity pass without saying how much respect I, and I am sure all my colleagues in the Senate, have for RALPH YARBOROUGH who has served this body so courageously and who has made so many courageous decisions since he came to the Senate.

I am sure that the time will come when we will have an opportunity at length and in depth to speak in commendation and appreciation for what RALPH YARBOROUGH has meant not only to the Senate but also to the United States of America.

The Senator mentioned that he was leaving, and I want him to know that there are those of us on the other side of the aisle, too—as I know there are on his side of the aisle—who have great respect and admiration for him and great appreciation for his valuable and yeoman service to the Senate.

Mr. COOPER. Mr. President, I want to associate myself with what my colleague from Massachusetts (Mr. BROOKE) has just said. I had the honor to serve with RALPH YARBOROUGH on the Committee on Labor and Public Welfare. Beyond that, in his political life and service in the Senate, I always think of him as one of whom it can be truly said, although it may be called a cliche, he has always stood for the people and the common man. We always know where RALPH YARBOROUGH stands.

Mr. YARBOROUGH. Mr. President, I am deeply grateful to the Senator from Massachusetts (Mr. BROOKE) and the Senator from Kentucky (Mr. COOPER) for their kind words. It has been a privilege to serve with each of them. They are the kind of Senators who work to accomplish good for the people. I remember no serious disagreements with any of them on any measures we have worked on, even though we may have differed in our votes.

The Senator from Kentucky (Mr. COOPER) possesses the true courtesy of the great gentleman from Kentucky that he is. We miss him on the committee, too.

I appreciate the kindness of the Senator from Massachusetts. He and the Senator from Kentucky are the kind of Senators who make this body the greatest legislative body in the world.

We hear it called the greatest deliberative body in the world, but I want to change that and say that it is the greatest legislative body in the world, as well.

I have attended interparliamentary meetings since 1962, sometimes twice a year. I have watched the leaders of legislative bodies of the world as they have debated at meetings. Thus, I believe that mine is not an uninformed statement when I say that the Senate of the United States is the greatest legislative body in the world. I have been to the Parliamentary meetings at Brasilia, Canberra, Tehran, Dublin, Lima, Vienna, New Delhi, and other places, and have listened to the world's legislators who are known to have great reputations in their own country, and I believe that I can say without being self-serving, that undoubtedly it is recognized around the world that the Senate of the United States—these 100 men in this small room, constitute the greatest legislative and deliberative body on earth.

Right now, in this Chamber, and occupying the chair, are great Senators who are serving their country. I believe that to serve in the Senate is the highest honor that can come to any American. Perhaps the office of President, or Chief Justice of the United States may be a step higher, so far as serving this great people is concerned, but with that exception, I think nothing else can exceed the public service opportunity for any American, than to serve in this great body.

I am very grateful to my colleagues for their great generosity to me.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time of the Senator from Massachusetts (Mr. BROOKE) not start running until I complete the following unanimous consent requests.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR McINTYRE TODAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the Senator from Massachusetts (Mr. BROOKE), the Senator from New Hampshire (Mr. McINTYRE) be recognized for 15 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR YOUNG OF OHIO

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that following the remarks of the Senator from New Hampshire (Mr. McINTYRE) today, the Senator from Ohio (Mr. YOUNG) be recognized for 10 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR FANNIN

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that following the remarks of the Senator from Ohio (Mr. YOUNG) today, the Senator from Arizona (Mr. FANNIN) be recognized for not to exceed 10 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR LIMITATION OF TIME FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the morning business not exceed 30 minutes today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Massachusetts (Mr. BROOKE) is now recognized for 15 minutes.

THE HATFIELD-McGOVERN "END THE WAR" AMENDMENT

Mr. BROOKE. Mr. President, the prolonged war in Vietnam is a source of deep anguish for every American. It has divided our people as no other issue. In spite of earnest efforts and honest intentions, the peace we seek has eluded us.

Yet we have always known that the goal for which we struggle—the right of the people of South Vietnam to determine their own political fate—is one which can only be attained by the Vietnamese themselves. The United States can play no more than a supportive role.

To many, the vast power we have brought to bear has seemed disproportionate to the limited mission we proclaimed. Seeing the immense drain on our national resources, on our military, economic, and social well-being, millions of Americans have despaired.

The remedy for that despair lies in a clear recognition that we have fulfilled our limited commitment, and in a deliberate program for orderly disengagement of American forces from the conflict.

The President has made a historic beginning on such a program. He has reversed the direction of the war. He has reduced American casualties. He has cut the cost of the war virtually in half. He has begun to withdraw hundreds of thousands of U.S. troops. He has exerted strong persuasion on the South Vietnamese to meet their obligations for self-defense. He has launched vital diplomatic initiatives in quest of a negotiated settlement. These efforts vividly demonstrate the President's determined search for a just peace.

However, in my judgment the time has come to reinforce the President's commendable new directions by lending congressional sanction to a responsible program for turning the burdens of this conflict back to the Vietnamese people.

The modified amendment offered by my distinguished colleagues, Senators HATFIELD and McGOVERN, and others, represents such a program. Their proposal is the product of many months of discussion. It provides a reasonable and flexible means for harmonizing legislative and executive policy on this perplexing issue. I support it and I hope the Senate will adopt it. What are the likely effects of its adoption?

The conclusion that we have satisfied our commitment to the Vietnamese, coupled with an extended timetable for troop withdrawal, could invigorate the efforts of the South Vietnamese to stand on their own. Hopefully it will heighten the willingness of all parties to negotiate an early political settlement.

The establishment of a firm timetable for U.S. disengagement would remove Hanoi's principal stated objection to serious diplomacy. It should also reduce Saigon's unstated reliance on the prospect of an indefinite American stay to avoid coming to grips with the hard political realities which must shape any final settlement.

Mr. President, if the military situation should deteriorate, if the lives of our men in Vietnam are endangered, there is no question we will come to their defense. And I am persuaded that the Hatfield-McGovern amendment fully provides for such a contingency. If the President finds that members of the American Armed Forces are exposed to clear and present danger, he may suspend the application of this amendment for up to 60 days. The date of final withdrawal may even be changed, if the President recommends

such action to the Congress, and wins its concurrence in his judgment. This affords ample flexibility to extend our military presence, if such an extension proves necessary.

Mr. President, every Member of this body has given much thought to this grave issue. We know that we must try to balance our important international objectives with our essential domestic goals. And the first of those goals, as the bitter experience of the 1960's has shown, must be at least a minimal consensus in support of our Nation's foreign policies. We all know that the cost of Vietnam is measured not only in lives and dollars and dreams foregone, but in a steep decline in the confidence our people vest in their public institutions.

Wise and independent leadership by this Congress on this issue can do much to restore trust in our political institutions. The Congress should share with the President the awesome burdens and risks he bears in shaping our Nation's policy in Asia.

That is the fundamental advantage of this amendment. It can bolster the President in the policy he has undertaken. It can strengthen the chances for peace in Vietnam. It can open the path to reconciliation for the American people. So vital and so promising a proposal deserves the approval of the Senate and the approbation of those we serve. I respectfully commend it to my colleagues.

NEW ENGLAND'S OIL CUSTOMERS GET HIT AGAIN

Mr. McINTYRE. Mr. President, last week was sad indeed for the consumers of New England.

Announcements were issued, one from Washington and two from islands in the Caribbean, which will mean that the homeowners of New England will probably pay higher prices for their fuel in the coming winter. The announcement in Washington came from General Lincoln, Director of the Office of Emergency Preparedness and Chairman of the Oil Policy Committee, stating that President Nixon was abandoning all consideration of the tariff plan proposed by the Cabinet Task Force on Oil Import Control earlier this year. That announcement means perpetuation, for the forseeable future, of the program which costs each and every family in New England well over $100 per year in added costs of gasoline and home heating oil. In brief, the President said to the consumers of the Nation:

> You don't have the power that the big oil companies have.

The other announcements came from two of the largest and richest oil companies in the world—Standard Oil of New Jersey and Shell—that they were raising the price of No. 2 fuel—home heating—oil from their vast Caribbean refineries by a penny per gallon. This announcement would normally go unnoticed except for the fact that we in New England were looking to the Caribbean area for some relief from the continuing escalation of prices for the vital product that heats our homes. As the Members of the Senate know, on June 17 President Nixon allocated 40,000 barrels of No. 2 imports for the northeastern part of the United States. While this level of imports is far from sufficient, we in New England viewed it as a good start. We hoped that these imports would enable independent fuel oil dealers to halt the continuing escalation in No. 2 fuel oil prices, and there were strong indications that they would.

Our hope was based on the level of No. 2 fuel oil prices that then existed in the Caribbean. Last June the posted Caribbean price of No. 2 fuel oil was 6.5 cents per gallon. That price prevailed until early this month, when Esso and Shell, the major and dominant marketers of the product in the Caribbean area, raised the price to 7.5 cents per gallon. Then last week, as I have indicated, Esso and Shell announced a further price increase to 8.5 cents per gallon. Thus, within the space of a few weeks, the major oil companies have increased the price of home heating oil at the cargo level in the Caribbean by 31 percent. This price increase of 2 cents per gallon—or 84 cents per barrel—means that the oil brought into New England under the new allocation program will be nearly equal in price to domestic oil, and that fuel oil dealers cannot pass on to the consumers savings that might have been realized from the new import program.

I am sure that the major oil companies' response will be that demand for No. 2 fuel oil is high and this is simply one of the results of a free market system. First of all, I would reply that demand simply cannot be high enough to justify a 31-percent increase in the price of a product so essential to the American consumer; and second, because the import allocations under the new program are limited to the Caribbean area, something of a "closed market" does exist. Therefore, it is fair, I believe, to ask whether the large international major oil companies, particularly Esso and Shell, have not raised the price simply to take advantage of the new program and to put increased profits of more than $6 million over the next 4 months into their pockets, while denying any of the benefits of lower priced product to the consumers of the Northeast.

If this were truly a free market situation, I could understand it. But it is not.

If there were no fuel oil shortage looming in this country, I might better understand the motives of the major oil companies. But a fuel crisis is upon us.

And I might add that these same two companies joined the other major oil companies 2 years ago in opposing and killing a plan to build a New England refinery to provide substantial quantities of lower priced home heating oil and residual fuel oil.

They callously killed any chance for relief 2 years ago, and are doing the same thing once again.

If crude oil prices in the Caribbean had risen sharply over the past several weeks, I could understand the reason for this sharp increase in No. 2 fuel oil. But crude oil prices have remained stable.

If the major oil companies did not enjoy so many benefits from the U.S. Government, including protection from real competition, I could understand their callous disregard for the public interest. But the industry receives vast benefits and protection from the U.S. Government and owes that Government, and its people, a special responsibility.

There are no good reasons for these inflationary price increases, and one can only interpret last week's action by these companies as a crass act of profiteering. It will mean more money for them, and higher heating prices for New England.

They could not have done this in a normal market situation; they could not have done this if they did not enjoy protection from the U.S. Government; they could not have done this if New Englanders were free to purchase their oil in any part of the world.

Once again, we in New England are paying the price of being a captive market, a captive market for the world's largest industry.

Mr. President, the Office of Emergency Preparedness has a specific responsibility under instructions from the Senate Appropriations Committee issued on June 24, 1970, as follows:

> The funds (for the OEP) will provide the resources needed to monitor the supply and price changes resulting from the June 17 proclamation providing 40,000 barrels a day of No. 2 fuel oil for New England. In this connection, the committee cannot urge too strongly the effect of fuel oil prices on the New England area, and recommends that the Office of Emergency Preparedness give particular attention to the problem in this area.

In addition, the Director of the OEP has a specified responsibility under section 6(a) of Proclamation 3279, which established the oil import program, to "maintain a constant surveillance of imports of petroleum" and "in the event prices of crude oil or its products or derivatives should be increased" such surveillance shall include a determination as to whether such increase or increases are necessary to accomplish the national security objectives of the oil import program.

And in a letter of comment on the proposed regulations governing the new No. 2 fuel oil program, filed with the Oil Import Administration on July 20, a number of Senators from the Northeastern States also made the following comments regarding Caribbean fuel oil prices:

> We urge that as part of the continuing surveillance requested by the Senate Appropriations Committee, the Office of Emergency Preparedness carefully monitor No. 2 fuel oil prices in the Caribbean. If any increase occur in this marketing area, where supplies must be purchased, the anti-inflationary impact of the new program, which is minimal at least, will be completely eliminated and heating oil prices in the Northeast will be forced upward once again. If there are significant increases in posted or spot prices in the Caribbean in the months ahead, we would expect the Oil Policy Committee to take such increases into account in assessing the impact of the new program on prices in the Northeast.

The President, and in particular, the Director of the Office of Emergency Preparedness, who is also chairman of the Oil Policy Committee, thus have a re-

sponsibility to determine the causes of the recent No. 2 fuel oil price increases, their impact on the Northeastern home heating oil market, and on the accomplishment of the objectives of Proclamation 3990, and, most important, to recommend steps which will lead to a recission of these inflationary and predatory actions. I would hope that the Oil Policy Committee could recommend steps that will lead to a permanent, substantial increase in the level of No. 2 fuel oil imports, and during this emergency, allow such increased imports of No. 2 fuel oil to be purchased in the Caribbean, Europe, and elsewhere.

Mr. BROOKE. Mr. President, will the Senator yield?

Mr. McINTYRE. I am happy to yield to the distinguished Senator from Massachusetts.

Mr. BROOKE. Mr. President, I certainly wish to commend the distinguished Senator from New Hampshire for making this very timely statement on the condition of the fuel oil supply in the New England States. The Senator has been in the forefront of this battle to see that the many, many consumers of fuel oil in New England will not be discriminated against.

There is no question that we are paying more for fuel oil than we should. But even worse than that, there is a services shortage of fuel oil at the present time which gives us great concern.

There is no question that there is need for a free trade zone and a refinery in New England. The Senator has been one of the leaders in the battle to acquire this free trade zone. We have worked together, as have our other colleagues in New England. I think we have had unanimity in the New England congressional delegation in fighting for a free trade zone and a refinery in New England. But still there is none after many years. Long before I came to the Senate, and I think before the distinguished Senator from New Hampshire came to the Senate, we had this problem of shortages, high prices, and high costs, particularly for No. 2 fuel oil in the New England States.

Could the Senator enlighten me as to the status of the application for a free trade zone at the present time? When we last discussed this matter, as I recall, there had been a unanimous vote or recommendation on the part of some advisory body.

Mr. McINTYRE. As the distinguished Senator from Massachusetts knows, this is one of the mysteries of the times. During the Johnson administration we got the runaround, the State of Maine got the runaround, and it has been continuing. If one reads the law that sets up the free trade zones he cannot help but wonder how in the name of heaven the State of Maine has not been given more prerogative under the law. There is nothing in the law that says this matter can be delayed.

I believe it was Mr. Smith of the Department of Commerce who said:

> We will have to hold up on this because there are large policy questions involved.

But nothing in the law says the application should not be processed because of policy considerations. Machiasport has now become a symbol of our overall fuel oil needs. The State of Maine is still hoping for this free trade zone but we see little glimmer of hope at the present time.

In the meantime, while all of us shoulder to shoulder in this battle against obstacles which at times seem insurmountable, and which frustrate me terribly, shortages and high prices will undoubtedly mean another beautiful but cold winter in New England.

Mr. BROOKE. We are waiting for the President's commission to make a further report and recommendations. Of course, it did make an initial report and recommendations, but it is my understanding now that there is a very large oil company that has a proposal for a refinery, the exact location of which I do not know. Its original site was Machiasport or some place else in New England, but it is my understanding this large oil company has come forth with plans and very shortly it is hopeful of getting a decision on the free trade zone and the location of a refinery which might bring us some relief.

But that will not help us in the heating season of 1970–71. It seems as if every year we are talking about the next year. Even if the application were to be approved the relief would not be forthcoming, for several heating seasons.

In our part of the country we are already only a few days away from the heating season. So it is hoped we could get some emergency relief.

One Massachusetts city—put out a contract for bidding, to heat the city buildings. There was only one bid, and that was only for 50 percent of its contract needs.

So we have a serious problem up there, and I am afraid it is going to get worse this year.

I am happy that the Senator has raised this question. We are going to have to redouble our efforts.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. McINTYRE. Mr. President, I ask unanimous consent to have 1 additional minute.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. McINTYRE. The application of the State of Maine is still before the Foreign Trade Zone Board and before Secretary of Commerce Stans, Secretary of the Treasury Kennedy, and Secretary of the Army Resor. As a matter of interest to the Senator from Massachusetts, I understand Northeast Petroleum, of Tiverton, R.I., has applied for a refinery at Tiverton, R.I., which would operate without a trade zone.

Mr. BROOKE. I was referring to Occidental Oil Co. The Senator may recall that Occidental Oil was interested initially. At that time there was some question of some preference need. There was much opposition from the oil companies and others. It is my understanding that Occidental has a proposal which will not require preferential treatment at all. I do not know where the location will be, if it is approved. We ought to look into that.

Mr. McINTYRE. I thank the Senator.

The ACTING PRESIDENT pro tempore. The time of the Senator has again expired.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum and ask unanimous consent that it be without prejudice to the able Senator from Ohio (Mr. YOUNG) under the previous order.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Under previous order, the Senator from Ohio (Mr. YOUNG) is recognized for 10 minutes.

SPIRO, PLEASE COME HOME

Mr. YOUNG of Ohio. Mr. President, the Constitution gives the Vice President of the United States an important duty. In fact, the only mention regarding the Vice President in our Constitution is:

> The Vice-President of the United States shall be President of the senate, but shall have no vote, unless they be equally divided.

If I were to shock easily, Mr. President, I would express surprise that Vice President AGNEW has presided over the Senate from January 19 to August 26 only 14 hours and 50 minutes. Bear in mind, Mr. President, the Senate has been in session approximately 950 hours during this period.

During these days since January 19 I note that many Senators have presided many more hours than has the Vice President. For example, my colleague Senator QUENTIN BURDICK of North Dakota, although a candidate for re-election, has presided 16½ hours. He has presided over the Senate more hours than the man whose duty it is to preside over our Senate sessions. He is doing this at a time when he is a candidate for reelection as U.S. Senator from his State and has many requests from political leaders there to spend many weekends in North Dakota campaigning for reelection.

Senator JAMES ALLEN of Alabama has presided more than 90 hours as against Vice President AGNEW'S 14 hours and 50 minutes. Also Senator TOM EAGLETON of Missouri has presided over the Senate more than 53 hours. Senator HAROLD HUGHES of Iowa more than 51 hours, and the senior Senator from Ohio, who is now speaking in criticism of the Vice President, has presided more than 16 hours against 14 hours and 50 minutes for the Vice President.

Reading in the Cleveland Plain Dealer of August 25, I find that Vice President AGNEW in Seoul, Korea, promised South Korea more war planes—not proposing to sell them to South Korea but as giveaways. He has generously promised to supply as gifts many more aircraft for

South Korea. Then, unfortunately for American taxpayers, the Vice President manifested his tremendous generosity by announcing for Cambodia an economic aid program of $200 million in the coming year. This also as an outright gift.

SPIRO, please come home.

It is discouraging and frustrating to read in today's newspapers and hear in newscasts that the Vice President, following leaving South Korea, said:

It will take five years or more before American troops will be withdrawn from South Korea.

It is further discouraging to learn that the Vice President's next stop is Thailand. One wonders how many millions of dollars for military and economic aid he will offer Thailand. We have approximately 42,000 soldiers and airmen in Thailand. Will he pledge their remaining there for another "5 years or more" fattening the economy of that nation?

We have approximately 56,800 men of our Armed Forces in South Korea. This despite the fact that South Korea now has a regular army of 550,000 well-trained men. This is the fifth largest standing army in the world. North Korea has a standing army of 350,000. In the South Korean navy there are 17,000 officers and men. Only 9,500 in the North Korean navy. South Korea has 30,000 well-trained marines. North Korea none. South Korea with a population of 31 million has 2 million officers and men in its active reserve. They drill at least twice weekly.

North Korea has a population of only 13 million and has a reserve force of but 1,200,000 men.

Now that the Vice President has promised to give American military aircraft to Korea, the air force of South Korea will be at least equal in combat strength with that of North Korea.

Due to our generosity South Korea has attained huge economic growth in recent years. Its prosperity is booming. North Korea is a poverty-stricken backward nation in comparison.

SPIRO, please come home.

Americans should say SPIRO, please come home. SPIRO, preside over the Senate. Unfortunately, we Americans have been giving away billions of dollars of taxpayers' money in recent years so SPIRO AGNEW, please do not do this to us. SPIRO, please come home.

SAME AID DIRECTOR DISGRACED IN VIETNAM NOW IN CHARGE IN CAMBODIA

Mr. YOUNG of Ohio. Mr. President, in the New York Post of Tuesday, August 25, and other metropolitan newspapers in our country, the nationally known columnists Frank Mankiewicz and Tom Braden exposed the Nixon administration leaders for pledging $200 million in economic aid for Cambodia involving the first year alone. This evidently is one of the achievements of Vice President AGNEW in his present trip to Southeast Asia. This is most unfortunate for the American people. This massive economic aid proposal of $200 million is in addition to the military aid program of $50 million to Cambodia to try to maintain the Lon Nol government in power.

This despite the statement of President Nixon that our intrusion in Cambodia was only temporary. Furthermore, it is amazing that this economic aid program for Cambodia is to be under the direction of Charles Mann who was in charge at one time of economic aid in Vietnam and dismissed from that position due to maladministration and corruption—in fact downright thievery of supplies, machinery and equipment which had cost American taxpayers some millions of dollars.

Mr. President, in their column Tom Braden and Frank Mankiewicz exposed this astonishing give-away program under the management of Charles Mann and Mr. President, I ask unanimous consent that the entire column of Tom Braden and Frank Mankiewicz be inserted in the RECORD at this point as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "VETERAN"

(By Frank Mankiewicz and Tom Braden)

WASHINGTON.—An economic aid program for Cambodia, involving up to $200 million in the first year, is in the works, and the man now set to turn it is the same man who ran the aid program in Vietnam until forced out in disgrace after a series of Congressional investigations.

Charles Mann was the director of aid in Saigon in 1966 when a devastating report was made by a House subcommittee led by Rep. John Moss (D-Cal.). The Moss report led to Mann's dismissal from the Saigon post, but he has remained close to the foreign aid scene and recently surfaced as the director of our economic mission in Laos.

From Laos, Mann recently surveyed the Cambodian economy and has recommended a $200 million annual program, strikingly similar to the one he administered in Saigon, which the Moss committee called a "device for such forms of corruption as profiteering through speculation, fraud, smuggling, theft, overpricing and kickbacks, under-the-table payments, false certification for origin of commodities and diversion to the Viet Cong."

The massive economic aid proposal will be in addition to the recently announced military aid program amounting to $50 million. The Cambodian economy cannot survive more than a few months in the aftermath of the great U.S. "victory" and the resultant Communist gains in the country.

Mann's administration of economic aid in Indochina was criticized in Congress even before the Moss committee made the charges stated. An earlier watchdog committee over foreign aid, headed by former Rep. Porter Hardy (D-Va.), was equally critical of Mann when he was aid director in Cambodia before 1963. But it is precisely this same job to which the Nixon administration now proposes to assign Mann.

Moss is alarmed at the prospect. "We will be watching every move," he says and adds with some understatement: "We do not believe there should be a program in Cambodia similiar to the one in Vietnam, and we do not believe Mann is competent to administer it."

But Mann's proposals for Cambodia, now "under study" at the State Department and the White House, call for a duplication in Cambodia of the program which caused such scandal in Saigon. Direct "budget supplement" is an element of it—that is a polite way to refer to large gifts of U.S. cash to make up any difference between expenditures and receipts.

A second element of the Mann proposal involves an international fund to support the Cambodian currency, a device which in Vietnam has resulted in an artificial rate of exchange which robs the American serviceman and the American taxpayer officially almost as much as local graft robs them unofficially.

But the major feature of Mann's plan involves the institution in Cambodia of a commodity import program (CIP). This is the device by which Vietnamese businessmen were kept friendly to the Thieu-Ky government by the granting of permits to import commodities for the civilian market, with the cost footed by American taxpayers. The goods were then resold at whatever the traffic would bear—either to wealthy Vietnamese or to other countries or—on occasion—to Communist China or to the enemy.

It was this CIP program, accounting for billions of dollars of U.S. aid to Saigon, which caused Moss' committee to blow the whistle on Mann in language rarely seen in an official report, and it is this program which—Moss and many of his colleagues believe—causes the Thieu government to resist so bitterly any negotiation which might end the war.

The CIP, according to the committee, "encouraged speculation, windfall profits and corruption, fed inflation and deprived the United States of maximum benefit from its assistance programs." If it is to be repeated for the Cambodians, their hearts and minds will never be the same.

PRESIDENT NIXON WILL NOT BE THE FIRST

Mr. YOUNG of Ohio. Mr. President, on several occasions President Nixon has been quoted as stating, "I do not intend to be the first U.S. President to lose a war." Apparently he has forgotten some American history taught him at Whittier High School. Very definitely, any student of history knows we Americans did not win the War of 1812. We Americans came out on the losing side.

President James Madison, spurred on by the warhawks of that period, went to war in 1812 with Great Britain. This followed a declaration of war which passed the U.S. Senate by a vote of but 19 to 13. The war cry and slogan of that period was sailors' rights and freedom of seas. Incensed citizens of our new Republic demanded that Great Britain be compelled to guarantee freedom of the seas for American merchant ships and an end to impressment of sailors from American ships by officers of English warships boarding our merchant ships removing sailors who they claimed had deserted British warships. The gazettes of that period and Americans generally demanded war against England for freedom of the seas and sailors' rights.

Great Britain maintained ships of line and frigates off Boston, in the Chesapeake Bay and, in fact, all along our eastern seaboard. Its officers were arrogant in their actions as if the United States was still a British colony. They stopped merchant ships and impressed members of the crew they claimed had deserted from English merchant vessels or warships.

Sailors from English frigates had been for years before our declaration of war boarding American merchant ships, removing seamen they claimed had deserted and were impressing them into the British Navy.

In a particularly provocative incident, the English frigate, *Leopard*, in 1807 followed our frigate, *Chesapeake* outside our 3-mile limit, fired a shot across its bow. Then the English commander demanded the right to board our ship and muster the crew to determine whether four deserters from the English squadron were aboard.

The *Chesapeake* was bound for the Mediterranean. Its cannon had not been mounted. Commodore Barron, the vessel's commander, incensed over delays in outfitting this frigate, then the pride of our Navy, decided to save valuable time by putting the ship in shape on the voyage.

Commodore Barron rejected the demand to permit British officers to board our frigate and muster its crew. The English demand was repeated through a trumpet "The Vice Admiral's orders must be obeyed."

When no response was forthcoming, the *Leopard* crossed the *Chesapeake's* bow, riddled her hull with cannon fire. Commodore Barron finally ordered a hot coal carried from the galley and the only cannon in place was fired. Our flag was then hauled down. The British boarded the *Chesapeake*, removed four deserters they found hiding in its hold.

This outrageous attack caused an uproar throughout the new country. The gazettes of that time and citizens generally demanded a declaration of war. English ships of line and frigates were in great strength in the Atlantic. Wherever our merchant ships sailed, many were halted by British warships. Sailors were forcibly removed under the claim they were English deserters. These hostile acts on the high seas continued right up to 1812. Our infant Navy was small. Our Army was inadequate. Its general officers, as a rule, were overage. Many had fought in the Revolutionary War. Liberty-loving patriots demanded war. War was declared against the British Empire.

Later during the war this ill-omened frigate, *Chesapeake*, under Captain Lawrence, engaged in a duel with the British frigate, *Shannon*, off Boston. In this battle, Captain Lawrence, mortally wounded and taken below deck, gave his final order. This has been passed down to generation after generation of Americans and is part of the great history and noble tradition of our Navy. His immortal words were "Don't give up the ship."

The War of 1812 dragged on until the Peace of Ghent, signed by our envoys and the British, Christmas Eve, 1814. Throughout 2 years of war, our soldiers invading Canada met with one disaster after another. General Hull who had boasted that the United States would annex Canada surrendered Detroit without firing a shot from his fortifications; and to a force of Canadians and Indians inferior in number. Later in Canada our soldiers won some battles. They captured and burned the public buildings in York, Canada's capital. Generally speaking, however, our ground forces invading Canada were poorly led and met with one defeat after another.

Perry's victory near Put-in-Bay, Lake Erie, September 10, 1813, was a great naval victory. The British commander Barclay went into combat with one arm and came out with none. This was the first time in history of the world that an entire British squadron surrendered to an enemy. American schoolboys have always been thrilled by Commodore Perry's message:

> We have met the enemy and they are ours: two ships, two brigs, two schooners and a sloop.

Then on Lake Champlain, another naval victory followed. Finally, from one defeat after another in land fighting, the English, Canadians, and Indian Tecumseh, allied with the English, met with defeat. Our land forces, however, undertook no further offensive in Canada but withdrew across the border. Americans had boasted early in 1812 that the conquest of Canada was a mere matter of marching and then Canada was to be annexed to the United States. This claim proved absurd.

Toward the end of the war British naval vessels including ships of line and frigates had completely blockaded our shore. Most frigates and sloops of our small navy were practically interned in rivers while British ships of line, many with 74 guns and frigates with 44 guns, maintained a tight blockade. An English squadron under Admiral Cockburn sailed up the Chesapeake, landed soldiers and marines, routed our militia at Bladensburg, captured Washington and burned the White House and all Government buildings.

In the Peace of Ghent, no mention whatever was made of the cause of the war nor of the main American demand—freedom of the seas and sailors' rights. No guarantees or assurances whatever were asked of the English by our negotiators who were seeking peace. None were granted.

Our War of 1812 with England had been so overshadowed by the War Between the States, or the Civil War, and by the two World Wars which we fought, it is understandable that President Nixon failed to recall that the War of 1812 was the first and only war in the history of our Republic we lost.

Gen. Andrew Jackson's victory at New Orleans, January 8, 1815, was fought 2 weeks after the Treaty of Ghent had been signed and the war ended. News of the peace treaty of Ghent did not reach the United States for a number of days after January 8, 1815.

Sir Edward Packenham, brother-in-law to the Duke of Wellington, had landed his army composed of veterans of the peninsular war. This army, superior in number to the American forces made a frontal assault on the American lines. The Redcoats marched as if in a drill across a plain expecting to easily overwhelm the frontiersmen behind hastily erected ramparts. General Jackson and his officers had stationed our riflemen three deep behind the ramparts, riflemen in front to shoot while the riflemen behind loaded rifles and reloaded as quickly as those in front fired. In a few minutes the flower of the British army had been decimated by this rapid fire. In less than half an hour the field was covered with dead and wounded. The English retreated having suffered losses of 2,600 including Sir Edward Packenham, their commanding officer and five other generals who were killed. The American losses were 13.

President Nixon will not be the first President to lose a war for the valid reason that we Americans certainly did not win the war of 1812—we lost it and later in the war our militia was routed at Bladensburg and the victorious English captured the Capital of our country and burned the White House and Government buildings.

President Nixon must, however, accept the guilt for expanding and escalating the Vietnam war into Cambodia, Laos, and Thailand, and this fact has been acknowledged by Pentagon and White House officials who now term our expanded air and ground war as the Indochinese war. Unfortunately, our giant B–52 bombers are operating sorties around the clock in Cambodia and along the southern border of Thailand, and in Laos in addition to our continuing operations in Vietnam. This is an undeclared war that is unwinable.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Arizona (Mr. FANNIN) is recognized for 10 minutes.

THE FIGHT AGAINST ILLEGAL NARCOTICS

Mr. FANNIN. Mr. President, last April I told the Senate about one of several community projects in Arizona aimed at stopping the epidemic of illegal drug use among the young. Since that time, community antidrug efforts in my State have intensified. Parents especially are concerned about the illegal narcotics their children are being exposed to.

Many of the citizen groups fighting narcotics are making a splendid effort to bridge the so-called generation gap and to get across the perils of narcotics and marihuana.

These groups are showing the initiative and determination to solve their own problems—the spirit of the Old West.

However, young persons in my State and the rest of the Nation will continue to be tempted by peddlers of destructive drugs unless stronger action is taken both nationally and internationally to cut off the illicit trade.

As far as action at the Federal level is concerned, the administration has submitted to Congress legislation to further accelerate our battle against drugs. The measure, the Controlled Dangerous Substances Act, was passed by the Senate by an 82 to 0 vote on January 28, 1970, and is now pending in the House.

Internationally, we have the United Nations with its Commission on Narcotic Drugs, and the International Narcotics Control Board. We also have an international treaty on narcotic drugs, the Convention on Narcotic Drugs of 1961.

In describing the value of the convention in its report to Congress on May 3, 1967, the Senate Foreign Relations Committee stated:

The 1961 single convention is the culmination of more than 55 years of effort and progress in the field of international narcotics control.

The United States has ratified this international agreement, as have 79 other nations including France, Turkey, Mexico, and Burma.

Unfortunately, paper support and active support are two entirely different and unrelated matters. These international agreements on narcotics control all too often have proven ineffective in coping with major sources of illegal narcotics being sent to the United States. It is for this reason that I chose to cosponsor along with the Senator from California (Mr. MURPHY) and the Senator from Oregon (Mr. PACKWOOD) S. 4233, which promises to increase the active support of the United States in the international control of drug traffic, and hopefully will inspire other nations to cooperate in this needed activity.

This bill pledges that not less than 10 percent of the U.S. fiscal 1971 appropriations for voluntary contributions to the U.N. development program be spent to establish a multilateral fund to support activities designed to end the illegal international traffic in narcotics. It directs the President to support effective multilateral undertakings aimed at the eradication of illegal production and traffic in narcotics through U.S. representatives to international organizations.

It directs the President to support the strengthening of those powers presently given to the United Nations concerning narcotics. This would include investigation and publication of information relating to illegal production and traffic in narcotics, and a further convention concerning production and traffic in synthetic drugs, the so-called psychotropics.

Finally, this bill directs the President to withhold U.S. assistance to nations which refuse to cooperate with U.N. or U.S. programs aimed at suppressing illegal narcotics traffic. The bill requires that the President shall withhold assistance from any country which the President determines has refused—a—to cooperate with the United Nations or its agencies in carrying out programs to suppress international traffic in narcotics or—b—to take appropriate steps to prevent narcotic drugs produced in such country from entering the United States unlawfully.

Sources of the drugs are fairly well known. For example, 80 percent of the illicit heroin sold in this country is grown in Turkey and processed in France. Most of the rest comes from Mexico, with only a small percentage originating in the Burma, Thailand, Laos area.

Just last week the President of Mexico pledged to work with the United States in suppressing the illicit narcotics trade.

Attempts to convince foreign governments they should cut off the illegal production of narcotics are nothing new. But the U.S. Government intensified its efforts in July 1969 after President Nixon emphasized that the elimination of narcotics trafficking was a major matter of U.S. policy.

It was only a month later that the cooperation of U.S. narcotics agents with French agents resulted in the largest seizure of opium ever recorded in France.

Through efforts of the administration, a Franco-American Intergovernmental Committee on Drug Control has been formed. France has increased its force of narcotics agents.

One year ago this month, there was another important action. The United States made a $3 million loan to Turkey for two purposes: equipment of a 750-man narcotics force and the establishment of a crop rotation plan.

Although Turkey has now reduced the number of provinces where opium poppies may be grown from 21 to 7, there is a question as to how successful this program has been.

Despite these efforts, heroin continues to pour into the United States.

I believe the administration has pursued a vigorous course using all the tools available to it in trying to stem this tide.

But there still are weak links in the chain of international, national, and local efforts to eradicate the blight of narcotics which threatens to overwhelm the Nation.

That is why we need to give the President the authority to put effective pressure on uncooperative nations.

While American citizens, young and old, mobilize locally to discourage narcotics use, the Federal Government must make strong efforts to intercept the professional peddler, and foreign governments must move forcefully against clandestine fields and dope factories.

RUSSIANS TEST NEW MRV MISSILES

Mr. FANNIN. Mr. President, in view of the votes taken recently here in the Senate supporting the administration's limited expansion of the ABM system, there was a significant announcement yesterday by Secretary of Defense Melvin R. Laird.

He noted that the Russians have in the past few weeks tested an SS–11 intercontinental ballistics missile carrying a multiple warhead. The Russians have also tested an SS–15.

The major significance of these Russian developments lies in the fact that the SS–11 is only about a third as expensive for the Soviets to build as the larger SS–9. It is estimated the SS–11 costs about $10 million to deploy whereas the SS–9 costs about $30 million. The major disadvantage of the SS–11 up to now has been that it is smaller and therefore cannot carry so massive a warhead as the larger SS–9. If the MRV tests are, however, successful, this big disadvantage will be whittled down considerably. The Soviet attack force will be much more deadly and flexible.

I bring this to the attention of the Senate only because it helps to provide added evidence—if such evidence were needed—to support those Senators who voted in favor of the ABM system. Their votes proved to be farsighted indeed.

TRANSACTION OF ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business, with a limitation of 3 minutes on statements therein.

Mr. BROOKE. Mr. President, I ask unanimous consent that I may proceed for 3 additional minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

NEED TO WORK FOR HUMANE TREATMENT OF PRISONERS

Mr. BROOKE. Mr. President, for the past 4 months the Senate has spent much of its time considering and discussing the problems of the war in Vietnam. It is the earnest desire of all Senators—as it is the desire of all Americans—to bring this war to an early conclusion.

But in our eagerness to see an end to the fighting we must never lose sight of the high-priority consideration, and that is the problem of the Americans now being held prisoner of war in North Vietnam. We must do nothing that will make their bondage more difficult, nor that will postpone in any way their release and reunion with their families.

At the same time we must double and redouble our efforts, both as a Government and as American citizens, to win for them at least the minimum degree of humane treatment provided for by the Geneva accords on prisoners. Among the immediate goals is that of communication between the prisoners and their families without that process being made part of the Communist propaganda war effort.

These considerations must be uppermost always in our minds as we discuss these vital issues.

Mr. President, the distinguished Senator from West Virginia (Mr. BYRD) has been in the forefront of those in Congress who have been working very diligently in trying to alleviate the pains of the families of the 1,500 or more American prisoners of war still being held in camps in North Vietnam. The distinguished Senator from West Virginia and I have jointly filed a resolution with the Senate calling for a special joint committee to conduct hearings. We are hopeful that our resolution will soon be acted upon by the Committee on Foreign Relations, to which it has been referred.

In the meantime, Mr. President, the North Vietnamese still have not shown any inclination whatever to release any of our prisoners. To the best of our information, since the senior Senator from West Virginia and I entered into a rather lengthy colloquy on the floor of the Senate, there has been no improvement in the communication between the prisoners of war and their families in the United States. Unfortunately, many of the wives and mothers have had to go around the world in an attempt to get a message to Hanoi, in an attempt to have Hanoi recognize their responsibility in the treatment of prisoners of war. This is a very shameful circumstance, and one which we certainly hope will be alleviated.

The North Vietnamese must see that we have released prisoners of war, that the treatment of their prisoners has cer-

tainly been humane and they have been allowed to communicate with their families. We expect no less and we will stand for no less.

Mr. BYRD of West Virginia. I thank the able junior Senator from Massachusetts for again bringing this subject to the attention of the Senate. I join him in expressing the hope that the Committee on Foreign Relations will conduct an early hearing on the resolution.

It is pleasing to state that 40 Senators have cosponsored the resolution which has been jointly authored by the Senator from Massachusetts and me. I trust that the Committee on Foreign Relations will be able to give prompt and favorable action to the resolution. It will be my plan—I have discussed this with the Senator from Massachusetts only today—to discuss the resolution with the chairman of the Committee on Foreign Relations, the Senator from Arkansas (Mr. FULBRIGHT), hopefully, at some point during the afternoon today.

Mr. BROOKE. I certainly thank the Senator from West Virginia. Jointly we want it to be known that we do not intend to let this matter drop, that we do not intend just to bring it up every 3 or 4 months, but that we intend to press it and press it and press it, until results are obtained and our American prisoners of war are released. In the interim period, we intend to do all in our power to see that they are treated humanely; and hopefully, that communication between them and their families will be permitted.

Mr. BYRD of West Virginia. I thank the Senator very much. He is performing a great service.

ECONOMY BEING REMOVED AS CAMPAIGN ISSUE

Mr. BROOKE. Mr. President, there is an old English saying that once may be an accident, twice a coincidence, but three times is a moral certainty.

Today it may be fair to go nearly that strong in suggesting that there are solid signs of an economic resurgence in the United States. These signs have come up without the simultaneous self-consuming flames of inflation destroying the effect of that economic upswing.

The latest indication that the economic climate is improving is the preliminary report by the Bureau of Labor Statistics that, for the first time since long before the Nixon administration took office, there is an actual decline in the wholesale price index. During August that index has declined by one-half of 1 percent. This is a major decline.

Newspaper accounts hasten to point out that the effects of this decline may be exaggerated—and I myself do not wish to over-emphasize its importance. But, taken together with the optimistic reports we have been receiving from the Council of Economic Advisers, we now have solid evidence to support the contention that the inflationary spiral has been broken.

It may be weeks, or a month or more, before the wholesale index decline is followed by lower prices at the marketplace. But it now appears assured that this will follow and that for the first time in a decade the buying power of the American dollar will actually show a slight increase instead of a continual erosion.

Of course, there will be economists who scoff at this indication of something better in the offing. It is to their political advantage to scoff, and so we should expect them to scoff. There are those who maintain that the Nation's economy will be in poor condition, and that this will be the biggest single issue during this fall's election. Those who make it such an issue obviously hope to gain votes by doing so.

To gain such votes they will put emphasis on gloom and predictions of disaster, of recession or even depression. There has already been some considerable talk by certain officeseekers of a recession in the midst of inflation, and so forth.

These self-serving predictors of economic doom will continue to preach along this vein.

The facts, however, again—and now more than ever—appear to belie their words.

They will have to find some other issue upon which to run for office; the one to which they now cling is too slender to hold their weight. For their own purposes they have wished the Nation's economy to decline. They have wanted people to believe that inflation means a good economy, that a lessened purchasing ability is good because, for some, it may be accompanied by more, though cheaper, dollars in the pocket. They are being proved wrong. The stability of our economic fabric is being restored. The benefits to all are apparent.

The decline in the wholesale price index is only one more of a series of indications that the policy of fiscal responsibility is working.

COMMUNICATION FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. BYRD of West Virginia) laid before the Senate the following letter, which was referred as indicated:

APPROVAL OF LOAN TO ARKANSAS VALLEY G. & T., INC., OF PUEBLO, COLO.

A letter from the Administrator, Rural Electrification Administration, U.S. Department of Agriculture, transmitting, pursuant to Senate report No. 497, information relating to the approval of a loan to Arkansas Valley G. & T., Inc. of Pueblo, Colo., for the financing of certain transmission facilities (with an accompanying paper); to the Committee on Appropriations.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MAGNUSON, from the Committee on Commerce, without amendment:

H.R. 17133. An act to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance (Rept. No. 91–1140).

By Mr. ALLOTT, from the Committee on Interior and Insular Affairs, without amendment:

S. 3997. A bill to provide for the disposition of funds appropriated to pay a judgment in favor of the Confederated Bands of Ute Indians in Court of Claims case 47567, and a judgment in favor of the Ute Tribe of the Uintah and Ouray Reservation for and on behalf of the Uncompahgre Band of Ute Indians in Indian Claims Commission docket No. 349, and for other purposes (Rept. No. 91–1141).

By Mr. FANNIN, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 13434. An act to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Ariz., in Indian Claims Commission dockets Nos. 90 and 122, and for other purposes (Rept. No. 91–1147).

By Mr. MOSS, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 16416. An act to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes (Rept. No. 91–1148).

By Mr. BELLMON, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 14097. An act to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma in Indian Claims Commission docket No. 96, and for other purposes (Rept. No. 91–1149); and

H.R. 14827. An act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission docket No. 220, and for other purposes (Rept. No. 91–1150).

By Mr. HANSEN, from the Committee on Interior and Insular Affairs, with an amendment:

S. 2735. A bill to provide for the conveyance of certain public lands in Wyoming to the occupants of the land (Rept. No. 91–1142).

By Mr. BIBLE, from the Committee on Interior and Insular Affairs, with an amendment:

S. 3196. A bill to declare that certain federally owned lands in the State of Nevada are held by the United States in trust for Reno-Sparks Indian Colony, and for other purposes (Rept. No. 91–1143).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with an amendment:

S. 4078. A bill to provide for the disposition of funds appropriated to pay judgments in favor of the Snohomish Tribe in Indians Claims Commission docket No. 125, the Upper Skagit Tribe in Indian Claims Commission docket No. 92, and the Snoqualmie and Skykomish Tribes in Indian Claims Commission docket No. 93, and for other purposes (Rept. No. 91–1144).

By Mr. FANNIN, from the Committee on Interior and Insular Affairs, with amendments:

S. 4033. A bill to provide for the disposition of funds appropriated to pay a judgment in favor of the Chemehuevi Tribe of Indians (Rept. No. 91–1145).

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, with amendments:

S. 3487. A bill to authorize the sale and exchange of certain lands on the Coeur d'Alene Indian Reservation, and for other purposes (Rept. No. 91–1146).

HEALTH INSURANCE LEGISLATION—REPORTS OF A COMMITTEE

Mr. BURDICK. Mr. President, from the Committee on Post Office and Civil Service, I report favorably, two bills relating to the Government contribution toward the cost of the Federal employees health insurance program. The

bill (S. 1772) is reported with amendments, and I submit a report (No. 91-1151) thereon. The second bill (H.R. 16968) is reported without amendment, and has no written report.

Under existing law, the Government contributes approximately 28 percent of the average cost of high option health insurance. Under S. 1772, which the committee agreed upon some time ago, this contribution would increase, effective October 1, 1970, to 40 percent of the average cost. The House bill is virtually identical to the Senate bill except that it provides for a 50-percent contribution. The House bill is reported so that, when the Senate bill is acted upon, the action can then be vacated and the House bill can be amended with substitute language in the form of S. 1772, and a conference, if necessary, on a House-passed bill number can be arranged. I hope that, if the Senate agrees with the committee's recommendation, the House might be willing to go along with the lower figure of 40 percent, so that the bill can be quickly signed into law and become effective at the beginning of the first pay period in October 1970.

The PRESIDING OFFICER (Mr. HANSEN). The report will be received and the bills will be placed on the calendar; and the report will be printed.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. SCOTT:

S. 4292. A bill to provide for fiscal responsibility through the establishment of a limitation on budget expenditures and net lending (budget outlays) for the fiscal year 1971, and for other purposes; to the Committee on Finance.

S. 4293. A bill for the relief of Yung Suk Kang; to the Committee on the Judiciary.

By Mr. SPARKMAN:

S. 4294. A bill to amend the Federal Aviation Act of 1958 to authorize free or reduced rate transportation for widows, widowers, and minor children of employees who have died while employed by an air carrier or foreign air carrier after 25 or more years of such employment; to the Committee on Commerce.

By Mr. MILLER:

S. 4295. A bill to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes; to the Committee on Public Works.

(The remarks of Mr. MILLER when he introduced the bill appear below under the appropriate heading.)

By Mr. CRANSTON (for himself, Mr. YARBOROUGH, Mr. HUGHES, Mr. JAVITS, Mr. KENNEDY, Mr. NELSON, Mr. SCHWEIKER, and Mr. WILLIAMS of New Jersey):

S. 4296. A bill to amend title VII of the Public Health Service Act to meet the need for additional personnel in the health professions by encouraging and assisting disadvantaged individuals to pursue training designed to prepare them to engage in the practice of such professions, and for other purposes; to the Committee on Labor and Public Welfare.

(The remarks of Mr. CRANSTON when he introduced the bill appear below under the appropriate heading.)

By Mr. KENNEDY (for himself, Mr. YARBOROUGH, Mr. COOPER, Mr. SAXBE, Mr. MCGOVERN, Mr. MONDALE, Mr. PELL, Mr. YOUNG of Ohio, Mr. HART, Mr. CRANSTON, Mr. HUGHES, Mr. BAYH, Mr. METCALF, Mr. MUSKIE, and Mr. MCCARTHY):

S. 4297. A bill to create a health security program; to the Committee on Finance.

(The remarks of Mr. KENNEDY when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. SMITH of Illinois:

S. 4298. A bill to authorize a White House Conference on Education in 1972; to the Committee on Labor and Public Welfare.

S. 4299. A bill to authorize the Secretary of the Interior to erect an historical marker in or near the Woodlawn Cemetery, Carbondale, Ill., designating such Cemetery as the site of the first recorded planned Memorial Day observance; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. SMITH of Illinois when he introduced S. 4299 appear below under the appropriate heading.)

S. 4295—INTRODUCTION OF THE FEDERAL-AID HIGHWAY ACT OF 1970

Mr. MILLER. Mr. President, I introduce for printing and appropriate reference a bill to authorize appropriations for fiscal years 1972 and 1973 for the construction of certain highways and to extend the time for completion of the National System of Interstate and Defense Highways.

I understand that the Senate Public Works Committee has held several weeks of hearings on various aspects of the Federal-aid highway program. Many different proposals have been advocated regarding what should be done with highway trust funds. Both Senator RANDOLPH, chairman of the committee, and Senator COOPER, the ranking Republican member, have introduced bills on this subject and both have invited Senators to make their views known to the committee. I am using the means of introducing this bill to set forth my views on this subject.

The Interstate System in this country is now more than 70 percent complete. It is anticipated that it can be completed by 1976 or 1977. It is my belief that no major changes should be made in the trust fund revenues and their distribution while the Interstate System is still unfinished. After completion of the system there will be ample opportunity to consider whether any changes in the use of the trust funds should be made.

Therefore, I am introducing this bill today which would merely authorize appropriations for the Federal-aid highway program. It would also extend the date for completion of the National System of Interstate and Defense Highways from the current target date of 1974 to 1976 and would provide authorization of funds for those years. These provisions are the same as the corresponding ones in the administration bill.

The PRESIDING OFFICER (Mr. BYRD of Virginia). The bill will be received and appropriately referred.

The bill (S. 4295) to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes, introduced by Mr. MILLER, was received, read twice by its title, and referred to the Committee on Public Works.

S. 4296—INTRODUCTION OF THE HEALTH PROFESSIONS ASSISTANCE AMENDMENTS OF 1970

Mr. CRANSTON. Mr. President, I introduce today, for myself and Senator YARBOROUGH, chairman of the Health Subcommittee, of the full Labor and Public Welfare Committee, and a leader of the Nation in health affairs, and for Senators HUGHES, JAVITS, KENNEDY, NELSON, SCHWEIKER, and WILLIAMS of New Jersey, a bill to "amend title VII of the Public Health Service Act to meet the need for additional personnel in the health professions by encouraging and assisting disadvantaged individuals to pursue training designed to prepare them to engage in the practice of such professions, and for other purposes." Its short title would be the "Health Professions Assistance Amendments of 1970."

I am delighted that six members of the Health Subcommittee have joined in cosponsorship of this bill.

The purpose of this legislation is to make important improvements in the health professions student loan and scholarship programs, to encourage greater representation of the educationally and economically disadvantaged in the health professions, and to provide incentives for health professionals assisted through Federal student loans to practice in urban and rural poverty areas.

We face a critical shortage of health professionals in the United States today, including an estimated 50,000 physicians and 9,000 dentists. Adequate health care is simply not available to millions of Americans. And this inadequacy is the result not only of a poorly functioning delivery system but also of shortages in various critical categories of health manpower.

In December 1968, the report of the Carnegie Commission on the future of higher education recommended "a substantial program of Federal aid for medical education" in order to increase the supply of medical school graduates in response to the Nation's rapidly growing need for medical services. Unfortunately, since that time, Federal support for medical education has not expanded at a pace adequate to meet the need.

An important facet of the overall shortage of health professionals is the disproportionately low representation of minority groups in such professions; their representation falls far short of the proportions which such groups represent in the population as a whole. For example, although blacks make up 11 percent of our population, only 2 percent of the medical profession is black. There are only 6,000 black physicians in the entire Nation; one out of every 560 whites is a physician while the rate for blacks is one out of every 3,800. Although comparable nationwide data is not available, the representation of chicanos, Indians and those of oriental descent is estimated

to be even lower proportionately. For example, although chicanos comprised as of 1960 approximately 11 percent of the total population in the Southwestern States, chicanos comprise only 1 percent of the medical student bodies in those States.

This unequal representation is due in large part to two things: the lack of effective counseling to encourage and assist minority students to enter the health professions, and the inadequacy of existing financial aid programs to provide assistance at levels which would enable the disadvantaged to meet the enormous, exploding costs of undergraduate and graduate education in the health professions.

The shortage of health professionals is most apparent and most unfair among the poor, for whom the lack of decent medical care is a serious and growing problem. It is estimated that 10 million persons in this country receive no medical care and for another 20 million the care is substandard and minimal. One reason for the appalling lack of adequate health care among the poor—both rural and urban—is the shortage of health professionals in general. Another is the severe economic disadvantages for any health professional choosing to serve in a low-income community. Poverty areas offer neither the prestige nor the economic rewards attainable in suburban or midcity areas. Thus, not only are the disadvantaged deterred from following careers in the health professions by the prohibitive cost of the many years of schooling required, but those who do manage to become doctors, dentists or other health professionals are prevented from practicing in a poverty area by the necessity of repaying educational debts.

Many young health professionals—black, white, or brown, disadvantaged or not—who would otherwise find a worthy outlet for their idealism, energy and social commitment working in a poverty area find it is simply economically impossible to do so. So these professionals go into practice elsewhere, or they go into research, and the health needs of the poor go unmet.

An important new initiative in this area—which the bill I am introducing would complement and enlarge upon—is the health manpower development program of the National Urban Coalition. This new program is aimed at increasing the supply of doctors, dentists and other health providers in poverty areas, under a $2 million grant just made by the Office of Economic Opportunity. In announcing the new program, John W. Gardner, chairman of the coalition and former Secretary of Health, Education, and Welfare, said:

> There is a particular need to recruit more minority groups into the health professions. In the United States today, only two percent of our physicians are black. Many more members of the minority communities, not only black but Mexican-American and Puerto Rican, would like to pursue careers in health. Such opportunities are almost wholly dependent on the provision of adequate financial support. I cannot emphasize that point too strongly.

In order to assist disadvantaged students to enter the health professions, and to make other improvements in health professions student assistance programs, the bill proposes a number of important changes in the health professions loan and scholarship programs. These changes would benefit all students in need of financial assistance. The loan program, which expires in fiscal year 1971, would be extended through fiscal year 1976. The fiscal year 1971 authorization would be increased from $35 million to $45 million. The authorization for fiscal year 1972 would be $55 million with increases of $5 million for each of the next 4 fiscal years. The student loan maximum would be increased from $2,500 to $3,500 per year for all students. Estimates given to me by medical schools in California are that present student costs average about $6,000 per year and are expected to increase substantially over the next several years. The combination of a $3,500 loan and a $2,500 scholarship authorized under present law would, therefore, just about cover average costs at these schools right now. However, there are many schools where costs are higher than $6,000 per year, and that figure does not include the added expenses for married students with dependents.

For those who are educationally or economically disadvantaged due to socioeconomic factors, the maximum loan would be increased to $7,000 per year. A recent report to the Inter-Association Committee on Expanding Educational Opportunities in Medicine for Black and other Minority Students, by a task force of the American Association of Medical Colleges, concluded:

> The main barrier today for minority students is the inadequacy of financial aid. Coincident with increasing enrollment of minority students in medical schools, federal government and other sources of funds have been decreasing. The need is urgent for reversing this trend and establishing better mechanisms for utilizing available funds.

Another feature of the bill is a broadening of present loan forgiveness provisions. Under existing law, indebtedness on health professions loans is forgiven at the rate of only 15 percent for each year of practice in a rural poverty area. The bill recognizes the need to provide greater encouragement for health professionals to practice in areas where the need is greatest, including both urban and rural poverty areas. Under the bill, loans would be forgiven, up to the full amount of the loan plus accrued interest, at the rate of 33⅓ percent for each year in which a physician, dentist or optometrist practices in either an urban or rural poverty area. This provision for total loan obligation cancellation over 3 years would make cancellation for the first time an attractive alternative to private practice as a means of paying off a student loan. It would also dovetail nicely with Senator MAGNUSON's proposed pilot project National Health Service Corps, contained in S. 4106, which I am privileged to cosponsor.

In addition, in order to provide a greater inducement for medical and other health professions schools to admit larger numbers of disadvantaged students, the scholarship formula would be revised to provide substantial additional assistance to such schools based on the number of such students they enroll. Under present law, this formula is $2,000 times 10 percent of the full-time student population; that is, the school's scholarship fund receives $200 for each student enrolled. The bill would authorize an additional $2,500 to the scholarship fund based on each full-time student who is disadvantaged—as defined in the outreach program which I will discuss next. The maximum individual scholarship for such disadvantaged students would be increased from $2,500 to $5,000, and the scholarship program would be extended through fiscal year 1976.

Finally, the bill would add a new part H to title VII of the Public Health Service Act to provide for grants and contracts to schools and other public or nonprofit organizations for the purpose of identifying, encouraging, and assisting disadvantaged individuals with a potential for education or training in the health professions. Specifically included are those returning veterans with training or experience in the health field. Individuals would be assisted in enrolling, or in qualifying to enroll, in postsecondary education or training, including health professions schools. The outreach program would also provide for broad dissemination of information on sources of financial aid available for such postgraduate or postsecondary education and training.

To this extent, the bill's outreach provisions are similar to those contained in S. 3586, the Health Training Improvement Act of 1970 already passed by the Senate—section 205—as well as the version passed by the House regarding allied health professionals. However, our bill goes further and specifically would authorize the Secretary to fund such other programs as he determines would enhance the enrollment, pursuit, and completion of study by such disadvantaged persons once they are enrolled in medical and other health professions schools.

The bill would authorize appropriations of $5 million for fiscal year 1971, and $40 million over the next 4 fiscal years for this outreach and special assistance program.

This outreach concept was recommended in the AAMC report on expanding minority student opportunities in the health professions, which I referred to earlier. The report called for a network of regional centers to provide information about career opportunities for disadvantaged students in the health professions. Such a program, the report stated, would serve a vital motivational purpose in encouraging and assisting qualified disadvantaged students who were pursuing or considering education and training in the health professions. The fact is that many, many disadvantaged persons who could be effectively educated and trained for vital health professional roles never consider this as a viable possibility. This program would seek to change that and make clear the great possibilities which exist for them in this highly critical skill-shortage area.

The new outreach initiative which I

am proposing would respond to two of the three major needs identified in the AAMC report: First, recruitment of students into health professions education; and, second, retention of students already in the "educational pathway" leading to such professions.

Finally, I wish to point out that physicians' assistants would be assisted under the allied health professions programs contained in S. 3586, the Health Training Improvement Act of 1970, which passed the Senate on July 13. Physicians' assistants are specifically recognized in the Senate report on that bill as being one of several new and promising categories of health manpower. Physicians' assistants are not included under this bill which deals only with the more traditional categories of health professionals. However, I strongly believe that the physicians' assistant is a very important new category in the health manpower area, and must be assisted to the maximum possible extent.

As a member of the Labor and Public Welfare Committee's Health Subcommittee, and as chairman of its Veterans' Affairs Subcommittee, I am deeply involved in the committee's efforts to improve our health care delivery system and to expand our supply of health professionals. Meeting these goals requires increasing our commitment to and our financing of student assistance programs, institutional and special project grants to medical and health professions schools, construction funds and research. However, in expanding and improving these programs I believe we must give special attention to ways in which they can be utilized to improve educational opportunities for the disadvantaged and to improve health care in our poverty areas.

Although I have emphasized the benefits of this bill to disadvantaged health professions students, I would like to make very clear that this bill is also intended to provide general assistance to health professions schools and students by improving and enlarging the loan and scholarship funds available for all students at all medical and health professions schools. We took a major step in this discretion by authorizing the appropriation of $100 million in emergency relief for medical and dental schools in financial distress in S. 3586, the Health Training Improvement Act of 1970, already passed by the Senate. Under that bill, the Secretary would be authorized to make grants to medical and dental schools in dire financial straits as a result of their affirmative response to one or more of the following aspects of national health policy: First, increasing enrollment of students for the purpose of augmenting the supply of trained health professions personnel; second, improving the quality or delivery of health care and services to disadvantaged persons in urban or rural areas; third, providing care to substantial numbers of patients under medicare and medicaid; or fourth, maintaining enrollments and quality in the face of rapidly rising costs.

Another example of the effort being made to meet the health professionals crisis is the action being taken by the University of California School of Medicine at Davis, where the first-year enrollment of medical students is to be increased from 52 to 100 next year. The 3-year-old school will apply for a 5-year, $5 million grant under the physician augmentation program, which provides grants to medical schools willing to make major increases in their first year enrollments. According to C. J. Tupper, dean of the school:

> The plan reflects the concern on the part of administrative and faculty members as to the school's responsibility in meeting the physician manpower shortage crisis.

The Davis medical school proposal is an ambitious one. In light of the very pressing needs and the long period of years before an entering medical student actually becomes an M.D., the timing is important and highly commendable. However, much of the success of the expansion will rest on the adequacy of Federal support in such areas as student assistance, institutional support and health facilities construction grants. It is important, therefore, that these vital programs of support for health professions education be maintained and expanded this year and in the coming years if such initiatives as that being undertaken at UC-Davis are to be productive in helping to solve the health manpower crisis.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point an analysis of the bill followed by the full text of the bill.

The PRESIDING OFFICER (Mr. BYRD of Virginia). The bill will be received and appropriately referred; and, without objection, the bill and analysis will be printed in the RECORD.

The bill (S. 4296) to amend title VII of the Public Health Service Act to meet the need for additional personnel in the health professions by encouraging and assisting disadvantaged individuals to pursue training designed to prepare them to engage in the practice of such professions, and for other purposes, introduced by Mr. CRANSTON (for himself and other Senators), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 4296

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Health Professions Assistance Amendments of 1970".

SEC. 2. Title VII of the Public Health Service Act is amended by adding at the end thereof the following new part:

"PART II—GRANTS AND CONTRACTS TO ENCOURAGE FULL UTILIZATION OF EDUCATIONAL TALENT FOR THE HEALTH PROFESSIONS

"SEC. 799a. (a) To assist in meeting the need for additional professional personnel in the health professions (as defined in subsection (b)), the Secretary is authorized to make grants to State or local educational agencies or other public or nonprofit private agencies, institutions, and organizations, or enter into contracts (without regard to section 3709 of the Revised Statutes (41 U.S.C. 5)) for the purpose of—

"(1) identifying individuals with a potential for education or training in the health professions (including veterans of the Armed Forces of the United States with training or experience in the health field) who due to socioeconomic factors are financially or educationally disadvantaged, and encouraging and assisting them (A) to enroll in a school of medicine, dentistry, osteopathy, pharmacy, optometry, podiatry, veterinary medicine, or public health which is accredited as provided in section 721(b)(1)(B); or (B) if they are not qualified to enroll in such a school, to undertake such postsecondary education or training as may be required to qualify them to enroll in such a school;

"(2) publicizing existing sources of financial aid available to persons enrolled in any such school or who are undertaking training necessary to qualify them to enroll in any such school; or

"(3) establishing such programs as the Secretary determines will enhance and facilitate the enrollment, pursuit, and completion of study by individuals referred to in clause (1) in schools referred to in clause (1)(A).

"(b) For purposes of this part, the term 'professional personnel in the health professions' refers to any of the following—

"(1) doctors of medicine;

"(2) doctors of dentistry or persons holding an equivalent degree;

"(3) doctors of osteopathy;

"(4) doctors of pharmacy or bachelors of science in pharmacy;

"(5) doctors of optometry or persons holding an equivalent degree;

"(6) doctors of podiatry or doctors of surgical chiropody;

"(7) doctors of veterinary medicine or persons holding an equivalent degree; or

"(8) graduates of schools of public health.

"(c) For the purpose of carrying out the provisions of this part, there is authorized to be appropriated $5,000,000 for the fiscal year ending June 30, 1971; $7,000,000 for the fiscal year ending June 30, 1972; $9,000,000 for the fiscal year ending June 30, 1973; $11,000,000 for the fiscal year ending June 30, 1974; and $13,000,000 for the fiscal year ending June 30, 1975."

SEC. 3. (a) Section 741(a) of the Public Health Service Act is amended—

(1) in the first sentence thereof, by striking out "Loans" and inserting in lieu thereof "except as otherwise provided in the succeeding sentence, loans";

(2) in the first sentence thereof, by striking out "$2,500" and inserting in lieu thereof "$3,500"; and

(3) by inserting after the first sentence thereof the following new sentence: "In the case of any student who is an individual referred to in section 799(a)(1) such loans may not exceed $7,000 for any such student for any such year."

(b) The second sentence of section 741(f) of such Act is amended—

(1) by striking out "15 per centum" and inserting in lieu thereof "33⅓ per centum";

(2) by striking out "a rural area" and inserting in lieu thereof "an urban or rural area"; and

(3) by striking out "an amount equal to an additional 50 per centum of the total amount of such loans plus interest may be canceled" and inserting in lieu thereof "an amount equal to the total amount of such loans plus interest may be canceled".

(c)(1) Effective in the case of fiscal years ending after June 30, 1970, the first sentence of section 742(a) of such Act is amended to read as follows: "There is authorized to be appropriated to the Secretary of Health, Education, and Welfare to carry out this part (other than section 744) $45,000,000 for the fiscal year ending June 30, 1971, $55,000,000 for the fiscal year ending June 30, 1972, $60,000,000 for the fiscal year ending June 30, 1973, $65,000,000 for the fiscal year ending June 30, 1974, $70,000,000 for the fiscal year ending June 30, 1975, and $75,000,000 for the fiscal year ending June 30, 1976.".

(2) The third sentence of such section 742(a) of such Act is amended—

(A) by striking out "1972" and inserting in lieu thereof "1977"; and

(B) by striking out "1971" and inserting in lieu thereof "1976".

SEC. 4. (a) Effective with respect to fiscal years ending after June 30, 1970, the first sentence of section 780(b) of the Public Health Service Act is amended to read as follows: "For the fiscal year ending June 30, 1971 and for each of the next five fiscal years, the amount of the grant under subsection (a) to each such school shall be equal to (1) $2,000 multiplied by one-tenth of the number of full-time students of such school, plus (2) $2,500 multiplied by the number of full-time students of such school who are individuals referred to in section 799a(a)(1)."

(b) The second sentence of such section 780(b) is amended—

(1) by striking out "1972" and inserting in lieu thereof "1977"; and

(2) by striking out "1971" and inserting in lieu thereof "1976".

(c)(1) Section 780(c)(1)(D) of such Act is amended by striking out "two" and inserting in lieu thereof "seven".

(2) Section 780(c)(1)(E) of such Act is amended—

(A) by striking out "1971" and inserting in lieu thereof "1976"; and

(B) by striking out "1972" and inserting in lieu thereof "1977".

(3) The second sentence of section 780(c)(2) of such Act is amended by striking out "$2,500" and inserting in lieu thereof $5,000 (in the case of any student who is an individual referred to in section 799a(a)(1)), or $2,500 (in the case of any other student).".

The analysis, presented by Mr. CRANSTON, is as follows:

ANALYSIS OF S. 4296—THE PROPOSED HEALTH PROFESSIONS ASSISTANCE AMENDMENTS OF 1970

I. GENERAL DESCRIPTION

The bill is designed to encourage and assist persons who are financially or educationally disadvantaged because of socio-economic factors to pursue training in the health professions. It would accomplish this by establishing a special outreach program to identify, encourage, and prepare disadvantaged persons to enroll in health professions schools and making grants to those schools once they enroll significant numbers of disadvantaged students. In addition, the present law concerning loans and scholarships for students in the health professions schools would be amended (1) to extend these two programs through fiscal year 1976; (2) to raise the maximum limits on loans for all students and on scholarships for disadvantaged persons; (3) to increase the authorizations of appropriations for the loan program; (4) to provide for substantial increases in the allocation of scholarship funds to schools in direct proportion to the number of disadvantaged students enrolled; and (5) to provide increased incentives for practice in urban or rural poverty areas by providing for full cancellation of student loans in return for three years of practice in those areas.

II. SHORT TITLE

Section 1 gives the Act the short title "Health Professions Assistance Amendments of 1970."

III. HEALTH PROFESSIONS OUTREACH PROGRAM

Section 2 of the bill would add a new Part H to Title VII of the Public Health Service Act. Title VII now includes provisions concerning training of professional health personnel. Part H would establish a new program to identify, encourage, and assist disadvantaged persons to prepare for, enter and complete training in the health professions. Part H consists of one section, 799a. It is analyzed by its three subsections. With the exception of clause (3), which is new, it is similar to the outreach provision contained in section 205 of S. 3586, the proposed "Health Training Improvement Act of 1970," passed by the Senate on July 13, 1970.

Subsection (a) of Sec. 799a. Clause (1) gives grant and contract authority to the Secretary of H.E.W. to establish, through public and private educational or other agencies, programs to identify potential health professions students who, due to socio-economic factors, are financially or educationally disadvantaged. (Veterans with training or experience in the health field are specifically included.) Such individuals would be encouraged and assisted to enroll if qualified, or to undertake such post-secondary work as is necessary to become qualified to enroll, in a health professions school.

Clause (2) specifies that a school's or organization's encouragement and assistance efforts would include publicizing existing sources of financial aid available to persons who are enrolled in health professions schools or are undertaking training necessary to qualify for enrollment in any such school.

Clause (3) of this subsection would provide for grants to or contracts with schools to establish programs which the Secretary determines will enhance and facilitate enrollment, pursuit, and completion of study by disadvantaged persons who are potential health professionals.

Subsection (b) of Sec. 799a. Defines "professional personnel in the health professions" as doctors of medicine, dentistry, osteopathy, pharmacy (or bachelor of science in pharmacy), optometry, podiatry or surgical chiropody, veterinary medicine or graduates of schools of public health. This definition is consistent with other parts of Title VII concerning types of health professions schools to which grants are made for construction, student loans and scholarships.

Subsection (c) of Sec. 799a. Would authorize appropriations for Part H from fiscal years 1971 through 1975. The initial authorization is $5,000,000 for FY 1971, and the authorization for each subsequent year is increased by $2,000,000 a year.

IV. STUDENT LOANS

Section 3 of the bill would amend the health professions student loan provisions of Title VII of the Public Health Service Act, 42 U.S.C. 294 a–b.

Loan Levels. Clauses (1) and (2) of subsection 3(a) would increase the present maximum loan level for all students from $2,500 to $3,500 per academic year.

Clause (3) would establish a maximum loan level of $7,000 for disadvantaged students described in the Outreach Provision (Part H of section 799a).

Cancellation of Loans. Subsection 3(b) of the bill would amend present law which cancels student loan indebtedness incurred by physicians, dentists, and optometrists at the rate of 15 percent for each year of practice in a rural poverty area. The annual rate of cancellation would be raised to 33⅓ percent, and the qualifying geographical areas would be expanded to include urban as well as rural poverty areas. The present provision permitting an additional 50 percent cancellation of the debt for work in a rural area is rephrased for clarity.

Student Loan Authorization. Clause (1) of Subsection 3(c) would amend the present student loan authorization section which now expires with an authorization of $35,000,000 in fiscal year 1971. The new schedule would begin with a fiscal year 1971 authorization of $45,000,000, rising to $55,000,000 for 1972, and increasing by $5,000,000 each fiscal year thereafter through fiscal 1976.

Clause (2) of subsection 2(c) would advance the dates but retain the present scheme for phasing out the student loan authorizations. For the three fiscal years following the last specific year's authorization, such sums would be authorized to be appropriated as are necessary to continue to provide loans to students who began their health profession training with a loan under this program.

V. SCHOLARSHIP GRANTS

Section 4 of the bill would (1) amend the present formula for scholarship grants, (2) extend the scholarship grant program through fiscal year 1976, and (3) raise from $2,500 to $5,000 the maximum limit on scholarships in the case of disadvantaged students described in the Outreach Program (Part H of section 799a).

Scholarship Grant Formula. Subsection 4(a) of the bill would change the formula for scholarship grants to schools. The present formula provides a sum equal to $2,000 multiplied by one-tenth of the enrollment, that is, $200 for the scholarship fund based on each student enrolled. This provision would add to the scholarship fund $2,500 based on each disadvantaged student enrolled. It also would extend the scholarship program beyond fiscal year 1971, the last year authorized in present law, to fiscal year 1976.

Scholarship Grant Authorization. Subsection 4(b) and clauses (1) and (2) of Subsection 4(c) provide, comparably to the provisions in section 3(c)(2) of the bill regarding the loan program, for extension of the dates of the scholarship program and for a gradual phasing out of the grants to ensure that a student who began his training with a scholarship may be assisted through to completion.

Scholarship Limit Raised. Clause (3) of Subsection 4(c) would increase the maximum scholarship which can be awarded during a school year from $2,500 to $5,000 in the case of disadvantaged students.

S. 4299—INTRODUCTION OF A BILL RELATING TO COMMEMORATION OF WOODLAWN CEMETERY, CARBONDALE, ILL., AS SITE OF FIRST RECORDED PLANNED MEMORIAL DAY OBSERVANCE

Mr. SMITH of Illinois. Mr. President, I am introducing today a bill to authorize the Secretary of the Interior to erect an historical marker in or near the Woodlawn Cemetery at Carbondale, Ill., designating such cemetery as the site of the first recorded planned Memorial Day observance.

It is especially fitting in my judgment that at this time of political division we should make a concrete demonstration of our dedication to this country. I can think of no more fitting tribute than to authorize the erection of a historic marker at Carbondale, Ill., the site of this, the first Memorial Day observance. According to the sketchy records still available, John A. Logan on April 29, 1866, spoke at that first observance. There for the first time a formal commemoration of the American war dead was made. On that first Memorial Day, 219 Civil War veterans met at the Carbondale Methodist Church and marched to the Woodlawn Cemetery to decorate the graves of their comrades who lost their lives in the War Between the States.

Mr. President, I believe it is especially appropriate that this marker be placed in Carbondale for another reason: Carbondale, Ill., is located in the southern part of Illinois. At the outbreak of the Civil War this town was subject to heavy pressure from both southern and northern sympathizers. In fact, a southern company was organized in that area, despite the fact that Illinois had earlier

declared for the Union. Significantly, when the war ended, survivors from both sides returned home and lived together in the same community.

I submit, Mr. President, that this example of rededication to the cause of national unity should be an example for us in remembering that first celebration. I am proud to introduce this bill for that very worthwhile goal.

I ask unanimous consent that a selection of newspaper clippings and other documents relating to the first celebration of Memorial Day in Carbondale, Ill., be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. FANNIN). The bill will be received and appropriately referred; and, without objection, the articles will be printed in the RECORD.

The bill (S. 4299) to authorize the Secretary of the Interior to erect an historical marker in or near the Woodlawn Cemetery, Carbondale, Ill., designating such cemetery as the site of the first recorded planned Memorial Day observance, introduced by Mr. SMITH of Iliinois, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The articles, presented by Mr. SMITH of Illinois, are as follows:

THE 100TH MEMORIAL DAY, CARBONDALE, ILL., MAY 30, 1968

"Let us then, at the appointed time, gather around their sacred remains and garland the passionless mounds above them with the choicest flowers of springtime. Let us raise above them the dear old flag they saved from dishonor. Let us in this solemn presence renew our pledges to aid and assist those whom they have left among us, a sacred charge upon the nation's gratitude—the soldier's and sailor's widow and orphan."—General John A. Logan.

Memorial Day was established as a national holiday exactly a century ago, when the state of Illinois was celebrating its 50th anniversary as a member of that Union which so many Illinois men had lately died to save.

In 1868, discussions were in progress across the nation about some fitting way to honor the large number of soldiers who had been killed in the bloody battles of the Civil War, 1861–1865. General John A. Logan, second commander-in-chief of the Grand Army of the Republic, issued his famous general order which set the first Memorial Day observance in motion.

A date in May was selected so that quantities of flowers would be available—the 30th because the 31st happened to fall on Sunday in 1868.

Copies of the order were distributed across the nation by the Associated Press. Veterans belonging to the Grand Army of the Republic and other citizens responded enthusiastically in 27 states and the District of Columbia (where General James A. Garfield, later President, gave the principal address).

In subsequent years, the annual Memorial Day observance was broadened to honor those who died in other wars.

The City of Carbondale and Woodlawn Cemetery unite to provide a patriotic service for the families and friends of American Veterans.

Notice was taken some time ago to the fact that upon the death of a veteran, the arm of service of which he was a member, provides an American Flag which covers the casket during the funeral. Before interment, this flag is given to the veteran's family. It is rarely flown. Instead, it is put away and serves as a silent and sad reminder of a loved one.

In 1966, with John Allen, local historian, as its first president, the National Flag Bank was formed in Carbondale. Owners of memorial flags may send them to the Bank. Each flag is then assigned a period in which it is flown over Woodlawn, following which the donor receives an attractive certification of the act and the receipt of the flag, signed by the Mayor of Carbondale and the President of the Memorial Day Association. This year's president is Mr. Paul Biggers.

Flags may be given to non-profit groups needing them. When flags are worn out, they are destroyed with appropriate ceremony.

The Gold Book, kept available for examination at the City Hall, is a permanent record of the names and service histories of veterans for whom flags have been deposited, and the donors.

In the two years of its existence, over seventy flags, from many states, have been received and flown over Woodlawn.

GRAND ARMY OF THE REPUBLIC,
HEADQUARTERS,
Washington, D.C., May 5, 1868.

1. The 30th day of May, 1868, is designated for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country during the late rebellion, and whose bodies now lie in almost every city, village and hamlet church yard in the land. In this observance no form or ceremony is prescribed but posts and comrades will in their own way arrange such fitting services and testimonials of respect as circumstances may permit.

We are organized, comrades, as our regulations tell us, for the purpose, among other things, of preserving and strengthening those kind and fraternal feelings which have bound together the soldiers, sailors and marines who united to suppress the late rebellion. What can aid more to assure this result than by cherishing tenderly the memory of our heroic dead, who made their breasts a barricade between our country and its foes? Their soldier lives were the reveille of freedom to a race in chains and their death a tattoo of rebellious tyranny in arms. We should guard their graves with sacred vigilance. All that the consecrated wealth and taste of the nation can add to their adornment and security is but a fitting tribute to the memory of her slain defenders. Let no wanton foot tread rudely on such hallowed ground. Let pleasant paths invite the coming and going to reverent visitors and fond mourners. Let no vandalism or avarice or neglect, no ravages of time, testify to the present or to the coming generations that we have forgotten as a people, the cost of a free and undivided republic.

If other eyes grow dull and other hands slack and other hearts cold in the solemn trust, ours shall keep it well as long as the light and warmth of life remain in us.

Let us then, at the appointed time, gather around their sacred remains and garland the passionless mounds above them with the choicest flowers of springtime. Let us raise above them the dear old flag they saved from dishonor. Let us in this solemn presence renew our pledges to aid and assist those whom they have left among us a sacred charge upon the nation's gratitude—the soldier's and sailor's widow and orphan.

2. It is the purpose of the commander-in-chief to inaugurate this observance with the hope that it will be kept up from year to year while a survivor of the war remains to honor the memory of his departed comrades. He earnestly desires the public press to call attention to this order, and lend its friendly aid in bringing it to the notice of comrades in all parts of the country in time for simultaneous compliance therewith.

3. Department commanders will use every effort to make this order effective.

JOHN A. LOGAN,
Commander-in-Chief.

By order of N. P. Chipman,
Adjutant-General.

"Every man's life belongs to his country and no man has a right to refuse it when his country calls for it."—John A. Logan, *April* 29, 1866.

SEXTON JOHN GREEN'S MEMO OF FIRST MEMORIAL DAY OBSERVANCE

Memo

Decration, Was held here April, A D 1866 the last Sunday. Speaker's Was John logan. J. W. lane, Methodist preacher Who led in prear. coneal Ingersall, Master of the Day hog,s furnished by Dillengers boys. bred by John borgher. 219 comrades in line of march one fight, branson and russel, "Every Man,s life belongs to his contry And no Man has A right to refuse It When his contry Calls for It" Logan.

THE FIRST MEMORIAL DAY

This is an account of the very local beginning of the American institution of Memorial Day.

Ambrose Crowell, Russell Winchester and Jonathan F. Wiseman, three returned veterans who had served together in the recently ended Civil War, were early arrivals for worship services at Crab Orchard Christian Church, one mile south and four west of Carbondale, Illinois on Sunday morning, April 15, 1866. While awaiting arrival of others they were seated on the steps of the church, talking.

No one of them could have suspected that they soon would witness a simple incident that would lead to the formation of a national institution.

Seated on the church steps, they saw the widow of a former comrade in arms and her two small children approaching on the roadway. They thought it somewhat strange that the mother and children were carrying bouquets of freshly gathered flowers. The little group passed near the steps where Crowell, Winchester and Wiseman were sitting and turned into nearby Hiller Cemetery. There the mother and children removed brush and weeds from a burial plot and arranged their bouquets upon an unmarked grave. The three men were deeply impressed by the simple incident they had observed.

After the worship services were ended people lingered to visit and talk, as was the custom at country churches. The three men who had watched the little family group decorate a comrade's grave before the church services, went into the cemetery and began to clean the graves of other comrades, among them those of Abraham Hiller and Samuel Caswell, both of whom had died while in military service. Some from the lingering group joined in the work while others went to gather flowers to decorate other soldier graves.

Before the three men parted, Crowell suggested to Winchester and Wiseman that the graves of other comrades buried in nearby cemeteries should be cleaned and decorated in like manner, saying it would be an appropriate mark of respect. The three accordingly went to Carbondale together on the next day to see if the people there would in like manner clean and decorate the graves of some twenty soldiers buried in Woodlawn Cemetery near the eastern edge of town.

When this self constituted committee came to Carbondale on Monday, they first went to see Colonel E. J. Ingersoll, prominent business man and civic leader. Colonel Ingersoll heartily approved. Colonel D. H. Brush and other leading citizens of the town enthusiastically approved the proposed plan. A meeting therefore was called for Tuesday evening at the Methodist Church.

At the Tuesday evening meeting it was decided that the observance should be an all-day affair. The last Sunday in April, falling that year on the twenty-ninth of the month, was selected as the date. Colonel

Ingersoll agreed to serve as marshal of the day. The Dillinger brothers, prominent farmers in the Carbondale vicinity, volunteered to furnish hogs for a barbecue. Other farmers gave stock for the same purpose. John Borger, the town's baker, agreed to bake the bread.

Colonel Daniel H. Brush allowed those selected to decorate graves to gather available blooms from his well planted grounds, that then comprised the entire block where Brush School and the United States postoffice now stand. Wreaths were prepared in the northeastern corner of Brush's ground where the postoffice now is.

General John A. Logan, an outstanding military figure of southern Illinois, was chosen to deliver the principal address of the day. Others were designated to take care of various details. Information concerning plans for the day were sent throughout the countryside. People entered heartily into the plan for an observance of the day.

Participants began to arrive in Carbondale early on the morning of the twenty-ninth. The number gathered doubtlessly was the largest in the history of the town. Men who had served in the armed forces of the recently ended conflict met at the Methodist Church. There they were formed in ranks by Col. Ingersoll and marched to the cemetery. Two hundred nineteen men were in the line of march. General Logan marched with them.

At the cemetery, the Reverend J. W. Lane, pastor of the Methodist Episcopal Church, led in prayer. Colonel Brush made a short talk, explaining the purposes and significance of the day. Colonel Ingersoll presented the speaker.

Logan, then forty years old and nearing the height of his influence in state and national affairs, was an eloquent and forceful speaker. He was particularly so when the elements of patriotism and tribute to the military were principal themes.

No copy of General Logan's speech is known to have survived.

Fragmentary written records indicate it as one of his supreme efforts. Only one quotation written then has been found. This one is of Josephus's *Antiquities of the Jews*, owned by James Green, a cousin of General Logan, and at that time caretaker of Woodlawn Cemetery.

It was Green's practice to record events on the margins and in blank spaces in his books. It was upon the flyleaf of the book mentioned recorded with other information about the events of the day in a copy that he made the entry concerning the 1866 Memorial Day services.

The sentence recorded must have been the climax of Logan's speech and impressively delivered to have been chosen by Green as the one to be recorded in his book. It was "Every man's life belongs to his country and no man has a right to refuse it when his country calls for it."

After Logan's address and the decoration of veterans' graves, people departed. The first Memorial Day in Carbondale, and so far as available records reveal, the first community-wide, organized Memorial Day in America had become history.

Tradition relates that the next year, 1867, saw another observance of the day in Carbondale.

Logan wrote to his cousin, the previously mentioned James Green, that he was going to ask the G.A.R., of which he was then Commander-in-Chief, to sponsor Memorial Day services over the nation and that he would suggest May 30, as a suitable date on which the ceremony should be observed. Logan accordingly issued the now famous General Order No. 11 on May 5, 1868. It asked for a Memorial Day and asked that it be observed on each succeeding May 30.

In compliance with this order another observance of the day was held in Carbondale on May 30, 1868. At three-o'clock the church bells rang, and people gathered at the various churches while the soldiers, about 150 in number, gathered at Hindman's Corner. They were commanded by Captain Frank H. Riggs. Their line of march passed the churches where large numbers of citizens joined them. Proceeding to the cemetery they were addressed by Rev. Clark Braden, pastor of the Christian Church, and later president or principal of Southern Illinois College that occupied the site of present day Lincoln Junior High School.

Rev. Braden was an eloquent speaker and by all accounts made a most effective talk. The returned soldiers then proceeded under the leadership of Captain Riggs to "laurel the graves" of their departed comrades.

As they came to each grave Captain Riggs paused and called aloud the name of the buried comrade and the unit with which he had served. At the one unknown grave he proclaimed, "Here rests a stranger—All that we know is that he gave his life for his country."

These ceremonies were followed by the address of Captain Issac Clements that drew praise for its "eloquency, pathos and beauty of language."

Rev. Andrew Luce, pastor of the Presbyterian Church then spoke. He remarked that the God of Battles, who carried the country safely through four years of blood-shed, still guarded and protected all. After a prayer asking the blessings of God upon the country and its defenders, the procession reformed and marched to the Public Square, where they "broke ranks" and returned to their homes.

On April 13, 1869, Logan who had again been chosen to head the Grand Army of the Republic issued General Order 21, calling upon all posts to properly observe Memorial Day on May 30. The exact process of its observance was not prescribed. The press, the Congress of the United States, and all who had so freely helped in previous observances were thanked. Since May 30 occurred on Sunday, it was stated that the observance of the day might be made on Saturday, May 29, if such was desirable.

The New Era of Tuesday, May 25, 1869, carried the following item:

"At home—Gen. Logan arrived home on last Saturday, much improved in health. Thousands of true hearts welcomed the gallant Logan to his native hills."

According to previous arrangements a fourth observance of Memorial Day, that name then beginning to displace that of Decoration Day, was observed at Woodlawn Cemetery. The services had been arranged for Saturday, May 29, as G. O. No. 21 had indicated that they might, but rain forced their postponement to Sunday, May 30. Even then the weather threatened to prevent their being held. In the afternoon the sun came out and people began to gather. Hurried preparations were made and the planned program was carried out as nearly as was possible.

Soldiers met at the depot. Again they were formed in columns under the command of Col. E. J. Ingersoll. Once more they were joined there by Gen. Logan and marched to the cemetery. The glee club sang an ode, "Decoration Day" after this came a prayer offered by Chaplain Cole of the old 31st Illinois. The ceremony of decorating the graves of departed comrades was carried out. Following this twenty seven graves, names given, were decorated. Logan was next presented and addressed the crowd gathered. When he had finished, a closing hymn was sung and the benediction was invoked by Rev. J. W. (W. J.) Grant, pastor of the Methodist Episcopal Church. The people then departed, Carbondale had completed its fourth observance of Memorial or Decoration Day at Woodlawn Cemetery.

With some slight variances in dates, Memorial Day had become a national institution.

It is highly proper than this centennial of the 1866 observance be observed.

[From the Daily Egyptian, May 27, 1967]

PARADE BEGINS HOLIDAY: THREE CIVIL WAR VETERANS RECEIVE CREDIT FOR STARTING MEMORIAL DAY IN CARBONDALE

(By Barbara Wilson)

Organized Memorial Day services claim to have their beginning in 1866 in Carbondale, according to John W. Allen, SIU historian.

On a Sunday early in April of that year, three veterans of the War between the States were waiting for church services to begin at Crab Orchard Church. During their vigil, the men noticed the widow of one of their former comrades and her children entering the nearby cemetery.

As the three continued to watch, the mother and her children cleared off the soldier's grave and placed a bunch of flowers on it. So impressed by this incident were the three men that they, too, gathered flowers and decorated the graves of several other Civil War veterans buried in the cemetery.

Later, the men, Ambrose Crowell, Russel "Spade" Winchester, and Jonathan S. Wiseman, went to discuss with Colonel E. J. Ingersoll, prominent citizen of Carbondale, the possibility of decorating the graves of other veterans in the cemetery in Carbondale.

Soon plans were being made for an all-day affair, with Ingersoll elected marshal-of-the-day. Gen. John A. Logan was chosen to be the main speaker. April 27, 1866 was the day designated as the first Memorial Day, then known as Decoration Day.

On that day, under the direction of Colonel Ingersoll, 219 veterans in and around Carbondale formed into rank and marched to Woodlawn Cemetery. Opening the program with prayer was J. W. Lane, then pastor of the Methodist Episcopal Church. Col. Daniel H. Brush, Civil War veteran and prominent citizen of Carbondale, told of the purpose and significance of the occasion.

Logan, famous Illinois military man during the Civil War period, then gave his address. The only recorded quotation of his speech to be found is: "Every man's life belongs to his country, and no man has a right to refuse it when his country calls for it."

This year's Memorial Day observance will feature J. Lester Buford as the main speaker, with other activities being nearly the same as those initiated a century ago.

Carbondale's 101st Memorial Day celebration will start with a parade. Leaving the Carbondale Community High School at 9 a.m., the parade will march to Woodlawn Cemetery.

The prelude to the first Memorial Day, done in pantomime, will follow the introduction of David H. Keene, mayor of Carbondale.

Buford will give his address following Allen's speech on "Woodlawn's Place in History."

Several choral numbers will be presented by the Rockhill Baptist Church choir. There will also be the presentation of a book of records the "gold book", and the dedication of the "Woodman of the World" plaque.

Commemorating a practice which started with the first Decoration Day in 1866, wreaths will be placed on the graves of patriotic Americans. As with that first memorial observance, this year's Memorial Day program will close with a benediction given by one pastor representing all faiths.

[From the Southern Illinoisan, May 31, 1966]

MEMORIAL DAY CENTENNIAL OBSERVED: FLAGS FLY FOR WAR DEAD

(By Helen Coombs)

The first flag of the first National Flag Bank whipped in the freshening breeze in Carbondale Monday.

The Stars and Stripes was hauled to the top of the pole, then lowered to half mast.

A crowd was in Woodlawn Cemetery for the dedication of the memorial flag bank on the centennial anniversary of the founding of Memorial Day in the same cemetery.

A parade of bands, twirlers, scouts, veteran's groups and their auxiliaries and equestrians opened the day.

Cast members of the memorial pageant "Epilogue To Glory" in costumes of the Civil War era danced in the street at pauses along the parade route to the cemetery. They performed the pageant Monday afternoon and night.

It is good to recall and honor the past and to remember and honor and build from it, dedication speakers said.

"Give me a land with lays and legends," John Allen, president of the sponsoring Carbondale Memorial Day Association said.

"Woodlawn has its place in history."

For Allen the Memorial Day observance was the culmination of dreams from a lifetime study of history and legends of Southern Illinois.

The day was a finale to his helping establish Woodlawn's historic right to claim the first Memorial Day, and to his planning for Monday's observance.

Army Reserve Capt. Ernest Klein, a Special Forces chaplain from Huntington, Ind., dedicated the flag bank as a tribute to all American military men.

Capt. Klein, the Army's official authority on Memorial Day celebrations, said 18 other communities claim to have founded the day. But his historical research leads to Woodlawn Cemetery, he said.

State Rep. Clyde Choate, Anna, a Medal of Honor recipient, accepted the first flag from Mrs. Burrell Smith, Carbondale a founder of the flag bank.

Retired Army Brig. Gen. Oscar Koch read General Order No. 11 of the Grand Army of the Republic, signed by Gen. John A. Logan, which proclaimed Memorial Day almost a century ago. Koch has been the association's general coordinator.

Carbondale Mayor D. Blaney Miller was master of ceremonies. He introduced U.S. Rep. Kenneth J. Gray, D-West Frankfort, who later addressed guests at a Memorial Day luncheon.

Gray is working for the passage of a bill to declare Carbondale the official site of the first Memorial Day.

A choir from the Rock Hill Baptist Church had "The Battle Hymn of the Republic" among its selections.

Negro and white children together inched into the shade-speckled sunshine beneath the speakers' stand for a closer view of the flowered wreaths and flags.

At Pleasant Grove Memorial Cemetery between Murphysboro and Carbondale, 165 flags were displayed in honor of deceased veterans.

Joint memorial services were held in Marion by the Veterans of Foreign Wars and the American Legion.

Herrin Prairie American Legion Post and the Herrin VFW held joint services at the Doughboy statue in Herrin Park.

CARBONDALE MEMORIAL DAY ASSOCIATION, INC.

Carbondale, Ill.

The Carbondale Memorial Day Association requests the pleasure of your company at the observance of the 100th Anniversary of the Founding of Memorial Day at Carbondale, Illinois on Monday, May 30th, 1966.

The events of the day include a parade, starting at the Carbondale Community High School building at West Oak and North Springer Streets at 9:30 A.M., proceeding via Main Street to Woodlawn Cemetery where memorial services will be held.

To commemorate the historic founding as a "first" in the nation, the Association announces with pride another "first"—the dedication of the National Flag Bank at which the first flags donated to the bank will be honored. The services will feature the massed colors and guards of the services of the United States, the Army, Navy, Marine Corps, Coast Guard and Air Force. A national authority on Memorial Day will give a brief dedicatory talk; the flag will be raised by a holder of the coveted Congressional Medal of Honor; the inspiration of the first decoration day at Crab Orchard Christian Church will be presented in pantomime; suitable music and singing by a local choral group and martial airs by bands will complete the program.

In the afternoon and evening the Southern Illinois University Department of Theatre cooperates in presenting a historic pageant written and produced especially for the occasion at the theatre in the new Communications Building on campus. No seats will be reserved. Admission $1.00 (children under 12 years of age, matinee only, 50¢). As the theatre capacity is limited to 600 seats, advance reservations are urged.

A formal luncheon, honoring distinguished guests will be held immediately following the cemetery services, at the Southern Illinois University Ballroom University Center. Tickets by advance sale only, $2.00 per person, not later than May 23rd, 1966.

Please enclose self-addressed envelope with your reservation orders.

Yours sincerely,

JOHN W. ALLEN,
President.

[From the Southern Illinoisan, May 29, 1966]

GENERAL LOGAN SPOKE 100 YEARS AGO AT WOODLAWN: AREA TO HONOR WAR DEAD, OBSERVE DAY'S CENTENNIAL

(By Helen Coombs)

Civil War Gen. John A. Logan spoke of patriotism at what may have been the nation's first Memorial Day 100 years ago in Carbondale's Woodlawn Cemetery.

The same spirit of reverence for the military dead will guide memorial services Monday in the same cemetery.

This year Army Reserve Capt. Ernest C. Klein of Huntington, Ind., a chaplain attached to the Special Forces, is the main speaker.

He served with the 95th Infantry Division in Germany during World War II, and earned the Combat Infantry Badge as an enlisted man.

PARACHUTIST

At 31 he entered Army parachute jump school. Now a senior parachutist, he has made more than 40 jumps.

Capt. Klein was assigned to the Special Forces as a chaplain in 1963. The famous Green Beret now tops his uniform.

But his Green Beret is centered with a cross.

Born in Cullman, Ala., 42 years ago, Klein received his bachelor's degree at Franklin and Marshall University in Lancaster, Pa., and did graduate work at Edes Theological Seminary in Webster Groves, Mo.

He is now pastor of St. Peter's United Church of Christ in Huntington, Ind. His previous pastorate was in Centralia.

He is attached to the Army reserve group headquartered in Chicago and is the only Special Forces chaplain in the western part of the United States.

Capt. Klein came to the attention of the Carbondale Memorial Day Association for another reason as they worked to plan the centennial.

AUTHORITY ON DAY

He was referred to retired Army Brig. Gen. Oscar Koch, Carbondale, as the Army's authority on Memorial Day.

Koch became interested in Carbondale's claim to the first Memorial Day soon after he moved to the city about two years ago.

He and John Allen, Southern Illinois historian living in Carbondale, began an exhaustive investigation. They ended the study, and organized the Memorial Day Association, with the idea that Carbondale was the first.

Allen became president of the non-profit corporation. Koch has acted as general coordinator.

Cities in Virginia, Georgia, Mississippi and Pennsylvania had claimed to have had the first Memorial Day.

One of these was Boalsbury, Pa., where Capt. Klein served an early pastorate. It was there he began his hobby of Memorial Day study. He began his now massive, cross-indexed files.

His findings supported those of Koch and Allen.

SEXTON'S NOTE

The Memorial Day Association's documentary proof was a photograph of a notation by James Green, sexton at Woodlawn Cemetary.

Using the spelling typical of the educational level of the era, Green wrote in 1866:

"Decration was held here April 1866 . . ."

He continued to note a portion of Gen. Logan's speech:

"Every man's life belongs to his country and no man has a right to refuse it when his country calls for it."

The notation on the flyleaf of a book was found in 1930 and photographed for historical reference.

But the association's first concern is the spirit of Memorial Day rather than the absolute proof of the origin.

The morning parade and afternoon and evening performances of the pageant "Epilogue to Glory" have memorial themes.

Rep. Kenneth J. Gray, D–West Frankfort, will give a memorial speech at luncheon.

The highlight of the centennial will be Capt. Klein's morning dedication of flags donated to fly over Woodlawn Cemetary in memorial.

ADDITIONAL COSPONSORS OF BILLS

S. 3354

At the request of the Senator from Washington (Mr. JACKSON), the Senator from Oklahoma (Mr. HARRIS), the Senator from Montana (Mr. METCALF), and the Senator from Texas (Mr. YARBOROUGH) were added as cosponsors of S. 3354, to amend the Water Resources Planning Act (79 Stat. 244) to establish a National Land Use policy.

S. 3822

At the request of the Senator from Utah (Mr. BENNETT), the Senator from Michigan (Mr. GRIFFIN) was added as a cosponsor of S. 3822, the Credit Union Insurance bill.

S. 4106

At the request of the Senator from West Virginia (Mr. BYRD), on behalf of the Senator from Washington (Mr. MAGNUSON), the Senator from Maryland (Mr. TYDINGS) and the Senator from New Hampshire (Mr. MCINTYRE), were added as cosponsors of S. 4106, the National Health Service Corps Act of 1970.

S. 4154

At the request of the Senator from New Jersey (Mr. WILLIAMS), the Senator from Maine (Mr. MUSKIE) was added as a cosponsor of S. 4154, to assist in the provision of housing for the elderly, and for other purposes.

S. 4246

At the request of the Senator from New Jersey (Mr. WILLIAMS), the Senator

from Maine (Mr. MUSKIE), was added as a cosponsor of S. 4246, to authorize a special emphasis transportation research and demonstration project program.

ADDITIONAL COSPONSORS OF AMENDMENTS

AMENDMENT NO. 796 TO H.R. 16311

At the request of the Senator from Montana (Mr. METCALF), the Senator from Oklahoma (Mr. HARRIS) was added as a cosponsor of Amendment No. 796 to H.R. 16311, the Family Assistance Act.

AMENDMENT NO. 846 TO H.R. 18546

At the request of the Senator from Illinois (Mr. SMITH), the Senator from Colorado (Mr. ALLOTT), the Senator from Maryland (Mr. MATHIAS), and the Senator from Michigan (Mr. HART) were added as cosponsors of Amendment No. 846 to H.R. 18546, to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes.

NOTICE OF HEARING ON EXECUTIVE REORGANIZATION

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Connecticut (Mr. RIBICOFF), I announce that the Subcommittee on Executive Reorganization will hold a hearing on Reorganization Plan No. 4 of 1970, on September 1. The hearing will be in room 3302, New Senate Office Building at 10:30 a.m.

ADDITIONAL STATEMENTS OF SENATORS

A PLAN FOR PULLING BACK FROM SOUTHEAST ASIA

Mr. JORDAN of Idaho. Mr. President, when President Nixon took office in January of 1969 American foreign policy was bogged down throughout the world with an overburden of troop commitments. He inherited a war involving 536,000 Americans in South Vietnam and a total troop commitment of 912,000 throughout the Pacific and Asia. This is an overwhelming figure. It means that nearly 1 million American men were serving in the U.S. Armed Forces stationed for duty in the Far East.

Six months later, in June of 1969, on the island of Guam, President Nixon set forth the Nixon doctrine, a mature and far-reaching policy to untangle what had become a frighteningly vulnerable percentage of American Armed Forces committed into the Asian world. The Nixon doctrine outlined clearly that American policy will be to assist our friends and allies economically and materially to build themselves, withdrawing American military manpower so that our allies can have the opportunity to govern themselves, their area of the world, and to become equal partners with the United States in assuming the role of mediator for international stability.

The effects of this policy have already begun to be felt in Asia. The President has cut that initial figure of 912,000 American troops to 770,000 American troops and, if present estimates are correct, that figure will be reduced by the end of President Nixon's first term to 272,500 American troops. That figure would roughly mean that in a span of 4 years time the President will have cut our military committment by three-quarters of a million men. This return to a foreign policy which has guided the United States over nearly two centuries and kept her out of the business of other nations shows the concern the President has for the lives of the American people. And it shows as well the assessment by the administration that Asia is ready to shoulder the burden of her own foreign policy.

The U.S. News & World Report of August 31, 1970, contains an article breaking down this dramatic shift, country by country. I ask unanimous consent that the article be printed in the RECORD as being one of the clearest indications of the firm foreign policy upon which the United States is now embarked.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEYOND AGNEW MISSION: A U.S. PLAN FOR PULLING BACK FROM ASIA

It was a clear and direct message that Vice President Spiro Agnew carried from the White House on his swing through the Far East and Southeast Asia. In sum:

The American role as guardian for all free Asia, constant since the end of World War II, is coming to an end more rapidly than most people think.

As the Pitcogram on these pages shows, plans are under way to reduce drastically the number of U.S. forces in the Far Pacific. As many as 500,000 of the 700,000 Americans now serving in that part of the world will probably be brought home by the end of 1972.

Force of the Nixon Doctrine: Asia allies are being told they must face up to the fact that the Nixon Doctrine, tentatively outlined in June a year ago by the President of Guam, now is the keystone of U.S. policy. That policy rests on the promise of material aid for allies in trouble, and a pledge of protection in case of attack by a nuclear power. But it also makes clear that the U.S. can no longer be counted on to furnish ground-combat troops for wars in Asia.

Four stops were on the Agnew schedule between Augucst 22 and 30—South Korea, Taiwan, South Vietnam and Thailand. All are key allies concerned with the U.S. pull-back.

South Korea, for example, fears that any sizable reduction in U.S. troop strength in that country—it totals 60,000 men in two divisions—will invite invasion by North Korea.

It was Mr. Agnew's mission to bolster the confidence of the South Koreans and other allies that, despite impending cuts, Asia was not being abandoned to the Reds.

In the case of South Korea, strategic U.S. studies have shown that a cut in U.S. troop strength, if balanced by an increase in U.S. air power in South Korea and more funds for modernizing Seoul's Army, will not weaken the South.

Importance of South Vietnam: Key to the pace of withdrawal throughout Asia depends on how fast the U.S. can bring remaining troops home from South Vietnam. Mr. Nixon has already cut strength there from 536,000 men to 400,000 and announced further reductions to 284,000 by next May. Administration sources hint strongly that the rate will be speeded up next spring, leaving a residual force of about 50,000 men in Vietnam at the end of 1972.

As fighting forces leave Vietnam, reductions will be permitted at air and naval bases, supply depots and hospitals in nearby countries. On Taiwan, for example, a reduction is forecast of at least 40 per cent in U.S. strength. U.S. forces in Thailand have already been trimmed by 6,000 men, and other reductions will follow as bombing missions supporting the war in Vietnam and Laos are cut back.

Okinawa, which the U.S. at one time hoped to retain as a strong point facing Red China, is being returned to Japan in an effort to end anti-American agitation there and in Tokyo, and U.S. forces could be cut by half by 1972.

In Japan itself, cuts are starting at military hospitals, airfields and supply centers. The U.S. will turn back 54 more bases in that country and may reduce strength to 20,000.

In the Philippines, withdrawal has been announced of 6,000 Americans by next June—and more will leave as Navy and Air Force support for Vietnam is diminished.

A year ago, some of these countries were clamoring for the U.S. to leave. Now the tune is changing. It was left to Mr. Agnew, in these circumstances, to explain that there is no turning back from the Nixon Doctrine, that two years from now the U.S. military role in Asia will be far different from the one Mr. Nixon inherited as President.

AMERICAN FORCES IN THE PACIFIC AND FAR EAST

	At start of Nixon administration	Today	At end of Nixon's term (estimate)
South Vietnam	536,000	400,000	50,000
South Korea	55,000	60,000	30,000
Thailand	45,000	42,000	10,000
Japan	41,000	39,000	20,000
Okinawa	40,000	55,000	30,000
Philippines	30,000	25,000	13,500
China (Taiwan)	15,000	9,000	9,000
Guam	10,000	10,000	10,000
Naval forces in Western Pacific	140,000	130,000	100,000

THE 221ST ANNIVERSARY OF BIRTH OF GOETHE

Mr. SCOTT. Mr. President, Friday marks the 221st anniversary of the birth of Johann Wolfgang von Goethe. One senses the deep emotion, feels the power, and experiences the vitality embedded in the words of this great German poet. Goethe transcends barriers of language, and establishes a catharsis with all who read his works.

Goethe's life, full of both disappointments and grand achievements, is reflected in his writings, ranging from the Anacreontic and pastoral poetry of his early life to the great perceptive dramas of "Faust" and "Egmont," written by a more somber, older Goethe.

But Goethe, more than a writer, was able to master most domains of human activity and knowledge. His was one of the last of universal minds, standing on the brink of an era of rapidly expanding knowledge which has made forever impossible the universality of interest and sympathy which distinguishes him. Goethe was an accomplished statesman, political economist, theater-director, drama critic, philosopher, and scientist.

This diversity is a tribute to his greatness. He is a poet, "for all time." He is universal; yet, he is still German. He puts into words the aspiration of peoples when he said:

Was du ererbt von deinen Vätern hast,
erwirb es, um es zu besitzen! (*Faust* P. 30).

Translated into English this means:

Earn what you have inherited from your forefathers if you would really possess it.

THE STEEL IMPORT THREAT

Mr. MOSS. Mr. President, the world trade situation in steel, as it affects the American steel industry, and all of its people, has reached a very critical posture.

I would like to review the situation for you, but first, I would like to recall that this is by no means the first time I have spoken in this body on the threat of steel imports to our domestic industry. I have also appeared a number of times before the Senate Finance Committee. The thrust of my comments in each instance has been the same—foreign steel imports must be kept within reasonable limits if our domestic steel industry is not to suffer serious harm.

I have been particularly concerned about the effect of the high level of imports from Japan on west coast markets because this imposes a special threat to the growth of the steel industry in Utah and in other Western States. The Geneva Steel Works, near Provo, traditionally has supplied about 25 percent of the total western steel market's need for structural, plate, hot rolled sheets, and tubular steel.

However, in the last few years the imports from Japan has expanded in these types of steel so tremendously that they have been cutting deeply into Geneva's markets. Unless firmer action is taken, steel import tonnage from Japan will reach a new record in 1970.

I would like to review with the Senate at this time three aspects of the world trade situation on steel.

First, I want to bring Senators up to date on the facts regarding total steel imports into, and steel exports from, this country;

Second, I shall review the economics of the steel trade situation as they bear on the industry;

Third, I wish to discuss the voluntary limitation program on steel imports and the urgent need either for a prompt strengthening of that program or, failing that, for legislative action.

In 1968, during a year of labor negotiations in steel, imports of steel surged to a record 18 million tons, almost 17 percent of consumption. That year, our steel trade deficit was $1.6 billion. In 1969, steel imports totaled 14 million tons, about 13.7 percent of consumption. That produced a steel trade deficit just below $1 billion.

With shipments for 1970 forecast at a level of about 90 million tons for the domestic steel industry, and with estimated imports of 13 million tons, we expect to continue to run a steel trade deficit just under $1 billion in 1970.

Despite the fact that our steel exports have increased to an expected 7 billion tons for the year, in response to a sharp increase in world demand, steel imports this year will be more than 13 percent of steel consumption.

The projected high percentage of imports to consumption and the projected high dollar deficit have been caused in part by an increase in steel prices in other major steel producing nations to a much greater extent than in this country. Accordingly, the value per ton of steel imports into the United States has risen. Additionally, a shift in imports to products of higher value has occurred with emphasis on speciality products, mainly stainless, alloy, and tool steels.

These factors, combined with the low value of our semifinished steel export products, will keep the dollar deficit in steel trade extremely high in 1970.

Thus, the impact of net steel imports in 1970, by market share and by dollar trade deficit, will be at about the same level as in 1969, the second highest year of steel import penetration on record.

The American steel industry faces important disadvantages in terms of foreign competition and steel imports into the United States. Forty-two percent of the world steel capacity outside the United States is government owned. In the free world, excluding the United States, 28 percent of steelmaking capacity is government owned in whole or in part. Because of these and other factors, foreign steel producers voluntarily agreed to limit their exports to the United States. Under the limitations, the European and Japanese producers estimated that the total imports of steel into the United States for 1969 would be 14 million net tons and pledged that there would be no significant shifts in product mix or geographic distribution. Steel imports in 1969 were 14 million tons, but changes occurred in the product mix principally in shifts to high-value steel products.

Specialty steel imports actually increased in 1969, rather than dropping 22 percent from the 1968 level, as was the case overall. In addition, the failure to distribute steel imports along existing prior geographic patterns adversely affected our western producers, who had imports in 1969 into the area 25 percent greater than the level anticipated under the limitations.

During the first quarter of 1970, the shift to products of higher dollar value has continued. Both stainless steel and tool steel imports increased in the first quarter.

The limitations, however, have not had an inflationary impact on steel prices or products. Steel prices have gone up less since the limitations began than the index for all metal products and steel profits were lower in 1969, and in 1970 to date, than in 1968.

Parenthetically, I note the industry had a net return of 7.9 percent on equity in 1968; 6.5 percent in 1969; and lower than that in the first half of 1970. Steel is still one of the lowest profit industries in America.

Moreover, since the inception of the voluntary limitation program in 1969, prices of steel in the United States have risen between January 1969 to May 1970 by 9.1 percent, while market prices of steel outside the United States have gone up by 19 percent in Germany; 13 percent in France; 18 percent in the United Kingdom; and in Japan 15 to 50 percent, depending on the product.

Mr. President, this situation regarding steel imports into the United States requires prompt Government action. Legislative action to impose quotas would far more effectively solve this critical problem than U.S. Government reliance on foreign industry commitments.

The product mix and geographical distribution commitments of the voluntary limitations were not adhered to and the resulting increase of steel imports in the West, as I have already indicated, is of particular concern to me.

In this Congress, as in past Congresses, I am one of the sponsors of bills before the Senate to limit steel imports.

On February 25, 1969, in the first few months of the first session I joined with 32 other Members of the Senate to sponsor S. 1164, a steel import bill introduced by Senator HARTKE.

I was very much interested to note that on July 28, 1970, my colleague from Utah in the House, Representative BURTON, introduced a bill which would have the same purpose. I welcome him aboard.

It is clear that we are fast approaching a point where the enactment of legislation to limit imports is the only effective answer. I hope that such action can be taken by both Houses of Congress this session—I shall certainly press for it.

PROBABLE SHORTAGES OF ENERGY

Mr. TOWER. Mr. President, on August 17, 1970, the Washington Post published an article entitled "Fuel-Short U.S. May Face Plant Closings, Rationing," written by Richard Harwood.

Mr. Harwood is to be praised for writing this timely article. In his comments, he explores the dimensions of the probable shortages of energy caused by various national and international influences.

The article should help to alert the public to the fact of probable shortages of energy in the months ahead. By being made aware of such shortages of energy and by knowing the reasons for these shortages. I hope that those affected will react in a calm and reasoned manner.

I ask unanimous consent that Mr. Harwood's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUEL-SHORT UNITED STATES MAY FACE PLANT CLOSINGS, RATIONING

(By Richard Harwood)

The Boston Gas Co. announced weeks ago that it would import fuel from Algeria to meet its needs for the coming winter. It could not buy in the United States the natural gas it required.

At about the same time, the town of Braintree, Mass., asked for bids on fuel oil to run its generating plant for another 12 months. No bids were received.

The East Ohio Gas Co., serving Cleveland and other industrial centers, last month issued a warning. If there is severe and widespread cold this winter, factories will have to shut down to provide gas to heat homes, schools and hospitals.

Hundreds of miles to the south, the country's largest electric producer—the Tennessee Valley Authority—is today desperately seeking coal to run its steam plants. Its

normal 60-day stockpiles have dwindled to an average supply level of only 11 days. Some large plants have only a four-day coal supply on hand.

These are symptoms of the fuel "crisis" in the United States today. All over America utility companies, pipeline distributors and oil, gas and coal producers are talking about energy shortages. Some forms of rationing already have been imposed. Other forms may become necessary if the fragile balance between fuel supply and demand is titled the wrong way.

Wildcat strikes in the coal fields, pipeline breakdowns, railroad car shortages, trouble in the Middle East, a maritime strike, or an unusually coal winter could produce severe fuel problems affecting large segments of the population.

Barring developments of that kind, however, most Americans are not likely to suffer from the fuel "crisis" this winter. The average homeowner will have the heat and electricity he has grown accustomed to, according to the Federal Power Commission and according to the utility companies.

But he may be affected in other ways. Factory shutdowns in some areas are a distinct possibility. They occurred last winter in Ohio, New York, Pennsylvania, South Carolina, Georgia, Florida and other states. General Motors, Ford, U.S. Steel, the Atomic Energy Commission, Sylvania Electric and public school systems were among those affected.

Higher utility bills are another likely prospect. The Tennessee Valley Authority recently announced electric rate increases that will add about 25 per cent to consumer utility bills. The prices of industrial fuels, the President's Council of Economic Advisers reported last week, "have advanced with exceptional rapidity during the past year and especially during the first half of 1970." Coal prices are rising at an annual rate of 56 per cent. Fuel oil has been going up at an annual rate of 48 per cent. Big increases in natural gas prices are expected. They may cost consumers $1 billion a year.

"Never before in this century," said John Emerson, an economist for the Chase Manhattan Bank, "have we faced such serious and widespread shortages of energy. These shortages are upon us now."

The chairman of the Federal Power Commission, John Nassikas, confirmed that assessment in a speech last week. The demand for natural gas in the winter of 1970–71, he said, will exceed the supply by 3 billion cubic feet per day. ". . . The basic fossil fuel shortage," he said, "is the most acute phase of our developing energy crisis."

That is evident from what is happening all over the country. Huge utility companies—in Chicago, Washington, Baltimore and other cities—have started rationing their output. In the case of Washington and Baltimore, no new industrial customer can get service if his requirements exceed 300,000 cubic feet of gas per day. No old customer can buy more than 300,000 cubic feet per day of additional gas.

In the past 10 months, East Ohio Gas has turned down orders by steel, chemical and rubber companies for an additional 27 billion cubic feet of gas. Panhandle Eastern Pipeline Company has warned its distributors in the industrialized Great Lakes region that "they have need for volumes of natural gas far in excess of our present ability to supply."

That that these shortages should have come about in a trillion-dollar, peacetime economy is inconceivable to many people. U.S. coal deposits are virtually inexhaustible. There are enormous untapped gas and oil reserves both in this country and abroad. Moreover, the United States has the most sophisticated and extensive fuel production and distribution systems in the world.

Still the squeeze is on and the explanations for it are as confusing as the fact of the squeeze itself.

The natural gas industry, with nearly 40 million residential and commercial customers, blames most of its problems on the Federal Power Commission. FPC price ceilings on interstate sales have been so low, the industry claims, that it has been unprofitable to find and produce the natural gas the country needs. That is the view of the industry's allies in Congress, including Sen. John Tower (R.-Tex.), who declared last week that the "most important reason for the decline (in natural gas production) has been 15 years of chaotic regulation by the Federal Power Commission."

The commission itself no longer rejects that argument out of hand. It has taken steps to permit certain price increases and is aware, Chairman Nassikas said last week, that it "must recognize the realities of the market . . . within a regulatory framework which recognizes the law of supply and demand."

A quite different explanation for the natural gas shortage has been suggested by Bruce Netschert, an economist with National Economic Research Associates.

He implied in recent testimony before a Senate subcommittee that the current shortages may be artificial. The industry, he said, has declined to hook up 500 producing wells in the Gulf of Louisiana to distribution pipelines. The inference was that a gas shortage adds clout to the industry's pleas for price increases.

The coal problem, the industry says, is largely the fault of the big electric utilities who became enchanted with the possibilities of nuclear power a few years ago and refused to sign long-term contracts for coal. Without such contracts, said the National Coal Association, mining companies were both unwilling and unable to expand production. When the nuclear boom failed to materialize and the utilities began clamoring for more coal, the capacity to produce it was simply not there, the association claims.

The fuel oil shortage is blamed primarily on events in the Middle East, which for many years has been a major supplier to the American East Coast. A bulldozer sliced through the Trans-Arabian pipeline—by accident or design—in Syria a few weeks ago. This cut off 500,000 barrels a day that were going to tankers in the Mediterranean Sea.

To take up that slack, oil is now being shipped from the Persian Gulf around the Cape of Good Hope, a trip that takes six to eight times as long as a voyage via the Mediterranean. The resulting demand for tankers has exceeded the supply and driven up the cost of East Coast deliveries tremendously.

Another development was the decision in May of the Libyan government to cut production by 575,000 barrels a day. This was low-sulfur oil, much in demand on the East Coast since stringent air pollution regulations were imposed.

These supply deficiencies are difficult for U.S. producers to overcome because their production of residual fuel oil has always been limited. It is a low-profit product.

The growing national concern with air and water pollution is another factor in the fuel "crisis".

The cleanest fuel is natural gas and the demand for it by utilities and industrial customers has risen as dramatically as the demand for clean air. The demand for low-sulfur coals and fuel oil has also grown rapidly; in some cases, more rapidly than the supply.

Concern over the effect of thermal power plants on water quality has slowed down their construction and has further added to the demands on conventional fuel supplies.

The broad outlook for the winter, according to the FPC, is for occasional industrial fuel shortages but no hardship for residential consumers. That forecast assumes no major interruptions in fuel deliveries.

AMERICAN CATTLEMEN SEEK WIDER EXPORT MARKETS

Mr. SYMINGTON. Mr. President, the cattle industry is an important sector of our agricultural economy, accounting for approximately 30 percent of the cash receipts of farmers and ranchers in my State of Missouri. This industry generates great income for the rural economy and provides an important source of food for our people.

The American cattleman can take credit for supplying the consumer with plentiful quantities of high quality meat and meat products at a reasonably low cost. Our cattlemen have been in the forefront in applying modern science and technology to the cattle business. Gone is the day when cattle were judged according to their appearance in the show ring.

Today, performance testing, detailed recordkeeping and computers are the tools used to produce a better meat animal. How many pounds of beef will an animal produce, of what quality and, above all, at what cost? These are the important questions which modern cattlemen seek to answer.

As a result of the technical and managerial superiority of our cattlemen, foreign cattlemen wishing to improve their own herds look more and more to the United States as a source of high quality breeding animals. But for a variety of reasons, the exporting of American breeding stock in international trade remains small. Often, arbitrary restrictions are placed against the importation of our cattle because of alleged disease problems. In other instances, even more questionable methods are employed by foreign governments to exclude our cattle.

There is much we can do, however, to improve and facilitate the movement of our cattle to overseas markets.

Cattlemen in this country are interested in obtaining better quarantine facilities for cattle exports and more reliable medical procedures for insuring the safe movement of cattle between countries. At the same time, foreign governments must be ready to accept the idea that our cattlemen are no longer in turn willing to accept foreign meat shipments to the United States without any reciprocity. By reciprocity, I mean allowing American cattlemen their fair share of the breeding cattle market overseas.

It would be my hope, therefore, that soon we could look forward to the day when breeding cattle exports would be a big source of dollar earnings for this country in international trade.

In this connection, I ask unanimous consent that an editorial written by Mr. Jerry Litton, from the Litton Charolais Ranch near Chillicothe, Mo., and published in a recent issue of the "Charolais Bull-O-Gram" be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. CATTLEMAN IS GETTING THE SHORT END OF THE STICK

Three weeks of visiting farms and attending livestock meetings in England, Wales, Scotland and France plus previous trips abroad has taught me that Americans, while being respected for their ingenuity and success, are also often times looked upon as "easy to be taken". And no group of Americans are being taken more in this area of world trade than U.S. cattlemen.

The failure of the U.S. Government to look out for the interests of the U.S. cattlemen as it does other interests in the country and the failure of U.S. cattlemen to stand up and fight has resulted in a deplorable situation for the American cattlemen.

Charolais had been raised in a small area of France for over 200 years without even spreading to other parts of France in any significant numbers. And then the U.S. cattlemen got hold of Charolais and showed the world what they could do. And yet, France, not the U.S., has benefitted from these efforts. In spite of the fact that more Charolais are being produced in the U.S. than France and it was the U.S. that brought the breed to the forefront after 200 years of largely unknown existence in France, it is France, and more recently England, Ireland, Japan and New Zealand, that is making money in the export market.

One of the biggest potential markets for breeding stock in the world is Australia and Australians want American Charolais because of easier calving. But Charolais or Charolais semen can't be exported from the U.S. to Australia. Instead the Charolais are sent from France to England, then New Zealand and eventually the progeny to Australia.

What would an export market to Australia mean to American Charolais producers? June 6, 1970 a Charolais sale was held in Australia. The sale consisted of Charolais crossbreeds brought in from New Zealand. Included in the offering were 9 half-blood bred heifers out of Angus cows and a Charolais bull. They sold for an average of $7,020 each. Just think what your half-blood heifers would be worth if they could be exported to Australia.

Five bred heifers with one ¼ Charolais blood sold for prices between $2,340 and $3,510 each. Twenty-four half-blood Charolais bulls (17 head were 10 month old calves) sold for figures from $3,000 to $6,000 each. Straight Angus cows which had been bred to Charolais in New Zealand (all they had going for them) brought as high as $1,700 each.

When one sees half-blood Charolais females worth $300 to $500 in the U.S. selling for an average of $7,020 in Australia it does make one's mouth water. And it is even more disheartening when you realize that Australians want American Charolais.

Here are some facts to keep in mind—and perhaps to write to your Congressman about:

1. The U.S. Congress has just passed a bill, Senate Bill 2306, authored by Senator Roman L. Hruska of Nebraska, to build a quarantine station at a cost of several million dollars on an offshore island for the purpose of making it possible to import breeding stock from countries which could not previously export to the United States because of hoof-and-mouth or rinderpest. I think it is fine to build a quarantine station to import breeding stock and provide the livestock industry with new genetic material. But, why shouldn't money also be spent to build a quarantine station for the U.S. to export or at least make some effort to set up export channels for U.S. cattlemen.

I am sure that cattlemen of other countries must appreciate the U.S. spending this kind of money to make it possible for them to export their product to the U.S. The question that must be asked is what is being done to make it possible for the U.S. cattlemen to export?

2. In 1969 the United States had by far the largest balance of payments deficit in its history—more than double that of any year in our history. For too long we have been interested in exporting U.S. dollars instead of U.S. products and it is catching up with us.

3. Of all farmers and ranchers in our agriculture complex in America the cattleman probably receives less in the way of subsidies than anyone else. Part of the reason is because he doesn't want it. His counterpart in England may get around $75 from the government to keep a cow a year (not bad when you consider the average cost of keeping a cow in the United States isn't much more than $100 a year). Even the Russian cattleman is subsidized. I couldn't find out how much you know how they are about giving out information. But the point to be made is that while the U.S. cattleman receives the least in subsidies, he is faced with the least amount of help in exporting and the most competition from imports.

Just think of the subsidies given to crop producers in the United States and on top of that the dollars the U.S. Government spends each year to export cotton, wheat, soybeans, etc. In spite of the fact that the United States is the biggest producer in the world of beef and in spite of the fact that while the cost of all goods and services have risen 40% in the past 20 years, a full hour's pay purchases 3½ pounds of beef today compared to 20 years ago showing the productivity of the American cattlemen, this country's cattlemen face more competition from beef imports than any cattlemen in the world. And we are going to get about 80 million more pounds this year than last year. The point is American cattlemen are doing more for less from the government and getting less consideration for it in comparison to producers of other agricultural commodities.

4. Australia and New Zealand account for a sizeable portion of the beef exported to the United States to compete with American cattle producers. And where do they go when it comes time to buy breeding stock—not the U.S. It is said that the existence of Blue Tongue disease in the U.S. and the fear that it will be transmitted from imported beef from the U.S. to sheep is the reason for barring all imports of breeding cattle from the U.S. But if a quarantine station can be built to bring in cattle to the U.S. from areas with dreaded disease like hoof-and-mouth, surely a quarantine station to admit cattle from the U.S. to Australia and New Zealand could be built.

5. We hear our Senators and Congressmen preach that trade is a two way street. Well, it isn't as far as the cattleman in the United States is concerned. In spite of being faced with competitive imports (more than any other country in the world) he can't reciprocate by selling breeding stock to these countries even though the cattlemen want to buy from us. They want to buy not only because of the recognized superiority of U.S. agricultural production and breeding methods and technology, but because it might also relieve some of the U.S. cattlemen pressure against their imported beef to the U.S. As it is they have to buy Charolais from countries who disagree to a great extent with American policy abroad.

6. Examine the lack of a two way street: England sells Charolais to the U.S. We cannot sell to England. Australia not only exports millions of pounds of beef to the U.S., but semen from Murrey Greys as well. Cattlemen in Austrlia say semen from American Charolais bulls would sell for $100 a vial in large quantities in Australia. Yet they send semen to us, but we can't send semen to them.

It was the U.S. cattlemen who really brought the attention of Charolais to the world and yet it is the rest of the world who is trading and profiting by it. England buys from France and sells to New Zealand who in turn sells to Australia. We can't sell to England, but Canada and France can. We can't sell to New Zealand, but England can. We can't sell to Australia, but New Zealand can. The U.S. is left out all the way around.

7. The AICA accepts a Charolais registered in the Charolais Herd Book of France, but will the Charolais Herd Book of France accept AICA papers? This is a question being posed to the Frenchmen now. You see a French Charolais herd wants to import an American Charolais bull (more details on that later) and the question is whether or not the French will accept AICA papers even though the AICA accepts French Herd Book papers. Another hurdle—according to the American Polled Hereford Association who recently exported some Polled Herefords to France after many obstacles, "There was and still is a French government restriction that the animals resulting from this cross must be slaughtered and not used or sold for breeding." In other words, they not only couldn't be registered, but their calves had to all be slaughtered. Now how's that for a two-way street in trade? We build a quarantine station at the cost of millions to import breeding stock from them and even if we did export to them, all the progeny would have to be slaughtered.

Tear this out and send it to your Congressman or Senator or write him a personal letter if you feel that U.S. cattlemen aren't getting a fair shake. Just write your U.S. Senator in care of the Senate Office Building, Washington, D.C. or your Congressman in care of the House Office Building, Washington, D.C. You would be surprised how much a letter from home means to an elected official. U.S. cattlemen haven't asked for much from the government in the past and they aren't asking for much now—just the opportunity to bring some U.S. dollars back home.

POLITICAL BROADCAST ADVERTISING

Mr. SCOTT. Mr. President, Congress, shortly after returning from its Labor Day recess, will be asked to approve or disapprove a political broadcast advertising conference report.

On August 18, 1970, WMAL–TV broadcast an editorial on the bill in question. I ask unanimous consent that the text of the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICAL BROADCAST ADVERTISING

The bill to limit political broadcast advertising is unfair. It is unfair to broadcasters, because it singles them out for restrictions. It is unfair to political candidates, because it keeps them from full use of their most effective weapon. And it is unfair to voters, because it suggests that somehow election campaigns will cost less.

The bill does not limit all campaign spending . . . just that on radio and television. The same political funds will simply be poured into other forms of advertising. The high cost of political campaigning is a national problem . . . but this bill won't solve it. The bill has advanced in Congress—we think—because it favors incumbents, who are already well-known. The outcry last week from one party shows the potential for political mischief. It is disgraceful that either party should favor such a bill in hopes of short-term or long-term political advantage. This highly discriminatory bill should be dropped. The voter will be best served by finding another solution to the problem of political campaign costs.

CULEBRA

Mr. JACKSON. Mr. President, as Senators are aware, I have initiated a detailed inquiry into the background of the necessity for, and alternatives to, the Navy's practice gunnery and bombing activities on the island of Culebra and adjoining cays.

The Senate is also aware that the junior Senator from New York (Mr. GOODELL) has proposed an amendment to the military procurement bill which would, in effect, terminate the Navy's use of Culebra. A number of Senators have joined in cosponsoring this amendment and many others have expressed deep concern over the Navy's use of Culebra. I wish to express my appreciation to Senator GOODELL for deferring action on his amendment while we search for a satisfactory solution to the present, unhappy situation on Culebra.

On August 11, 1970, the Secretary of the Navy, Hon. John H. Chaffee, Assistant Secretary of the Navy Frank P. Sanders, and other representatives of the Department of Defense appeared before the Armed Services Subcommittee on Military Construction to present a report on both the present and proposed Navy activities on Culebra. The committee's meeting was held in closed session not only because of the confidential nature of portions of the subject but also to encourage frank and open discussion of the present controversy.

Subsequent to the committee's meeting, I requested the Department of the Navy to respond to a number of questions on matters which I felt were not adequately covered during the hearing. I have requested that answers to these questions be made available to the committee no later than September 2, 1970. Among the matters of particular concern to me are the potential political ramifications of the Navy's present activities, the possibility of an accident endangering the lives and safety of the people on Culebra, a designation of alternative areas where the Navy's training requirements could be met without endangering national security, and the Navy's contingency plans for its training mission in the event that present activities should be prohibited.

I have also requested Secretary Hickel and the Department of the Interior to review lands in Federal ownership on Culebra and the adjoining cays and to provide me with a report on the suitability of using these lands for a national recreation area at some future date. This request, of course, assumes that it will be possible to find an alternative site or sites which will meet the Navy's requirements for coordinated training activities.

Mr. President, we have delayed too long coming to grips with the problem of Culebra. As a result of the Senate's concern, reflected by Senator GOODELL'S amendment and my investigation, there is some hope that the Navy is beginning to realize that the situation there is serious: That what is at stake is something more than the Navy's use of a training facility. In fact, what is at stake is the quality of life on Culebra and the Navy's right to decide how far it can go in affecting the lives and well-being of the people who live there.

I hope, Mr. President, that we will be able to resolve not only the immediate situation on Culebra but the broader question of what course the island's future development shall take.

NATIONAL SERVICE FRATERNITY WORKS TO ELIMINATE ARCHITECTURAL BARRIERS

Mr. DOLE. Mr. President, Alpha Phi Omega is a national service fraternity with over 500 chapters on college and university campuses throughout the United States. Alpha Phi Omega boasts a membership of over 119,000. This collegiate organization carries out a broad spectrum of meaningful service projects at the local, regional, and Federal levels.

Local service projects vary from providing Big Brothers for the community children's home and transportation for a handicapped classmate to caring for a university's cougar mascot. Phi Chapter at Syracuse University in Syracuse, N.Y., is promoting a nationwide architectural barriers project to alleviate physical barriers to the handicapped.

Public opinion polls have revealed that approximately two-thirds of the American public have not considered what a serious problem architectural barriers present in the Nation's handicapped, aged, and temporarily disabled.

One in every 10 persons is unable to use buildings and facilities designed for the able bodied. This fact prevents millions of American children from attending school and millions of adults from seeking higher education, training, and employment.

New facilities built and equipped to accommodate the handicapped cost little or no more than buildings designed only for the physically fit. Also, existing buildings are easily made barrier-free at only a nominal cost.

In short, inaccessibility is due simply to failure to think of the needs of the handicapped at the design and planning stage.

Mr. President, I commend Alpha Phi Omega for this public service project and ask unanimous consent that the article recently published in the spring 1970 issue of Torch and Trefoil be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NATIONAL SERVICE PROPOSAL—ARCHITECTURAL BARRIERS

One out of seven people in our nation has a permanent physical disability. A great many more—possibly you or a brother—will find himself temporarily confined to a wheelchair or crutches due to an injury or disease. These people look at simple structures from a different viewpoint than that of the physically fit. Stairs become obstacles, telephones and water fountains unreachable, and most buildings objects to be viewed, but impossible to enter. These people are being discriminated against and denied a chance to use their talents, unaffected by their handicap.

What is the problem? In many cases it is a lack of simple planning. A ramp, or a wider door can easily turn an impenetrable fortress back into a building. These cost little and are easy to plan for, but the general public is not aware of these problems. With a basic education program these barriers can be eliminated in all future buildings.

And what of those structures already built? Many may be expensive to reconvert, but some can be made accessible through very simple measures, such as widening one door, eliminating three steps, or putting up directions to a well-lighted, accessible service entrance. A simple guide to a city, published for the handicapped, can be of great help. Imagine yourself confined to a wheelchair, having to go to a strange city. Where will you stay?

How will you get around? Such a guide can easily free such a person from complete dependence upon others, allowing him to choose the best facilities available.

We feel the solution to many of these problems lies in a program of information and correction. There are various activities that can be adopted by the various chapters depending upon their size and interests. Each activity alone can be a separate service project.

INFORM THE PUBLIC

Make local people aware of the problem. This will not take the form of pressure, but rather informal presentations, using movies which are available. People usually are very cooperative and eager to help once they become aware of the problem. Government officials can be contacted regarding legislation, action, such as building codes. Businessmen and agencies controlling public buildings, such as the college administration, can be urged to improve their facilities, or consider architectural barriers when planning new ones. Offer specific solution based on your survey, including costs, actual work, and benefits to be derived. Community groups may be quite eager to start a new project on a much larger scale than can be done by a chapter. Such contacts will improve communications between the chapter and the community, and make the community aware of your chapter, paving the way for further help from the community.

Getting our article published about this in the local newspaper may cause citizens to act.

HAVE THE CHAPTER TAKE ACTION

A. Parking facilities

Arrange for special parking facilities for disabled students and faculty. Paint special signs and offer to police these areas.

B. Buildings

A universal symbol for accessible buildings is being designed, and should be ready by this summer. Offer to paint and erect such signs on all buildings you feel are accessible.

C. Orientation and registration

Many times publishing a guide book is not practical. A special orientation tour for disabled students can give them a basic idea of what barriers are present on campus. Find out what courses they would be taking, and arrange with the registrar for preregistration and scheduling of these courses in accessible buildings or on ground floors.

D. Minor construction

There may be some areas where a simple ramp, or minor adjustments can be made by the chapter. Build any corrective devices that may possibly be useful.

E. Think disabled

Make sure any service project carried out does not have built-in barriers. For example, a book exchange should be in an accessible area. Disabled persons should not be overlooked as possible donors in blood drives.

F. Get a guide book prepared

A guide for the handicapped can cover either the campus or community. A survey of all buildings included in the book should

be taken. Gathering all statistics regarding access, parking facilities, elevators, interior halls, doors, and facilities. Sample survey sheets are available from Phi Chapter. These are then reduced to a short description for each building and arranged in booklet form. Many times the cost of printing will be absorbed by a civil group or the printer. The books are distributed to all those who will be using the facilities covered, and can be used by disabled people to plan their activities. It also locates architectural barrier problems in your community that can be used as concrete examples, as well as ones that the chapter can attempt to solve.

NATIONAL COORDINATION

By coordinating this project on a national level, a great impact can be made on the lives of disabled persons. There must be one central location where all news of chapter activities can be compiled; one source for information of where architectural barrier projects are being carried out. Many civic groups have attempted to tackle the problems of architectural barriers, but without national coordination their work has been known by few and left unused.

The importance of this project has been impressed upon us through letters from Secretary Finch and other notable people. Reactions from the college administration and the Architectural Barriers Committee of Syracuse have been favorable, with substantial support. Phi Chapter has all necessary information and material for each portion of the program. Each chapter should try in the next year to adopt some part of this project. We want as many opinions and ideas as possible. We hope to formally propose adoption of architectural barriers as a national service project at the 1970 National Convention in Dallas. Before then, all opinions from other chapters would be greatly appreciated. This is a project Alpha Phi Omega, as a national fraternity, can tackle and solve—now!

THE SLOVAK DESIRE FOR FREEDOM

Mr. SCOTT. Mr. President, on June 19 of this year, representatives of Slovak organizations throughout the world held the first world congress of Slovaks in New York City. This congress adopted a resolution which reaffirms the Slovak desire for freedom. I ask unanimous consent that the declaration be printed in the RECORD.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

DECLARATION OF THE FIRST WORLD CONGRESS OF SLOVAKS IN NEW YORK, N.Y., JUNE 19–21, 1970

Representatives of Slovak organizations throughout the world, as well as individuals of Slovak origin in the United States of America, Canada, Australia, Switzerland, Italy, Austria, Sweden, England, Argentina, Germany, Spain and Chile, assembled in New York City in order to lay the foundations for the creation of a world organization of Slovaks hereby declare that:

The struggle for freedom and self-fulfillment is the constant goal throughout Slovak history. Attainment of this objective has not been without encountering obstacles, nor without requiring the work and struggle of many generations and countless sacrifices. Particularly now, when the Slovak nation is unable to determine its own destiny freely, everyone must make great sacrifices.

Slovaks living throughout the entire world, many of whom were born in the United States and elsewhere, accept as a moral duty the necessity to unite in the struggle for the natural rights of the Slovak nation and for the complete freedom in the determination of its destinies. We consider it our obligation to present to the world a true picture of the life and aspirations of the Slovak nation for a free and democatic way of life.

Today we are more acutely aware of this duty in view of the fact that the regime which has been forced upon the Slovak nation is opposed to the national traditions of Slovakia and the country is occupied by the military forces of a foreign Great Power.

Therefore, in view of the foregoing:

We subscribe to the traditional values of Slovak history which have promoted the rebirth of our nation, its growth and its acceptance in western civilization among cultured nations;

We contend that the Slovak question is an international problem and therefore we request that international justice be done Slovakia, justice that would be expressed in full democratic statehood;

We take a positive attitude towards the process of integration in Europe and we demand that the Slovak nation be given the right to participate freely and directly in this process.

We desire and hope that the situation in Central and Eastern Europe will change so that there will no longer be any obstacle towards establishing and maintaining cultural exchanges between the Slovaks at home and abroad which present conditions in Slovakia either make completely impossible, or allow only in a restricted sense.

We recommend the establishment of a permanent organization for the realization of all these aspirations under the name of: Slovak World Congress, which shall embody the spirit of brotherhood and mutual respect. Religious affiliations or political views, insofar as they are not contrary to the spirit of democracy and the objectives mentioned above, will not bar anyone from membership or active participation in our organization. We consider it essential that our goals and methods as well as our activities follow democratic principles.

We shall endeavour to have the Slovak World Congress represent its members on all international scientific, cultural, religious or political forums in the interests of the Slovak nation as expressed in the Constitution and by-laws of the organization.

We urge that the Slovak World Congress devote itself towards promoting the spirit of unity and to co-ordinate all national efforts through constant contact with member organizations maintained through central secretariats, regional secretariats, committees and information bureaus in various countries around the world.

We ask the blessing of Almighty God in this undertaking in the firm hope that with the help and co-operation of all Slovaks we may successfully fulfill our role.

ANDREW GRUTKA, D.D.,
Chairman.
STEFAN D. ROMAN, LL.D.,
Cochairman.

WOMEN'S RIGHTS: THE ROAD AHEAD

Mr. PROXMIRE. Mr. President, yesterday marked the 50th anniversary of the ratification of the 19th amendment to the Constitution guaranteeing women the right to vote. The day was marked by marches, speeches, and other events at which women pressed for expanded rights and opportunities. Much of the activity was very constructive and served to bring to public attention the need for new guarantees of equality in employment, political rights, and other areas. Unfortunately 1 day of protest will not produce the permanent reforms which are necessary if these goals are to be achieved. Sustained political action will be required if women are to gain the guarantees they seek.

Recently the House approved an amendment to the Constitution which will guarantee equal rights for women. This amendment will come before the Senate very shortly. If it is to pass the Senate, concerted political action of the part of women's rights organizations will be necessary to obtain the necessary support.

Another very important issue in which women can exert political pressure is the ratification of the Political Rights for Women Convention. This convention has been before the Senate for many years, but no real consideration has been given to it simply because very little pressure has been placed on the Senate to act. Now is the time for women to organize and urge their Senators to support this convention. The time for Senate action is now—women can make sure that favorable action is taken on this treaty.

"MR. ED" MARKS 40 YEARS AS FREDERICK CAB DRIVER

Mr. MATHIAS. Mr. President, in some communities the transportation of young children to and from kindergarten is a source of great concern to mothers. The mothers of kindergarten children in Frederick, however, have found a solution to this problem in the person of Ed Saltzman. Ed, with his station wagon taxi, known to everyone in town as "Eddie's School Cab," has been driving children to and from kindergartens all over Frederick for 30 of his 40 years as a driver. His friendliness and good humor are remembered by his passengers long after they have finished school. Many a young man or woman can be seen in town waving to Eddie's passing cab, just as they did when they were 5 or 6. Eddie's fans are not limited to past and present kindergarten children though. Many of Frederick's older citizens also rely on Eddie; often refusing, in fact, any other drivers.

If any one person is known and loved by all of Frederick, it is Ed Saltzman. Monica Main, of the Frederick Post, recently recounted some of Eddie's anecdotes in a story in honor of his 40th year of driving. Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"MR. ED" MARKS 40 YEARS AS FREDERICK CAB DRIVER

(By Monica Main)

For more than 90 kindergarten and school children in Frederick, "Mr. Ed," the man with the big smile in the brown and yellow station wagon is an important part of their everyday life.

"Mr. Ed" is in reality, Edward K. Saltzman and the 1970 station wagon that he drives is known to mothers all over the city as

"Eddie's School Cab." The "cabbie" has transported generations of youngsters to and from their respective schools for 40 years.

In 1930, Saltzman began his colorful career in a 1930 Sedan.

"It was during fair week," Saltzman recalled. "Fair week was held in October in those days. I was living with my aunt and uncle. My uncle owned a cab service and asked if I would like to try my hand at driving. That's how it all began."

The school service became a routine part of his life as a cab driver in 1940. His school transportation began with 15 youngsters and has grown to a surprising 90 to 100 children today.

The oldest driver "in service years." Saltzman hauls children to Mrs. Corbin's Day Center, Church of the Brethren Kindergarten, Federated Children's Kindergarten, St. John's, Elm Street and North Frederick Schools.

"You learn so much," the father of seven declared, "especially from the children. I could write a book like Art Linkletter's 'Kids Say The Darndest Things.' Parents may not want me to repeat some of the amusing 'family tales' the children tell one another en route to school," he laughs.

For persons who feel cab driving is very dull work, consisting only of chauffeuring people around town, Saltzman describes several past experiences.

"I was once forced to take a pair of characters to Baltimore. I drove the distance with a gun in my back. Fortunately, I made it to Baltimore and they instructed me to return with mouth shut. I notified the police when I reached Frederick but the two were never apprehended."

Not all of Saltzman's mad-cap adventures occurred in the darkened evening hours.

"In broad daylight, after I had picked up two men who instructed me to transport them to Unionville, I was put out of my cab and forced to walk back to town. The state police, whom I reached after obtaining a ride with a passing motorist, were able to recover my cab but never were able to find the thieves. Money was taken, however, it was no great amount since I had just started my route."

Saltzman's passengers range from crooks to celebrities. On one incident a helicopter enroute to President Eisenhower's farm in Gettysburg, carrying the Secretary of Defense and his aides, broke down. Saltzman was summoned to transport the party to the farm and wait until the meeting had adjourned to drive them back to Washington.

"During the meeting," Saltzman explained, "the helicopter was repaired but I still waited because they hadn't paid their fare." When the meeting adjourned, the government workers paid their fare and President Eisenhower bid good day to the Frederick "cabbie."

During his 40 years of service, Saltzman has watched the growth of Frederick and the growth of cab fares.

"I can recall," the small man with graying temples reminisced, "when you could go anywhere in Frederick for 15 cents. Today the same trip will cost anywhere from $1.25-1.50."

Friendships form through a ride in "Eddie's cab." The smiling cabbie pointed out the late Harding sisters, who "wouldn't go anywhere without Eddie at the wheel."

Serving as a chauffeur and guide can be frustrating at times, he admits. Drinking customers give Saltzman reason for concern. "I am leery about taking them out of the city, and they sometimes have no idea where they want to go anyhow," he says.

Would he trade his job for another?

"No, I wouldn't," Saltzman states thoughtfully. "It's a great job. I love the children and most of my day is devoted to them. It's really great to transport children of the children I hauled in years past."

ENCOURAGEMENT IN SOUTHEAST ASIA

Mr. DOLE. Mr. President, encouraging news continues to come out of Vietnam, despite the efforts of some to minimize and belittle the President's efforts to bring about a just and lasting peace.

Today's encouraging news is that the newest casualty figure—the one for the week ending August 22—is 52 men, the lowest since the week ending December 3, 1966.

This, as Senators will recall, was in the early days of the period of the massive manpower buildups in South Vietnam under President Johnson.

It is always tragic to have to talk about encouraging news in terms of reduced casualties since one casualty is always one too many. Nobody, I can assure you, feels more strongly about that last statement than the President of the United States. And he is doing his level best to reach that 7-day period when we can report zero casualties.

There are those today who would do that by retreating or surrendering, but the President, whoever he may be, and in this case it is President Nixon, has the duty and responsibility to end this war in such a way that it insures peace throughout the world, not only today but also tomorrow, by maintaining America's credibility both with its allies and with its potential enemies.

That is what President Nixon is doing.

And that is what he was doing when he sent American troops into the North Vietnamese sanctuaries along the Cambodian border on May 1.

The success of the President's long-term approach as well as of the Cambodian operation is apparent in the figures released today.

Not only is this week's casualty figure the lowest in more than 3½ years, but also the casualty figure for the 8-week period ending August 22 is the lowest in 4½ years.

We have lost 560 men in the last 8 weeks. Not since the period ending February 12, 1966, when we lost 525 men, have we lost so few.

Another encouraging figure and one that emphasizes the worth of the Cambodian operation is the fact that every week in the 8 weeks since June 27, American casualties have run under the 100-a-week figure.

With these results, who can honestly say today that the Cambodian operation was not a success?

As I said earlier, any casualty is too many but the President is working desperately to end the war and to secure a lasting peace, one that will insure that our next generation of young men and women do not have to fight in either the jungles of Asia, or anywhere else in the world.

And, I am proud to say, the President is succeeding—succeeding despite the blind opposition of some who seek peace at any price and others, not so sincere, who seek to turn this terrible war into a political issue.

I assure you again, however, Mr. President, that it is President Nixon who will succeed and not the advocates of retreat and surrender. The American people have too much commonsense, too much love of and pride in their country, too much honor, and too much confidence in President Nixon to settle for less than a peace that embodies honor and justice and that gives the entire world a better chance for peace, not only today but also tomorrow and in the years ahead.

MARY EDITH WILROY, THE SUPERHOSTESS OF BLAIR HOUSE

Mr. MATHIAS. Mr. President, foreign heads of state, ambassadors, and dignitaries come and go in Washington with the assumption on the part of most of us that they are receiving the best in American hospitality. It is, of course, a valid assumption, due in large part to Mrs. Mary Edith Wilroy. Mrs. Wilroy is the hostess in charge of Blair House, which accommodates visiting kings, queens, presidents, diplomats, and other notables. She is charged with the care of these visitors, their meals, accommodations, and even drycleaning and appropriate flowers. The efficiency of Blair House under her guidance rivals the "neither rain, nor sleet, nor snow, nor dark of night" standard of the Post Office motto. Many an international crisis in the form of kitchen fires, and lost clothing and keys, has been expertly avoided by Mrs. Wilroy's outstanding ability.

Marylanders take great pride in being able to serve their Government, and a special debt of gratitude is certainly due Edith Wilroy, of Takoma Park. Her activities and personal insights were recently the subject of an article by Mary Finch Hoyt in Parade magazine. Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SUPERHOSTESS OF BLAIR HOUSE

(By Mary Finch Hoyt)

WASHINGTON, D.C.—Mary Edith Wilroy is a name that few Americans know. But she has probably entertained more heads of state than any other person in the world—and been paid for doing so. She is the discreet super-hostess who runs Blair House (catty-corner from the White House), the President's guest house for visiting kings, queens, presidents, prime ministers, diplomats and other notables.

During the terms of three Presidents, Mrs. Wilroy has been "protocol officer," tactical commander and fiscal genius for the gracious Georgian-style house, which is furnished with priceless Americana donated by individuals, women's clubs, history buffs and business firms.

"My job is to provide a setting in which international relations can flourish," says the handsome grandmother of seven. "Basically, I go about it like any housewife would."

This means that dinner for 20 or maybe 40 is ready, the housework in 35 rooms is done and she is standing by the door to meet foreign dignitaries who occasionally have been escorted across the street and introduced to her by the President of the United States.

It also means that she must be prepared for the worst. Like the time a dry cleaning truck was stuck in a raging snowstorm with the laundry and evening suits of a party of foreign diplomats who were due at the White House at 8 p.m. "The weather was so bad that I couldn't rent a helicopter, so I finally called the Chief of Police and told him we were headed for an international disaster," she says. "At precisely the right moment a

Black Maria drew up at the door with the clothes. The guests never knew the difference."

A QUIET FIRE ALARM

On another evening, she made sure that Washington officials being entertained in candlelit splendor by a visiting head of state were unaware that excessive heat in the kitchen had triggered an automatic fire alarm at a nearby fire station. Between soup and dessert, Mrs. Wilroy persuaded firemen to take down the ladders already stretched to the third floor and remove fire equipment that completely blocked traffic on Pennsylvania Avenue, without any of the guests being the wiser.

Already this year, Mary Wilroy and her staff of four have kept their cool during a dozen or so state visits. In April alone, for instance, four important foreign guests called Blair House home for three days each, and Cabinet members and State Department officials and their wives—who are entitled to use the mansion—entertained at various luncheons, receptions and dinners for from ten to 200 people.

Word about a state visit comes to Mrs. Wilroy's basement office in Blair House from the State Department's Office of Protocol, of which she is an officer. Next she receives an attaché case full of fact cards which often include not only cultural and geographical data about the country of the visitors, but pictures, biographies and information about their hobbies and interests.

Then she has the huge old mansion put into impeccable order by her staff. The furniture and the old glass and silver—including some made by Paul Revere—are polished to a sheen. Historical memorabilia are dusted. Fine old brass is scrubbed. Fresh, monogrammed linen for bed, bath and table is selected. Candles with pleasant odors are placed in strategic spots. And in each room the supply of souvenir pencils, pens and the blue embossed Blair House stationery is replenished, bowls of fresh fruit, dried fruit, candy, and salted nuts are set out, daily papers and current American and foreign-language magazines brought in.

INDIVIDUALIZED FLOWERS

Mrs. Wilroy may buy favorite white freesias for the bedside of a queen, or pick a special bouquet from her own garden in Takoma Park, Md. When India's Prime Minister Nehru stayed at Blair House, she presented him daily with a fresh rosebud to wear.

"There is simply no routine to fit each occasion," she says, adding that she keeps her own personal file about any visitor who has stayed at Blair House before—like whether he has a wife, a large entourage, medical problems, religious preferences, food considerations or allergies.

Menus are planned with Blair House chef William Dallas. Hot "American" corn sticks, corn muffins or spoonbread and big, U.S.-style breakfasts and an around-the-clock buffet are specialties of the house.

At the very last minute before her guests arrive, Mrs. Wilroy checks to see that embossed name cards have been slipped into special holders on the doors of up to 15 suites awaiting the foreign contingent (they also receive maps with room assignments), that the house is neither too warm nor too cold, that TV sets and light bulbs are working and that doors are hospitably ajar into the cozily lit rooms of the four-story wheat-colored, green-shuttered home.

Sometimes, of course, things go wrong. Recently, she was forced to leave a royal guest standing outside his suite while she searched frantically for keys borrowed by his own security aide, who had slipped upstairs earlier, checked out the rooms, turned off the lights and locked every door in sight.

Mary Wilroy has been chatelaine of 1651 Pennsylvania Avenue since 1961 when she was plucked out of an administrative protocol job in the State Department and told to "go over there and run it as if it were your home."

It was purchased in 1942 by the U.S. Government, fully furnished, from the family of Francis P. Blair, a member of President Jackson's "Kitchen Cabinet." The Blair-Lee house next door, which was built for Blair's daughter who married a cousin of Robert E. Lee, was bought the following year. Now the two homes are connected and used jointly—the doors were cut through when the Truman family lived there while the White House was being renovated.

In 1964, the 140-year-old structure needed a facelift. It had an antiquated kitchen, no central air-conditioning, termites, a leaky water system, hazardous wiring. With Government funds the mansion was modernized and with about $200,000 of contributions from individuals and organizations a massive redecoration project was started. It is still going on.

The AFL–CIO, for instance, paid for redecorating the Lincoln Room, a small, butter-yellow reception room in which Robert E. Lee declined command of the Union Army.

A "king's suite," a handsome red and black bedroom chamber and adjoining library was furnished with gifts from Ambassador and Mrs. Angier Biddle Duke, the Harcourt Amorys Jr., and former Governor and Mrs. W. Averell Harriman.

DIPLOMATIC BUDGET

Mary Wilroy declines to talk about the annual budget for entertaining the President's guests. "When we have company in our home," she says diplomatically, "we don't talk about how much it costs." But because of the wear and tear of constant use, the mansion is always being repaired, and enhanced by new acquisitions. All gifts are approved by a Fine Arts Committee headed by the wife of the Chief of Protocol, who is currently Mrs. Emil S. Mosbacher Jr.

But Mary Wilroy makes the hard decisions about lining up the plumbers, electricians, carpenters and painters who must work quickly when one guest leaves and before another arrives.

Now divorced, she says that the biggest challenge in her life was running her own home and raising her two sons and two daughters.

On some nights when Blair House is dark, Mary Wilroy is able to commute to her own big old house in the Maryland suburbs. But more often she is scurrying around the Blair House mansion offering the kind of American hospitality that calls for finding a rare digestive herb to calm a royal guest; finding the recipe for a very special Norwegian birthday cake for the Prime Minister of Norway, or a bed long enough to accommodate Charles de Gaulle.

"All of this would be pretty heady stuff," admits the hostess of Blair House, "if only there were time to stop and think about it."

ANNIVERSARY OF THE CZECHOSLOVAKIA INVASION

Mr. DOLE. Mr. President, on August 20 a unique protest meeting was held in Washington to commemorate the second anniversary of the Soviet invasion of Czechoslovakia. The organizations sponsoring the meeting represented thousands of Americans of Czechoslovak origin and Czech and Slovak refugees in this country. The proceedings were presided over by Dr. Joseph K. Hasek, president of the District of Columbia chapter of the Czechoslovak National Council of America.

One of the principal accomplishments of the meeting was the adoption of a proclamation by the assembled delegates which outlined the rise and extinction of progressive liberalism in Czechoslovakia in 1968.

Mr. President, this is a compelling and eloquent document, and lest the Senate forget the events of 1968 in Czechoslovakia, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA

On this sad occasion—the 2nd anniversary of the brutal Soviet-led invasion and occupation of the peaceful, freedom-loving country of our ancestors—we, American citizens of Czech, Slovak and Subcarpatho-Ruthenian descent, again remind the entire world of this Soviet violation of principles of international law, incorporated into the Charter of the United Nations.

The Soviet aggression and occupation of Czechoslovakia:

(1) violated the sovereignty of a member state of the United Nations (Article 2, Section 1);

(2) violated Article 2, Section 4, prohibiting the use of military force in the relations between individual members of the United Nations;

(3) violated the principle of self-determination of peoples (Article 1, Section 2);

(4) was in conflict with Article 2, Section 7, prohibiting outside intervention in matters essentially within the domestic jurisdiction of any state; and

(5) was in conflict with a number of resolutions of the General Assembly of the United Nations, particularly Resolution 2131 (XXI) adopted at the meeting of December 21, 1965, upon the Soviet Union's own motion. This resolution prohibits intervention in the domestic affairs of any state, and guarantees the protection of its independence and sovereignty.

The hopes that Czechoslovakia, following the Nazi occupation, would resume its splendid progress toward a modern democracy were first shattered by a communist coup in February, 1948. For the next 20 years, the communist regime lived on reserves accumulated by the 1918 generation, all the time deceiving the very ones in whose name communist revolutions occur: the working class. Czechoslovak workers never were given the promised factories; instead they became prey to communist state-capitalism and Soviet neo-colonialism. Wages gradually were reduced to only about half an adjusted pre-war level as compared to earnings being enjoyed by fellow-workers in the West. The whole nation was politically manipulated, and there was no freedom of press, expression or assembly permitted.

Soviet Russia forced Czechoslovakia to sign lopsided commercial treaties under which that country had to buy low-grade Russian raw materials at world-market prices but sell Russia manufactured goods at below market prices. This kind of operation understandably resulted in tremendous yearly losses for the Czechoslovak economy where foreign trade had been profitable and at least 75% western-oriented. Even under these conditions, Soviet Russia failed to fulfill its trade obligations, and by 1967 owed Czechoslovakia approximately $1 billion for excess deliveries.

The glorious spring of 1968 brought an end to oppression and hypocrisy. Without violence, united behind new, young leaders, Czechs and Slovaks began to expose and correct past blunders . . . until the Soviet war

machine mustered half a million troops and subdued a small, peace and freedom-loving country.

In Washington, on the first anniversary of that humiliating aggression and occupation, Czechoslovak democratic organizations called a Protest Meeting which was attended by many representatives of other exile and ethnic groups and won strong endorsement by many United States Senators, Governors, and Congressmen. That Meeting voted, by acclamation: August 21st shall henceforth be called the "Soviet Day of Shame." Similar meetings and demonstrations were held in Chicago and other cities in U.S.A. and throughout the world.

Now the continued Soviet occupation of Czechoslovakia is another crime against the right of a small country to determine its own destiny and aspirations. The invasion was an intervention by the forces of reactionary communism to prevent the Czechs and Slovaks from establishing their own social order . . . one that did not endanger anyone, and sought to contribute to the building of bridges of understanding across the discords of an ideologically divided world while lending aid to better understanding and cooperation among all nations on the basis of true progress and humanity.

The Soviet Union has tried, subsequently, to justify its crime by the so-called Brezhnev doctrine, which is—in fact—in direct conflict with the Charter of the United Nations. This doctrine tries to sanction aggression, and thereby deliver small countries to the "tender mercies" of the aggressive plans of Soviet imperialism.

The Czechoslovak people, however, are not resigning themselves to these aggressive plans of Moscow. They resisted, and continue to resist and reject, Moscow's claim to a right to intervene in the leadership of the State; they deny Soviet Russia the right to determine who should govern their country or represent it in foreign relations. August 21, in Czechoslovakia, is being commemorated as the "Soviet Day of Shame."

And those of us here in the United States who are joining our friends in Czechoslovakia, urge the whole civilized world to support the effort to achieve the withdrawal of Soviet troops from Czechoslovakia.

Especially at this time we remind representatives of free nations not to lose this opportunity to support the just demands of the people of Czechoslovakia in international meetings and bi-lateral negotiations. We are grateful to President Nixon for his statement of August 7, 1969, rejecting the Brezhnev doctrine and pointing out that he will not be guided by it in cooperating with countries of Eastern Europe. During the forthcoming General Assembly of the United Nations there will be many occasions for denouncing Soviet aggression and repeating demands for the withdrawal of Soviet forces from Czechoslovakia. We hope that representatives of all free nations will not let this opportunity be lost, but will help us solve a problem that endangers not only the peace in Europe but throughout the world.

AWARD OF DD–963 DESTROYER CONTRACT TO LITTON INDUSTRIES, INC.

Mrs. SMITH of Maine. Mr. President, on July 1, 1970, I asked the Comptroller General of the United States to have the General Accounting Office examine into the circumstances surrounding the recent award of a $2.1 billion contract to Litton Industries, Inc., for 30 DD–963 class destroyers. Yesterday I received a report from the Acting Comptroller General. Because of the great interest in this matter, I ask unanimous consent that his letter and report be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., August 26, 1970.

Hon. MARGARET CHASE SMITH,
United States Senate.

DEAR SENATOR SMITH: This is in reference to your letter dated July 1, 1970, requesting that we examine into the circumstances surrounding the recent award of a $2.1 billion contract to Litton Industries, Inc., for 30 DD–963 class destroyers.

During our review of this matter, we examined records maintained by the Navy's DD–963 Project Managers Office; the Chief of Naval Operations DD–963 Program Coordinator; the Office of the Naval Ships System Command; Litton Industries, Inc., and Bath Iron Works, Inc. Although we did not obtain advance review comments on this letter from the Department of Defense, the Department of the Navy, or the companies, we discussed these matters with responsible Department of the Navy officials and company officials during the course of our review.

The DD–963 class destroyer program had its origin in late 1966 when officials of the Department of Defense, in recognition of the approaching obsolescence of segments of the Navy's surface fleet, initiated a new shipbuilding program. The primary missions of the DD–963 class destroyer are to (1) provide protection to attack carrier forces against the surface/submarine threat, (2) escort amphibious assault-preassault forces, and (3) conduct shore bombardment in support of amphibious assault or land warfare forces. The Navy inventory objective for destroyers of this type is 50 ships. A procurement program of 30 ships had been approved by the Secretary of Defense subject to congressional authorization. According to the Navy, no procurement action will be taken on the additional 20 ships until the 30 ship program has been funded. The Navy is procuring those destroyers through the concept formulation contract definition multi-year procurement process. A contract was awarded to Litton Industries on June 23, 1970.

FEATURES OF THE FPIS CONTRACT

The DD–963 destroyer contract is a multiyear fixed-price incentive, successive target (FPIS) contract. This type of contract provides for negotiating at the outset an initial target cost and an initial target profit (which make up the initial target price), a ceiling price, and a formula fixing the target profit at the target re-set point. At the re-set point a new formula may be negotiated. The target profit will be adjusted upward or downward fifteen percent (15%) of the difference between the total initial target cost and the re-set target cost, provided that in no event will re-set target profit be less than 6.53 percent ($107.5 million) or more than 10.87 percent ($178.9 million) of the total initial target cost. The ceiling price is not changed but remains at 130 percent of the initial target costs.

The initial target price for the Litton contract is $1.7892 billion. This consists of an initial target cost of $1.64607 billion and $143.13 million for initial target profit. The incentive price revision clause of the contract provides that the vessels being procured are subject to price revision within 90 days after the end of the 37th month after the execution date of the contract. It also provides that, in no event will the total re-set price exceed an established price ceiling of 130 percent of initial target costs, or $2.1399 billion.

The net effect of this is that at the target re-set point the estimate of costs for the 30 ships could have increased by $387 million (about $13 million per ship), and the contractor still would be entitled to a minimum profit of 6.53 percent of target cost or about $107.5 million unless the contractor exceeds the ceiling price.

IMPACT OF ESCALATION CONSIDERATIONS

The escalation features of this contract had a significant impact on the final price proposals of Litton and Bath. These features provided for quarterly labor and material escalation adjustments to be made automatically, based on changes in indices calculated by the Bureau of Labor Statistics without regard to changes in the bidder's actual costs. These automatic adjustments are determined by Navy tables included in the contract which apportion percentages of labor and materials to each individual quarter. The adjustments are made upward or downward and do not alter target cost, target profit, target price, or ceiling price.

In practice, the amount of escalation recoverable using the contract tables may differ from that which the contractor believes he may actually incur. Accordingly, he may include an adjustment for this difference in his price proposal which could either increase or decrease the price. It should be emphasized that the percentage increase either bidder would get from the escalation tables would be the same, since both would be based on the same table and the same index changes. The divergent views of the two bidders as to how economic price levels will perform over the life of this program and their ability to control their impact on their costs appear to have been the largest single point of difference between them in the fourth and final bid prices.

Litton, in its final proposal, estimated that its escalation recovery based on the Navy tables would be $143.7 million more than the escalation they would actually experience, and reduced their final proposal by this amount. Litton's estimate of their recovery of escalation on the third and fourth proposals are shown below in millions of dollars.

[In millions of dollars]

	Proposals	
	Feb. 2, 1970	Mar. 26, 1970
Estimated inflation	485.5	297.45
Estimated escalation payable by Navy	409.5	441.15
Total	76.0	----------
Less: Net escalation estimate included in proposal	72.0	----------
Estimated (under) or over-recovery of escalation	(4.0)	143.7

In reviewing the change in escalation with both DCAA and Litton, we were advised that this change resulted from new data and reconsideration of old data between February 2, and March 26, 1970. Four basic factors entered into this change:

1. Litton's estimates of economic inflation as it would apply under the Navy tables were revised upward to reflect the more recent increases in the labor and material indices. The effect of this was to increase the estimate of the amount of money that Litton would recover under the Navy tables.

2. Certain agreements were tentatively consummated with two primary suppliers that stabilized the exposure of Litton to escalation payments to these two suppliers. Although these agreements actually increased the expected amount payable for escalation, they also removed the risk of po-

tential increases in escalation payments to these two important suppliers.

3. A further analysis of the escalation exposure of a key Litton division heavily involved in this procurement resulted in adjustments in several areas and had the effect of substantially reducing the estimated net exposure of this subsidiary.

4. The fourth factor, which had by far the largest effect, was based on Litton's analysis of experiences in buying material on the LHA program. In effect, Litton believes that it will be able to write contracts without escalation clauses, because it had been successful in doing so in the LHA program, and will thereby substantially reduce its own escalation exposure.

Bath, in its final proposal estimated that its escalation recovery from the Navy tables would be $146.3 million less than it would incur. Bath's projected under-recovery from the tables is shown below in millions of dollars.

[In millions of dollars]

	Proposals	
	Feb. 2, 1970	Mar. 26, 1970
Estimated inflation	454.704	428.219
Estimated escalation payable by Navy	296.068	281.934
Estimated under-recovery of escalation	158.636	146.285

In effect, because Litton anticipated an over-recovery from the tables and Bath an under-recovery, the disparity between the two bids in total dollars was approximately $290 million. The impact of escalation was, therefore, a significant factor in the price competition for the 30 DD–963 destroyers.

If it is assumed that each bidder is correct on his own escalation and cost estimates, the final cost to the Government would be approximately five million dollars more per ship for Bath than for Litton regardless of which bidder's projection of escalation recovery proves to be correct. In Litton's case, should its projection of escalation recovery prove correct, the contract would be completed at about the initial target price, provided cost estimates are also reasonably accurate. If Bath's projection of escalation recovery from the Navy tables is correct, Litton will suffer some reduction in profit. If Bath had received the contract and Litton's projection of escalation recovery proves correct, then Bath would receive about $160 million more for escalation than it estimates. On the other hand, if Bath's projection proves correct, it would complete its contract at about its estimated target price, provided its cost estimates are also reasonably accurate.

REVIEWS OF FINAL PRICE PROPOSALS

Both bidders made substantial reductions in the prices proposed as between their third proposals and their "best and final" offers. Bath reduced its proposed target cost by about $3.6 million per ship, while Litton reduced its proposed target cost by about $9.8 million per ship. In the area of target profit, Bath made a reduction of about $1.3 million per ship compared with a $2.4 million per ship reduction made by Litton. The target price reductions amounted to about $5 million per ship for Bath and about $12 million per ship for Litton. Litton's $12 million per ship reduction was made up of (1) about $2.6 million in estimated material cost, (2) $7.2 million related to recovery of escalation, and (3) about $2.4 million in profit.

No audit of this reduction was conducted since it was the area of material costs that the Navy felt contained most of the contingencies in the February 2, 1970, offer. The Defense Contract Audit Agency (DCAA), in its audit of Litton's February 2nd proposal, had indicated that a material figure of $40.5 million per ship could be justified and that the difference between that figure and the $49.999 million included in the price offer was unsupportable. We were informed by the Navy that this difference, and the fact that a similar situation existed in the Bath offer, was one of the primary reasons why the Navy chose to request the "best and final" offer on the basis of a successive target contract. Thus, when Litton's reduction to $41.5 million per ship was received as the "best and final" offer, it was in reasonably close agreement with the recommendations of DCAA. Also, since there were no technical changes in the contract package between the third and fourth proposals which would affect the types and amounts of material involved, the Navy believed that it had sufficient confidence in the final price offer without further audit.

The ultimate contract price was agreed upon after the Navy had sought and received four specific proposals from the two competing companies. The first three proposals had been prepared on the basis that a firm-fixed price incentive contract would be awarded. The fourth proposal, a "best and final" offer, was prepared on the basis of a fixed-price, incentive contract with successive target prices. Reductions based on this change were made in a period of six days between the time the Navy asked for a "best and final" offer and the time the Navy required this offer to be submitted. Actually, four days had been allowed but this was extended to six as requested by Bath. This seems to us to be a very short period of time, but the Navy believed that each bidder was generally aware that such an offer would be required and was essentially prepared for it. They believe that this is borne out by the fact that both bidders were able to respond.

After we expressed concern that no formal audit was conducted of the changes in Litton's "best and final" offer, Navy, on August 12th, requested DCAA to audit these changes. DCAA's report susbtantially supported Litton's revised prices. However, it contained a qualification, to the effect that DCAA assumed Litton's estimate of the effect of economic inflation, and ability to control its own exposure, were accurate.

ALLOWANCE FOR RISK

Although the Navy maintains that the contractor's estimates of cost for the 30 ships are credible and very much in line with its own independently prepared estimates, the Navy did provide for sharing the risks of cost growth with the proposers. The Navy advised us that, although it believes that it has considerably reduced the technical risks in the procurement of this ship, it is also aware that all risks have been by no means eliminated. It was the intention of the Navy, through the early stages of contract definition, to award a fixed-price incentive contract. However, in its final assessment, it concluded that risks related to softness in major equipment vendor quotations and the additional detailed design work based on the performance type specifications made it unwise to award a fixed-price firm target contract. Any proposer would have to make provision for these risks, whether they did or did not develop. The 130 percent ceiling provision, in conjunction with the provision for a profit floor, permits an increase of $387 million above initial target cost, while still providing the contractor a profit of $107 million. This seems rather substantial. We recognize, however, that the precise amount of this allowance is a matter of judgment and the Navy points out that 30 percent is not unusual and has been used in other ship contracts.

OTHER RISKS ASSUMED BY THE NAVY

A risk assumed by the Navy—one that cannot be calculated—is the risk that in the future a situation might exist where the contractor cannot complete the contract for the ceiling price. The Navy considers this risk to be low in view of its planned close monitoring of technical, schedule, and cost aspects of the contract.

In addition, there is the risk that competition on future buys will be diminished considering the start-up and early learning costs in a procurement of this magnitude, assuming the same ground rules apply. The Navy is of the opinion that the risks are less than the expected advantages. The Navy believes that with other shipbuilding programs, such as the Maritime Administration's ten-year program to build 300 cargo ships, at least five firms, including Bath, will have an excellent opportunity to modernize and improve their competitive position for future destroyer programs. The above, of course, deal with subjective judgments, however, we believe that the Navy should be conscious of the fact that they are the only ones who build military-type ships since it, in essence, controls the military shipbuilding industry. This point is dealt with in the report of the Blue Ribbon Defense Panel, dated July 1, 1970. An extract from this report is attached as Appendix IV.

CONSIDERATION OF ALTERNATIVE MEANS OF BUYING SHIPS

While some consideration may have been given to alternative methods of procuring these ships, we saw no evidence that the Navy performed a thorough analysis of alternatives to awarding a contract of this magnitude to one supplier or of the potential consequences of this action. Whether or not it would have been to the Government's advantage to have these destroyers constructed in more than one yard does not appear to have been considered at that time and we have no firm data from which to assess that question. In anticipation of the possibility that there would be legislation requiring two or more awards, the Navy in the spring of 1969 prepared estimates showing that this would result in increased costs of $125 million to $150 million. Similar estimates made about a year later were $225 million. The production of destroyers of a single configuration will undoubtedly provide economy in both logistical support and in training of crews. Similarly, economy in production can normally be expected from volume production of identical items.

Recognizing that uncontrolled changes have, in past programs, resulted in significant cost growth, in schedule slippages, and in performance degradation, the Navy has taken extraordinary steps to control such changes as follows:

(a) All recommendations for changes must be analyzed and evaluated by several board reviews and by the Project Manager. Changes can be made only as specifically approved and directed by the Project Manager after complete analysis of cost, schedule and effectiveness. Changes which have adverse impact on characteristics or which increase cost or delay production schedule must be approved by the Chief of Naval Operations.

(b) The ship to be constructed is described in the contract. Should it be desired to make major ship system changes, it only can be done after the proposed new system has been thoroughly analyzed and justified to the Chief of Naval Operations, the Secretary of the Navy, the Secretary of Defense—through the Defense Systems Acquisition Review Council process—and then only after funds are obtained through congressional review and appropriation. Thus, major system changes in the ship must be fully funded before they are implemented.

Notwithstanding these efforts, the Navy's *past* experience over the years gives little encouragement that these destroyers really will be built to a single configuration. If, however, controls now planned by the Navy are strictly enforced, the changes in configuration should be kept to a minimum. Additionally, the concerns expressed herein regarding program risks and the procurement process apply regardless of whether Bath or Litton were the selected contractor.

Our specific responses to the matters raised in your letter are discussed in attachments to this letter.

In accordance with agreement reached with you that 24 hours after its delivery this letter could be released to the general public, we will make copies of this material available to those requesting it.

If you desire any further information on this matter, please let us know.

Sincerely yours,

R. F. KELLER,
Acting Comptroller General.

ANALYSIS OF SPECIFIC POINTS RAISED IN THE LETTER FROM SENATOR SMITH

Point 1. The possibility that the contract pricing re-set provision, introduced as a last minute change after three rounds of prices had already been submitted and audited, may have permitted a contractor to take advantage of the regulations to lower estimated costs with full knowledge that costs can be negotiated upward several years after the award at a small sacrifice in profit—but at the expense of another substantial overrun to the Government.

EVENTS LEADING TO AWARD

During the negotiation period leading to the award, the Navy requested and received from the two bidders (Bath and Litton) an initial pricing proposal, two supplements and a "best and final" offer. There were substantial changes between the initial proposal and the second and third offers due largely to changes in the scope of work. The "best and final" offer did not involve a change in the scope of the work.

Bath and Litton responded to the Navy's January 5, 1970, request for a proposal supplement on February 2, 1970. This was each bidder's third round of price and technical proposals for construction of 30 DD–963 destroyers. Both bidders' February 2, 1970, price proposals were predicated on award of a fixed-price incentive contract with a firm target price.

Navy officials advised us that evaluation of these responses indicated that the basic ship designs of each contractor were satisfactory and no further technical changes were required. However, they stated that the type contract previously proposed—fixed-price incentive with firm target—was no longer considered suitable for the DD–963 procurement and that a change to a fixed-price incentive contract with successive targets was indicated. Navy officials stated that the rationale for changing the type of contract centered on their difficulty in obtaining auditable supporting data from both Bath and Litton subcontractors.

Bath officials also indicated that they were hampered by the short time allowed for responding to the Navy's request of March 20, 1970, for a "best and final" offer even though their only request for an extension was granted in full. Litton officials stated they had discussed internally the possibility that the Navy might request use of a successive-target type contract although they had no knowledge of this change until the March 20, 1970, notification. They stated that they had adequate time to prepare a revised price proposal on a successive-target contract.

Both bidders had the same options under the request for proposals. Each bidder reduced its price considerably between March 20 and March 26 when "best and final" offers were submitted. The possibility of obtaining substantial recovery of overruns of target costs up to the ceiling price at the expense of a relatively small reduction in target profit after 39 months of the contract period was available to both bidders. The situation of the Navy would be about the same regardless of whether Litton or Bath received the contract if either found itself in the position of not being able to build the ships within the ceiling price.

ANALYSIS OF PRICE PROPOSALS

In addition to its own price analyses of the bidders' price proposals the contracting officer requested the Defense Contract Audit Agency (DCAA) to review the first three price proposals.

Our review of DCAA reports on the first three rounds of proposals and discussions with DCAA representatives substantiates the Navy's contention in regard to difficulties with subcontractor cost data. For example, at the time of the November price submittal, the Government was questioning $800 million of Litton's proposed costs. By February 2, 1970, these exceptions had been reduced to $230 million. A substantial portion of the reductions was achieved by Litton's acceptance of DCAA's recommendations.

We were informed by the DCAA representatives assigned to the DD–963 project office that, in many instances, DCAA was unable to obtain any reliable source data to support the prices quoted which resulted in substantial amounts of unresolved costs in both bidders' proposals. We discussed the problem of the reliability of subcontractor estimates with officials of both Bath and Litton. Both contractors stated they were ready to accept an award on each of their first three proposals, despite the Navy's concern over the subcontractor estimates. It seemed to be the opinion of both bidders that the reliability of subcontractor quotations steadily improved during the course of the negotiations.

We also found that, because of the difficulty in obtaining reliable subcontract data, the Navy had considered use of a successive-target type contract as early as June 1969. At that time, a decision was reached to continue efforts to use a firm target contract, subject to change to a successive-target contract during final negotiations.

On March 20, 1970, the Navy requested Bath and Litton to submit their "best and final" offer for the DD–963 program. No changes in the scope of the work were specified but the bidders were requested to submit their price proposals on the basis of a fixed-price incentive successive-target contract.

Both bidders submitted revised price proposals to the Navy on March 26, 1970. A per ship comparison of the bidders' February 2 and March 26, 1970, offers is shown below.

[Dollars in millions]

	Bath		Litton	
	3d, Feb. 2, 1970	4th, Mar. 26, 1970	3d, Feb. 2, 1970	4th Mar. 26, 1970
Target cost	$64.9	$61.3	$64.7	$54.9
Target profit:				
Rate (percent)	(13.5)	(12.2)	(11.1)	(8.8)
Dollars	8.8	7.5	7.2	4.8
Target price	73.7	68.8	71.9	59.7
Ceiling price	81.1	79.7	80.8	71.3

We were advised by Navy officials that no audit was requested by the procurement contracting officers on the "best and final" offers. They indicated that their comparison of Bath and Litton's "best and final" offers with their own estimates showed a high degree of similarity in the estimates required engineering and labor hours and in the proposed material costs. They concluded from this comparison that Litton's prices were credible and felt that no audit was needed.

In view of the very substantial reductions in price in Litton's final offer, however, and particularly since there was no change in the scope of the work, we believed that a detailed analysis of the basis of these reductions should be made. On August 12, 1970, the Navy requested DCAA to perform an audit of the changes. The results of that review are discussed in the accompanying letter.

COST GROWTH

As with any such large program, the possibility of cost growth exists and the history of military procurement would indicate that it is more than a possibility. But the Navy feels very strongly that the nature of this procurement and the actions they have taken reduce the risk of cost growth substantially.

Essentially, the Navy believes the risk involved in this contract centers around the long term commitment of the Navy and the contractor, the substantial dollars involved, and the concentration of the work in one facility. In our judgment, there are other factors involved, such as the realism of the Navy commitment to a ship design that will not be materially changed over a long period of time, the fact that the ship has not actually been built, and the possibility that the contractor may not be able to complete the contract within the ceiling price.

The Navy believes that these possibilities have been considerably reduced by the action they have taken. For the most part, components being utilized are "off-the-shelf". A potential problem lies in the integration of the propulsion system. The Navy considers the individual components to be satisfactory, all of which have undergone extensive testing programs in similar applications.

Although the weapon componentry now specified for the ship is off-the-shelf, the Navy also has improved versions for much of it in R&D. The Navy has required that provision be made in the ships' design to allow for incorporating these improvements without great difficulty. Additionally, special procedures have been instituted which require the highest approval before any significant design changes can be made.

Whether these actions will provide the advantage envisioned by the Navy, no one can say at this time. But as indicated above the Navy obviously believes that the actions they have taken significantly reduce the risks.

In addition to these factors, the escalation provisions of the contract provide that these payments will not alter target or ceiling price. Litton estimates this recovery from the Government for escalation of $441.150 million. Should this be an accurate estimate, this amount could be incurred above the ceiling price of $2.139 billion.

OTHERS FACTORS CONSIDERED IN MAKING AWARD

The Navy rationale for awarding the contract to Litton Industries, in addition to price competition, was based on an exhaustive source selection process that extended from about April 1969 to April 1970. This evaluation included five major areas of inquiry in the categories of life cycle cost, ship system, management plans, military effectiveness and corporate qualifications. In the final assessment by the Source Selection

Authority, Litton was given a numerical rating superior to Bath for the following categories.

	Bath	Litton
Ship system	5.80	5.85
Management plans	4.20	5.07
Military effectiveness	6.00	6.68

In the Navy's rating system all of these were considered in the normal range. The records also show that estimates for life cycle cost were also higher as proposed by Bath, by about 5½ percent. With regard to the category of corporate qualifications, our review shows that Bath had considerable difficulty in providing a financial plan acceptable to the Navy; however, the insufficiency of the financial plan was corrected during the final stages of the evaluation. The Source Selection Advisory Council ultimately concluded that the proposal of either contractor would provide destroyers suitable for the future needs of the Navy. Based on the decision of the Source Selection Authority, as well as the lower price quoted by Litton in the best and final offer, the award to Litton Industries was made.

Point 2. "The rationale for awarding a $2 billion shipbuilding contract to a company already carrying the largest new ship construction backlog in the industry."

Point 3. "The dangers from the standpoint of the United States Government of contracting a large portion of our new shipbuilding programs—including $2 billion plus total package procurements—under one corporate entity in the very face of the problems engendered by doing this in the Lockheed Aircraft Corporation case."

Point 5. "The dangerous impact on future competition leading to higher procurement cost in award to a shipbuilding company which has already constructed a new shipyard on the basis of prior total package awards enabling it to drive out proven destroyer-building capability."

In light of the related substance of issues 2, 3, and 5, we felt it appropriate to respond to them collectively.

The Navy's rationale with respect to issue number 2 is related essentially to price. The Navy determined that either bidder could perform the work under the contract. In substance, the Navy maintains that Litton will build the ships cheaper and should not be penalized for its strong position in the industry. With respect to issue number 3, the Navy believes that large cost overruns are unlikely to occur because it doesn't visualize any significant problems in developing this ship. With respect to issue number 5, Navy believes there is sufficient future shipbuilding business (Navy cites the proposal for 300 Maritime vessels and their hope for obtaining 20 additional destroyers) to maintain a competitive industry. Each of these points was dealt with by the Navy in a memorandum prepared in response to a request by the staff consultant, Senate Preparedness Investigating Subcommittee, a copy of which is attached.

The Navy's objective is to build a single ship that will substantially reduce logistical and other problems that have plagued the Navy over the years. In the last analysis, this objective appears to have been the overriding and compelling consideration by the Navy throughout this whole procurement, and has been the primary reason for adhering to the concept of an award to a single contractor.

We think that the substance of the Navy's rationale comes down to the desire to solve what are long standing problems by a standardized ship and to reduce the cost of acquisition as well as operations. However, by contracting with one company that risk is present that the company may not be able to complete the contract at the agreed price. It is possible that the company at some point could come to the Navy and say it is unable to build the ship for the contract price. Under these circumstances, the Navy would find itself with few options. The Navy says it does not expect that this is a real possibility, but it has occurred under other long-range production programs.

We believe also that there is some danger to future competition. Given the Navy's premise of a single ship design (presumably Litton's) at the lowest price, it is difficult to see how another company will be able to compete pricewise with Litton on future orders. Start-up and early learning costs in such a program are substantial and, assuming the same ground rules are applied in the future, it seems questionable as to whether anyone will be able to compete with the successful contractor in this award, no matter how many additional ships the Navy plans to buy. We are told that the differences in commercial and military ships, even if the Maritime program should become a reality would not make the winner of these awards competitive for military ships.

Point 4. Use of the multiyear contract which requires that Congress pay tremendous cancellation charges should it decide in future years not to make appropriations for continuance of the program.

As we understand the contract, the cancellation clause gives the Navy the option of cancelling at the end of any program year, and none of the costs of any ship not included in that program year will be borne by the Navy. As an example, the Navy could cancel the contract after the third ship, and they would in no way be obligated to pay any of the costs of any ships thereafter. There would, of course, be start-up costs, such as design and development work that would apply to all ships and would be largely incurred before any ships are built. However, these costs would be incurred for the most part even if the Navy were to contract for only three ships in the first place.

We think, therefore, that the cancellation clause keeps the Navy or the Congress from being irrevocably committed to the entire ship program and the costs to the Government of buying a lesser number of ships would not be materially different under either method.

Mrs. SMITH of Maine. Mr. President, in my opinion, the most pertinent observations and conclusions of the report are those which are in agreement with the same observations that have been previously made by myself and those in the "Staff Report on Navy Ship Procurement and Construction" made to the Blue Ribbon Defense Panel and which I reported here on August 18, 1970. These observations point up the risks and dangers of concentration of so much ship procurement in a single yard.

When all the destroyer procurement is given to Litton, what options does the Navy Department have should Litton go broke—what options does the Navy Department have if the failure of Lockheed on the C–5 aircraft is repeated by Litton on the DD–963 destroyer?

When all the destroyer procurement is given to Litton, what does this do to future competition?

Apparently the Comptroller General and the General Accounting Office found that the Navy was very narrow minded in this procurement for on pages 6 and 7 of the letter-report are to be found these statements:

While some consideration may have been given alternative methods of procuring these ships, we saw no evidence that the Navy performed a thorough analysis of alternatives to awarding a contract of this magnitude to one supplier or of the potential consequences of this action. Whether or not it would have been to the Government's advantage to have these destroyers constructed in more than one yard does not appear to have been considered at that time and we have no firm data from which to assess that question.

And further:

Notwithstanding these efforts, the Navy's *past* experience over the years gives little encouragement that these destroyers really will be built to a single configuration.

Special attention is directed to pages 8 and 9 of attachment I of the report for these observations by the GAO say in substance that past history is contradictory to the Navy's professed objective in this matter. I call specific attention to that section which states:

The Navy's objective is to build a single ship that will substantially reduce logistical and other problems that have plagued the Navy over the years. In the last analysis, this objective appears to have been the overriding and compelling consideration by the Navy throughout this whole procurement, and has been the primary reason for adhering to the concept of an award to a single contractor.

We think that the substance of the Navy's rationale comes down to the desire to solve what are long standing problems by a standardized ship and to reduce the cost of acquisition as well as operations. However, by contracting with one company the risk is present that the company may not be able to complete the contract at the agreed price. It is possible that the company at some point could come to the Navy and say it is unable to build the ship for the contract price. Under these circumstances, the Navy would find itself with few options. The Navy says it does not expect that this is a real possibility, but it has occurred under other long-range production programs.

We believe also that there is some danger to future competition. Given the Navy's premise of a single ship design (presumably Litton's) at the lowest price, it is difficult to see how another company will be able to compete pricewise with Litton on future orders. Start-up and early learning costs in such a program are substantial and, assuming the same ground rules are applied in the future, it seems questionable as to whether anyone will be able to compete with the successful contractor in this award, no matter how many additional ships the Navy plans to buy. We are told that the differences in commercial and military ships, even if the Maritime program should become a reality, would not make the winner of these awards competitive for military ships.

Mr. President, with the filing of this GAO report, we now have the situation of common criticism of the Navy on the award of the entire contract to Litton being made not just by myself and other Senators, but more significantly by the staff report of the Department of Defense's own Blue Ribbon Defense Panel and the Comptroller General of the United States and the General Accounting Office—severe criticism on the very same basic points.

In view of this, I think that Congress should find great persuasion to split this procurement in the best interests of our national security.

SENATOR KENNEDY'S PERCEPTIVE ADDRESSES TO THE AMERICAN BAR ASSOCIATION ANNUAL MEETING IN ST. LOUIS

Mr. SYMINGTON. Mr. President, earlier this month the distinguished senior Senator from Massachusetts (Mr. KENNEDY) made an extraordinary trip to my State to attend the annual meeting of the American Bar Association in St. Louis. His trip was extraordinary, first, because he was invited to appear by four different units of the ABA and, second, because during his four appearances within a period of 24 hours, he impressed all those who heard him with the range of his experience and the depth of his knowledge in the vital areas he touched upon.

On Monday night, August 10, Senator KENNEDY was the featured speaker at the prestigious annual dinner in honor of the judiciary sponsored by the ABA section on judicial administration. His speech, entitled "At the New Interface of Justice: Challenge and Opportunity," was an incisive call to action for judicial reform especially at the State and local level, and Chief Justice Burger himself called it a perfect companion to his own "State of the Judiciary" address on Federal judicial reform given earlier the same day.

On Wednesday morning, August 11, Senator KENNEDY spent the breakfast hour answering questions from law stuents on topics ranging from polarization in society to the prospects for a constitutional convention.

Next, he was the keynote speaker at a panel on "Hunger" sponsored by the ABA's individual rights and responsibilities section, and he vividly described the urgent need for a massive national assault on hunger and malnutrition.

Finally, he was the featured speaker at a luncheon given by the ABA's standing committee on legal aid and indigent defendants and the National Legal Aid and Defender Association in honor of the 50th anniversary of the ABA's commitment to legal aid and the fifth anniversary of the ABA's support for OEO's legal services program. His speech on "Citizen Advocacy: Trends for the 1970's" projected the growth of legal services and the broader function of citizen advocacy into a future where they will be an integral part of good government.

I believe that all three of his speeches merit careful reading and close consideration by all of us. I ask for unanimous consent that they be printed in the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

AT THE NEW INTERFACE OF JUSTICE: CHALLENGE AND OPPORTUNITY

The separation of powers and the independent prerogatives of the three branches of government are basic and cherished keystones of our constitutional system, at both the federal and state levels.

Yet, for those of us in Congress, and especially in the Senate, in practice, our focus is on the interdependence of the branches; our activity is constantly at the interfaces between our branch and the other two.

And in recent years we have spent an extraordinary amount of time and effort interacting with the Federal Judiciary.

Our most direct and difficult responsibility has been our constitutionally assigned task of screening federal court appointments to assure their quality, and we have taken this responsibility seriously at every level of the federal court system.

We have also spent a great deal of time generating more business for the federal courts, in such fields as civil rights, organized crime, riots, and gun control, and through such government reforms as the Freedom of Information Act. We have fought battles in the halls of Congress over whether to protect or dilute judicial precedents on such issues as one-man, one-vote, and the First, Fourth, Fifth, and Sixth Amendments, and the outcome of these battles has either generated or precluded extensive federal litigation.

At the same time we have sought to help solve the problems of the federal courts. Although they are still the poor relations in the Federal Establishment, receiving less than 1/10 of 1% of the total Federal Budget of $200 billion, we have during the '60's expanded the federal court system by 185 judges, 2087 employees, and $77 million. And we have done much more. We have replaced the U.S. Commisioners with an upgraded system of U.S. Magistrates. In the Criminal Justice Act of 1964, and the Bail Reform Act of 1966, we have enhanced the fairness of federal criminal justice. We have provided new funds to train U.S. Attorneys, and new law clerks for our judges. We are processing legislation now to encourage the establishment of federal defender offices, and—with the particular guidance and support of the ABA and your President—to create the position of Court Administrator in each circuit.

Perhaps most important of all, we have provided the Federal Judiciary with a research and development arm in the Federal Judicial Center, a focal point for future efforts to modernize and reform federal court performance.

Thus, while we have created problems for our co-equal branch, we have also sought to help solve them in a manner that at least holds potential for success. Certainly the critical situation which Chief Justice Warren has described as "presently bad and ominous for the future" is still with us, but we can now approach it with much more hope, hope borne not only of the new resources and tools Congress has provided, but also of the continuing leadership of men like Chief Justice Warren, Justice Clark, and Chief Justice Burger, who have, in turn, stimulated the interest and support of federal judges everywhere. Certainly, the Chief Justice's eloquent statement today will add great impetus.

Yet, any sense of progress we may feel in the federal courts is dulled by our knowledge that they are only a small part of the entire machinery for administering justice in America, and that in the rest of the system, in the state and local courts which are the instruments of justice for most citizens, there is a worsening crisis of almost unmanageable proportions. In many courts, justice seems about to grind to a complete halt. Immense backlogs, intolerable delays, assembly-line treatment, constant confusion, understaffing, under-planning, and under-funding, have transformed civil litigation into marathons and criminal justice into a hollow game. You who labor on and in the courts know the crisis at first hand, and for you statistics are redundant. But the facts are no longer the exclusive property of the profession. The public is becoming aware that something is awry. Citizen concern has been increasing and this has been reflected in the past few weeks by detailed stories in such publications as Time, Life, and Fortune, which have painted a vivid and disturbing picture of our courts for all the world to see.

The message is not a new one, and it has not been lost on those of us in Congress. If we had not heard it before, we certainly heard it in 1967 in the report of the National Crime Commission, in which so many judges and ABA leaders played a vital role. "The courts are the pivot on which the criminal justice system turns," the Commission said. But pointing to a long line of warnings dating back over half a century, from Charles Evans Hughes through the Wickersham Commission, and others, the 1967 Commission found it "distressing to report that these warnings have gone largely unheeded."

The Ninetieth Congress, however, did not allow this latest warning to go unheeded. We acted decisively to create a mechanism to invest substantial new resources in the entire criminal justice system. In the Safe Streets Act of 1968, we created a new "interface of justice" where federal, state, and local governments could join together to combine their efforts to combat crime. Through the Law Enforcement Assistance Administration, we provided for massive block grants to carry out comprehensive state plans to reform and update every dimension of the criminal justice system from police to courts to corrections. And we authorized sizeable discretionary grants to focus additional funds on priority and innovative programs. We established a National Institute of Law Enforcement and Criminal Justice to develop and test new concepts in all of these fields, and to create a nationwide flow of current information on promising answers to old problems. And we created an Academic Assistance Program to support the education of those who will enter criminal justice careers and those already engaged in them.

It is on this interface that we will focus in the 70's for it reflects the nation's needs and the public's demands. It is an ambitious program, and hard work and close monitoring will be vital to its success. We have just passed the program's second anniversary, and as one who was intimately involved in its drafting and passage, and who has followed its implementation in detail, I must candidly report that it has been only a qualified success. Right now in the Judiciary Committee, we are considering the necessity for structural reforms in L.E.A.A., and the need for administrative reform within that agency is universally recognized. Nevertheless the basic concept of large-scale federal assistance to state and local law enforcement and criminal justice programs is sound, and we are optimistic enough about its future to jump from a funding level of $268 million last year to a figure which will probably be between $750 million and one billion in fiscal '71, and substantially more than a billion thereafter. In the context of the estimated present total national expenditures on crime prevention and control of some 5 to 6 billion dollars, the federal increment will be significant indeed.

Among the problems, however, is one which all those here should be fully apprised of. Thus far, the court's dimension of the Law Enforcement Assistance Program has been its least successful and most disappointing component. For a time, by L.E.A.A.'s own analysis, partial fault was at the federal level where the priorities placed on corrections and police components within the Law Enforcement Assistance Administration left its court division understaffed and somewhat neglected. But that temporary defect cannot explain the dismaying showing of the court systems in the State Plans filed in Washington by each of the State Criminal Justice Planning Agencies in 1969 and 1970.

The figures for 1969 are almost embarrassing. Out of 21 million dollars of block grants distributed to the States, the state plans included projects in the amount of only

$1,382,1000, or 5%, on court-related programs, including prosecution and defense services. This compares to a national rate of spending on courts of 11% of all criminal justice expenditures.

17 out of the 50 states, or over one-third, had no court component whatsoever in their 1969 state plans. Another 15 states had only one such program each. The analyst who reviewed the plans for the Justice Department concluded that:

Most of the reporting states had not focused sharply on their court problems;

The court grant proposals submitted were vague and lacked comprehensiveness;

There was too much emphasis on "studies" in court-related fields that have been well-studied already and are ripe for action;

The proposals indicated that not much innovative work was being planned.

If the 1969 results were all we had, we might attribute these failures to the fact that the program was new or that the '69 plans were prepared on a rush deadline, or that other areas of the Criminal Justice system had more quickly and easily definable needs and opportunities. But now the results for fiscal 1970 are in, and they are almost equally disappointing, with some notable exceptions. And it is the exceptions which prove how deficient the other plans are. For example, in the large and urbanized state of New York, $2 million of the block grant of $16.3 million, or 12.2%, will be spent on court-related projects. And in the small and largely rural state of Idaho, $143,281, out of $702,900, or 20.3% will be spent on courts.

Nevertheless, the average court component for all the state plans is only 6.74%, or $12,452,000 out of the $184,522,000 available for block grants. Twelve states have allocated less than 3% to their court programs. One state which will receive nearly a million dollars more in block grants than New York, will spend over a million dollars less of its grant on its courts.

Of course, there are differences in needs and in relative progress from state to state which may explain some of these disparities. But they do not justify the general pattern of apparent neglect of court programs in the state plans as a group. Moreover, even in the area of discretionary grants, where state and local agencies can apply directly to the Justice Department for federal funds without necessarily going through the state planning process, only 4.19% of the available $30½ million went to court-related projects in fiscal '70, largely because of lack of demand.

These facts have grave implications for all of our goals for the administration of justice in America. First they suggest that we lack either the skill or the will to translate our hopes for the court system itself into action. Second, they indicate that those who know the courts dimension of the criminal justice system best, the judges and the practicing lawyers, are not participating in the state and local criminal justice planning processes.

These conclusions are unacceptable, and it is up to every member of the bench and the bar to see to it that they are rebutted. We cannot afford to miss this opportunity to match the realities of justice to the ideals of justice in our courts. Even at the unjustifiably low 1970 rate of under 7% of block grants spent on courts, the amount available in 1971 will be 25 to 40 million dollars, and if the courts proportion doubles, as it should, there may be $50 to 90 million of new capital available to our court systems in the coming year. I believe that we have both the will and the skill to make that investment and to make it wisely.

Certainly we have the commitment. Members of the bench and bar have come to recognize that court reform must be an issue for widespread involvement and not just for a few high court judges or bar officials. The appellate court judges have accepted the fact that they cannot merely lock themselves in their own courtrooms, but that they must get out and observe for themselves the bargain basement of justice, both to assist the sensitivity and relevance of their own decision-making on cases deriving from lower courts, and to enable them to use their prestige in the battle for lower court reforms. And I think most judges have realized that they can and must delegate administrative authority over court business to management experts who can apply modern business methods to the flow of cases, the storage and retrieval of court information and the scheduling of witnesses, lawyers, jurors and judges. For those few who fear interference with the judicial process, Justice Warren's answer should be dispositive: "The judge's opportunity to apply his independent judgment to the facts and law in individual cases," he said, "is enhanced and strengthened by the proper administration of the courts." Similarly most judges now know that bankers' hours and school teachers' calendars are anachronisms for members of busy courts, and defense counsel and prosecutors as well, know that the time has come to terminate the shell game of continuances to accommodate marginal lawyer needs.

So we do have the will. And we have at least enough of the way to absorb many times the newly available amount of capital. First and most important, we know that we are going to invest heavily in court management and administration. We must bring modern business efficiency to bear on the business of running the courts. A nation as successful as we have been in national defense, in space, and in industry should have ample management and technical skills to get its system of justice working effectively.

And we are going to have to make the necessary changes in structures and habits and processes to render this management meaningful. If we bring a computer into a court that is a mess, and do nothing else, then we are going to have a computerized mess.

But we have other things to be done: Summons systems and station-house release to eliminate court steps for minor offenders. Bail reform, well-designed and intensively followed through, not only to enhance fairness, but to reduce the largely wasted annual expenditures for pre-trial jailing which the Crime Commission estimated at $100,000,000. We need more defender offices, more training for prosecutors, sentencing institutes for judges, and presentence investigation facilities.

More importantly, we must adopt and install more drastic methods for reducing the flow of cases. The Bowery Project in New York, and other programs, have demonstrated how to eliminate from the judicial process public intoxication cases, where the courts can provide neither deterrence nor rehabilitation to the defendants, and the stream of defendants only degrades and demeans the courts in the eyes of the citizenry. Even for some of those who are brought into the criminal justice system, we have seen that it can have its impact on them without the necessity for grinding every one of them through the guilt-determination function. In our federal and state Narcotics Addict Rehabilitation Acts and in our Juvenile Courts we have examples of constructive dispositions without guilt determinations. And in New York City, the Vera Institute's employment project has tested a system where all arrestees for certain types of offenses are screened and considered for job training and job placement, and for counselling by reformed ex-convicts. If they are selected for the program, the project goes to court on their behalf and requests continuances of their cases, so that the task of rehabilitation can begin immediately. Of course, such methods of providing the courts with new alternatives require welcoming into court at an early stage new kinds of resources and new kinds of people to focus efforts on accomplishing quickly the goals of the criminal process without going through all its forms. But as Justice Burger said, just "as war is too important to be left to the generals, so justice is far too important to be left exclusively to the technicians of the law."

There is, then, no barrier of either desire or demand which can justify the poor showing of the courts in the first two years of the Law Enforcement Assistance Program. And so it is on the other conclusion that we must take aim, the indication that judges and lawyers are not contributing to the comprehensive crime planning that is meant to be going on at the local and state level everywhere.

Certainly this state of affairs would be regrettable enough solely in terms of its impact on the courts proportion of LEAA. We know that police officials have been extremely aggressive in seeking funds, and that corrections administrators are well-organized for grantsmanship. Thus if the judicial systems and their friends are timid, we will see federal monies going to air condition paddy wagons in cities where nothing is being done to relieve unbearable court backlogs.

But there is a broader and more basic implication. Those who work on and in the courts do not work in isolation and cannot plan in isolation.

The idea, for example, that there is any problem with a judge's participating in a state or local anti-crime planning agency must be repudiated, and I hope that this Section and the Association will take a clear stand on that point. Judges have a unique and valuable perspective on the entire criminal justice system, and they *must* participate in the planning process, not only to assure adequate attention to the courts' needs, but also to interact with those from the other components of the system.

Indeed, as the Crime Commission and many others have long recognized, one of the key problems with our criminal justice system is that it is *not* a system. Rather it has been a series of separate, only slightly coordinated mechanisms, each with different goals and attitudes and approaches. In many places the various participants have only the most formal contacts with one another. Many judges, for example, believe it is improper for them to even speak to policemen outside of court, presumably because it might affect their judicial detachment. But if there are not more, and more informal contacts we have no change of building a real system. Each participant must understand and take into account the other. The lines of communication feedback must be strengthened. The judge must talk to the policeman, and they must both talk to the correctional administrator. They must all ask themselves hard questions about the impact of what they are doing. I wonder how many judges have asked themselves what fraction of arrests for serious offenses in their communities result in dispositions that make any sense for society. I wonder how many judges have thought about the viewpoint of the policeman who cares much more about arrests than he does about follow-through. And how often do judges get detailed feedback showing the ultimate results of their sentencing decisions. Asking and answering questions like these helps us to take a real system view, to reexamine our goals, and tactics, and assumptions, and then to accomplish meaningful change.

But this process can only go on if all parties to the system relate and interact with one another. And right now there is no better forum than in the state and local planning processes which the Safe Streets Act has spawned.

The questions are hard, harder than they have ever been, and the answers are more

disturbing than ever. Yet now we have the resources and the knowledge and the dedication to try at least to face up to those answers. We can make our courts efficient. We can make them relevant. We can make them both fair and productive. We can make them an integral part of a system that has continuity, strategy, and impact. But we not again have as favorable a setting as we do today, so we must act forcefully and quickly and together. That is our challenge, and that is our opportunity.

HUNGER—1970

I am very pleased to be able to take part, this morning, in the discussion on Freedom from Hunger. I know that hunger is a topic in this year's convention because of the guidance and direction provided to the members of the American Bar Association by Mr. Lloyd Cutler and Mr. Jerome Shestack. No other subject of national concern is more deserving of critical attention. The Section of Individual Rights and Responsibilities has properly focused on the hunger issue as one which should command the attention of all of us who work with our nation's legal and legislative councils.

Our concern about the national hunger scandal is properly emphasized in the report and recommendation of the Section of Individual Rights and Responsibilities. That report urges rapid elimination of hunger and malnutrition in this country.

That is certainly not a new pronouncement. It is not an exhortation directing attention to a new or undiscovered national crisis. But because hunger in America is terribly widespread and totally unnecessary, I fully support the basic tenets of your recommendations—that the continued existence of substantial conditions of hunger and malnutrition are inexcusable, humanly unconscionable and economically and socially shortsighted. For those reasons the battle against hunger must be continued. The repetition of the call to eliminate hunger, as you have done, must be sounded daily, until every American is guaranteed an adequate diet.

I wish to join you in repeating the call for an end to hunger and starvation. In this morning's session I hope to review briefly some of the things that have happened in Washington to assure that no citizen will be permitted to go hungry. At the same time I hope we can discuss what remains to be done and how we might be able to do those things.

In the summer of 1968, sixteen congressional hearings produced statements, accusations, and responses that seemed to hopelessly tangle the true picture of hunger in America.

The majority of congressional witnesses testified that hunger does exist in this prosperous country, in urban slums, in the hills of Appalachia, on the worn out fields of the South, in the barrios of the Southwest and on Indian reservations.

"People are being starved" said Doctor Gatch, a South Carolina physician. "They are being deliberately denied their health and well-being." Hunger USA, the statistically based report of a citizen's Board of Inquiry argued that "ten million Americans are chronically hungry".

In addition, countless studies and endless tours revealed that many children as well as adults are not getting enough food to sustain life. Physicians who visited rural Mississippi counties in 1967 found little children so ridden with disease they were beyond cure.

Indices of substantial malnutrition and hunger appear in the findings among 12,000 people studied by Dr. Arnold E. Schaefer in the National Nutrition Survey in 1968. Doctor Schaefer methodically and conclusively gathered information that proves to everyone, including those who may be doubters that many Americans have bad nutritional health. His studies also verified what many people have long suspected—that in America today there exists not only those who are hungry and malnourished—but also, those who are starving.

He uncovered cases that reveal children who are victims of Kwashiorkor, the tragically consuming and debilitating malady—which fades hair color to a dull red, distends the stomach like a blow-toad, and saps life and energy from the muscles.

From countless documented accounts in statistical summaries, we know what the sad dreary picture of hunger in America looks like:

Approximately 27 million people in this country live in poverty. One third of these people receive some kind of government assistance. The remaining 18 million are really abandoned, and we have not yet found it in our conscience to begin dealing with their problems.

Three million children in America go to bed each night without a decent meal. They always wake up hungry. For these kids each day means there are three strikes against them—their breakfast, their lunch and their dinner.

Among infants admitted to Children's Hospital in Cincinnati 40 years ago, 20 per cent were anemic. In 1944, the incidence was the same. In 1965, that hospital's admissions still had no change in the incidence of anemic infants.

Only ⅓ of poor children in this country receive free or substantially reduced price school lunches.

Too many slum schools in our big cities have no school lunch program.

Food assistance programs are deliberately designed to provide only two-thirds the volume of food per person estimated to be an absolute minimum for nutritional health.

In 1968, 2.3 million farmers received Federal farm subsidies.

If those subsidies had been made on the same skimpy basis that food stamps are issued to the needy poor—only 193,000 farmers would have been subsidized.

Suppose the Defense Department provided adequate diets for just 16 percent of all military units; that was the percentage in 1968, of counties with hungry poor that got food stamps.

A strong correlation exists between prenatal and natal protein deficiency and mental retardation.

5.1 million Americans live in families whose yearly income is less than $1200 a year for a family of four.

Another 9.3 million Americans have incomes less than $2400 per year for a family of four.

Unless they have food assistance, these 14.4 million Americans are hungry because they are poor. This is the group that Federal food programs must help.

Yet as late as last summer, the principal Federal food assistance programs, the food stamp and commodity distribution programs, served only 3.2 million poor people. That amounts to 6.4 million of the estimated 27 million poor and 13 million near poor. Thus, the two programs combined serve a maximum of only 44 percent of the 14.4 million Americans who are so poor that they must have assistance if they are to escape malnutrition.

In short, these programs have never succeeded in reaching a significant proportion of those in need of help.

The participation gap in these food assistance programs is significant—but is often ignored by those who blame the poor for their plight.

In the average food stamp county only 10 percent of the poor actually receive food stamps. A poor family has only one chance in three of living in a county with a stamp program. And if the family happens to live in such a county, it still has only one chance in six of participating in the program.

It is clear from this capsule view that Federal family food assistance programs reach only a small portion of the poor. Moreover, the dollar value of food benefits provided by these aids and the need for food income for poor people is between $2 billion and $4 billion.

The poor can never get all of the things needed for a minimum level of subsistence in our economy. As one witness told Ben Heineman, Chairman of the President's Commission on Income Maintenance Programs, "I either eat good and smell bad, or smell good and don't eat."

For the most part what we hear and read about the poor comes to us in the cold faceless form of statistics. But the people who suffer because they have inadequate incomes are real and personable.

They include: A woman of 72, room bound in a grimy cold flat. A miner with one lung, and no electricity in his mountain shanty. A former farm hand, cotton chopper, orange picker, who has been made obsolete at 32 by mechanization or minimum wage laws. A deserted mother of six in a county that doesn't believe in welfare and doesn't have a food stamp or commodity food program. A slum child in a big city whose father works every day, but earns just $1.40 an hour.

Millions of the hungry of America thus receive no welfare help. They are deprived of nourishment in a country teeming with abundance. Most of us have yet to admit that existing assistance programs do not provide the means to insure even minimum well-being for the unfortunate. The notion that an abundantly adequate subsidy for the "worthy" factors of our economy has not yet spilled over to the care we allocate for the poor.

This is not a problem, however, that is insoluble. Many experts agree that Federal Food Assistance Programs are not bad devices. With enough money and flexibility they can be effective.

Dr. Jean Mayer of the Harvard School of Public Health, suggests that the Food Stamp program be federalized and computerized. According to his proposal, needy people would simply make a statement declaring their requirement and family needs. Then, food stamps would be distributed much the way we now issue assistance through the Social Security Program.

Doctor Mayer and a number of others believe that ultimately food programs ought to be recognized as income supplements and become part of an income maintenance system.

I agree.

The shortage of food in the homes of the poor is not a matter of agriculture. It is a natural and understandable product of a system that thrives on profits. But that system cannot serve effectively the poor people in our population because they offer no means to produce a profit. The obvious and the only way to do that is to improve the income of the poor.

Current action in the Congress and Public concern for the need to revise our national policies of welfare assistance will hopefully be able to do that.

In the past, programs and laws designated to assist the unfortunate were not necessarily planned to provide for protection of their nutritional health.

We have aid to the blind; aid to the permanently and totally disabled; and aid to dependent children. The very names indicate that one must be more than just poor to receive assistance. But none of these programs protect the hungry among the poor.

Laws that were nominally designed to assist the hungry only provide aid to them as an incidental side effect. Even when the nation has conscientiously tried to help the poor it has done so only to the benefit of the so-called "worthy" factors of the economy.

The Agricultural Act of 1935 resulted in benefits as favorable or the farmer as the

Smoot-Hawley Tariff act has been for the manufacturer.

Section 32 of the Agricultural Act encouraged the over production of farm goods in the embarrassingly large quantities that we have today. Each year more than $100 million is spent buying up fresh milk—presumably for consumption by children of all economic classes. But the expressed purpose of the program is frankly not to be construed as a program for the benefit of children, but as one primarily for the milk producers.

Also under the Agricultural Act of the Thirties was the authorization for the initial food stamp program. It was designed to satisfy the grocers' claim for special subsidy consideration. After the start of World War II, food stamps were abandoned, partly because we learned how poorly it served the needs of the hungry.

But in the fifties, we again heard the grocers' pleas for special consideration.

They regarded those who received food from surplus commodity distribution program as lost customers. Conveniently, they ignored the fact that people getting the trickle of surplus commodities were too poor to be viable customers in the first place. The nation's response to the grocers' plea was to revive the old food stamp plan of the thirties.

But again this provides evidence that we reverted to the food stamp program for the benefit of the grocer, not for service to the hungry.

Indeed there is ample evidence that stamp purchase and benefit levels were designed purely for the convenience of program administration and producer profit. The typical food stamp participant family must pay between 37 and 50 percent of its monthly income for food. Which by the way, is the proportion spent for food in many communist countries. While the average American housewife spends 17 percent of the family's money for food.

The Food Stamp Program has little relevance to the family wage earner who follows the crops, does day work, seeks unsuccessfully for a better job, or, while having physical and educational handicaps, tries to retain the family unit and thus is denied welfare.

Other food programs are not much better. Reams of Congressional testimony show similar flaws in the surplus commodity program and in the School Lunch Program. Poor people's needs are consistently the last consideration made in the developing design of such assistance devices.

And so it is, that it can fairly be said, all current laws enacted to bring an end to hunger are suspect in the hollow-eyed stare of the hungry. This, in a country that has shown great ingenuity in responding to human and material emergencies.

If there is a flood or a hurricane, we have a national disaster procedure for the President to employ.

If an entire continent is destroyed by war, we devise a Marshall Plan.

If there is an earthquake in Peru, we send a member of the first family and plane loads of supplies.

If we deem a nation in Southeast Asia vital to our security, we go to war.

There is no end to our ingenuity and resources when the determination is made that a real problem exists, either here or abroad.

But what of the hungry among us. I submit that our response has not been sufficient.

Since Senator Robert Kennedy and Senator Joseph Clark made their tour of several Mississippi counties in 1967, considerable public attention has been focused on the hunger crisis. The public reacted to the CBS documentary "Hunger in America" with considerable furor. That was an encouraging response.

Public debate over the issue of hunger was startling. Lawsuits were filed. The White House and Congress were deluged with mail. The rigid disinterest of middle-class America was shattered. And the history of political manipulation entered an era of critical scrutiny.

Congress got the word. Quickly but carefully, legislation was prepared in the House—two Bills pertaining to school lunches and one proposing a Hunger Commission.

In the Senate the issue of hunger was met head on—first, action was taken to authorize Section 32 funds to feed more poor children. It then acted to create the Select Committee on Nutrition and Human Needs. The Senate mandated that Committee "to conduct a complete study of all matters pertaining to the food, medical and other related basic needs among the American people".

Through participation as a member of that Committee, I watched and studied repeated evidences of the existence of chronic hunger and malnutrition in the United States.

Yet, throughout the hearings the committee heard witness after witness complain about the administration of Federal food assistance programs.

Last Fall I was deeply involved, along with others in the Senate, to insure passage of two food assistance measures:

The first, S. 2547—amended the food stamp Act to provide for more money and to liberalize administration of that program.

After action by the House that introduced a work requirement, and removed the Senate passed provisions authorizing free food stamps to the very needy, that bill was signed into law on May 14.

The second, S. 2548, amended the National School Lunch Act and the Child Nutrition Act of 1966. Final House action on that bill is expected very soon.

My efforts in working for the passage of those bills were aimed at increasing the level of funds available to feed poor people.

In my view, both of these bills are critically vital in the struggle against the deteriorating conditions of chronic hunger. But, Federal legislation, no matter how sincerely or how compassionately it is founded, can be totally ineffective if it is not accompanied by systematic and humane standards at the point where the service is brought to the intended recipient.

Last summer, two professors from the U.S. Military Academy at West Point, conducted a study of food distribution programs at the request of the White House.

They visited fifteen counties in four states in different parts of the country.

In their report of food assistance programs, Captain Terrance Goggin and Captain Clifford Hendrix told of the many subtle and overt schemes local officials use to deny food to the poor:

If you're Black in Mississippi you can't eat. For the mother who bears more than her "quota" of illegitimate children, she and the children will go hungry. And if you work only during the harvest season to pick beets or grapes or oranges, you can't meet the residence requirements for food assistance.

The food issue is a perfect unhappy example of the dangers of the latest fad of local control. Local governments request and run food assistance programs. But the sad repressive result is that those hometown officials who are least responsive to the needs of the poor can also deny them federally proffered food. According to Goggin and Hendrix, federally funded food assistance programs are directly influenced by and are vulnerable to—the parochial attitudes and prejudices of local officials.

It is in this area of local program operation that members of the ABA can have an impact on the crisis of hunger and malnutrition. For, you can stir the benign calm and arouse public compassion. Already because of the cases brought to court concerning food programs, there is an increase in public awareness and interest in this problem.

I can only hope that for my presence here today to be of value on the struggle to insure "Freedom From Hunger" that you will continue with the kind of litigation and administrative action that we have come to call "poverty law" in the hunger area. The advent of the Federal poverty program brought with it legal aid practitioners who are effectively changing the concept of legal action in the area of social welfare. So far, the Columbia Center on Law and Social Policy and the California Rural Legal Assistance Program have been the sources of most legal action in the field of hunger. I believe that to make a lasting impact for hungry Americans that kind of advocacy effort must continue. But litigation, in a sense, is a kind of a last resort in the search for solutions to man's problems. What is really needed is a cold analytical look at the problem of feeding the poor. By training, lawyers are expert at problem solving. They are best when asking questions, questions that haven't been asked before.

Probing questions that would shatter the traditional attitudes about food distribution can arouse the food industry so that there will be less apprehension about change. A lot more can be done to feed the poor efficiently and inexpensively. Surely, from the ingenuity of that great combine called "agribusiness" there can emerge creative methods to "get some food down there" to the poor.

When asked by the space agencies, food companies devised fantastic ways to pack meals for astronauts.

Modern day private catering feeds thousands of people in hospitals, factories and most spectacularly, in airplanes.

We know that there is more than enough food produced by American farmers to feed all of our citizens. It is not because of mechanical or industrial failures that Americans go hungry. People are hungry because of what happens to men in management and policy making positions in government and in industry.

Public debates about the country's ability to feed the poor pointlessly end in a wrangle about money, loss of personal incentives and concern over proving the relationship between good nutrition and desired productivity.

Yet, in our nation's largest Federal assisted food program operated by the Department of Defense these irrelevant concerns are never debated.

The Pentagon spent over $4 billion last year to feed 3.5 million servicemen. That was an annual rate of more than $1100 per person.

While the administration budget for food assistance for the poor amounted to $1.2 billion to feed 8 million people, at a rate of $145 per person.

It has been easier to stir sustained national concern over hunger in Biafra than for places at home for which we are more directly responsible.

The problems of hunger, malnutrition and starvation in this country are looked at in terms of the workings of the system, and the way we have always done things. Unfortunately, they have not been looked at in terms of the problems of feeding hungry people. Decent men continue to sit and discuss statistical reliability and administrative neatness while people still go hungry. I urge you here today to use all your resources, your training and your skill to make the system guarantee an adequate diet for every American. You can help end a hunger emergency in America if you will probe for new and modern responses to this problem.

CITIZEN ADVOCACY: TRENDS FOR THE 1970'S

Nineteen Sixty-Five was a memorable year for all of us.

The Selma-Montgomery march and the Voting Rights Act, Watts and the McCone Commission Report. The great blackout in the Northeast. LBJ started his first full term.

Nick Katzenbach became Attorney General. Sarge Shriver was running OEO by day and the Peace Corps by night. Only 4.3 million dollars was going into legal aid societies nationwide that year, and only 600,000 of the nation's 32 million were getting any kind of assistance in criminal or civil legal matters. And "Murphy" was still a bed, or a woman who made chowder.

But for those of us here, one event that year stands out very clearly. The February meeting of the ABA House of Delegates made its historic pledge on behalf of the ABA "to cooperate with the Office of Economic Opportunity and other appropriate groups in the development of services to indigents and persons of low income." Of course that historic act was a continuation and a vindication of Reginald Heber Smith's dramatic challenge 45 years earlier, on the occasion of the founding of the Committee on Legal Aid Work.

"Let us assume leadership," he said, "by declaring here and now that henceforth within the field of law, the mighty power of the organized American Bar stands pledged to champion the rights of the poor, the weak, and the defenseless."

We come together today to celebrate both of these anniversaries, and we have much to celebrate. The forty-five years of active association between the Bar and the Legal Aid movement have led to five years of the most fruitful partnership in American society today.

Through its support of OEO's Legal Services program the Bar has helped keep itself dynamic and relevant. It has enhanced the attractiveness of law as a career for the new generation of altruistic and activist young Americans. It has helped build new bridges between the poor and the affluent, between the disenfranchised and our institutions, between young and old, between black and brown and red and white. It has sustained what we lawyers like to think of as our built-in conservatism, with a small "c," by proving the durability, adaptability, responsiveness, and capacity of the system and its traditional institutions, but it has done so by producing some radical changes in the system's operations. It has given support to legal services at the local level, getting programs started, educating local bar groups to overcome their timidity, helping to shield programs against local political and economic pressures. At the national level the support of the Bar has been the lifeblood of the Legal Services program, with the ABA leading the fight for authorizing legislation and annual appropriations, and manning the battle stations to ward off the persistent attacks by the enemies of equal justice for all, and by those who wish to dilute the lawyer's independence and the integrity of the lawyer-client relationship. The Congressional rejection of the Murphy Amendment last winter marked the coming of age of the ABA-OEO partnership, although the defensive machinery will have to be kept well-oiled to resist attempts to sneak the substance of the amendment in the side door of an Oklahoma plan or through subordination of Legal Services in the process of OEO regionalization.

We can see the signs of maturity as OEO Legal Services enters a phase where the focus is on quality as well as quantity, where the goal is not just to get money out and offices going, but to see that the lawyers are working with a rational sense of priorities, that they have a real impact, not just an existence.

All of you know at first hand that the growth of legal services means much more than just the 53 million dollars and the 3,950 people now in legal services offices. It means a new source of hope in hundreds of communities, law as a tool for all the people, David and Goliath victories in food stamps, housing, welfare, and the other fields where precedents are vital to the poor.

And with this security and maturity and success, perhaps it is time to pause, to ask what we have learned, and where we want to go. Here is one man's opinion.

First, I think we must begin to look at Legal Services not as an isolated function or a unique instrument, not only as a vital facet of life for the poor, but also as a prototype and model for, and as a subsystem of, a broader function of Citizen Advocacy, of skilled representation for all those who need it to deal with the powerful, sluggish institutions of society, whether in Washington or at City Hall. Obviously, such advocacy has produced a startling change in the lives of the poor. It is their sword to accelerate the flow of the basic ingredients of life—food, shelter, clothing. It is their shield against draconian legal interventions, like eviction and repossession. But in essence, it is really their lever to make the impersonal institutions that control their lives respond to their needs.

Yet, the poor are not the only ones in our society who are disenfranchised and underrepresented and powerless in their relations with the mighty institutions of modern living. We have seen that the same unresponsiveness and irrelevance and blindness and insensitivity to human needs and values, which have made the lives of the poor miserable, are also spoiling the lives of the non-poor. On one ground or another, the majority of Americans are disaffected with the quality of life imposed upon them by forces they cannot see or grasp or do anything about. The city dweller is fed up with traffic and air pollution and crimes; the homeowner with high interest rates and high taxes; the car owner with insurance and repair costs, the elderly with medicare and social security limitations, the middle-income American with the high rent and low quality in available housing. Then there's airport noise and dirty rivers and polluted beaches. And there are whole ranges of institution decisions that vitally affect our lives that we hardly even know about—fuel supply and pricing policies, t.v. programming decisions, aviation safety rules, car safety design, food additives, and hundreds of other conditions of modern living chosen for us mysteriously by unknown forces in unknown ways.

The problems for the non-poor may be different from those of the poor, and they may be generally less urgent—although they can be matters of health and safety and life and death—but they stem from the same roots of institutional malfunctioning, public and private, and in large part they will yield to the same approaches. The theories and principles of Jean and Edgar Cahn are as much blueprints for action for Nader's Raiders as they were for Bellow's Fellows. And any Legal Services Attorney worth his salt is going to have to study closely the Nader techniques and results. The past of the Neighborhood Lawyer and the Consumer Advocate is a shared past, and the future will be a shared future whether we try to make it so or not. But if we consciously make it so, if they share resources and knowledge and ideas, it will be a more fruitful future for all the citizen advocates and for the citizens they represent.

This commonality will be seen clearly, I believe, in a healthy refocussing, during the 70's, of citizen advocacy away from litigation as a primary tool.

In the field of legal services for the poor, the principal avenue of progress has been litigation, but the very successes in this field have taught us that litigation is not the only answer nor the best answer for the citizen advocate. Many of us lawyers like litigation. It can be exciting and competitive, gratifying to the ego; it works under clear rules and within strict bounds; it can produce clean-cut and visible victories. But of course the goal of every corporation lawyer and government lawyer is to stay out of court, to resolve issues before they become irreconciliable conflicts. For litigation in our crowded courts is slow, expensive and frequently undeterminative. It deals only with the pathology of institutions and not with their effective functioning. Most often a single case deals with a single fact situation, and it takes as much work to translate a precedent into a general rule of actual practice as to obtain the precedent. In short, it is too late, too little, and too limited.

Thus our emphasis on the "test case" as the key element of "reform" in the field of citizen advocacy—especially for the poor—may soon become obsolete.

Of course, the bar as a whole must continue to place high priority on vindicating fully in court the rights of the unpopular, and the discriminated against, and the oppressed, and the indigent accused, for when their rights are compromised we all lose a share of our liberty. And it must continue to service the day-to-day litigation needs of the poor, who must be represented fully if the legal system is not to be a cruel hoax to them. But at the same time we must focus our attention earlier in the process of institutional decision-making and actions. We must direct our efforts to the basic sources of agency malfunctions and not just at their symptoms.

We are going to do this in two ways. First, we are just going to do it. That is, even if the structures stay the same, the citizen advocate will have to introduce himself earlier and earlier into the processes of governmental—and corporate—decisionmaking. At the threshold he is going to have to open up these processes to public scrutiny. He is going to have to find out where and when and by whom the key decisions are made, the quiet decisions that really count, and what inputs and pressures go into those decisions. Then he is going to have to marshal his facts and his law and his logic and whatever political support he can muster, to make sure that there are adequate and articulate citizen inputs at the stages where priorities are set, where resources are allocated, where policies are determined, where discretion is exercised, as well as the stages where policy is interpreted, and applied, and implemented. When a court gets a lawsuit involving an agency decision, it can ordinarily ask only two questions—did the agency follow the correct procedure, and was there a sufficient factual basis on which that decision could have been reached within controlling law? But if the citizen advocate enters the picture before the decision is made, the slate is clean. He can affect the choice among a range of alternatives, all of which would be unassailable in court. He can ask—and answer—the questions "why" and "why not" and "what ought to be" about housing and welfare regulations, about auto safety and water pollution rules, or, for that matter, about the OEO guidelines.

Given the existing structures and attitudes, accomplishing this kind of citizen input is not an easy task. Sometimes it takes years just to understand what the dynamics of a government policy are, and to identify the avenues for change. Even with all the advantages we in Congress have when we perform the citizen advocate function—which we frequently do—it was ten years after the adoption of the Oil Import Control program, for example, before we learned where it was vulnerable and how to attack it at the policy-making stage.

And so, the second way we are going to have to approach the task of increasing citizen inputs is by changing the structures and practices of our institutions, so that they welcome and encourage representation of the public interest at the earliest possible stage.

Certainly the federal government has become too big and too complex and spread out for a few top managers to know or affect

what really happens at the delivery end of government programs. And the mushrooming problems and programs at the state and local government stretch the talents and time of officials at those levels to their limits. At this point in history, therefore, public interest advocacy is an absolutely essential element of good government, and government must act accordingly. We must write into every new program, and amend onto every old program, the most effective citizen input mechanisms we can devise. We will have to experiment with different modes, but the task should not be difficult. Most of our federal agencies have had no difficulty designing input mechanisms for industry interests or other special interests, so they should have no trouble innovating in the field of citizen inputs.

In some programs the course is self-evident. The Law Enforcement Assistance Administration, for example, will distribute close to a billion dollars in fiscal 1971. Most of the money will go from the Justice Department to State Anti-Crime Planning Agencies to spend in accordance with the state plans they have submitted. Most of that money will go to cities and counties in accordance with plans and applications they have submitted to the state, or in some cases to regional agencies within the state under plans these agencies have submitted. At no step in the pyramid is there required any citizen input, other than the possibility that a mayor or two may be on the state or regional planning group. There is no stipulation that the plans or applications be released for public comment before they are submitted, and thus we are very likely to see the spectacle of a city getting money to buy a more elaborate harbor patrol launch when it does not have an adequate police-community relations program. In that one program alone there is a fertile field for citizen advocacy on behalf of both the poor and non-poor alike all across the nation.

Under this view the citizen advocates wear many hats. They are policy advisors, substantive evaluators, fiscal auditors, quality control checkers, agents of the legislature to see that its mandates are carried out. And since these functions are quasi-governmental, it is totally appropriate that the government not only be open and hospitable to the citizen advocates, not only require that their inputs on behalf of the public be sought and received, but also assist and, in one form or another, finance the process of citizen advocacy.

The idea of investing public funds in public interest advocacy is not a new one. We have done it with the citizen advisory groups in model cities. In San Francisco, the urban renewal grants include financing for community representatives to participate in the planning and relocation functions. And, of course, the best example is OEO Legal Services, where we have funded in umbrella fashion a wide range of citizen advocates to audit and attack and elevate the functioning of institutions of every type, federal, state, local, and private, whose activities affect the most unrepresented groups of all, the poor. Perhaps Dr. Heard also qualifies as an example of a federally funded and stimulated citizen advocate. And the OEO investment in the National Clients Council, as a gadfly to OEO Legal Services itself, is a perfect example of what can be done by those who sponsor and support a program to make sure that program produces.

Thus the Murphy and Ruckleshaus incidents were the last gasps of an effort to turn the clock back, for the clock will inexorably turn forward to increasing—not stifling—government supported advocacy of government reform. The number of bills before the Ninety-First Congress which will enhance the federal role in financing assaults on federal decision-making is probably in the dozens. I have just held hearings on a bill I introduced to establish a Public Counsel Corporation to provide or fund the provision of representation for the unrepresented public in federal agency rulemaking proceedings, broadly defined. My bill may be one of the least expansive—and I hope most feasible. But it certainly reflects the direction we are moving in, and the direction states, and cities, and corporations must move in, if they are to meet the demands of the times.

Of course, if this prognosis, or expression of hope, proves accurate it is going to create some problems. There is going to be a sudden jump in demand for citizen advocate services, and our law schools and law firms will have to respond to that demand. Right now the citizen advocate bar consists of Legal Services and Legal Aid offices and centers, a few organizations like Inc. Fund and the A.C.L.U., and a handful of foundation-sponsored advocacy centers in Washington, a few public interest law firms, and the ad hoc, pro bono work performed by private lawyers for various citizen groups. Even with all the talent presently centered in Washington, the citizen advocates there cannot properly monitor all the federal agencies. And for each agency that decentralizes, there will be ten Washingtons around the nation where policies are set and executed and will need citizen inputs. For every block grant program there will be fifty Washingtons, and many times that if the state programs are subregionalized. So it will take many "Washington" type lawyers all over the country just to monitor the federal programs, not to mention state and local and corporate activities. They will need a new range of talents from grantsmanship to the Administrative Procedure Act, and from the Hatch Act to Freedom of Information. Thus the law schools will have to assist with new kinds of training. And the law firms will have to help make the manpower available.

Perhaps this is all a big order. And the steps for getting it filled are still wide open for discussion. Yet if we are to be able to stand behind our promises that the system can work in a responsive and responsible manner, then it is an order we had better fill. The Legal Services program has really blazed the trail in this direction, proving clearly the viability of taxpayer funded citizen advocacy. Now it is up to us to follow through.

THE HEALTH COSTS OF AIR POLLUTION

Mr. MUSKIE. Mr. President, last week the Subcommittee on Air and Water Pollution completed action on major amendments to the Clean Air Act. The bill sent to the full committee is a strong piece of legislation. It will, when enacted, have a major impact on the way we live. The subcommittee did not act in haste. It held some 20 days of hearings and 12 executive sessions over the course of the summer.

One of the bill's innovations is the requirement levels of air quality necessary to protect public health be achieved within a period of time set by the statute. This must be done regardless of cost but costs works both ways.

Air pollution costs the American people billions of dollars in health losses, property damage, increased accidents, and in the deterioration of the quality of life. A paper by Lester Lave and Eugene P. Seskin entitled "Air Pollution and Human Health" appeared recently in the publication of the American Association for the Advancement of Sciences. In that paper the authors calculate the health costs of air pollution to the American people.

Mr. President, the costs presented were made without regard to increased accidents, property damage, psychological effects, esthetic values, or effects on vegetation or wildlife. The paper concludes that 50 percent reduction in air pollution levels in this country would produce a health savings to the American people of some $2.1 billion annually.

The concluding paragraphs from this paper summarize what I consider to be important and relevant information as the Senate prepares to consider air pollution legislation. It demonstrates the need to act immediately to provide protection of the public health:

We estimate the total annual cost that would be saved by a 50 percent reduction in air-pollution levels in major urban areas, in terms of decreased morbidity and mortality, to be $2080 million. A more relevant indication of the cost would be the estimate that 4.5 percent of all economic costs associated with morbidity and mortality would be saved by a 50 percent reduction in air pollution in major urban areas (64). This percentage estimate is a robust figure; it is not sensitive to the exact figures chosen for calculating the economic cost of ill health.

Mr. President, I ask unanimous consent that the paper by Messrs. Lave and Seskin be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR POLLUTION AND HUMAN HEALTH

(By Lester B. Lave and Eugene P. Seskin)

The quantitative effect, with an estimate of the dollar benefit of pollution abatement, is considered.

Air pollution is a problem of growing importance; public interest seems to have risen faster than the level of pollution in recent years. Presidential messages and news stories have reflected the opinion of scientists and civic leaders that pollution must be abated. This concern has manifested itself in tightened local ordinances (and, more importantly, in increased enforcement of existing ordinances), in federal legislation, and in extensive research to find ways of controlling the emission of pollutants from automobiles and smokestacks. Pollutants are natural constituents of the air. Even without man and his technology, plants, animals, and natural activity would cause some pollution. For example, animals vent carbon dioxide, volcanic action produces sulfur oxides, and wind movement insures that there will be suspended particulates; there is no possibility of removing all pollution from the air. Instead, the problem is one of balancing the need of polluters to vent residuals against the damage suffered by society as a result of the increased pollution (1). To find an optimum level, we must know the marginal costs and marginal benefits associated with abatement. This article is focused on measuring one aspect of the benefit of pollution abatement.

Polluted air affects the health of human beings and of all animals and plants (2). It soils and deteriorates property, impairs various production processes (for example, the widespread use of "clean rooms" is an attempt to reduce contamination from the air), raises the rate of automobile and airline accidents (3), and generally makes living things less comfortable and less happy. Some of these effects are quite definite and measurable, but most are ill-defined and difficult to measure, even conceptually. Thus, scientists still disagree on the quantitative effect of pollution on animals, plants, and materials. Some estimates of the cost of the

soiling and deterioration of property have been made, but the estimates are only a step beyond guesses (4). We conjecture that the major benefit of pollution abatement will be found in a general increase in human happiness or improvement in the "quality of life," rather than in one of the specific, more easily measurable categories. Nonetheless, the "hard" costs are real and at least theoretically measurable.

In this article we report an investigation of the effect of air pollution on human health; we characterize the problem of isolating health effects; we derive quantitative estimates of the effect of air pollution on various diseases and point out reasons for viewing some earlier estimates with caution; we discuss the economic costs of ill health; and we estimate the costs of effects attributed to air pollution.

THE EFFECT OF AIR POLLUTION ON HUMAN HEALTH

In no area of the world is the mean annual level of air pollution high enough to cause continuous acute health problems. Emitted pollutants are diluted in the atmosphere and swept away by winds, except during an inversion; then, for a period that varies from a few hours to a week or more, pollutants are trapped and the dilution process is impeded. When an inversion persists for a week or more, pollution increases substantially, and there is an accompanying increase in the death rate.

Much time has been spent in investigating short-term episodes of air pollution (5). We are more concerned with the long-term effects of growing up in, and living in, a polluted atmosphere. Few scientists would be surprised to find that air pollution is associated with respiratory diseases of many sorts, including lung cancer and emphysema. A number of studies have established a qualitative link between air pollution and ill health.

A qualitative link, however, is of little use. To estimate the benefit of pollution abatement, we must know how the incidence of a disease varies with the level of pollution. The number of studies that allow one to infer a quantitative association is much smaller.

Quantifying the relation. Our objective is to determine the amount of morbidity and mortality for specific diseases that can be ascribed to air pollution. The state of one's health depends on factors (both present and past) such as inherited characteristics (that cause a predisposition to certain diseases), personal habits such as smoking and exercise, general physical condition, diet (including the amount of pollutants ingested with food), living conditions, urban and occupational air pollution, and water pollution (6, 7). Health is a complex matter, and it is exceedingly difficult to sort out the contributions of the various factors. In trying to determine the contribution of any single factor one must be careful neither to include spurious effects nor to conclude on the basis of a single insignificant correlation that there is no association. Laboratory experimentation is of little help in the sorting process (8).

The model implicit in the studies we have examined is a simple linear equation wherein the mortality or morbidity rate is a linear function of the measured level of pollution and, possibly, of an additional socioeconomic variable. In only a few cases do the investigators go beyond calculating a simple or partial correlation.

A number of criticisms can be leveled at this simple model. No account is taken of possibly important factors such as occupational exposure to air pollution and personal habits. These and other factors influencing health must be uncorrelated with the level of pollution, if the estimated effect of pollution is to be an unbiased estimate. In addition, the linear form of the function is not very plausible, except insofar as one considers it a linear approximation over a small range.

Both because of the rather crude nature of the studies and because of the statistical estimation, there is a range of uncertainty concerning the quantitative effect of pollution on human health. This range is reflected in the estimate of the benefit of pollution abatement, discussed below.

Epidemiological studies. Epidemiological data are the kind of health data best adapted to the estimation of air pollution effects. These data are in the form of mortality (or morbidity) rates for a particular group, generally defined geographically (9). For example, an analyst may try to account for variations in the mortality rate among the various census tracts in a city. While these vital statistics are tabulated by the government and so are easily available, there are problems with the accuracy of the classification of the cause of death (since few diagnoses are verified by autopsy and not all physicians take equal care in finding the cause of death). Other problems stem from unmeasured variables such as smoking habits, occupations, occupational exposure to air pollution, and genetic health factors. Whenever a variable is unmeasured, the analyst is implicitly assuming either that it is constant across groups or else that it varies randomly with respect to the level of air pollution. Since there are many unmeasured variables, one should not be surprised to discover that some studies fail to find a significant relationship or that others find a spurious one. For the same reason, one should not expect the quantitative effect to be identical across various groups, even when the relationship in each group is statistically significant.

Sample surveys are a means of gathering a more complete set of data. For example, a retrospective analysis might begin with a sample of people who died from a particular disease. Through questionnaires and interviews, the smoking habits and residence patterns of the deceased can be established. The analysis would then consist of an attempt to find the factors implicated in the death of these individuals. Two types of problems arising from such a study are the proper measurement of variables such as exposure to air pollution (there are many pollutants and many patterns of lifetime exposure) and the possible contributions of variables which still are unobserved, such as occupational hazards, socioeconomic characteristics, and personal habits.

Whatever the source of data, the investigators must rest their cases by concluding that the associations which they find are so strong that it is extremely unlikely that omitted variables could have given rise to the observed correlations; they cannot account for all possible variables.

Episodic relationships. Another method of investigating the effects of pollution involves an attempt to relate daily or weekly morality (or morbidity) rates to indices of air pollution during the interval in question (10). The conclusions of these studies are of limited interest, for two reasons. First, someone who is killed by an increase in air pollution is likely to be gravely ill. Air pollution is a rather subtle irritant, and it is unlikely that a healthy 25-year-old will succumb to a rise in pollution levels. Our interest should be focused on the initial cause of illness rather than on the factor that is the immediate determinant of death. Thus, morbidity data are more useful than mortality data. Second (and more important for the morbidity studies), there are many factors that affect the daily morbidity rate or daily rate of employee absences. Absence rates tend to be high on Mondays and Fridays for reasons that have nothing to do with air pollution or illness. One would expect little change in these absence rates if air pollution were reduced. Other factors, such as absence around holidays, give rise to spurious variation; this can be handled by ignoring the periods in question or by gathering enough data so that this spurious variation is averaged away. Some of these factors (such as high absence rates on Fridays and seasonal absence rates) may be correlated with variations in air pollution and no amount of data or of averaging will separate the effects. We have chosen to disregard the results of these episodic studies, with a few exceptions, cited below.

It is difficult to isolate the pollutants that have the most important effects on health on the basis of the studies we survey here. Measurement techniques have been crude, and there has been a tendency to base concentration figures on a single measurement for a large area. A more important problem is the fact that in most of these studies only a single pollutant was reported. Discovering which pollutants are most harmful is an important area, where further exploration is necessary. We have tried, nevertheless, to differentiate among pollutants in the survey that follows (11). The problem is complicated, since pollution has increased over time, and since lifetime exposure might bear little relation to currently measured levels. These problems are discussed elsewhere (12).

A REVIEW OF THE LITERATURE

We will proceed with a detailed review of studies made in an attempt to find an association between mortality or morbidity and air pollution indices.

Air pollution and bronchitis. Studies link morbidity and mortality from bronchitis to air pollution in England (13), the United States (14, 15), Japan (16), and other countries (17). Mortality rates by country boroughs in England and Wales have been correlated with pollution (as measured by the sulfation rate, total concentration of solids in the air, a deposit index, and the density of suspended particulates) and with socioeconomic variables (such as population density and social class). The smoking habits of the individuals studied have also been investigated. The conclusion of these studies is that air pollution accounts for a doubling of the bronchitis mortality rate for urban, as compared to rural, areas.

We took data reported by Stocks (18, 19) and by Ashley (20) and performed a multiple regression analysis, as shown in Table 1. We fit the following equation to the data $MR_i = a_0 + a_1 P_i + a_2 S_i + e_i$ (1) where MR_i is the mortality rate for a particular disease, in country borough i, P_i is a measure of air pollution in that borough S_i is a measure of socioeconomic status in borough i, and e_i is an error term with a mean of zero. (We also fit other functional forms, as discussed below.) Under general assumptions, the estimated coefficients (a_0, a_1, a_2) will be best linear, unbiased estimates (21). Only if we want to perform significance tests must we make an assumption about the distribution of the error term (for example, the assumption that it is distributed normally).

The first regression in Table 1 relates the bronchitis mortality rate for men to a deposit index (see Table 1, footnote †), and the population density in each of 53 country boroughs. Thirty-nine percent of the variation in the mortality rate (across boroughs) is "explained" by the regression. It is estimated that a unit increase in the deposit index (1 gram per 100 square meters per month) leads to an increase of 0.18 percent in the bronchitis mortality rate (with population per acre held constant). An increase of 0.1 person per acre in the population density is estimated to lead to an increase of 0.02 percent in the mortality rate (with air pollution held constant). As indicated in Table 1 by the t statistics (the values in parentheses below the estimated coefficients), the air pollution variable is extremely important, whereas the socioeconomic variable contributes nothing to the explanatory power of the regression.

TABLE 1.—MULTIPLE REGRESSIONS BASED ON DATA FROM ENGLAND. NUMBERS IN PARENTHESES ARE THE t STATISTIC

Category	R^2*	Index† Air pollution	Index† Socio-economic

*The coefficient of determination: a value of .386 indicates a multiple correlation coefficient of .62, and indicates that 39 percent of the variation in the death rate is "explained" by the regression.

†The t statistic: for a one-tailed t-test with 23 degrees of freedom, a value of 1.71 indicates significance at the .05 level; for 25 or 50 degrees of freedom, the critical values are 1.71 and 1.68.

‡Data for 53 county boroughs in England and Wales as reported by Stocks (18). Air pollution is measured by a deposit index (in grams per 100 square meters per month) whose observed range is 96 to 731, with a mean of 375. The socioeconomic index is expressed in numbers of persons per acre (multiplied by 10); the range is 69 to 364, and the mean is 163. Death rates are measured as index numbers, with the mean for all boroughs in England and Wales equal to 100. Ranges within this sample are as follows: bronchitis (males), 73 to 259; bronchitis (females), 72 to 268; lung cancer, 70 to 159; stomach cancer (males), 67 to 168; stomach cancer (females), 84 to 161; intestinal cancer, 87 to 123.

§Data for 28 county boroughs in England and Wales as reported by Stocks (18). Air pollution is measured by a smoke index (suspended matter, in milligrams per 100 cubic meters); the range is 6 to 49. Again, the socioeconomic index is expressed in numbers of persons per acre (×10) the range is 83 to 342.

‖Data for 26 areas in northern England and Wales as reported in Stocks (19). Air pollution is measured by a smoke index, as for category 3; the range is 15 to 562 mg/1000m³ and the mean is 260. One socioeconomic variable is the number of persons per acre (×10); the range is 1 to 342 and the mean is 102. The other socioeconomic variable is social class; the range is 61 to 295. Death rates are measured as for category 1; within this sample, the range for lung cancer is 23 to 165; for other cancer, 6 to 122 (males) and 88 to 154 (females); for bronchitis, 18 to 259 (males) and 12 to 240 (females); for pneumonia, 61 to 227 (males) and 40 to 245 (females).

¶Data for 53 areas as reported by Ashley (20). Air pollution is measured (i) by a smoke index (as for category 3), with a range of 23 to 261 $\mu g/m^3$ and a mean of 124, or (ii) by an SO_2 index (apparently in the same units), with a range of 33 to 277 and a mean of 124. Death rates are measured as for category 1; within this sample, the range for lung cancer is 70 to 146, and for bronchitis, 64 to 186.

The first ten regressions in Table 1 are an attempt to explain the bronchitis death rate. Four different data sets are used, along with three measures of pollution and two socioeconomic variables. The coefficient of determination, R^2 (the proportion of the variation in the mortality rate explained by the regression), ranges from .3 to .8. Air pollution is a significant explanatory variable in all cases. In only three cases is the socioeconomic variable significant.

The implication of the first regression is that a 10 percent decrease in the deposit rate (38 g 100 m^{-2} month $^{-1}$) would lead to a 7 percent decrease in the bronchitis death rate. Another way of illustrating the effect of air pollution on health is to note that, if all the boroughs were to improve the quality of their air to that enjoyed by the borough having the best air of all those in the sample (a standard deposit rate for all boroughs of 96 g 100 m^{-2} month $^{-1}$), the average mortality rate (for this sample) would fall from 129 to 77. Thus, cleaning the air to the level of cleanliness enjoyed by the area with the best air would mean a 40 percent drop in the bronchitis death rate among males. In the fifth regression the pollution index is a smoke index (Table 1, footnote §), and a different set of areas is considered. This is a more successful regression in terms of the percentage of variation explained. As before, the air pollution coefficient is extremely significant, and the implication is that cleaning the air to the level of cleanliness currently enjoyed by the area with the best air (15 mg/100 m^3) would lower the average bronchitis mortality rate from 106 to 30, a drop of 70 percent. Results of the other regression analyses based on bronchitis mortality data have similar implications. Note that the effect is almost the same for males and females. This indicates reliability and suggests that the effect is independent of occupational exposure.

Winkelstein *et al* (14) collected data on 21 areas in and around Buffalo, New York. A cross tabulation of census tracts by income level and pollution level shows that the mortality rate for asthma, bronchitis, and emphysema (in white males 50 to 69 years old) increases by more than 100 percent as pollution rises from level 1 to level 4 (see 22).

These studies indicate a strong relationship between bronchitis mortality and a number of indices of air pollution. We conclude that bronchitis mortality could be reduced by from 25 to 50 percent depending on the particular location and deposit index, by reducing pollution to the lowest level currently prevailing in these regions. For example, if the air in all of Buffalo were made as clean as the air in those parts of the area that have the best air, a reduction of approximately 50 percent in bronchitis mortality would probably result.

Air pollution and lung cancer. The rate of death from lung cancer has been correlated with several indices of pollution and socioeconomic variables in studies that provided controls for smoking habits and other factors. For English nonsmokers, Stocks and Campbell (23, 24) found a tenfold difference between the death rates for rural and urban areas. Daly (25), in comparing death rates in urban and rural areas of England and Wales, found the urban rate twice as high. Evidence for other parts of Europe also shows an association between lung cancer and air pollution (26).

Regressions 11 through 16 (Table 1) show our reworking of the data for lung cancer mortality for England and Wales (there is no control for smoking). Regressions 11 through 14 imply that, if the quality of air of all boroughs were improved to that of the borough with the best air, the rate of death from lung cancer would fall by between 11 and 44 percent. Regressions 15 and 16 show a relationship between air pollution and lung cancer which is either insignificant or inverse. The only contrary results come from Ashley's data. In the absence of more complete evidence, we must remain curious about these results. Use of such small samples and inadequate controls is certain to lead to some contrary results, but they are disconcerting when they appear.

In a study of 187,783 white American males (50 to 69 years old), Hammond and Horn (27) reported that the age-standardized rate of death due to lung cancer was 34 (per 100,000) in rural areas as compared to 56 in cities of population over 50,000. When standardized with respect both to smoking habits and to age, the rate was 39 in rural areas and 52 in cities of over 50,000.

Haenszel *et al.* (28) analyzed 2191 lung cancer deaths among white American males, that had occurred in 46 states, and data for a control group consisting of males who died from other causes. They found the crude rate of death from lung cancer to have been 1.56 times as high in the urban areas of their study as in the rural areas in 1958 and 1.82 times as high in the period 1948–49 (in subjects 35 years and older, with adjustments made for age). When adjustments are made for both age and smoking history, the ratio is 1.43. Also the ratio increased with duration of residence in the urban or rural area, from 1.08 for residence of less than 1 year to 2.00 for lifetime residence. Haenszel and Taeuber (29) report similar results for white American females. In a number of additional studies the association between air pollution and lung cancer is examained (30).

Buell and Dunn (31) review the evidence

on lung cancer and air pollution; a summary of their findings is given in Table 2. For smokers, death rates (adjusted for age and smoking) ranged from 25 to 123 percent higher in urban areas than in rural areas. For nonsmokers, all differences exceed 120 percent. "The etiological roles for lung cancer of urban living and cigarette smoking seem each to be complete," they say, "in that the urban factor is evident when viewing nonsmokers exclusively, and the smoking factor is evident when viewing rural dwellers exclusively." They argue that differences in the quality of diagnosis could not account for the observed differences for urban and rural areas.

TABLE 2.—A SUMMARY OF LUNG CANCER MORTALITY STUDIES. NUMBER OF DEATHS FROM LUNG CANCER PER 100,000 POPULATION [FROM BUELL AND DUNN (31)]

Study	Standardized for age and smoking			Nonsmokers		
	Urban	Rural	Urban/rural	Urban	Rural	Urban/rural

[1] California men; death rates by counties.
[2] American men.
[3] England and Wales.
[4] Northern Ireland.
[5] England land; no adjustment for smoking.
[6] American men.

Nonrespiratory-tract cancers and air pollution. Our reworking of data from England on rates of death from non-respiratory-tract cancer is presented in Table 1 (regressions 17 through 26). In the regressions, stomach cancer is significantly related to a deposit index and a smoke index. The effects are nearly identical for males and females. Intestinal cancer appears to be only marginally related to indices of either deposit or smoke. For 26 areas in northern England and Wales, there appears to be little relationship between nonrespiratory-tract cancers and a smoke index. The single exception in the four regressions occurs for males when the socioeconomic variable is social class; here the smoke index explains a significant amount of the variation in the cancer mortality rate. (Apparently population density and smoke index are so highly related in these 26 areas that neither has significant power to explain such variation).

Winkelstein and Kantor (32) investigated rates of mortality from stomach cancer in Buffalo, New York, and the immediate environs. Their measure of pollution is an index of suspended particulates averaged over a 2-year period. They found the rate of mortality due to stomach cancer to be more than twice as great in areas of high pollution as in areas of low pollution (33).

Hagstrom *et al.* (34) tabulated rates of death from cancer among white middle class residents of Nashville, Tennessee, between 1949 and 1960, using four measures of air pollution. They found the cancer mortality rate to be 25 percent higher in polluted areas than in areas of relatively clean air (35). They also found significant mortality-rate increases associated with individual categories of cancer, such as stomach cancer, cancer of the esophagus, and cancer of the bladder. The individual mortality rates are more closely related to air pollution after the data are broken down by sex and race.

Levin *et al.* (36) report, for all types of cancer, these relationships: The age-adjusted cancer-incidence rates for urban males was 24 percent higher than that for rural males in New York State (exclusive of New York City) (1949–51), 36 percent higher in Connecticut (1947–51), and 40 percent higher in Iowa (1950); the incidence rate for urban females was 14 percent higher than that for rural females in New York State, 28 percent higher in Connecticut, and 34 percent higher in Iowa. For both males and females, the incidence rate for each of 16 categories of cancer was higher in urban than in rural areas.

Cardiovascular disease and air pollution. Enterline et al. (37) found that mortality from heart disease is higher in central-city counties than in suburban counties, and, in turn, higher in suburban counties than in nonmetropolitan counties. Ziedberg *et al.* (38) found that both morbidity and mortality rates for heart disease are associated with air pollution levels in Nashville. The morbidity rate was about twice as high in areas of polluted air as in areas of clean air. The mortality rate was less closely associated; it was 10 to 20 percent higher in areas of polluted air than in areas of clear air (39).

Friedman (40) correlated the rate of mortality from coronary heart disease in white males aged 45 to 64 with the proportion of this group living in urban areas. The simple correlation for 33 states is .79. When cigarette consumption is held constant, the partial correlation is .67.

On the basis of these studies we conclude that a substantial abatement of air pollution would lead to 10 to 15 percent reduction in the mortality and morbidity rates for heart disease. We caution the reader that the evidence relating cardiovascular disease to air pollution is less comprehensive than that linking bronchitis and lung cancer to air pollution.

Total respiratory disease (41). Daly (25) found significant correlations between air pollution and death rates for all respiratory diseases (and for nonrespiratory diseases as well) in England. Douglas and Waller (42) found significant relationships between air pollution and respiratory disease in 3866 British school children. Fairbairn and Reid (43) found significant correlations between air pollution and morbidity rates (for bronchitis, pneumonia, pulmonary tuberculosis, and lung cancer) in England. Regressions 27 through 30 in Table 1 show pneumonia mortality to be related only marginally to a smoke index.

Zeidberg *et al.* (44) questioned 9313 Nashville residents about recent illnesses. Among males aged 55 and older from white middle-class families, the numbers of illnesses per respondent during the past year were 1.92, 1.15, and 1.26 for areas of high, moderate, and low pollution, respectively. There are a number of other comparisons, based on other measures of air pollution and on data for females and nonwhites (some of these are given in 45). However, we should add a word of caution: although the sample size in this study was large enough and controls for many socio-economic variables were included, many important factors were ignored—for example, smoking habits and length of residence. Nonetheless, the finding is extremely strong and seems unlikely to be an artifact of unmeasured variables.

Hammond (46) studied over 50,000 men to find the relationships between emphysema, age, occupational exposure to pollution, urban exposure, and smoking. His results indicated that the effect of air pollution is significant and that heavy smokers have a much higher morbidity rate in cities than in rural areas; the effect becomes more marked as age increases.

Ishikawa *et al.* (47) estimated the incidence of emphysema in Winnipeg (Canada) and St. Louis. They examined the lungs of 300 corpses in each city (the samples were comparable). Findings for each age group (over 25 years old) indicated that the incidence and severity of emphysema is higher in St. Louis, the city with the more polluted air. (In the 45-year-old group 5 percent of those in Winnipeg and 46 percent of those in St. Louis showed evidence of emphysema.)

A number of studies have been made in England on homogeneous occupational groups, such as postmen. The results are relatively pure in that all members of the sample have comparable incomes, working conditions, and social status. Holland and Reid (48) found that the rates of occurrence of severe respiratory symptoms were 25 to 50 percent higher for London postmen than for small-town postmen (sample size, 770), Reid (49) found that, in the postmen of his study, absences due to bronchitis rose from an index number of 100 for the area of least air pollution, to 120 for an area of moderate pollution, to 250 and 283 for the areas of highest pollution. Corresponding figures for absences due to other respiratory illness were 100, 100, 150, and 151, respectively, and for absences due to infectious and parasitic diseases, 100, 115, 130, and 140. Cornwall and Raffle (50) made a similar study of bus drivers in London. They found that 20 to 35 percent of absences due to sickness of any kind could be ascribed to air pollution (they used a fog index as a measure of pollution). Fairbairn and (Reid (43) tabulated absences due to sickness of pollution). Fairbairn and Reid (43) tabulated absences due to sickness for postmen, for males working indoors, and for females working indoors. They found that the age-standardized morbidity rate for bronchitis and pneumonia in the postmen of their study rose from 40 man-years, per 100 man-years, for the area of lowest air pollution (of the four areas studied) to 122 for the area of highest air pollution. Corresponding figures for morbidity from colds were 75 and 171 man-years, and for morbidity from influenza, 131 and 184 man-years. For males working indoors, the low and high morbidity rates were as follows: bronchitis and pneumonia, 32 and 39; colds, 53 and 64; influenza, 88 and 102.

Dohan (fifty-one) studied absences (of more than 7 days) of female employees in eight Radio Corporation of America plants. He found a correlation of .96 between atmospheric concentrations of SO_3 and absences due to respiratory disease in the five cities for which complete data were available. During Asian flu epidemics there was a 200 percent increase in illness in cities with polluted air and only a 20 percent increase in those with relatively unpolluted air.

Infant mortality and total mortality rates. Sprague and Hagstrom (fifty-two) compared air-pollution date for Nashville with fetal and infant mortality rates for Nashville as given in census tracts (for 1955 through 1960). Controls for socioeconomic factors were not included. For infant death rates (ages 28 days to 11 months), the highest correlation was with atmospheric concentrations of SO_3 (in milligrams per 100 square centimeters per day) and was .70. For the neonatal death rates (ages 1 day to 27 days), the highest correlation was with dustfall and was .49. For infants dying during their first day whose death certificate includes mention of immaturity, the highest correlation was with dustfall and was .45. The correlation of the fetal death rate with dustfall was .58.

In a study just being completed (fifty-three), we have collected data for 114 Standard Metropolitan Statistical Areas in the United States and have attempted to

relate total death rates and infant mortality rates to air pollution and other factors. Socioeconomic data, death rates, and air-pollution data were taken from U.S. government publications (fifty-four). Regression 1 (Table 3) shows how the total death rate in 1960 varies with air pollution levels and with socioeconomic factors. As the (biweekly) minimum level of suspended particulates increases, the death rate rises significantly. Moreover, the death rate increases with (i) the density of population of the area, (ii) the proportion of nonwhites, (iii) the proportion of people over age 65, and (iv) the proportion of poor families. Eighty percent of the variation in the death rate across these 114 statistical areas is explained by the regression.

TABLE 3.—REGRESSIONS RELATING INFANT AND TOTAL MORTALITY RATES FOR 114 STANDARD METROPOLITAN STATISTICAL AREAS IN THE UNITED STATES TO AIR POLLUTION AND OTHER FACTORS. FOR MEANS AND STANDARD DEVIATIONS (S.D.) OF THE VARIABLES, SEE †

Category	R^2‡	Air pollution (minimum) concentrations)	Socioeconomic			
			P/m²§	Nonwhite (percent)	Over 65 (percent)	Poor (percent)

8. Sulfates	.434	.171	.004	.181	----------	.085
t statistic*		(1.95)	(1.82)	(5.87)	----------	(1.71)

*The t statistic: for a one-tailed t-test, a value of 1.65 indicates significance at the .05 level.
†Total death rate per 10,000: mean, 91.5; S.D., 15.2. Infant death rate (age, <1 year) per 10,000 live births: mean, 255.1; S.D., 36.1. Infant death rate (age, <28 days) per 10,000 live births: mean, 188.0; S.D., 24.4 Fetal death rate per 10,000 live births: mean, 153.9; S.D., 34.4. Suspended particulates ($\mu g/m^3$), minimum reading for a biweekly period: mean, 45.2; S.D., 18.7. Total sulfates ($\mu g/m^3$) (× 10), minimum reading for a biweekly period: mean, 46.9; S.D., 30.6. Persons per square mile: mean, 763.4; S.D., 1387.9. Percentage of nonwhites in population (× 10): mean, 125.2; S.D., 102.8. Percentage of population over 65 (× 10): mean, 84.2; S.D., 21.2. Percentage of families with incomes under $3000 (× 10): mean, 181.6; S.D., 65.7.
‡The coefficient of determination: a value of .804 indicates a multiple correlation coefficient of .90, and indicates that 80 percent of the variation in the death rate is "explained" by the regression.
§Persons per square mile.

Regression 3 shows how the 1960 infant death rate (age, less than 1 year) varies. A smaller proportion (55 percent) of the variation in the death rate is explained by the regression, although the minimum air-pollution level, the percentage of nonwhites, and the proportion of poor families continue to be significant explanatory variables. Regression 5 is an attempt to explain variation in the neonatal death rate. The results are quite similar to those of regression 3. The fetal death rate is examined in regression 7. Here the minimum air-pollution level, population density, the percentage of nonwhites, and the percentage of poor families are all significant explanatory variables.

Regressions 2, 4, 6, and 8 are an attempt to relate these death rates to the atmospheric concentrations of sulfates for the 114 statistical areas of the study. Regression 2 shows that the total death rate is significantly related to the minimum level of sulfate pollution, to population density, and to the percentage of people over age 65; 81 percent of the variation is explained. Regressions 4, 6, and 8 show that the minimum atmospheric concentration of sulfates is a significant explanatory variable in three categories of infant death rates.

One might put these results in perspective by noting estimates on how small decreases in the air-pollution level affect the various death rates. A 10 percent decrease in the minimum concentration of measured particulates would decrease the total death rate by 0.5 percent, the infant death rate by 0.7 percent, the neonatal death rate by 0.6 percent, and the fetal death rate by 0.9 percent. Note that a 10 percent decrease in the percentage of poor families would decrease the total death rate by 0.2 percent and the fetal death rate by 2 percent. A 10 percent decrease in the minimum concentration of sulfates would decrease the total death rate by 0.4 percent, the infant mortality rate by 0.3 percent, the neonatal death rate by 0.4 percent, and the fetal death rate by 0.5 percent.

Each of the relations in Tables 1 and 3 was estimated in alternative ways, including transformation into logarithms, a general quadratic, and a "piecewise" linear form as documented elsewhere (12). The implications about the roles of air pollution and of the socioeconomic variables were unchanged by use of the different functional forms. Another result to be stressed is that, in Table 1, comparable regressions for males and females show almost precisely the same effects for air pollution. This suggests that occupational exposure does not affect these results; the result lends credence to the estimates. A result that we document elsewhere (53) is that it is the minimum level of air pollution that is important, not the occasional peaks. People dealing with this problem should worry about abating air pollution at all times, instead of confining their concern to increased pollution during inversions.

SOME CAVEATS

In preceding sections we have described a number of studies which quantify the relationship between air pollution and both morbidity and mortality. Is the evidence conclusive? Is it possible for a reasonable man still to object that there is no evidence of a substantial quantitative association? We believe that there is conclusive evidence of such association (55).

In the studies discussed, a number of countries are considered, and differences in morbidity and mortality rates among different geographical areas, among people within an occupational group, and among children are examined. Various methods are used, ranging from individual medical examinations and interviews to questionnaires and tabulations of existing data. While individual studies may be attacked on the grounds that none manages to provide controls for all causes of ill health, the number of studies and the variety of approaches are persuasive. It is difficult to imagine how factors such as general habits, inherited characteristics, and lifetime exercise patterns could be taken into account.

To discredit the results, a critic would have to argue that the relationships found by the investigators are spurious because the level of air pollution is correlated with a third factor, which is the "real" cause of ill health. For example, many studies do not take into account smoking habits, occupational exposure, and the general pace of life. Perhaps city dwellers smoke more, get less exercise, tend to be more overweight, and generally live a more strained, tense life than rural dwellers. If so, morbidity and mortality rates would be higher for city dwellers, yet air pollution would be irrelevant. This explanation cannot account for the relationships found.

Apparently there is little systemic relationship between relevant "third" factors and the level of air pollution. An English study (19) in which smoking habits are examined reveals little evidence of differences by residence. There is evidence in the United States that smoking is more prevalent among lower socioeconomic groups (56) but income or other socioeconomic variables would account for this effect and still leave the pollution coefficient unbiased. More importantly, the correlations between air pollution and mortality are better when one is comparing areas within a city (where more factors are held constant) than when one is comparing rural and urban areas (57). It is especially hard to believe that the apparent relation between air pollution and ill health is spurious when significant effects are found in studies comparing individuals within strictly defined occupational groups, such as postmen or bus drivers (where incomes and working conditions are comparable and unmeasured habits are likely to be similar).

When there are uncontrolled factors, some studies may show inconclusive or even negative results; only by collecting samples large enough to "average away" spurious effects can dependable results be guaranteed. In the main, each of the studies cited above was based on a substantial sample. It is the body of studies as a whole that we find persuasive.

An examination of contrary results. Uncontrolled factors, together with small samples, are certain to lead to some results contrary to the weight of evidence and to our expectations. For example, in some studies (58) no attempt is made to control even for income or social status. From the evidence of studies which did provide such controls, we know that failure to control for income leads to biased results, and so we place little credence in either the positive or negative findings of studies lacking these controls.

Sampling error can be extremely important. For example, Zeidberg *et al.* (59) find mixed results in cross-tabulating respiratory disease mortality with level of air pollution and with income class. In general the relationships are in the expected direction, but they are often insignificant. Insignificant results might occur often, if the samples are small, even if air pollution is extremely sig-

nificant, since sampling errors dominate the explanatory variables.

Another study in which sampling error is important is reported by Ferris and Whittenberger (7). They compared individuals in Berlin, New Hampshire, with residents of Chilliwack (British Columbia), Canada, and—not surprisingly in view of the small samples—failed to find significant differences in the occurrence of respiratory disease. Prindle *et al.* (60) compared two Pennsylvania towns in the same fashion. These two studies are admirable in that individuals were subjected to careful medical examinations. However, only a few hundred individuals were studied, and this means that sampling errors tend to obscure the effects of air pollution. Moreover, there were no controls for other factors, such as smoking. Also, one must be careful to control for a host of other variables if the sample is small. For example, the ethnic origins of the population and their general habits and occupations are known to affect mortality rate. It is exceedingly difficult to control for these factors; use of carefully constructed large samples seems the best answer. Finally, air pollution is measured currently, and it is generally assumed that relative levels have been constant over time and that people have lived at their present addresses for a long period. It is hardly surprising that statistical significance is not always obtained when such assumptions are necessary.

Since investigators are more reluctant to publish negative results than positive ones, and since it is more difficult to get negative results published, it is probable that we are unaware of other studies that fail to find a strong association between air pollution and ill health. We are somewhat reluctant to come to strong conclusions without knowledge of such negative results. However, there seems to be no reasonable alternative to evaluating the evidence at hand and allowing for uncertainty. Thus, we conclude that an objective observer would have to agree that there is an important association between air pollution and various morbidity and mortality rates.

THE ECONOMIC COSTS OF DISEASE

Having found a quantitative association between air pollution and both morbidity and mortality, the next question is that of translating the increased sickness and death into dollar units. The relevant question is, How much is society willing to spend to improve health (to lower the incidence of disease)? In other words, how much is it worth to society to relieve painful symptoms, increase the level of comfort of suffers, prevent disability, and prolong life? It has become common practice to estimate what society is willing to pay by totaling the amount that is spent on medical care and the value of earnings "forgone" as a result of the disability or death (61). This cost seems a vast underestimate for the United States in the late 1960's. Society seems willing to spend substantial sums to prolong life or relieve pain. For example, someone with kidney failure can be kept alive by renal dialysis at a cost of $15,000 to $25,000 per year; this sum is substantially in excess of forgone earnings, but today many kidney patients receive this treatment. Another example is leukemia in children; enormous sums are spent to prolong life for a few months, with no economic benefit to society. If ways could be found to keep patients with chronic bronchitis alive and active longer, it seems likely that people would be willing to spend sums substantially greater than the foregone earnings of those helped. So far as preventing disease is concerned, society is willing to spend considerable sums for public health programs such as chest x-rays, inoculation, fluoridation, pure water, and garbage disposal and for private health care programs such as annual physical checkups.

While we believe that the value of earnings forgone as a result of morbidity and mortality provides a gross underestimate of the amount society is willing to pay to lessen pain and premature death caused by disease, we have no other way of deriving numerical estimates of the dollar value of air-pollution abatement. Thus, we proceed with a conventional benefit calculation, using these forgone earnings despite our reservations.

Direct and indirect costs. Our figures for the cost of disease are based on *Estimating the Cost of Illness*, by Dorothy P. Rice (61). Unfortunately, Rice calculated disease costs in quite aggregate terms, and so the category "diseases of the respiratory system" must be broken down. It seems reasonable to assume that both direct and indirect costs would be proportional to the period of hospitalization (total patient-days in hospitals) by disease category (62).

Rice defines a category of direct disease costs as including expenditures for hospital and nursing home care and for services of physicians, dentists, and members of other health professions. "Other direct costs" (which would add about 50 percent to those just enumerated) consist of a variety of personal and nonpersonal expenditures (such as drugs, eyeglasses, and appliances), school health services, industrial in-plant health services, medical activities in federal units other than hospitals, medical research, construction of medical facilities, government public health activities, administrative expenditures of voluntary health agencies, and the net cost of insurance. Since Rice does not allocate "other direct costs" among diseases, we omit it from our cost estimates. However, we conjecture that respiratory diseases represent a substantial portion of this category. Thus, our direct cost estimate is likely to be a substantial underestimate of "true" direct costs (probably more than 50 percent too low).

Estimating indirect cost is an attempt to measure the losses to the nation's economy caused by illness, disability, and premature death. We would argue that such a calculation gives a lower bound for the amount people would be willing to pay to lower the morbidity and mortality rates. These costs are calculated in terms of the earnings forgone by those who are sick, disabled, or prematurely dead (63).

THE HEALTH COST OF AIR POLLUTION

The studies cited earlier in this article show a close association between air pollution and ill health. The evidence is extremely good for some diseases (such as bronchitis and lung cancer) and only suggestive for others (such as cardiovascular disease and nonrespiratory-tract cancers.) Not all factors have been taken into account, but we argue that an unbiased observer would have to concede the association. More effort can and should be spent on refining the estimates. However, the point of this exercise is to estimate the health cost of air pollution. We believe that the evidence is sufficiently complete to allow us to infer, roughly, the quantitative associations. We do so with caution, and proceed to translate the effects into dollars. We have attempted to choose our point estimates from the conservative end of the range.

We interpret the studies cited as indicating that mortality from bronchitis would be reduced by about 50 percent if air pollution were lowered to levels currently prevailing in urban areas with relatively clean air. We therefore make the assumption that there would be a 25 to 50 percent reduction in morbidity and mortality due to bronchitis if air pollution in the major urban areas were abated by about 50 percent. Since the cost of bronchitis (in terms of forgone income and current medical expenditures) is $930 million per year, we conclude that from $250 million to $500 million per year would be saved by a 50 percent abatement of air pollution in the major urban areas.

Approximately 25 percent of mortality from lung cancer can be saved by a 50 percent reduction in air pollution, according to the studies cited above. This amounts to an annual cost of about $33 million.

The studies document a strong relationship between all respiratory disease and air pollution. It seems likely that 25 percent of all morbidity and mortality due to respiratory disease could be saved by a 50 percent abatement in air pollution levels. Since the annual cost of respiratory disease is $4887 million, the amount saved by a 50 percent reduction in air pollution in major urban areas would be $1222 million.

There is evidence that over 20 percent of cardiovascular morbidity and about 20 percent of cardiovascular mortality could be saved if air pollution were reduced by 50 percent. We have chosen to put this saving at only 10 percent—that is, $468 million per year.

Finally, there is a good deal of evidence connecting all mortality from cancer with air pollution. It is difficult to arrive at a single figure, but we have estimated that 15 percent of the cost of cancer would be saved by a 50 percent reduction in air pollution—a total of $390 million per year.

Not all of these cost estimates are equally certain. The connection between bronchitis or lung cancer and air pollution is much better documented than the connection between all cancers or all cardiovascular disease and air pollution. The reader may aggregate the costs as he chooses.

We estimate the total amount annual cost that would be saved by a 50 percent reduction in air-pollution levels in major urban areas, in terms of decreased morbidity and mortality, to be $2080 million. A more relevant indication of the cost would be the estimate that 4.5 percent of all economic costs associated with morbidity and mortality would be saved by a 50 percent reduction in air pollution in major urban areas (64). This percentage estimate is a robust figure; it is not sensitive to the exact figures chosen for calculating the economic cost of ill health.

A final point is that these dollar figures are surely underestimates of the relevant costs. The relevant measure is what people would be willing to pay to reduce morbidity and mortality (for example, to reduce lung cancer by 25 percent). It seems evident that the value used for forgone earnings is a gross underestimate of the actual amount. An additional argument is that many health effects have not been considered in arriving at these costs. For example, relatively low levels of carbon monoxide can affect the central nervous system sufficiently to reduce work efficiency and increase the accident rate (65). Psychological and esthetic effects are likely to be important, and additional costs associated with the effect of air pollution on vegetation, cleanliness, and the deterioration of materials have not been included in these estimates (66).

Spicer, J. M. G. Wilson, *Lancet* 1961–II, 338 (1961); G. F. Abercrombie, *ibid.* 1953–I, 234 (1953); A. E. Martin, *Mon. Bull. Min. Publ. Health Lab. Serv. Directed Med. Res. Counc.* 20, 42 (1961); R. Lewis, M. M. Gilkeson, Jr., R. O. McCaldin, *Public Health Rep.* 77, 947 (1962); T. D. Sterling, S. V. Pollack, D. A. Schumsky, I. Degroot, *Arch. Environ. Health* 13, 158 (1966); T. D. Sterling, S. V. Pollack, J. Weinkam, *ibid.* 18, 462 (1969)]; absence rates (see J. Ipsen, F. E. Ingenito, M. Deane, *ibid.*, p. 462); symptoms in school children [see B. Paccagnella, R. Pavanello, R. Pesarin, *ibid.*, p. 495; T. Toyama, *ibid.* 8, 153 (1964)]; the incidence of asthma attacks [see L. D. Zeidberg, R. A. Prindle, E. Landau, *Amer. Rev. Resp. Dis.* 84, 489 (1961); C. E. Schoettlin and E. Landau, *Public Health Rep.* 76, 545 (1961); R. Lewis, *J. La. State Med. Soc.* 115, 300 (1963)]; and other morbidity [see J. T. Boyd, *Brit. J. Prev. Soc. Med.* 14, 123 (1960); R. G. Loudon and J. F. Kilpatrick, *Arch. Environ. Health* 18, 641 (1969)].

11. The most complete investigation of various pollutants was that of the Nashville studies. See L. D. Zeidberg, R. A. Prindle, E. Landau, *Amer. Rev. Resp. Dis.* 84, 489 (1961); L. D. Zeidberg and R. A. Prindle, *Amer. J. Public Health* 53, 185 (1963); L. D. Zeidberg, R. A. Prindle, E. Landau, *ibid.* 54, 85 (1964); L. D. Zeidberg, R. J. M. Horton, E. Landau, *Arch. Environ. Health* 15, 214 (1967); ———, *ibid.*, p. 225; R. M. Hagstrom, H. A. Sprague, E. Landau, *ibid.*, p. 237; H. A. Sprague and R. Hagstrom, *ibid.* 18, 503 (1969). It is conceptually possible to differentiate among pollutants, since, for example, the correlation between mean level of suspended particulates and mean level of sulfates for 114 U.S. Standard Metropolitan Statistical Areas is only .20.

21. That the least-squares method provides the best linear unbiased estimates is the conclusion of the Gauss-Markov theorem, for which $E(ee') = \sigma^2 I$ and $E(e) = 0$ are the basic assumptions. These assumptions are that the basic model must be linear and that the distribution of the errors must have an expected value of zero, have finite variance, have a constant distribution over the various observations, and be independent. In addition, no explanatory variables may be omitted which are correlated with included variables. It is also convenient to assume that the explanatory variables are measured without error, although the framework can easily be adusted to handle errors. In order to perform significance tests, one must make an assumption about the distribution of the error term. For all the relations we estimated, we plotted the residuals and discovered that all distributions were unimodel, symmetric, and basically consistent with the normal distribution. Thus, in the discussion that follows, we have assumed that the error term is distributed normally.

22. For example, for economic level 1 (defined below), the death rates (per 100,000) for pollution levels 2 to 4 (defined below) are 126, 271, and 392. For economic level 2, the death rates for air pollution levels 1 to 4 are 136, 154, 172, and 199. For economic level 4, the death rates for pollution levels 1 to 3 are 70, 80, and 177. The five economic levels, based on median family income in a census tract, are as follows: $3005–$5007; $5175–$6004; $6013–$6614; $6618–$7347; and $7431–$11,792. The four air pollution levels (in micrograms) of suspended particulates (per cubic meter per 24 hours) are as follows: less than 80, 80–100, 100–135, and more than 135.

23. P. Stocks and J. M. Campbell, *Brit Med. J.* 2, 923 (1955).

24. In most of the early studies, pollution measures were not available, and so urban mortality rates were contrasted with rural rates. In these studies a substantial "urban factor" was found, which, unfortunately, was a compound of air pollution and many other factors. In the later studies the portion ascribable to air pollution is separated out.

25. C. Daly, *Brit. J. Prev. Soc. Med.* 13, 14 (1959).

26. Buck and Brown [*Tobacco Res. Counc. Res. Paper No. 7* (1964)], in examining data from England, control for population per acre, for social class, and for smoking habits. They find no relationship between smoking and lung cancer, and a relationship between SO_2 and lung cancer that is not consistent. Stocks uses three sets of data to isolate the effect of air pollution on lung cancer. Contrasting data for eight northern European cities, he finds a correlation between lung cancer and air pollution of .60, and correlations between lung cancer and smoking that range between .27 and .36. Contrasting data for 19 countries, he finds that an index of solid fuel consumption is a much stronger variable than cigarette consumption per capita. Finally, with data from northern England, he finds confirmation of an association between lung cancer and air pollution. See P. Stocks, *Brit. J. Prev. Soc. Med.* 21, 181 (1966).

27. E. C. Hammond and D. Horn, *J. Amer Med Ass.* 166, 1294 (1958).

28. W. Haenszel, D. B. Loveland, M. G. Sirken, *J. Nat Cancer Inst.* 28, 947 (1962).

29. Haenszel and Taeuber analyzed data for 683 white American females who died of lung cancer, and for a control group. They found the crude rate of death from lung cancer to be 1.32 times as high in urban areas as in rural areas for 1958–1959 and 1.29 times as high for 1948–1949 (in subjects 35 years and older, with adjustments made for age). When adjustments were made for both age and smoking history, the ratio was 1.27. This ratio increased with the duration of residence in the urban or rural area, from 0.80 for residence of less than 1 year to 1.76 for lifetime residence. See W. Haenszel and K. E. Taeuber, *J. Nat. Cancer Inst.* 32, 803 (1964).

30. L. D. Zeidberg, R. J. Horton, and E. Landau [*Arch. Environ. Health* 15, 214 (1967)] are not able to isolate an air pollution effect on mortality from lung cancer from data for Nashville for the years 1949 through 1960; C. A. Mills [*Amer. J. Med. Sci.* 239, 316 (1960)] investigated rates of death from lung cancer in Ohio. Stratifying according to the amount of driving done by the deceased, he found that the death rate varied with driving and urban exposure; L. Greenburg, F. Field, J. I. Reed, M. Glasser [*Arch. Environ. Health* 15, 356 (1967)] investigated 1190 cancer deaths that occurred on Staten Island between 1959 and 1961 and found a relationship between lung cancer and pollution; M. L. Levin, W. Haenszel, B. E. Carroll, P. R. Gerhardt, V. H. Handy, S. C. Ingraham II [*J. Nat. Cancer Inst.* 24, 1243 (1960)] found significant differences between urban and rural mortality rates (for periods around 1950) in New York State, Connecticut, and Iowa. For males, the death rates were 41 percent higher in urban areas in New York, 57 percent higher in Connecticut, and 184 percent higher in Iowa. For females, the differences were 7 percent, 24 percent, and 47 percent, respectively; P. Buell, J. E. Dunn, L. Breslow [*Cancer* 20, 2139 (1967)] utilized 69,868 questionnaires covering 336,571 man-years, in their study of lung cancer in California veterans. They found rates of death from lung cancer (adjusted for differences in age and smoking habits) to be 25

percent higher in the major metropolitan areas than in the less urbanized areas. Among nonsmokers, the rates of death from lung cancer were 2.8 to 4.4 times as high for major metropolitan areas as for more rural areas.

31. P. Buell and J. E. Dunn, Jr., *Arch. Environ. Health* 15, 291 (1967).

32. W. Winkelstein, Jr., and S. Kantor, *ibid.* 18, 544 (1969).

33. For economic level 2 (see 22), the mortality rate per 100,000 for gastric cancer in white males 50 to 69 years old changed from 45 to 41, 48 and 84 as the pollution level (see 22) rose. For economic level 4, the rates were 15, 38, and 63 for the first three pollution levels. For white women 50 to 69 years old, the death rates for economic level 2 were 8, 18, 25, and 40 per 100,000. For economic level 4, the death rates were 5 and 21 for the first two pollution levels.

34. R. M. Hagstrom, H. A. Sprague, E. Landau, *Arch. Environ. Health* 15, 237 (1967).

35. The four measures of pollution are suspended particulates (soiling), dustfall, SO_3 and SO_2. For all cancer deaths, the number per 100,000 for middle class residents (defined to include about 75 percent of all residents) fell from 153 for high-pollution areas, to 130 per moderate-pollution areas, to 124 for low-pollution areas when a soiling index (concentration of haze and smoke per 1000 linear feet) was used to classify air pollution. When SO_3 (milligrams per 100 square centimeters per day) was used as a basis for classification, the corresponding death rates were 150, 129, and 145, respectively. With dustfall as a measure, the figures were 145, 130, and 131, and with 24-hour SO_2, in parts per million, they were 141, 129, and 138.

36. M. L. Levin, W. Haenszel, B. E. Carroll, P. R. Gerhardt, V. H. Handy, S. C. Ingraham II, *J. Nat. Cancer Inst.* 24, 1243 (1960).

38. L. D. Zeidberg, R. J. M. Horton, E. Landau, *Arch. Environ. Health* 15, 225 (1967).

39. When air-pollution level was measured on the basis of sulfation (SO_3, in milligrams per 100 square centimeters per day), the morbidity rates (for white, middle-class males aged 55 and older) were 64.0 man-years per 1000 man-years for high-pollution areas, 34.1 for moderate-pollution areas, and 36.8 for low-pollution areas. Measurement of air pollution on the basis of 24-hour concentrations of SO_2 gave morbidity rates of 47.2, 36.8, and 22.2, respectively. For these same white, middle-class males, in areas of high atmospheric concentrations of SO_3, the mortality rate was 425.6 per 100,000 population; in moderate-concentration areas, 327.41; and in low-concentration areas, 361.97. With SO_2 concentrations as a measure, the corresponding figures were 424.87, 319.19, and 364.93. When soiling (smoke or suspended particles) was used as the pollution index, the figures were 376.65, 339.13, and 399.88, respectively.

40. G. Friedman, *J. Chronic Dis.* 20, 769 (1967).

41. The effect of air pollution on pneumonia, tuberculosis, and asthma has also been investigated. C. Daly (see 25) reports simple correlations of .60 for pneumonia mortality and pollution from domestic fuel and .52 for pneumonia mortality and pollution from industrial fuel. For tuberculosis mortality the correlations are .59 and .22, respectively. The death rates for pneumonia rise from 30 to 52 per 100,000, and those for tuberculosis rise from 47 to 89, as one goes from rural settings to conurbations. Stocks (19) reports data on pneumonia mortality, by sex, for 26 areas of northern England and Wales. As shown by regressions 27 through 30 in Table 1, there appears to be a strong relationship between a smoke index and pneumonia mortality. The relationship is much stronger for men than for women. C. A. Mills [*Amer. J. Hyg.* 37, 131 (1943)] in a classic study of wards in Pittsburgh and Cincinnati for 1929–30, reports substantial correlation between pneumonia death rates and local pollution indices. He found the correlation between dustfall and rates for pneumonia mortality in white males to be .47 for Pittsburgh and .79 for Cincinnati. The actual variation in these death rates is 41 to 165 per 100,000 population for Cincinnati and 0 to 7852 for Pittsburgh. Mills argues that omitted socioeconomic variables could not account for these correlations, but he made no attempt to control for such variables in his studies. He also found that death rates fell significantly as the altitude of an individual's residence increased; there was a drop of approximately 10 percent in death rate for every 100 feet (30 meters) of elevation [see also C. A. Mills, *Amer. J. Med. Sci.* 224, 403 (1952); E. Gorham, *Lancet* 1959–II, 287 (1959)]. Zeidberg, Prindle, and Landau [*Amer. Rev. Resp. Dis.* 84, 489 (1961)] studied 49 adult and 35 child asthma patients for a year. They found that the attack rate (attacks per person per day) for adults rose from .070 during days when atmospheric concentrations of sulfates were low to .216 when concentrations were high. In children, the effect of increased concentration of sulfates was insignificant. Schoettlin and Landau [*Public Health Rep.* 76, 545 (1961)] investigated 137 asthma patients in Los Angeles during the fall months. They found that 14 percent of the variance in daily attacks (n—3435) could be explained by the maximum atmospheric concentrations of oxidants for that day. These two studies document a strong relationship between asthma and air pollution; Lewis, Gilkeson, and McCaldin [*Public Health Rep. 77,* 947 (1962)] found no association between the daily frequency of visits to charity hospitals for treatment of asthma attacks and measures of air pollution.

44. L. D. Zeidberg, R. A. Prindle, E. Landau, *Amer. J. Public Health 54,* 85 (1964).

45. Morbidity rates associated with a soiling index were 140, 122, and 96, respectively, for high, moderate, and low pollution; corresponding rates associated with an SO_2 index were 177, 117, and 81. For white females, morbidity rates associated with an SO_3 index were 169, 134, and 160; with a soiling index, 158, 139, and 127; and with an SO_2 index, 172, 136, and 116. For nonwhite males, the morbidity rates asosciated with an SO_3 index were 86 for high concentrations and 84 for moderate and low concentrations; corresponding rates associated with a soiling index were 94 and 67, and with an SO_2 index, 84 and 88. For nonwhite females, morbidity rates of 136 and 140 were associated with high and with moderate and low SO_3 concentrations, respectively; corresponding rates associated with soiling were 140 and 129, and with SO_2 concentrations, 145 and 126. The effects for working women and for housewives, between the ages of 14 and 65, were similar.

No. 978* (1962); "Vital Statistics of the United States (1960)," *U.S. Dep. Health Educ. Welf. Publ.* (1963); "Vital Statistics of the United States (1961)," *U.S. Dep. Health Educ. Welf. Publ.* (1963).

55. For a discussion of the limitations of these studies, see B. G. Ferris, Jr., and J. L. Whittenberger (7) and J. R. Goldsmith, *Arch. Environ. Health* 18, 516 (1969).

56. See "Smoking and Health Report of the Advisory Committee to the Surgeon General of the Public Health Service," *U.S. Public Health Serv. Publ. No. 1103* (1964), p. 362.

57. This might be explained by noting that farmers tend to be exposed to a high level of pollution in the course of their work (from fertilizers, insecticides, and the exhaust fumes from farm equipment), which causes more deaths from respiratory disease than would be expected from the low level of general air pollution in rural areas.

58. See, for example, T. Toyama (*16*) and F. L. Petrilli, G. Agnese, S. Kanitz, *Arch. Environ. Health* 12, 733 (1966).

59. L. D. Zeidberg, R. J. M. Horton, E. Landau, *Arch. Environ. Health* 15, 214 (1967).

60. R. A. Prindle, G. W. Wright, R. O. McCaldin, S. C. Marcus, T. C. Lloyd, W. E. Bye, *Amer. J. Public Health,* 53, 200 (1963).

61. D. P. Rice, "Estimating the Cost of Illness," *Public Health Serv. Publ. No. 947–6* (1966).

62. The category "diseases of the respiratory system" encompasses numbers 470 through 527 of the 1962 International Classification of Diseases, Adapted (ICDA). A report of the Commission on Professional and Hospital Activities, entitled *Length of Stay in Short-Term General Hospitals (1963–1964)* (McGraw-Hill, New York, 1966), gives details on the average lengths of stay and number of patients in 319 U.S. general hospitals for 1963 and 1964 by specific ICDA classifications. From these figures we were able to compute the ratio of total hospitalization by specific disease to total hospitalization for all respiratory diseases. Of the 2,410,900 inpatient days for all respiratory diseases, 232,222 were for acute bronchitis and 177,232 were for "bronchitis, chronic and unspecified." Thus, approximately 17 percent of all inpatient days for respiratory diseases were for some form of bronchitis. On the basis of current hospitalization rates, we find the direct cost of diseases of the respiratory system to be $1581 million annually. An estimated 17 percent of this amount is due to bronchitis; thus, the direct cost of bronchitis is about $268.8 million annually.

63. To calculate the indirect cost of bronchitis, we must do more than take 17 percent of the total indirect cost ($3,305,700) of all diseases of the respiratory system. Almost 50 percent of respiratory disease patients are hospitalized for "hypertrophy of tonsils and adenoids" (ICDA 510). Hospitalization is categorized by age of patient in the Commission on Professional and Hospital Activities report, and we note that 80 percent of these "tonsils and adenoid" patients were under 20 years of age. Thus, it seems clear that the "forgone earnings" of these patients is negligible, and so no indirect costs should be allocated to this group. We therefore excluded the hospitalization of "tonsil and adenoid" patients before computing the percentage of hospitalization due to bronchities. Thus, we estimated that 20 percent of the indirect cost of respiratory disease can be ascribed to bronchitis.

64. There is one bit of evidence that 25 to 50 percent of total morbidity (and therefore mortality) can be associated with air pollution; see L. D. Zeidberg, R. A. Prindle, E. Landau, *Amer. J. Public Health* 54, 85 (1964). If one accepted this evidence as conclusive, it would follow that the annual cost of air pollution, because of health effects, would run between $14 billion and $29 billion.

65. See J. H. Schulte, *Arch. Environ. Health* 7, 524 (1963); A. G. Cooper, "Carbon Monoxide," *U.S. Public Health Serv. Publ. No. 1503* (1966); *Effects of Chronic Exposure to Low Levels of Carbon Monoxide on Human Health, Behavior, and Performance* (National Academy of Sciences and National Academy of Engineering, Washington, D.C., 1969).

66. Another way to estimate the cost of air pollution is to examine the effect of air pollution on property values. See R. J. Anderson, Jr., and T. D. Crocker, "Air Pollution and residential property values," paper presented at a meeting of the Econometric Society, New York, December 1969; H. O. Nourse, *Land Econ.* 43, 181 (1967); R. G. Ridker, *Economic Costs of Air Pollution* (Praeger, New York, 1967); R. G. Ridker and J. A. Henning, *Rev. Econ. Statist.* 49, 246 (1967); R. N. S. Harris, G. S. Tolley, C. Harrell, *ibid.* 50, 241 (1968).

BILL TO BAN POLLUTING CARS BY 1975 GAINS IN SENATE

WASHINGTON, August 20.—A Senate subcommittee has approved an air pollution bill that would halt sales of new cars on Jan. 1, 1975, if they did not eliminate 90 per cent of the exhaust contaminants allowed in 1970 cars.

Senator Edmund S. Muskie, Democrat of Maine, announced today that his Subcommittee on Air and Water Pollution of the Public Works Committee approved yesterday "a tough piece of legislation" designed to achieve clean air for breathing within five and a half years after its enactment.

He called the automobile "a pollution monster" that consumed most of the subcommittee's deliberations. And he called upon American ingenuity to meet the challenge of the problem, which auto manufacturers have previously said would be difficult to solve before 1980.

Senator Muskie expressed confidence that the measure would pass the full committee next Thursday and the Senate after Labor Day, substantially unchanged or with stronger provisions.

Senator J. Caleb Boggs, Republican of Delaware, appeared at the news conference with him to demonstrate the bi-partisan support Senator Muskie says his bill has in the Senate.

However, the House has already passed an antipollution bill that sets no deadline on the development of cleaner automobiles although it contains many other stringent measures similar to those in the Senator's subcommittee bill.

Representative Ancher Nelsen, Republican of Minnesota, doubted that the House would accept the 1975 deadline in a House-Senate conference, but he would not rule out the possibility.

"Some of us feel that it can't be done by setting any specific target date because the auto industry is perplexed and has told us it doesn't know when it can achieve such standards," he said. "It's like trying to set a date next week, or next month to pull out of Vietnam. It can't be done that way."

The automotive industry and the Department of Transportation officially declined to comment on the Muskie bill until they had time to study it.

But a source at General Motors in Detroit suggested that the industry was not impossibly far from meeting the demands by 1975 for an auto that would be almost pollution free.

He said that two approaches were being followed in research in an attempt to "take autos out of the pollution business." One involves the development of a catalytic muffler that would chemically clean exhausts. The other seeks to develop a new exhaust manifold that would be hot enough to burn off unused fuels.

Publicly, internal combustion experts have taken the position that such developments would take a number of years at a marked increase in the cost of automobiles.

Senator Muskie said the urgency for moving up a target date for low-pollution cars from 1980 to 1975 was the length of time it took to eliminate used cars that would still be polluters.

He said that if new cars did not become minimal polluters until 1980, then it would not be until 1990 that a sufficient number of used cars would be eliminated from the roads to meet public health standards.

AIR STANDARDS CITED

And he suggested that some localities might have to decide to limit or ban automobiles to meet the national air qualities standards his bill would require the Federal Government to establish.

Subcommittee sources said that the high levels of air pollution emitted during rush hour traffic movements into major cities such as New York, Los Angeles and Washington were such that these cities would have to cut such traffic significantly to meet even minimal air standards.

"We will have to do whatever needs to be done to protect the public health," Senator Muskie said. "Tough decisions are going to have to be made."

Other major provisions of the measure would require the following:

Establishment of national air quality standards to protect human health and welfare "from any known or anticipated effects."

Plans by the states to meet these standards after they are promulgated. The plans would have to be prepared in nine months with public hearings and they would have to be designed to achieve air quality standards within three years.

Approval by the Secretary of Health, Education, and Welfare of such plans within four months or preparation of a plan by the Secretary if no plan or an unacceptable one should be submitted.

Achievement by new major-industry plants of a standard of emission consistent with national standards and use of the latest available technology.

Preparation of emission standards for aircraft and vessels and regulations for used commercial vehicles.

The Muskie bill would also allow citizen suits against polluters, including the Federal Government, and establish tough new penalties up to $50,000 and two years in jail for criminal violations and up to $10,000 for civil violations. It would also finance emission research at $450-million during the next three fiscal years.

A major difference between the House-approved bill and the measure reported by Senator Muskie's subcommittee is in the establishment of air-quality control regions.

The Muskie measure would have the Secretary of Health, Education, and Welfare establish interstate and intrastate regions within 90 days of the bill's enactment.

The House bill establishes each state as an air quality region and Representative Paul G. Rogers, Florida Democrat who is generally considered to be the author of the House bill, said on the telephone today that he expected a fight over this issue when the bill reached conference.

He posed no objection to the 1975 deadline for ending sales of polluting cars "if that is a possible accomplishment" but questioned the need for air quality regions that would require new structures.

AMENDMENT TO END THE WAR: VIETNAMESE WAR CASUALTIES AND IMPLICATIONS FOR U.S. POLICY

Mr. HATFIELD. Mr. President, I submit today the fifth in a series of articles dealing with U.S. involvement in Southeast Asia. The article, entitled "Vietnamese War Casualties and Implications for U.S. Policy," was written by Charles P. Shirkey for the Congress of Young Professionals for Political Action.

As a former staff member of the Office of the Assistant Secretary of Defense, Systems Analysis, Mr. Shirkey is well qualified to comment upon the Government projections of reprisals in the event that the Vietcong should gain control in South Vietnam. With concise facts and clear reason he refutes the emotion-laden charges that have been raised about the prospect of a "blood bath," and points out how the only real blood bath will be the continuation of the war. Such information is of utmost importance to the debate on American involvement in Southeast Asia.

I ask unanimous consent that "Vietnamese War Casualties and Implications for U.S. Policy" be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD:

VIETNAMESE WAR CASUALTIES AND IMPLICATIONS FOR U.S. POLICY

(By Charles P. Shirkey [1])

This paper examines two recent government-sponsored studies which are often quoted in the press as definitive projections of the likely level of reprisals if the Viet Cong should gain control of South Vietnam. During the past year the "bloodbath" argument has been cited by many, including the President, as justification for the Administration's policy on the future U.S. role in Vietnam. In particular, it has been used by the Administration as sufficient reason why U.S. forces should not be withdrawn fully during the next twelve months. These two studies imply that the Administration is justified in arriving at that conclusion. Thus in addition to examining the empirical basis for the "bloodbath" argument put forth in these two studies, this paper addresses the implications for U.S. policy, particularly the timing of withdrawal.[2]

To clarify the various elements of the "bloodbath" argument, it is useful to distinguish between the following:

A deliberate policy of violent reprisal by a Communist regime in control of South Vietnam;

A post-war Communist policy of assassination and execution; following a *de facto* or negotiated cease-fire;

The current war-time Viet Cong policy of assassination and execution; and

The toll of the war itself.

---

[1] The author is a former staff member of the Office of the Assistant Secretary of Defense (System Analysis).

[2] For a discussion of the historical basis for the "bloodbath" argument, see D. Gareth Porter and Len E. Ackland, "Vietnam: The Bloodbath Argument," *Christian Century*, November 5, 1969.

In a monograph on "The Viet-Cong Strategy of Terror" published in February for the U.S. Mission in Saigon, Douglas Pike states, that

"If the communists win decisively in South Viet-Nam (and the key word is decisively) . . . All political opposition, actual or potential would be systematically eliminated." Elsewhere, he quotes Col. Tran Van Dac (the highest ranking Communist officer to come in under South Vietnam's Chieu Hoi program) as stating in the course of a Saigon-sponsored press conference in 1969, that "There are three million South Vietnamese on the (communist) blood debt list" (or blacklist). Thus Mr. Pike concludes, that "Considering the integral part terror plays in communist social change, it does not follow that the quick and sure route to peace, to a moratorium on death, is to permit the communists to assume power." Mr. Pike fails to note, however, that in response to a question a year earlier about what would happen to officials of the Saigon government if the Communists succeeded in Vietnam, Col. Dac responded,

"They would imprison them, send them to concentration camps under this or that pretext . . . to reeducate them . . . so that they can adapt themselves better to the new social order . . . former high officers, educated people, landlords, or property owners . . . are carefully watched." [3]

Another analyst, Stephen T. Hosmer, is somewhat less certain of the likelihood and extent of reprisals under a Communist regime in South Vietnam. In a RAND Corporation report on "Viet Cong Repression and Its Implications for the Future," [4] published in May for the Pentagon's Advanced Research Projects Agency (ARPA), he underlines for emphasis the observation that, *"any discussion of possible Communist behavior must obviously be considered highly speculative."* However, he "finds it difficult to believe that the number (of executions alone) would be much less than 100,000. Indeed, it might well be considerably higher." He notes that both the Saigon government and the Viet Cong fear reprisals should the other side ultimately win. But there is nothing in the entire study which supports a figure of 100,000, much less a figure "considerably higher."

Both authors confuse the past and current use of assassination and execution as a Viet Cong instrument of warfare with (a) the post-war policies which the Communists might adopt or (b) the policies of a Communist regime in control of South Vietnam. They imply that the only reason the Viet Cong have received support from Vietnamese peasants to date has been because of the use of terror. It therefore seems to follow that the Viet Cong could retain control only by continuing such tactics. But this is not consistent with Viet Cong objectives or capabilities. Mr. Pike notes that the use of terror tactics by the Viet Cong to date is designed:

"To prove that the Government of Viet-Nam (GVN) in Saigon is a mere facade propped up by the Americans and will collapse when American disengagement reaches a certain point" and

"To destroy the various political, social, economic and militia-type programs the GVN has underway in the country's 2,500 villages—collectively known as the Pacification Program—thus destroying or minimizing any faith and trust villagers might have in the Saigon government."

Moreover, the use of assassination and execution has been more common in areas outside firm Viet Cong control. Hence, the evidence suggests that the objective of terror is not to maintain control; rather, it is designed to weaken Saigon's authority, particularly in the countryside.

Furthermore, the Viet Cong could readily increase the number of assassinations and executions. Yet they have chosen not to increase them and, in fact, deliberately use restraint. For example, both Mr. Pike and Mr. Hosmer note that all executions must be approved by higher Viet Cong headquarters, a procedure which tends to have a restraining influence. In any event, the mere use of assassination and execution by the Communists in fighting a war does not mean that the same methods would be used to control the country if they were to win. Indeed, Mr. Hosmer notes that the Communists would have strong political reasons to hold down the level of violent reprisals: (1) Disintegration of the Saigon regime would have removed a major reason for reprisals; (2) Needing to run the country, a Communist regime "presumably would want to avoid actions that might hamper its major task of political consolidation and mobilization . . . in particular, to eschew the kind of indiscriminate mass reprisals that might permanently alienate much of the population;" and (3) A Communist regime might fear the excessive reprisals would breed "adverse reactions in other Communist states or parties and among the uncommitted nations."

In addition to confusing the current Viet Cong tactic with a policy which might be pursued by a Communist regime, Mr. Hosmer also appears to confuse (a) the deaths arising from the struggle for power with (b) the deaths that might occur once the Communists are in power. The situation under which one could expect a "bloodbath" of very large proportions is cited as the one in which the struggle for control is long and drawn out. This would apparently result in what Mr. Pike refers to as a "decisive" Communist victory. One would have to agree that any war, conventional or non-conventional, is likely to be bloody if it is long drawn out. Also, the "bloodbath" in this sense would have occurred regardless of whether the Viet Cong or the Saigon government should be the winner.

To the extent that the "bloodbath" argument reflects a genuine concern to reduce the number of Vietnamese deaths in this war, or merely the American complicity, it is worth while to put current and prospective Viet Cong assassinations and executions in the context of the total war. Table I shows that about 1,000,000 Vietnamese have died over the past 5½ years as a direct result of the war. (This would be equivalent to about 5.0 million Americans being killed over a similar period. By comparison, the Vietnamese have lost during the past five years alone four times more, as a percent of population, than we did during the five years of our Civil War—the bloodiest war in our history.) It is estimated that about 330,000 of this total were civilians. About 10%, or about 32,000, of the civilians killed were the victims of Viet Cong assassinations and executions.

[3] This interview dated May 18, 1968, was distributed in mimeographed form by the Joint U.S. Public Affairs Office, Saigon. It is interesting to note that this statement was made *after* the Tet offensive; Mr. Pike maintains that the killings at Hue during Tet support his "bloodbath" argument.

[4] Mr. Hosmer uses the word "repression" to include assassinations and executions.

TABLE I.—TOTAL VIETNAMESE CASUALTIES (DEATHS IN PARENTHESES) JANUARY 1960–JUNE 1970

[Calendar years; casualty estimates in thousands]

	Total 1960–64	1965	1966	1967	1968	1969	Total 1965–69	January–June 1970
Civilians:								
Non-Communist South Vietnamese [1]	NA	100.0	150.0	175.0	300.0	225.0	950.0	110.0
		(33.0)	(45.0)	(53.0)	(100.0)	(68.0)	(300.0)	(30.0)
Includes Viet Cong assassinations and executions [2]	[3] (6.0)	[4] (2.0)	(1.8)	(3.7)	[5] (15.4)	(6.1)	(29.0)	(3.0)
North Vietnamese [6]	NA	NA	NA	NA	NA	NA	NA	NA

[1] "Report on Civilian Casualty and Refugee Problems in South Vietnam," the Senate Subcommittee to Investigate Problems Connected with Refugees and Escapees, May 9, 1968. The estimates were subsequently updated and inserted in the Congressional Record, vol. 115, pt. 30, p. 40623.

[2] Official estimates of the Military Departments and MACV.

[3] An approximation based on the U.S. mission estimate of 9,700 assassinations during 1958–65.

[4] U.S. official estimate cited by Senator Dole, Congressional Record, vol. 115, pt. 30, p. 40620. In 1966, however, Senator Dole's estimate is considerably higher than the MACV estimate cited by Mr. Hosmer.

[5] Ibid.; includes 10,000 civilians reportedly executed by the Viet Cong during Tet.

[6] To the knowledge of this author, no official estimates have been released by the Government of North Vietnam.

[7] Includes para-military forces beginning in 1968.

[8] This program did not begin officially until 1966 but some assassinations of Viet Cong no doubt took place before that time.

[9] Estimates cited in "Vietnam: December 1969," Staff Report, Senate Committee on Foreign Relations, Feb. 2, 1970 (p. 4).

These statistics are rough, but on balance they tend to be conservative. The body count of Viet Cong and North Vietnamese forces are probably inflated and often include civilians, as they did most notably at My Lai. But then estimates of North Vietnamese killed during the bombing of the North are not available and no attempt has been made to estimate the number.

In any event, numbers of deaths alone grossly understate the cost in human suffering that this war has visited on the Vietnamese people. Any discussion of "bloodbath" should also address the 1.6 million wounded—many of whom are maimed for life, and the 4.0 million refugees in South Vietnam alone.[5] In addition, one should include the Laotians and Cambodians who have been killed, wounded or made homeless, since they cannot escape the war.

Setting aside for the moment the question of when and how the Communists might gain control of South Vietnam and whether a Communist regime might pursue a policy of violent reprisals, the number of Vietnamese deaths and casualties over the next five years will depend on three variables:

The level of military engagement (which depends largely on the size of U.S. forces in Southeast Asia, whether engaged in direct combat or in support of the South Vietnamese forces);

The timing of a cease-fire and thus the duration of military hostilities (whether before or after a U.S. full or partial withdrawal); and

The level of Viet Cong and South Vietnamese assassinations and executions prior to a cease-fire, and the level (if any) after cease-fire.

Over the past year, five out of every 1,000 South Vietnamese were killed. For both Vietnams, there were six deaths per 1,000 population. (This would be equivalent to about one million Americans being killed in one year alone). Table II shows projections of Vietnamese casualties over the next five years under various assumptions. If the Administration continues to withdraw troops at the current rate of 50,000 men per quarter (see Case 2), we can expect about 96,000 non-Communist South Vietnamese and 265,000 more total Vietnamese to be killed during the next two years. This will include about 72,000 South Vietnamese civilians. Thus, unless the troop withdrawal rate is accelerated, 100,000 more *will* be killed:

By April 1975, if we count South Vietnamese civilians only and assuming we leave no residual U.S. forces in Vietnam;

By September 1972, if we count total non-Communist South Vietnamese (including South Vietnamese forces); and

By December 1970, if we count total Vietnamese (including Viet Cong and North Vietnamese forces).

Of course, the figure of 100,000 will be reached sooner if (a) there is any delay in the withdrawal schedule (compare Cases 3 and 4) and/or (b) any residual U.S. forces (50,000 or more) are left to support the South Vietnamese forces (see Cases 3, 4 and 5). Alternatively, an accelerated and total withdrawal (see Case 1) will result in fewer deaths over the same periods of time.

TABLE II.—PROJECTED VIETNAMESE CASUALTIES JULY 1970 THROUGH JUNE 1975[1]

[In thousands]

U.S. troop withdrawal options[2]	Non-Communist South Vietnamese only		Total Vietnamese	
	Deaths	Total casualties	Deaths	Total casualties
Case 1: Accelerated withdrawal date; out by Dec. 31, 1971 (Hatfield-McGovern amendment)	130	500	370	1,045
Case 2: Current withdrawal rate; out by early fiscal year 1973	140	540	400	1,130
Case 3: Current withdrawal rate; residual force of 50,000 men	195	750	555	1,565
Case 4: Withdrawal delayed in fiscal year 1972; residual force of 50,000 men	215	810	600	1,695
Case 6: Continuing force of over 200,000 men[3]	265	960	715	2,025

[1] Based on recent monthly averages as shown in appendix A.

[2] All projections assume a level of deaths and casualties at 20 percent the current annual rate when U.S. forces withdraw (i.e., the level of hostilities the South Vietnamese alone could sustain). The remaining 80 percent is assumed to vary in direct proportion to U.S. force levels in Vietnam. Cases are those used in a paper by Arnold Kuzmack, "Casualty and Cost Projections for Different Withdrawal Plans," inserted in the Congressional Record, Aug. 24, 1970, p. 29849.

[3] To date, President Nixon has stated he would withdraw only combat troops; the remaining combat support and logistic support troops number more than 200,000. On the other hand, if the President makes no further withdrawals than those announced to date, there would be about 275,000 men left in Vietnam. These cases would tend to lower or increase the projections respectively.

IMPLICATIONS FOR U.S. POLICY

At his news conference on May 8, Mr. Nixon noted that it is a "moot question" whether the war had been worthwhile, but "now that America is there, if . . . we withdraw from Vietnam and allow the enemy to come into Vietnam and massacre the civilians there by the millions, as they would, if we do that, let me say that America is finished insofar as the peacekeeper in the Asian world is concerned."

Most recently, Vice President Agnew raised the "bloodbath" spectre in an August 17 speech to the Veterans of Foreign Wars Convention in Miami Beach, stating that withdrawal of United States forces would result in the "collapse of the Government, chaos in the country—ultimately the kind of Communism that literally decimated the civilian population of Hue in the Tet offensive".

The "bloodbath" argument has been an integral part of the Administration's position on U.S. withdrawal from South Vietnam since the President first alluded to it in a talk on May 14, 1969. Curiously, the current Adminstration's position is very similar to the position held by Vietnamese officials in Saigon for many years.

Convinced of a "bloodbath" should the Communists take over in South Vietnam, the Administration appears to want to reduce the probability of a Communist victory by keeping U.S. forces in Vietnam until they have a higher confidence than they do now that Vietnamization will work. It does not appear that the Administration expects to have that higher confidence in the near future, given the current rate of withdrawal and the possibility of a residual force.

But the thrust of the Administration's position is contrary to what is being said about the success of the Vietnamization program and the claim that the allied sweep of the sanctuaries in Cambodia resulted in a severe set-back for the Viet Cong and North Vietnamese forces. Indeed, a combined North Vietnamese and Viet Cong force of about 220,000 (backed up by 400,000 regular forces in North Vietnam) would be confronted with a 1,100,000-man South Vietnamese force, having been upgraded by the Vietnamization program, plus about 500,000 Regional and Popular Forces and 2,000,000 Peoples' Self-Defense Force.[6] Moreover, the Administration's position fails to recognize the huge toll in human life that continuation of the war *will* impose on the Vietnamese people. This current bloodbath will continue to be the direct result of American action so long as U.S. troops continue to support large-scale combat operations against the Viet Cong and North Vietnamese forces. Finally, even as Mr. Hosmer notes in his study, the longer the war continues, the greater likelihood of violent reprisals by the Communists should they be the ultimate victors.

The alternative of a fixed timetable for withdrawal, as proposed by the Hatfield-McGovern Amendment (Senate Amendment 609), would insure the lowering and early termination of the current Vietnamese casualty rate, as shown in Case 1 in Table II. The increase in U.S. withdrawals would reduce the level of combat activity prior to a cease-fire. Moreover, it would increase the likelihood of a cease-fire, since the present intransigence of the Saigon government to talks on a cease-fire and coalition is bolstered by the seemingly interminable presence of U.S. forces carrying a major share of the combat duties.

Even if one believes the "bloodbath" argument, the U.S. could offer asylum to those South Vietnamese citizens who might fear reprisals. Senate Amendment 609 provides funds for this very purpose. In the past we have granted asylum to over ½ million Cubans, thousands of Hungarian and others in Communist countries.

STRATEGIC ARMS LIMITATION TALKS—ARTICLE BY GEORGE BUNN

Mr. NELSON. Mr. President, the Strategic Arms Limitation Talks in Vienna have been termed by some as the most important negotiations in the history of mankind. Whether so or not is probably yet to be determined. Nevertheless no one would doubt the great importance of these talks.

Many articles have been written about the SALT talks, and many more will no doubt appear as the talks continue. One of the most informative and perceptive articles appeared in the Columbia Law Review. In the article entitled "Missile Limitation: By Treaty or Otherwise?" the author, Mr. George Bunn, visiting professor of law, University of Wisconsin, and formerly General Counsel of the Arms Control and Disarmament Agency, discusses the importance of congressional involvement if agreement is ever to be reached in the SALT talks. He also calls for appointing congressional advisers to the American delegation and the creation of an advisory committee composed of Senators from the Foreign Relations Committee, the Armed Services Committee, and the Joint Committee on Atomic Energy.

I ask unanimous consent that this timely article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSILE LIMITATION: BY TREATY OR OTHERWISE?

(By George Bunn)

INTRODUCTION

With the opening of the Strategic Arms Limitation Talks (SALT), a fleeting opportunity to halt the "mad momentum" of the missile race is finally at hand. For over a decade arms control negotiators have been trying to find a way to end this competition. During the first several years of discussions, missile proposals were part of comprehensive package plans requiring agreement on a broad range of other weapons before the stockpiling of missiles could be stopped. Wide differences existed between the Americans and the Soviets over inspection, the rates of reduction of various weapons on each side, and the institutional arrangements for keeping the peace as arms were reduced.

In 1964, American negotiators decided to separate strategic nuclear delivery vehicles from the other weapons of the package plans in hopes that a simplified goal could produce agreement more easily. Their proposal was for a "freeze" on the numbers and characteristics of the long-range missiles and aircraft held by each side. The verification system was to be less onerous because it would focus on missile production, the institutional requirements were much reduced, and the arguments over the rate of reduction were to be postponed by negotiating a simple "freeze" agreement in the first instance.

This proposal, and its later modifications, were all rejected by the Soviet Union, probably for two basic reasons. First, the proposal required that inspectors enter the Soviet Union to check on whether its factories were producing missiles. Soviet political leaders found such inspection intolerable. Second, the Soviets had fewer intercontinental missiles than we had, and they did not want to enter negotiations which might reveal that fact to the world or freeze them into a position of inferiority.

By late 1966, an end to these two obstacles was in sight. Intelligence had improved to the point where long-range detection devices could determine with reasonable accuracy the number of fixed intercontinental missiles stationed on the ground. Therefore, if the arms control measure were changed to limit the deployment of these missiles rather than their production, it could be verified without on-site inspection in the Soviet Union. At the same time, the growth of the Soviet stockpile was such that a period of rough American-Soviet parity in numbers of land-based intercontinental ballistic missiles seemed fast approaching. There were, of course, other kinds of nuclear delivery vehicles and other ways of measuring strategic nuclear strength. For example, the United States was thought to have superiority in numbers of deliverable nuclear warheads while the Soviet Union was thought to have superiority in total deliverable nuclear megatonnage. Nonetheless a nuclear exchange between the two would produce about 100 million dead on both sides no matter which attacked first. Because each side had more than enough strength to knock out the other even after suffering a first strike, questions of exact equality were of little relevance. We had become "scorpions in a bottle, able to sting each other only at the price of death."

Private discussions in late 1966 and early 1967 produced an announcement in March of 1967 by President Johnson that Chairman Kosygin had confirmed the willingness of the Soviet Union to enter bilateral talks "to discuss means of limiting the arms race in offensive and defense (*sic*) nuclear missiles." It was two and a half years, however, before the talks began. Completion of the Non-Proliferation Treaty, and apparent Soviet caution, delayed the setting of a date for talks until August of 1968. At that point, the planned announcement of date and place was canceled by the United States after Soviet troops invaded Czechoslovakia. Then, reconsideration by the new Nixon Administration and further hesitation by the Soviet Union delayed things still further. Finally, on November 17, 1969, preliminary talks began in Helsinki. These produced agreement to begin substantive SALT negotiations on April 16, 1970 in Vienna.

The missile race continues unabated, however, and with it, developments in technology which threaten to re-erect the two obstacles which stood in the way of realistic negotiations earlier: the need for on-site inspection and the fear of inferiority, perhaps even of vulnerability.

Without on-site inspection, long-range detection devices may soon be unable to verify compliance with "standstill" agreements freeing certain new weapons both sides now plan to deploy. For example, a missile armed with the newly developed "Multiple Independently-Targeted Reentry Vehicles" (MIRVs), looks from a distance like a missile armed with one reentry vehicle. If both countries install MIRVs, each will have difficulty, without on-site inspection, knowing how many deliverable warheads the other has. Whether a missile system is a defensive anti-ballistic missile (ABM) system, and whether, if so, it is effective, are likewise difficult to determine at great distances. Deployment of ABM systems, therefore, further complicates the problem of verification. New intercontinental missiles which can be fired from railroad flatcars or truck trailers (rather than massive concrete and steel launching pads) can be hidden from view in large warehouses. If these are deployed, inspectors may also be needed. Thus, the new weapons are likely to raise the inspection problem all over again.

The development of new weapons may also cause each side to doubt whether it still has sufficient missile strength to deter the other's first strike. Neither will have an accurate means of knowing how many warheads the other side has. Just as we might interpret the growing Soviet intercontinental missile strength as aimed at our second-strike capability, they could interpret our desire to

[7] Reprinted (in full or excerpt) in the CONGRESSIONAL RECORD, May 26, 1970. pp. 17073–17078.

increase our reentry vehicles by geometric proportions through MIRV's as a threat to their second-strike capability, and our planned thin ABM as a defense against those few Soviet missiles that might survive our first strike. If either side seriously believes that its second-strike capability might be jeopardized, it may well redouble its efforts to deploy more missiles rather than talking seriously at the negotiating table. If one side suspects that the other is trying to take every advantage of the latest technology in order to freeze the first into a position of inferiority, further delay is probable. If both insist upon negotiating from a position of superiority, the talks are not likely to get far.

Assuming, however, that both sides exercise some restraint, the negotiators will continue to be plagued by the problem of advancing technology. They may find it possible to halt deployment of new missiles, but they can not stop political change or the advancement of science. Almost inevitably, a specific limitation on particular kinds of missiles will have to be revised in the future to prevent evasion by new kinds. Almost inevitably, the negotiating problem will be so complex that a first agreement will be able to deal with only part of it. Almost inevitably, what the parties first agree to live with will be changed over time by such developments as mounting Chinese stockpiles, increasing tension or conflict over the Middle East or other unforeseen crises. Almost inevitably, new information about one side's plans will prompt the other to change its own.

The missile race cannot be ended with one bold stroke of the negotiator's pen on a single comprehensive and lasting treaty. I foresee instead a continuing negotiation, a continuing exchange of information on weapon plans and a continuing series of agreements. This article suggests possible structures for such a dialogue, given the division of power over the conduct of foreign policy between the Executive and the Congress.

I. THE PROBLEM—TO PROVIDE EXECUTIVE FLEXIBILITY WITH CONGRESSIONAL PARTICIPATION

Most members of Congress probably assume that any missile agreement will be expressed in the form of a formal treaty to be submitted to the Senate for approval, a treaty which deals with all aspects of the problem and which can only be changed with the consent of the Senate. But, if what I have said already is correct, a number of agreements may be necessary, and they may need frequent revision. To require formal Senate consent to each agreement and to each revision as if each were a separate treaty makes very litle sense in view of the Senate's many other responsibilities.

1963, a vintage year for arms control, illustrates the strain which too many important treaties could put upon the Senate's procedures. The Senate gave expedited treatment that year to the Test Ban Treaty, a modest measure in comparison to a limit on the number of deployed American and Soviet strategic missiles. Yet the advise and consent process occupied most of the Senate's time for about two months. Because Senate action was still required on appropriations and other legislation that year, President Kennedy decided that a prohibition on "bombs in orbit" should not be in treaty form. As a consequence the ban on stationing nuclear weapons in space was not presented as a treaty until 1967.

Not only is two months sometimes too long to wait for approval of a treaty dealing with rapidly changing conditions, but the Senate simply cannot devote very many two-month periods in any year to missile agreements. Moreover, even if a single, comprehensive treaty could be negotiated, its submission to the Senate could run the risk of a damaging defeat—a defeat of the kind suffered in the Senate by the Covenant of the League of Nations. A better method would be informal, interim agreements of narrow scope which would not need formal approval by the Senate but which could be followed by a treaty.

In addition, after almost eight years of worrying about Congressional support for arms control measures, I believe that in carrying out an effective plan of arms control the necessary cooperation between the Executive and the Senate could be improved. Sometimes the Executive does not take the Senate sufficiently into its confidence until the negotiations are so advanced that changes are difficult. On the other hand, the Senate's division of responsibility for arms control is not the best structure for close cooperation with the Executive during negotiations. The Foreign Relations Committee has responsibility for treaties, including those on arms control. The Armed Services Committee and the Senate members of the Joint Committee on Atomic Energy also claim a legitimate interest. At the same time, because theirs is not the sole committee with responsibility, many Senators on these committees feel no real responsibility to advise themselves sufficiently to pass informed judgment on an arms control problem. As a consequence, there is no one comimttee which, if properly involved in the negotiations and satisfied with their progress, could really give any assurance that a two-thirds vote of the Senate could be obtained on an important arms control agreement. The Executive therefore, has less to gain from close consultation than might otherwise be the case.

The framers of the Constitution probably anticipated that the Senate would participate actively from the beginning of treaty negotiations. They appear to have assumed that the Senate would normally act as an "executive council," advising the President and his negotiators on the positions they should take during the negotiations. This method of procedure was tried during George Washington's administration and abandoned when it foundered on tension and disagreement between the President and the Senate. It has not been tried again.

The amount of consultation concerning ongoing treaty negotiations between the Senate and the executive branch has varied considerably since Washington's time depending upon the current state of relations between the executive branch and the Senate and upon the subject matter of the treaty. In some cases, the Foreign Relations Committee, other committees having responsibility for the area covered by the treaty, and the Senate leadership have been consulted before negotiations were begun; in some cases they have not. Later, when agreement becomes close, consultation is, of course, more common.

During arms control negotiations, consultation has generally been more than routine. Perhaps because of the Senate's failure to ratify the League of Nations Covenant, President Harding sent Senators Lodge and Underwood as delegates to the 1921 conference on the Limitation of Armaments and added Senator Root as well to the delegation to the 1922 Naval Limitation Conference. In recent years, members of both House and Senate have served as advisors to American delegations to the Geneva Disarmament Conference. However, their other duties in Washington and the slow pace of negotiations have resulted in their appearance at the conference for a day or two at most, perhaps once or twice a year. As a consequence, the more meaningful consultations have taken place in Washington. During the lengthy negotiations before conclusion of the Test Ban and Non-Proliferation Treaties, for example, informal consultations and formal hearings with the Joint Committee on Atomic Energy were frequent. Committee members took an active interest, committee staff became experts, and the Committee directly influenced the American position, sometimes holding the Executive Branch back from agreements which the Committee thought unwise. The Foreign Relations Committee and its Disarmament Subcommittee were also active, many members urging the negotiators forward toward agreement. A subcommittee of the Armed Services Committee also held hearings, but most of its members were, at best, lukewarm toward successful conclusion of the negotiations. After hearings or informal consultations with members or staff of these committees and often with the Senate leaderhip, the Executive Branch would draft instructions to the negotiators. It would sometimes revise its position in light of the consultations, and sometimes go ahead with the position it had tentatively prepared before the consultations.

During the course of both the Test Ban and Non-Proliferation Treaty negotiations, two crucial issues arose on which large numbers of Senators took a position on the negotiations. The Dodd-Humphrey resolution expressed wide bipartisan support for a treaty banning nuclear tests everywhere but underground at a time when our test ban negotiators were still attempting to gain Soviet agreement to a ban on all tests, including those underground. Before this resolution, the differences over the number and nature of inspections necessary to monitor underground tests had made agreement impossible. The eventual Test Ban Treaty contained no ban on underground tests and therefore no inspection provisions. Similarly, negotiation of a Non-Proliferation Treaty was at a standstill for several years in large part because of our attempt to create, with some of our allies, a Multilateral Force (MLF) having nuclear weapons. It was during hearings before the Joint Committee on Atomic Energy, that the hostility of key members of that Committee to the MLF became publicly clear. Soon after the Senate overwhelmingly adopted the Pastore Resolution urging conclusion of such a Non-Proliferation treaty, serious negotiations began.

It is my belief that both resolutions helped the executive branch choose between conflicting goals and reassured the Soviets that a two-thirds vote of the Senate could probably be obtained. When these two treaties were finally negotiated and submitted to the Senate, the earlier resolutions may well have been of some help in producing such a vote. Probably of much greater importance, however, were the detailed knowledge and dedicated support of key Senators such as Fulbright of Foreign Relations and Pastore of Atomic Energy. This knowledge and support were, of course, the result of the many consultations and hearings going back over a number of years.

Some procedure of this sort will be necessary for the present missile talks. Given our constitutional division of powers and the need for continuing broad public support for arms control, congressional cooperation will be necessary for successful conclusion of binding agreements. Moreover, such agreements will probably require frequent changes. Under the Test Ban Treaty, pressures for change—largely in connection with the venting of radioactive debris from underground shots—have been accommodated entirely by interpretation of its terms. The Non-Proliferation Treaty permits flexibility in the narrowly defined safeguards area through further negotiations not subject to Senate approval. These are ways to accommodate change, and may be useful precedent for future missile agreements, but they should be accompanied by improved procedures for Congressional liaison, perhaps including the designation of one select Senate

Committee with primary responsibility to follow the negotiations. These and other methods of providing, at the same time, both executive flexibility and congressional participation are the subject of more extensive discussion in the pages that follow.

II. PERMISSIBLE FORMS OF AGREEMENT FOR A MISSILE LIMITATION

There can be little doubt that missile limitation is one of the "proper subjects of negotiation between our government and the governments of other nations . . ." which may be dealt with in a treaty. Disarmament is clearly a matter of international concern and has been at least since Isaiah. Arms control has been the subject of treaties to which the United States was a party from the 1817 Rush-Bagot Agreement which limited naval ships on the Great Lakes, to the 1922 Naval Armament Treaty which limited the number of battleships and aircraft carriers of major sea powers, to the 1968 Non-Proliferation Treaty which limits the spread of nuclear weapons to additional countries.

A treaty is not only a proper form for a missile limitation, but it has become the expected form for a final, lasting arms control agreement. Other forms are, however, available, and they should be considered.

A. Executive agreement not authorized or approved by Congress

In addition to treaties, binding international agreements may be made by executive agreement. An executive agreement may be negotiated pursuant to prior statutory authorization of Congress. It may be entered into pursuant to the terms of a treaty approved earlier by the Senate or subject to the later approval of both houses of Congress by joint resolution. Or, it may be made without any basis in congressional action.

The last of these—the most often criticized, form of executive agreement—is one which the President makes by virtue of his authority as Commander-in-Chief and as possessor of the government's "executive power." The federal courts have not considered many executive agreements which have no basis in congressional action, but they upheld several important ones and have given them the same effect as if they had been treaties. The question therefore arises whether a missile limitation agreement could be in this form. An argument can be made that the President's authority as Commander-in-Chief and chief executive would permit him to direct the Secretary of Defense not to add any more strategic missiles to our arsenal. Therefore, the argument runs, he could agree with another country not to do so, and he would not have to submit the agreement to Congress for approval. This argument, however, denigrates the constitutional power of Congress to provide for the common defense, to raise and support an army, and to raise and maintain a navy, as well as the power of the Senate to advise and consent to treaties.

Furthermore, the Arms Control and Disarmament Act of 1961 prohibits the Executive from taking action under any law to "obligate the United States to disarm or to reduce or to limit the . . . armaments of the United States, except pursuant to the treaty making power of the President under the Constitution or unless authorized by further affirmative legislation by the Congress of the United States." Thus, any missile limitation not authorized by Congress or approved by the Senate which *obligates* the United States *to reduce or limit* armaments is barred by this statute, assuming its constitutionality. Moreover, the President would have a fight on his hands if he agreed to reduce or limit missiles without seeking further congressional approval at some point. After the lengthy controversy resulting in the recent Fulbright Resolution against "national commitments" without congressional sanction, the senatorial criticism of secret "commitments" to Laos and Thailand, and the divisive debate over the ABM, this would seem unwise.

The only modern arms control obligation in executive agreement form, other than armistice agreements, is the "Hot Line," and it does not obligate the United States to reduce or limit any arms. Finally, no major missile reduction or limitation is likely to receive the continuing support of public opinion—which it needs to be lasting—if it ignores Congress altogether. Thus, for reasons as much political as constitutional, it would be unwise to seek, as the preferred framework for obligations reducing or limiting missiles, an executive agreement which is not to be approved by the Senate or Congress and not to be succeeded by a treaty.

B. Executive agreement approved by resolution or authorized by statute

Another form for an arms control measure is an executive agreement subject to later approval by Congress or negotiated pursuant to the express provisions of a statute. A joint House-Senate resolution approving an already-negotiated agreement has been used occasionally to approve such things as an American agreement to become a member of an international organization. An advantage from the Executive's point of view is that only a majority vote is required in the Senate and the House. On the other hand, opponents of a missile agreement could argue that the Executive had chosen to seek a joint resolution in order to avoid the need to secure a two-thirds vote in the Senate. They might attempt to arouse senatorial ire against the participation of the House in what Senators probably would think should be a treaty. Without advance congressional authorization to use this form, any voting advantage of the joint resolution might well be dissipated by such criticism.

This problem could be avoided by prior statutory authorization for the negotiation of the agreement. International postal agreements have been negotiated pursuant to statute since 1874, and reciprocal trade agreements since 1934. The 1934 Reciprocal Trade Agreements Act contained specific limits on executive discretion, such as a prohibition against cutting any tariff more than 50 per cent. As the years went by, and the Act was renewed, Congress increased the tariff-cutting authority of the Executive, but added other limitations on the negotiating power of the Executive. The 1962 Trade Expansion Act, which authorized the Kennedy Round of tariff negotiations, made innovations in providing expressly for congressional members of the American delegation, but it also contained many explicit restraints upon the negotiators.

Reciprocal trade agreements are a useful precedent for congressional authorization for future executive negotiations. But there is not now enough experience with missile talks to know what kinds of limits should be imposed in advance by Congress. I find it almost inconceivable that Congress would authorize the Executive to enter into a missile limitation agreement not subject to later congressional review unless severe statutory restrictions were imposed on executive discretion beforehand. Without more knowledge of the kind of agreement which might be possible, Congress would probably hold the negotiators under such tight reins as to prevent serious talks from getting started. But the procedure is worth considering for the future. Perhaps the negotiation of agreements requiring a "standstill" in missile deployment by the United States and the Soviet Union would give enough experience to provide the basis for congressional authorization of future negotiation of reductions in missile strength.

Other relevant examples of executive agreements authorized by statute are the "agreements for cooperation" with other nations in the atomic energy field. These are based upon the Atomic Energy Act of 1954 and its 1958 amendments. The 1954 Act authorized the negotiation of agreements for the distribution abroad of uranium and other nuclear materials as well as specified information on nuclear processing and reactors, all of which were to be used for peaceful nuclear programs under prescribed conditions. These conditions are much tighter than those imposed by Congress under the first Reciprocal Trade Agreements Act in 1934.

The 1958 Atomic Energy Act Amendments authorized the negotiation of agreements for the transfer to our NATO allies of non-nuclear parts of atomic weapons systems which would not contribute to their atomic weapons capability, the transfer of certain other equipment and material for military application, and the transfer of classified information of the kind necessary, for example, for the development of defense plans and the training of military personnel. The purpose of these agreements was to improve our allies' state of training and readiness to participate in their defense against attack by nuclear weapons, or to use such weapons themselves if authorized by the President to do so after the outbreak of war in Europe. The 1958 Amendments also authorized the executive to provide both classified information on atomic weapons and non-nuclear parts of atomic weapons to allies (at that time only Britain) which had made substantial progress in the development of atomic weapons. The restrictions upon executive discretion in the 1958 Amendments were even tighter than those in the 1954 Act.

Both the 1954 Act and the 1958 amendments contained a substitute for the Constitutional procedure of advice and consent to treaties, a substitute not utilized to review trade negotiations. This is the requirement that the agreement itself be submitted to Congress for a special waiting period before it can go into effect. In the case of agreements for cooperation for peaceful purposes authorized by the 1954 Act, the submission is actually to the Joint Committee on Atomic Energy, the designated watchdog over the executive in atomic energy matters. In this case, the waiting period is thirty days. For the more sensitive agreements for cooperation for military purposes authorized by the 1958 amendments, the submission is to the Congress itself, and the waiting period is sixty days.

Legislative opportunities to "veto" executive action through procedures such as this have been critized as an invasion of executive prerogatives by the legislature. But none of the many agreements for cooperation negotiated under the 1954 Act or the 1958 amendments has even been rejected by Congress. The procedure is tight; both executive and legislature have defined roles; and the Joint Committee has been diligent as a watchdog of the system, yet effective as a defender of its products. The precedent is therefore a useful one for arms control.

For the moment, however, the lack of executive experience with missile talks probably precludes enactment of detailed legislation such as the Atomic Energy or Trade Agreements Acts to authorize the negotiations. At some future time, such legislation can be considered. A key to its success, as in the case of the Atomic Energy Act, will no doubt be the designation of a diligent watchdog committe which has the confidence of other members of Congress. This may present jurisdictional problems since the Foreign Relations Committee claim treaties, the Armed Services Committee claims military affairs, and the Joint Committee on Atomic Energy claims atomic energy matters. The Test Ban Treaty was, however, considered by the members of all three committees sitting together,

and a Disarmament Subcommittee composed of members of all three once existed. So the problem is not insuperable.

C. Executive agreement authorized by treaty

A third form of executive agreement which has seen frequent service is that which is expressly authorized by treaty. This form has, for example, been used for some of the important "status of forces" agreements with our allies. These agreements establish who has jurisdiction over American servicemen charged with law violation abroad. Some of these agreements are treaties; others are executive agreements authorized by treaty. Both have the same international legal effect.

The executive agreement authorized by treaty avoids the problem of a premature congressional enactment based on inadequate negotiating experience. Presumably the negotiation of the treaty will provide sufficient information on future negotiating possibilities to give general guidelines for later executive agreements to be made pursuant to the treaty. By seeking a treaty, the more traditional form of arms control agreement, the executive would avoid the criticism which often accompanies executive agreements without basis in congressional action. Tradition is usually an important consideration in the executive's choice between the treaty and other forms of international agreement. Probably the treaty is the best goal to pursue for a lasting international obligation reducing or limiting missiles. The flexibility for executive action which can be provided within the treaty's framework is therefore discussed in some detail in a later section.

III. THE FIRST STEP: EXECUTIVE ACTION PENDING TREATY NEGOTIATION AND ENTRY INTO FORCE

While a treaty like the one described above may be the best form for the arms limitation agreement, the ideal often suffers when exposed to the practical. Such a treaty may take a good deal of time both to negotiate and to bring into force after negotiation through constitutional ratification procedures. Negotiation of the treaty may indeed turn out to be impossible. We must, therefore, consider other forms of agreement which can serve either in the interim or as a substitute should the treaty negotiations fail.

A. Executive agreement

After negotiating a treaty, states often enter into agreements to govern their relationship in the area dealt with by the treaty pending is ratification and entry into force. On signature of the 1936 Naval Armament Treaty, for example, the parties agreed that if the treaty had not entered into force by January 1, 1937, they would nevertheless observe one of its important obligations until it did, unless entry took longer than six months from that date. This agreement was to be effective as an executive agreement if the Senate did not act by January 1. Similarly, when the treaty creating the International Atomic Energy Agency (IAEA) was signed, the negotiating parties signed an annex providing for a Preparatory Commission which would lay the groundwork for the Agency and remain in existence until the treaty came into force. The annex was submitted to the Senate with the treaty even though it went into force as an executive agreement on the date of signature. Its purpose was to provide for what should be done while the Senate and other parliaments were considering the treaty. A like agreement produced a Provisional International Civil Aviation Organization which operated for two years before the treaty creating the International Civil Aviation Organization became effective.

Executive agreements without benefit of any congressional sanction are thus frequently used to cover the period between negotiation of a treaty and its entry into force. There are, in addition, a number of precedents for executive agreements to cover the earlier period between the beginning of negotiations and their successful conclusion. For example, certain features of an 1871 fisheries agreement which had been formally terminated by Congress were continued in force by the executive pending negotiation of a new treaty in order not to lose the benefits of the old agreement during the then current fishing season.

Armistice agreements, usually of the highest importance to the United States, typically enter into force immediately upon signature by the Executive and are not submitted to the Senate. These agreements may not only terminate hostilities but also lay down political conditions for the belligerents, establish obligations controlling armed forces and armaments and even adumbrate the terms of the final peace treaty. For example, the agreement signed by the Secretary of State on behalf of President McKinley suspending hostilities in the Spanish-American War provided that Spain should relinquish her claim to sovereignty over Cuba, cede Puerto Rico and an island in the Ladrones to the United States and allow the United States to occupy the city, bay and harbor of Manila, pending the final disposition of the Philippines at the peace conference. The armistice of 1918 not only determined military conditions for ending the fighting, but embodied President Wilson's famous "Fourteen Points." The armistice agreements signed with the German satellites after World War II contained provisions for such things as human rights, restitution of property, reparations and boundary adjustments, all of which influenced the pattern of the final peace treaties.

Few would suggest that the Executive lacks power to make armistice agreements and that hostilities should continue pending negotiation of a treaty and approval by the Senate. At the time it is negotiated, an armistice is assumed to be a temporary agreement which will be followed by a definitive treaty of peace to be submitted to the Senate. In some instances, however, as in Korea, no treaty ever is concluded. The armistice agreement then continues in force so long as it is observed, even though it was intended only as a temporary executive agreement. The President's broad authority to negotiate armistice agreements is based upon his powers as Commander-in-Chief and Chief Executive. These are the same Constitutional powers which could provide the basis for an interim executive agreement halting the strategic missile race pending negotiation of a treaty.

B. Conscious parallelism

Interim arms agreements may be informal as well as formal. Countries have restricted the deployment and testing of new weapons by executive action subject to parallel restraint by other countries but without formal agreement to do so. Examples of conscious parallelism include informal agreements relating to nuclear testing, "bombs in orbit," military spending and fissionable material. The examples are discussed below.

1. *Moratorium on nuclear tests—1958–61.* During the period of public debate over a test ban treaty but before negotiations began, the Supreme Soviet ordered all nuclear tests ended in the Soviet Union, reserving its freedom of action if other powers continued testing. The United States was in the midst of a test series and did not then respond. On August 22, 1958, however, after an international conference of experts had agreed to a report on the detection of nuclear tests, President Eisenhower proposed prompt conclusion of a treaty and offered to withhold further American testing for a period of one year from the beginning of negotiations, if the United Kingdom and the Soviet Union would do so. The Soviet Union did not then reply. The last United States test was on October 31, 1958, but the Soviet Union set off nuclear explosions on November 1 and 3. President Eisenhower promptly announced that the United States was thereby relieved "from any obligation under its offer to suspend nuclear weapons tests." He said, however, he would continue the test suspension for the time being and hoped the Soviet Union would also suspend. So far as the United States could determine, the Soviet Union did not conduct a test after this announcement for a period of almost three years. During 1959, there were statements by the United States that, while it regarded itself free to test, it would not do so without first making an announcement to that effect. There were also statements by the Soviet Union that it would not be the first to resume testing. While, on August 30, 1961, the Soviets did resume before we did, they did so after a number of French tests.

In 1963, after both sides had conducted further atmospheric tests and new test ban negotiations in Moscow had been scheduled, President Kennedy announced that "the United States does not propose to conduct nuclear tests in the atmosphere so long as other states do not do so. * * * Such a declaration is not a substitute for a formal binding treaty, but I hope it will help us achieve one." This second test ban moratorium continued for several months—until it was replaced by the Test Ban Treaty.

At no time during either moratorium was there any legal obligation on either side to refrain from testing. From an American constitutional point of view, two presidents had exercised their powers as Commander-in-Chief to order a suspension of tests, but neither had entered into an executive agreement to refrain from doing so. Both had stated that their goal was negotiation of a binding treaty.

2. *Parallel statements of intention on "bombs in orbit"*—1963–67. During 1962, there were public statements by spokesmen for the United States disclosing that thermonuclear weapons could be placed in orbit around the earth subject to reentry on command over target. These statements declared that the United States had no intention of so deploying its nuclear weapons unless the Soviet Union did so, and suggested that the Soviet Union refrain from doing so. During the same year there were private discussions with Soviet representatives on the subject. In 1963, Foreign Mnister Gromyko responded by proposing an "agreement with the United States Government to ban the placing into orbit of objects with nuclear weapons on board." President Kennedy's affirmative reply came the next day.

The Kennedy and Gromyko statements were made in September of 1963 toward the end of a two-month period of Senate consideration and national debate on the Test Ban Treaty. President Kennedy had made clear to his subordinates his desire not to submit another arms control treaty to the Senate that year because of the time, effort and commitments expended to secure a favorable vote on the Test Ban Treaty, Consequently, American and Soviet negotiators agreed upon statements which each side would make to the General Assembly renouncing any "intention of placing in orbit around the earth any weapons of mass destruction, of installing such weapons on celestial bodies, or of stationing such weapons in outer space in any other manner." They agreed upon the text of a resolution which was then adopted by acclamation by the General Assembly. It welcomed the expressions of intention and called upon all states to refrain from the proscribed conduct.

The net result was a moratorium on "bombs in orbit" until 1967 when the Outer Space Treaty was finally concluded. The Treaty constitutes an international obligation to refrain from the conduct which had been renounced in the General Assembly in

1963. By preventing placement of nuclear weapons in space between 1963 and 1967, the President exercised his executive and Commander-in-Chief powers, but did not obligate the United States.

3. *Parallel military budget reduction*—1963–64. In an interview December 31, 1963, Premier Khrushchev said:

"The Supreme Soviet of the USSR has already decided to reduce our military appropriations under the 1964 budget. It would be a good thing if other states acted in a similar way. I am convinced that the peoples of the world would whole-heartily [sic] approve such a policy—I would call it a policy of reciprocal example—in the matter of reducing of the armaments race."

Three days later Secretary of State Rusk announced that there were indications that "the two sides will not be pressing their defense budgets upward into new levels of competition during this next year." President Johnson, in his State of the Union Message, made clear that the U.S. defense budget would be reduced for the fiscal year beginning the following July; in his January message to the Geneva Disarmament Conference, he said that the atmosphere for disarmament negotiations had been brightened by "recent Soviet and American announcements of reductions of military spending . . ."

These announcements were, of course, preceded by private American-Soviet talks. No commitment was made by either side, but each decided that its own interests would be served by parallel announcements of budget cuts. The escalation of the Viet Nam war in late 1964 and in 1965 required supplemental appropriations which increased our military budget for the fiscal year in question. The Soviets believed we had gone back on our word, but in fact there was no obligation.

In a situation where changing events and problems of verification made a commitment unwise even for a year, the parallel action technique was used instead. Had events turned in another direction, the technique might have been repeated and a significant reduction in military expenditures produced over a period of time. No treaty dealing with military expenditures was then being negotiated, but a budget freeze or reduction might have restrained both sides from escalating the nuclear arms race pending negotiations of an agreement applying more directly to nuclear weapons or their carriers.

4. *Parallel announcement of cutbacks of fissionable material production—1964.* The United States has repeatedly advocated a treaty in which some or all of the nuclear powers, particularly the United States and the Soviet Union, would cut off the production of fissionable material for use in nuclear weapons. Negotiation of such a treaty has never begun because the Soviet Union rejected all such proposals. By 1964, however, President Johnson decided we were producing more weapons-grade fissionable material than we needed. "Even in the absence of agreement," he said in his State of the Union Message, "we must not stockpile arms beyond our needs or seek an excess of military power that could be provocative as well as wasteful." He therefore announced a cutback in production of enriched uranium and plutonium, and called on other nuclear powers to do the same. Two weeks later, in a message to the Geneva Disarmament Conference, he proposed that this process be continued by an inspected, plant-by-plant shutdown in the Soviet Union and the United States, leading to a verified agreement to halt all production of fissionable materials for nuclear weapons.

On April 20 and 21, 1964, after consulations among their representatives, President Johnson, Prime Minister Douglas-Home and Premier Krushchev made parallel announcements that they were reducing production or planned production of fissionable material for use in nuclear weapons. Doubt was later expressed by Senator Jackson, chairman of two Senate subcommittees having nuclear weapon responsibilities, whether the Soviet Union was in fact reducing its production. Moreover, the Soviet Union continued adamantly to oppose a verified halt in the production of fissonable materials for weapon purposes. When later cutbacks in American production were announced, no attempt was made to secure parallel Soviet limitations on production.

The President's power to order a cutback was reflected in provisions of the Atomic Energy Act authorizing him to set the amount of fissionable material to be produced. And President Johnson's announcements of production cutbacks were premised upon Amerian needs—with or without any corresponding reduction by the Soviet Union. By announcing a cutback at the same time as did the heads of government of the Soviet Union and the United Kingdom he did not enter into any international obligation. Yet, if the simultaneous announcements had led to successful negotiation of a treaty cuting off production of fissionable materials for making nuclear weapons, they would have been very useful steps toward a restriction on the growth of nuclear stockpiles.

5. *The legality of parallel actions.* None of the parallel actions on nuclear testing, bombs in orbit, military budgets or fissionable material violated the prohibition of the Arms Control and Disarmament Act on executive action "that will *obligate* the United States . . . except pursuant to the treaty-making power of the President under the Constitution or unless authorized by further affirmative legislation by the Congress of the United States." None of them did so, first, because none constituted an *obligation* of the United States, and second, because they did not "reduce or . . . limit . . . armaments of the United States." The test ban moratorium limited the testing of nuclear weapons, not the weapons themselves. The outer space declarations of intention restricted deployment of nuclear weapons, but not the size of the stockpile. The budget announcements reduced military expenditures, but not necessarily armaments. The fissionable material cutbacks dealt with the "ammunition" for nuclear weapons, but not the weapons themselves. None of these four parallel actions thus constituted an "obligation" to "reduce or limit" armaments.

Nor did any of the four parallel actions contravene the Constitution. Each was based on power the President can exercise alone as the Executive and Commander-in-Chief. In any event, each of them could have been described at the time as a step designed to lead toward negotiation of a treaty which would ultimately be submitted to the Senate. Two of the four were, in fact, succeeded by such treaties.

President Nixon has announced that the executive branch is considering a "moratorium" on the testing of multiple independently - targeted reentry vehicles (MIRV's) as a measure which might come out of the missile talks. A moratorium on further testing or deployment of particular missiles by parallel executive restraints pending negotiation of a treaty is amply supoprted by the foregoing precedents and well within President Nixon's power. Moreover, following the example of the preparatory commission created by executive agreement pending the effectiveness of a treaty, an organization to implement the moratorium could also be established by executive action. For the reasons already indicated, technological developments, unforeseen political problems and new information on the other side's plans will probably prompt repeated requests for changes in the specific limitations of the moratorium. Furthermore, one of the basic objectives of the talks is to reduce the risk of nuclear war "through a dialogue about issues arising from the strategic situation." Moreover, the experience with the four parallel actions described above might have been better had there been a forum for everyday exchange of information and negotiation concerning the moratorium.

Assuming, then, that a moratorium can provide necessary interim restraint pending negotiation and entry into force of a treaty, let us look at the ways in which a modern treaty could provide later flexibility for change short of formal amendment of, or withdrawal from, the treaty.

IV. THE SECOND STEP: A TREATY PERMITTING CHANGE BY EXECUTIVE ACTION WITHOUT TREATY AMENDMENT OR WITHDRAWAL

The United Nations Charter and the Test Ban Treaty are examples of two quite different methods of accommodating future developments. Both provide for formal treaty amendment by future agreement which must be submitted to the Senate for its advice and consent. But the Charter goes still further. It gives the Security Council "primary responsibility for the maintenance of international peace and security" in a changing world, and requires members to accept the Council's decisions. The General Assembly has a more limited but nevertheless important role in implementing the Charter in light of new circumstances. Either organ may pass resolutions significantly affecting future conduct of states in particular circumstances.

In the case of the Test Ban Treaty, however, no international organization was created to oversee operation of its provisions. After possibilities for interpretation have been exhausted, the only safety valve it contains aside from the article on treaty amendment, is language permitting a party to withdraw whenever "it decides that extraordinary events, related to the subject maer of his Treaty" (e.g., atmospheric testing by a non-party) have "jeopardized the supreme interests of its country."

These two treaties illustrate two extremes in the range of flexible provisions which can be found in modern treaties to which we are party—treaties which affect our national interests in important ways. It is my view that the Test Ban's provisions are inadequate to meet the needs of missile agreements which will probably need frequent review and revision. On the other hand, the Charter's provision for multilateral decision-making organs are inappropriate for essentially bilateral missile agreements. Most multilateral organizations seem poor precedents for an American-Soviet arrangement to provide flexibility in an agreement to halt future missile deployment. Neither country is likely to admit other countries into the strategic decision-making process. Neither is likely to trust its security to third party mediation or settlement, whether the third parties are international staff or other countries. How could they, without providing the third party with much of the technical, classified information upon which each will act in making its own decisions? Consequently, most precedents involving international legislation within specialized agencies seem inapposite. An examination must be made of other methods for accommodating change within the framework of a treaty affecting important United States interests without either amending the treaty or withdrawing from it.

Both the U.N. Charter and the Test Ban Treaty were in the best tradition of cooperation between the executive branch and the Senate. Both resulted from negotiations in which Senators were involved through advance consultations, hearings, and participation as advisers or members of the American delegation. The Senate could and should devote as much time and attention to one, all-inclusive strategic arms treaty if one could be negotiated. But assuming there are a number of lesser agreements, and that even these will need continuing revision, the manner of congressional participation ap-

propriate for the U.N. Charter and the Test Ban Treaty may not be appropriate for missile agreements. Experience under other treaties should, therefore, be examined.

A. Rush-Bagot Agreement of 1817

The Rush-Bagot Agreement limits naval armament on the Great Lakes and was the first disarmament treaty entered into by the United States. It continues to stand for the principle of Great Lakes disarmament even if the wars, economic growth, and technological development of a century and a half have made its specific restrictions on naval armament obsolete. Lacking any provision for change except for a six-month withdrawal clause, it demonstrates clearly the need for flexibility in such an agreement. Without the executive discretion assumed by the foreign offices of Canada and the United States, the Treaty would now be a dead letter rather than a symbol of international friendship and successful arms control.

The basic provisions of the Agreement were:

(1) The Great Lakes naval force on each side should be confined to four ships, one each on two lakes, and two for the others.

(2) None of these should weigh more than 100 tons or be armed with more than "one eighteen pound cannon."

(3) No other vessels of war should be "there built or armed."

None of these provisions now remains in force in the terms in which it was written. Executive agreements have modified and modernized their content. Any Great Lakes naval vessel of either side can be stationed on any of the Lakes and all limit has been removed on the number of vessels used for training, provided that each side notify the other of the functions, disposition and armament of all training vessels. The 100 ton restriction—designed not for steel but wooden hulls—has been removed. The eighteen-pound limit for guns has been transformed into a more modern four-inch limit. Both countries are now able to build and arm war vessels on the Great Lakes, provided full information is exchanged, the armament is incapable of immediate use and the vessels are promptly removed from the Great Lakes after completion.

These executive agreements came out of the close cooperation of two world wars, but they were preceded by a history of relations between the two countries which was not so amicable. The Rush-Bagot Agreement itself followed the War of 1812 with Britain. Both the United States and Britain were anxious to avoid the economic strain and the risk of collision of a large naval force on the Great Lakes. They dismantled their Great Lakes war vessels and, for approximately twenty years following ratification, closely adhered to the terms of the Agreement. This state of affairs lasted only until the late 1830's and the Canadian Rebellion. During the rebellion, the British government seized and burned an American ship which had been rented to the rebels as a supply ship. Both countries began making preparations for war. By 1841, the British had two steam frigates in the Great Lakes. They removed these in 1843 after protest from the Americans, who in the meantime had begun work on their own warship, the 685-ton, 2-gun ship, the *Michigan*, which remained on the lakes until the early 1920's.

A great deal of informal negotiation went on between the diplomats on both sides. Each side informed the other when it increased its naval forces for purposes of "self-defense," as the British did during the Canadian Rebellion and the United States did during the Civil War. Actions which appeared to endanger the security of the other nation drew sharp protests. In 1864, the United States went so far as to give notice of its intention to terminate the agreement after six months so that shipyards might be built on Great Lakes shores as a defense measure against Confederate raids from Canada. The notice of termination was withdrawn within the six-month period, as the course of the war changed, and the Secretary of State instructed our ambassador in Great Britain to tell the British that the United States wanted to Rush-Bagot Agreement to remain in force and "hoped" the British would not arm vessels in excess of the agreed force. Although the notice of termination had been the subject of a House resolution, there is no indication that the withdrawal of the notice was ever referred back to the House or Senate for its approval. Throughout the life of the Agreement, the negotiation of terms and modifications has been primarily the work of the Executive, although some of the impetus for negotiation may have been made necessary by congressional concern. In the 1890's when there was renewed pressure on the Congress to allow naval shipbuilding on the Great Lakes, the United States attempted to negotiate an exception to the Agreement permitting shipbuilding. The Canadian Governmen refused to agree to such a modification at that time. However, the common needs of the two world wars produced such agreement later. Indeed, by 1942, the two governments had agreed that the new ships built on the Lakes could be tested on the Lakes so that they would be ready for combat as soon as they reached the sea.

During the period of great concern about the Navy's shipbuilding budget in the early 1920's, Canada and the United States met to discuss amendment of the Agreement to make it conform more closely to modern conditions. One of the provisions that both sides wished to include in the new treaty was a clause making the numerical limit on ships subject to executive agreement. This clearly resulted from the lengthy history of changing naval requirements on the Great Lakes. However, although drafts were prepared and exchanged, no final action was ever taken.

The lesson which both foreign offices had learned from the Rush-Bagot experience by the 1920's is still instructive today. A provision permitting changes in specific terms by executive agreement, perhaps reserving for treaty amendment any modification which might alter the purpose of the agreement, would have sanctioned what actually happened and produced a workable, realistic treaty.

B. Boundary commissions

The deficiency of Rush-Bagot—the lack of any provision for change short of amendment or withdrawal—is not present in the treaties governing settlement of disputes about our national boundaries. Yet territory is often as important a national interest as military security and territorial disputes have been a leading cause of wars. From the point of view of Senator Fulbright and the Senate Foreign Relations Committee, "the transfer of territory," like the sending of American troops abroad, is a matter of "really great importance that required the most serious thought" and therefore should clearly be dealt with by treaty. How responsibility for boundary changes is divided between the legislative and executive branches, therefore, seems instructive for the drafting of future arms control agreements.

Senator Fulbright is of course correct in thinking that our boundaries with Canada and Mexico are largely established by treaty. But the everyday problems which arise under these treaties are dealt with by the executive branch alone; only major differences such as the recent Chamizal settlement with Mexico are submitted to Congress for formal approval. On our Canadian border, the recurrent problems of consequence are water diversion, pollution and obstruction. On the Mexican border, the meandering Rio Grande continues to create territorial changes. In both cases, boundary commissions composed of members from each side reach agreements and thereby make decisions which can become binding on their governments without submission to the Senate.

1. *Canadian Border.* A 1909 treaty gives three American and three Canadian Commissioners compulsory jurisdiction over all cases involving the use, obstruction or diversion of boundary waters.[1] Except where the two governments conclude a special agreement, which could of course be submitted to the Senate, the International Joint Commission approves or disapproves all applications which either government may forward to it concerning use, obstruction or diversion.[1] Decisions on these applications are made by majority vote and bind the two governments. In certain other cases, the Commission makes recommendations which are not binding. And, on matters of such importance as the building of the St. Lawrence Seaway, lengthy congressional consideration is of course required.[1]

2. *Mexican Border.* For more than 60 years, the American Commissioner of the International Boundary and Water Commission, United States and Mexico, has had authority to negotiate and settle differences in the application of treaties concerning the location of the shifting boundary line formed by the Rio Grande and the Colorado Rivers. Under an 1889 treaty with Mexico, joint decisions of the United States and Mexican Commissioners are submitted to their two governments for a one month waiting period.[1] If there is no objection by either within that period, the decision on the boundary is binding on both governments. One month is sufficient time for consultation with interested Members of Congress by the officers of the Executive Branch who must make the decision. But it is not usually adequate for formal advice and consent by the Senate. Later treaties, legislation and practice make clear that unusual decisions involving large areas and populations must be submitted to Congress, but everyday matters involving smaller areas and populations need not be. And the practice of executive agreement by the Boundary Commissioners subject to a 30-day waiting period in Washington has been extended to other matters, including the division of irrigation waters between Mexico and the United States pursuant to treaty.[1]

C. Naval limitation treaties

Between the two world wars, three important treaties limiting naval ships and armaments were negotiated: the first in 1922, the second in 1930, and the third in 1936.[1] The 1922 treaty dealt with battleships and aircraft carriers. It established a 5:5:3 ratio for these ships for the United States, the United Kingdom and Japan. The 1930 treaty limited the building of smaller vessels, such as cruisers, destroyers and submarines. The 1936 treaty attempted to regulate only the size and armaments of naval vessels. It did not deal with the number of ships each country could have because Japan, desiring parity in battleships and carriers with America and Britain, walked out of the conference when they would not accede to her demands. Because of the "gathering storm" of war, however, the 1936 treaty was short lived.[1]

None of the three treaties created by international organization to implement its terms. The treaties did, however, contain successively more elaborate provisions for dealing with changed circumstances. While all incorporated formal treaty amendment articles, the later treaties went considerably beyond such provisions.

The 1922 treaty called for a conference to be held in 1930 to consider "what changes, if any, in the treaty may be necessary" in

---

Footnotes at end of article.

view of "possible technical and scientific developments." If any of the parties believed, before then, that "the requirements of [its] . . . national security . . . in respect of naval defense are . . . materially affected by any change of circumstances," it could call for a conference of the parties. In either of these conferences, change was to be accommodated by amending the treaty which, of course, required ratification by each government in accordance with its own constitutional processes. Finally, if any party became "engaged in a war which in its opinion affects the naval defense of its national security" it could "suspend for the period of hostilities" most of its obligations upon notice to the other parties. In that event, the other parties were to "consult together with a view to agreement as to what temporary modifications, if any, should be made in the Treaty as between themselves." If no agreement were reached, any of the other parties could suspend its obligations for the period of hostilities. Temporary modification of the treaty would presumably have required submission to the Senate, but suspension would not.

The 1930 Treaty was an amendment to the 1922 Treaty and it continued in effect the relatively traditional provisions for change in the earlier treaty. Additional language was necessary, however, because France and Italy had declined to accept limitations on their cruisers, destroyers and submarines. Britain, Japan and the United States therefore agreed that if the "requirements of national security" of any of them in respect of cruisers, destroyers, or submarines was "materially affected by new construction by any power other than" the three, any of the three could notify the others of the "increase required to be made in its tonnages" of cruisers, destroyers or submarines. Without further agreement, without amending the treaty, and without submitting any amendment to its parliament for approval, the notifying power could make the increase it had specified. The other two would then be permitted to make proportionate increases, provided each of them notified the other.

A provision of the 1930 Treaty called for a conference in 1935 to frame a new treaty. Although both the 1922 Treaty and the 1930 Treaty were scheduled to expire at the end of 1936, the conference was not convened until March of 1936. After the Japanese walked out, Britain, France and the United States drafted a new treaty imposing restrictions on the size and armaments of their battleships, aircraft carriers, lighter surface vessels, and submarines. More significant for our purposes, they agreed to elaborate provisions for the exchange of information on their annual programs for naval construction and acquisition. Throughout the year, notification was to be given of changes in these programs, of various specifications of the vessels to be built, of the dates when keels were laid down, of modifications during construction, and of major over-hauling of older vessels. No vessels within prescribed categories were to be laid down, otherwise acquired or modified in important respect until four months after notification. The provisions appear designed to permit each party to check his intelligence estimates against the declared plans of another party, and to respond to the other's plans by trying to talk him out of it, or by changing his own plans. A fairly continuous exchange of information was required, and a great deal of informal negotiations was possible.

The 1936 Treaty contained authorization somewhat similar to that of the 1930 Treaty to depart from the limits prescribed in the Treaty or in the party's declared annual program if non-parties built vessels not in compliance with the treaty, or if the party felt its "national security" to be "materially affected by any change of circumstances" other than those provided for in the Treaty. As under the comparable provisions of the 1930 Treaty, a departure could be made without amending the Treaty. Such departure was more difficult, however, because of a three month waiting period and a requirement that the parties "consult together and endeavor to reach an agreement with a view to reducing to a minimum the extent of the departures which may be made." Finally, the 1936 Treaty included an article permitting suspension in event of war, an article which was exercised by Britain on the very day in 1939 that she declared war on Germany. The other parties soon followed Britain's suit.

These provisions, according to the American negotiator, were designed to give the agreement sufficient "flexibility" so that it could change to meet the needs of the times. Although they met the needs of war time by permitting immediate suspension, they were not in effect long enough during peacetime to demonstrate their flexibility in such circumstances.

One of the significant precedents for a missile limitation in the 1936 Treaty is the information-exchange requirement giving each party details on the declared annual program of the others and providing a waiting period before new starts were made. During the delay the other parties could respond by negotiating to eliminate or reduce the new starts, and, at the same time, by planning the changes in their own programs which might be necessary if the new starts went ahead on schedule. If negotiation successfully prevented the new start, a formal treaty amendment deflecting that agreement could be negotiated, assuming of course that a moratorium existed until it was ratified. Or, since the departures were from the annual program and not from the Treaty, the parties could simply accept notices from each other of changes in their declared programs.

Another useful precedent from the 1936 arrangement is the authority to change one's annual program in response to the construction by non-signing parties of ships covered by the Treaty. Again, the notice requirement and waiting period afforded opportunity for negotiation within the framework of the treaty to eliminate or reduce new starts without any requirement for formal treaty amendment.

D. Antarctic Treaty

The 1959 Antarctic Treaty, which also permits change with or without treaty amendment, proclaims that Antarctica "shall be used for peaceful purposes only. There shall be prohibited, *inter alia*, any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military maneuvers, as well as the testing of any type of weapons." In addition, nuclear explosions are explicitly prohibited in Antarctica.

The Treaty did not create any international organization to implement these terms. It did, however, authorize executive agreement to carry out their purposes. Representatives of the 12 original parties meet periodically to consult and recommend to their Government *"measures in furtherance of the principles and objectives of the treaty,* including measures regarding: (a) use of Antarctica for peaceful purposes only. . . ." These recommendations become effective as an international agreement when approved by each of the governments entitled to participate in the meeting. An American representative ordinarily goes to such a conference with instructions from the State Department worked out with other agencies. Depending upon the importance of the matter, he consults with appropriate members or committees of Congress before departing. During and after the meeting, he reports to the State Department what the agreed recommendations are. The State Department then places the recommendations before officials of other interested government agencies, including members or committees of Congress, before giving its approval. The executive can then bind the United States to these recommendations without further action by Congerss.

At the first consultative meeting, the Antarctic representatives made recommendations to implement a number of the Treaty's provisions, including the Treaty's requirement for prior notice by any party of "any military personnel or equipment intended to be introduced by it into Antarctica. . . ." The recommendation specified the time and manner for furnishing the information and stated that it should include "names, types, numbers, descriptions and armaments of ships, aircraft and other vehicles, introduced, or to be introduced into Antarctica, and information on military equipment, if any, and its location in Antarctica; . . . the number of personnel who are members of the military services . . .; the number and types of armaments possessed by personnel. . . ." These recommendations became effective as an agreement nine months after the meeting without submission to the Senate.

While arms in the Antarctic seem unlikely at the moment to jeopardize our security, the Soviet Union has claims there, and missiles based there could threaten our South American allies as well as ourselves. Consequently, implementation of the Treaty's prohibition on military installation is of some consequence to us. In addition, the Treaty is one of the handful of arms control agreements to which both the United States and the Soviet Union are parties. The Antarctic Treaty's provisions for change are, therefore, relevant precedents.

E. Control of nuclear materials used for peaceful purposes in nonnuclear countries

To control nuclear materials in use by other countries, Congress has worked out new institutional arrangements which give the executive branch considerable leeway in negotiating arrangements. While traditional treaty procedures are not used, executive branch discretion is exercised under the close scrutiny of an alert watchdog committee, the Joint Committee on Atomic Energy.

1. *American-made Fissionable Material.* American cooperation with other countries in the peaceful uses of atomic energy derives largely from President Eisenhower's 1953 "Atoms for Peace" proposal to the United Nations. He announced that the United States would assist other countries in their development of nuclear energy, provided they gave adequate assurance that this assistance would not be misued for military purposes. implementing legislation was enacted in 1954. It authorized the U.S. Atomic Energy Commission to distribute nuclear materials to other nations pursuant to international agreements containing guaranties that the material would not be used for atomic weapons or other military purposes. Such agreements are submitted first to the President for approval, and then to the Joint Committee on Atomic Energy, where they must lie for 30 days while the Congress is in session. Unless the Congress takes steps to disapprove an agreement during the thirty-day period, no further Congressional action is required.

The first agreements for cooperation which the United States entered into with other countries contained detailed language describing the safeguards which would be imposed, and provided for inspection by American nuclear experts. Later, two important international atomic energy organizations were created, one regional (Euratom), and one world-wide (International Atomic Energy Agency). Since 1962, the responsibility for safeguarding nuclear materials from the United States in the reactors of other countries has been gradually transferred to these two agencies—with the support of Congress.

At the present time, the United States relies upon the IAEA's Safeguards System to police the agreements by which we transfer uranium to most countries other than the Euratom Six. Yet, the IAEA regulations creating this system were not submitted to the Congress or any of its committees for formal approval.

This reliance upon the IAEA came about through the following arrangements which the Congress helped to create:

The 1957 International Atomic Energy Agency Statute, a treaty to which the Senate gave its consent, authorizes the Agency to "establish and administer safeguards designed to ensure that special fissionable and other materials . . . are not used in such a way as to further any military purposes. . . ." The statute also contains certain standards or specifications for these safeguards. The regulations creating the IAEA Safeguards Systems were worked out under the direction of the Board because the Statute gives it the major power for running the Agency. The Board is so structured that the United States, with help from its friends and allies, can usually wield a veto on important issues.

The regulations creating the IAEA's Safeguards System were drafted initially by the IAEA's international staff and later drastically revised by the Board of Governors. They were largely the product of lengthy negotiations between nations and not majority voting by the Board. In these negotiations, the United States and, to a lesser extent, the Soviet Union played important roles. Their common interest in effective safeguards to prevent the emergence of new nuclear powers is obvious. On the whole, they have worked fairly well together in the IAEA in recent years.

Congressional participation did not stop with the Senate's vote approving the IAEA Statute. An IAEA Participation Act requires that the American representative, who among other things, sits on the IAEA's Board, shall be appointed with the advice and consent of the Senate and shall take positions based upon instructions from Washington. The first head of the IAEA itself was former Chairman of the Joint Committee, Congressman Sterling Cole. Congressional advisers, usually members of the Joint Committee, attend some of its meetings every year. The Atomic Energy Commission, which has a close relationship to the Joint Committee, supplies experts to the IAEA and to American delegations to IAEA meetings. Instructions from Washington to the American representative are frequently discussed with the Joint Committee before they are transmitted. The AEC has a major role in developing and implementing U.S. policy in this area. It is required by law to keep the Joint Committee "fully and currently informed." Finally, as indicated above, the individual agreements providing for transfer of American nuclear materials to other countries must lay before the Joint Committee for 30 days. If the Congress becomes dissatisfied with the safeguards the IAEA provides, it can require a gradual shift back to inspections by U.S. nationals as particular agreements of cooperation between the United States and other countries come up for renewal. Congress could not in this fashion require the IAEA to change its standards for IAEA safeguard agreements, but it could require American inspectors and higher American standards as the price for American assistance.

2. *Foreign-made Fissionable Material.* The Non-Proliferation Treaty will extend the obligation to accept IAEA-supervised safeguards to nuclear materials which have not been supplied by the United States. In consenting to its inspection article, the Senate refrained from interfering with the present practice of executive discretion, under congressional security, to accommodate future inspection developments.

The inspection article required the application of international safeguards on all nuclear material employed in the peaceful nuclear activities of nonnuclear parties. The safeguards are to be those "set forth in an agreement to be negotiated and concluded with the International Atomic Energy Agency in accordance with the Statute of the International Atomic Energy Agency and the Agency's safeguards system." These safeguards are intended to verify the Treaty's prohibition on the manufacture of nuclear weapons by non-nuclear states.

This inspection clause has been criticized as an "agreement to agree" which the Senate should not approve without first reviewing the inspection agreements which individual countries were going to negotiate with the IAEA. The United States, however, was not to be a party to agreements not involving its materials or equipment, the non-nuclear countries had no obligation to negotiate the inspection agreements until the Treaty went into force, and the Treaty could not go into force until the Senate gave its consent. The Senate decided to rely upon the executive branch, and the watchful eye of the Joint Committee, to see that effective safeguards were ultimately required in the negotiations. The Joint Committee will have all the means for working its will described above—except that the safeguards agreements between the IAEA and other countries covering material not supplied by the United States will not be submitted to the Joint Committee since we will not be party to them.

The IAEA and Non-Proliferation treaties are instructive in showing the extent to which the Senate is prepared to permit the executive branch to negotiate important changes within the framework of a treaty to meet future security needs without repeatedly submitting treaty amendments provided that a committee in which the Senate has confidence is overseeing the negotiations. For our purposes, the participation of a multilateral international organization, the IAEA is probably not the key. An international organization is not what the Senate relies upon and it is not likely to be used for a missile limitation agreement, at least not at the beginning. The relevance of the experience is to show how a treaty giving broad guidelines may result in delegation to the Executive of negotiating power not subject to formal Senate consent, at least where a watchdog committee has been designated to oversee the negotiations and where it does so, effectively.

F. Mutual defense alliances

The executive branch has exercised a great deal of independent authority under our collective defense treaties, which involve forty-two countries. It has even entered into what the Senate Foreign Relations Committee seems to regard as a military alliance with Spain without submitting any treaty to the Senate. Executive promises without Congressional sanction to assist a foreign country by use of the American armed forces or finances have run into frequent Senatorial criticism, culminating recently in the adoption of the Fulbright "National Commitments" resolution. Putting such promises aside, however, arrangements amounting to effective obligations have taken place within the framework of treaty alliances as the result of executive action without clear and explicit Congressional sanction, yet with general Congressional support NATO is the most important case in point.

In NATO, the growth of executive discretion has been directly related to the growth of an institution, the North Atlantic Council. The basis for this institution is Article 9 of the North Atlantic Treaty which establishes a "council" of the parties "to consider matters concerning the implementation of this Treaty." This rudimentary provision was given little further elaboration in the Treaty. According to the 1949 report on the Treaty by the Senate Foreign Relations Committee, this was so because it was "preferable that the specific organization may be evolved in the light of need and experience."

When it gave its consent to Article 9, the Senate may not have foreseen the extent of the institutional evolution which was to follow. But the North Atlantic Treaty was as much a creature of the Senate as it was of the executive branch. It has received strong, bipartisan support in the Senate ever since. It has even acquired an auxiliary organization of legislators from NATO countries who confer once each year.

After the invasion of South Korea in 1950, the United States and other NATO members agreed to the then revolutionary idea of an integrated North Atlantic international military command during time of peace. The North Atlantic Council decided to draw on the forces of its members to increase NATO's military strength, and to place the forces under unified command in Europe. It requested President Truman to designate General Eisenhower to serve as the Supreme Commander.

With the prospect of several more divisions of American troops being sent to Europe while a war was being fought in Korea, the Senate injected itself into the decision-making process. It disagreed with Secretary of State Acheson's claim that the President had constitutional authority as Commander-in-Chief to send U.S. forces to Europe and that "this authority may not be interfered with by the Congress in the exercise of powers which it has under the Constitution. By resolution, it approved President Truman's order sending General Eisenhower to Europe as Supreme Allied Commander and it approved his plans to send more divisions. But it expressed the "sense of the Senate" that Congressional approval was necessary before deploying American troops to Europe pursuant to the North Atlantic Treaty, and that no more troops should be so deployed without further approval.

Except for troop deployment abroad, however, Congress has been relatively content to let executive branch discretion and NATO decision-making machinery grow—gradually but effectively. After General Eisenhower became Supreme Allied Commander, the North Atlantic Council transformed itself into a permanent body which met regularly. The legal status of the staff, of the permanent representatives to the Council, of the NATO military forces and of the NATO headquarters were regularized by a series of international agreements. As part of the arrangements for bringing Germany into NATO, all forces of NATO members on the continent, with a few exceptions, were placed under the Supreme Allied Commander by resolution of the Council. In large measure as the result of implementation of the North Atlantic Treaty by this and later Council resolutions (none of which were submitted to the Senate for its consent), NATO "has evolved into . . . an international organization which . . . has acquired a marked influence over national forces and defense policies in the Atlantic area . . . and has become a center of decision-making which, although still essentially subject to the principle of unanimity, is nevertheless capable of influencing the allocation of resources in a vital sector through informal and formal procedures in the collegiate bodies, and through the working of its hierarchic military organs.

There are three areas of interest in which this is probably true. In the first, the military infrastructure built up to support the Treaty, the arrangements have evolved to the point where an excellent argument can be made that France violated multilateral international obligations created in large measure by resolutions of the Council when she "with-

drew" from the organization without withdrawing from the Treaty.

Second, within the broad outlines of the Treaty and the 1951 Senate resolution authorizing deployment of United States forces under NATO command, specific annual obligations are made by the executive branch through NATO with respect to the size of our troop commitment, and with respect to national force levels. NATO has devised an annual review procedure for prodding its members toward meeting their treaty obligation to "maintain and develop their individual and collective capacity to resist armed attack." As this procedure now works, a NATO committee recommends certain "force goals" to NATO members; they submit "country plans" which are analyzed by NATO military authorties and international staff; and the differences between the "country plans" and the "force goals" are negotiated out at various levels ending with the defense ministers of each country. Ultimately a five-year plan is adopted for each country with the understanding that it is "firmly committed" to only the first year. "Never before in peace or war have members of an Alliance agreed to exchange systematically such detailed and precise information on the military, economic and financial programmes and to submit these programmes to the examination and criticism of their partners."

Third, executive branch participation in NATO may to some degree limit our freedom of action with respect to our strategic nuclear deterrent. A 1962 NATO communique—which the State Department regards as a "defense commitment or assurance"—reports that our representative to a Council of Ministers meeting gave "firm assurances that [United States] strategic forces will continue to provide defense against threats to the Alliance beyond the capability of NATO-committed forces to deal with." And in 1966, a "nuclear planning group was established to make the first international study of nuclear deterrence and plan for the management of the Western deterrent." Partly as a result of the work of this committee, during the ministers' meeting in December 1967, the North Atlantic Council "adopted" Secretary McNamara's revised strategic concept of a "flexible and balanced range of appropriate responses, conventional and nuclear."

No NATO decision of this kind which we did not support would, of course, bind us to take any action. This is particularly true in the case of an armed attack when "each" member is to take action "individually and in concert" with others as "it deems necessary." But much has been accomplished by consulting in the Council and acting in concert thereafter.

[E]ven if one takes the view that the NATO Council . . . is nothing more than a conference of member states and has no power to make authoritative decisions, there can be no question . . . that certain resolutions agreed upon unanimously by the national representatives in the Council would constitute *international agreements* creating international obligations for the member states.

There are also many times when a "consensus" is achieved which may not impose an international obligation on us but which nevertheless guides our future action.

The North Atlantic Treaty experience is instructive in showing how a forum designed essentially for consultation and negotiation can evolve into an organization providing the basis for a good deal of executive branch discretion to negotiate agreements affecting major national interests, agreements which lie within the broad outlines of a treaty but which go beyond the treaty and are not submitted to the Senate for its consent. This could probably not have happened but for strong Congressional support for the North Atlantic Treaty, executive branch briefing of key committees and members of Congress, congressional participation in some NATO affairs (including visits to European installations) and the watchful eye of the Joint Committee on the nuclear arrangements.

CONCLUSION

When dealing with weapons, closer cooperation with the Soviets than with our NATO allies is not to be expected. To assume that an American-Soviet council to limit missiles could quickly acquire the power to create obligations that is now possessed by the North Atlantic Council is unrealistic. But the kind of cooperation and congressional support which exist in NATO should be our goal if SALT agreements are to achieve the flexibility necessary for stability in a changing world.

A broad exchange of information on national military programs is essential as a check on the intelligence estimates which will form the initial basis for negotiating positions. Precedent for this exists not only under the North Atlantic Treaty, but also under the Naval Limitation Treaties and the Rush-Bagot Agreement. Executive authority to negotiate modifications of missile limitations within guidelines established by Congress or the Senate finds similar precedent in the atomic energy agreements, the Antarctic Treaty, and the later Naval Treaties—as well as in NATO.

For constitutional and political reasons, the best framework for lasting agreement is probably a treaty—as soon as one can be negotiated. In the interim, however, an executive agreement or a moratorium can halt further escalation of the missile race. To implement and revise such a measure, and to provide a continuing forum for strategic dialogue, a preparatory commission can be established.

Appointing congressional advisers to the American delegation will help keep Congress involved, but it will not substitute for the creation of a single committee with Senators from the Foreign Relations Committee, the Armed Services Committee and the Joint Committee on Atomic Energy. If the Senate reposes its confidence in a diligent, responsible and discreet committee, that committee should receive the same kind of information and opportunity to influence the SALT negotiations which the Joint Committee now has in atomic energy activities. The joint participation contemplated by the Constitution and required to sustain wide public support for the negotiations, clearly justifies the greater effort necessary on both sides.

THE DEFENSE OF FORT McHENRY

Mr. MATHIAS. Mr. President, the story of the writing of the national anthem of the United States is familiar to every schoolboy. During the battle for Baltimore, Francis Scott Key, a native of my own Frederick County, Md., wrote a poem, "The Defense of Fort McHenry," which was soon to be known as "The Star-Spangled Banner." In 1931, President Hoover signed the legislation which established this popular song as our National Anthem.

I was pleased to see the tale recounted in the September 1970 Army Digest, the official magazine of the Department of Army.

In addition to retelling the history of the War of 1812, the narrative should remind all of us of the proximity of Fort McHenry National Monument in the Baltimore harbor. Daily between 8 a.m. and 8 p.m., this historic landmark is open for all to inspect and tour its museums.

On September 13, 1970, Defenders' Day, a special celebration is planned. Starting at 7:30 p.m., there will be music, military drill, fireworks and bombardment of the fort.

I ask unanimous consent that the article published in the September 1970, issue of Army Digest, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BY THE DAWN'S EARLY LIGHT . . . "AN INSPIRATION NOT TO BE RESISTED"

Several miles offshore, a young lawyer stands anxiously on the pitching deck of a small boat, watching helplessly, fearfully, as bomb and shell and rocket send their fiery trails converging on the beleaguered fort.

It is dawn of September 14, 1814, on the Patapsco River, just outside Baltimore, where 16 British warships ride safely, smugly, at anchor as their superior firepower puts them outside the range of the American batteries in Fort McHenry. All that night they had poured shot and shell into the fort, while a landing party attempted to assault it from the rear.

On the tiny American ship the young lawyer, Francis Scott Key, and a companion can only speculate on conditions in the fort. Is the bombardment smashing it to pieces? Did the landing party penetrate its walls? Does it still stand?

Bursts of rockets through the night had lit up the flag. Then, finally, the first rays of the sun pierce the darkness and the black powder smog, and pick up the red, white, and blue of the flag—a flag that shows rips, tears, holes, but still a flag that shows that the fort still stands. Defiantly, it still whipped in the early morning breeze over the frowning walls of the star-shaped, and star-destined, fort.

The sight of the flag still flying over the walls told the men in the little boat—and the British in their men-of-war—and the world generally—that the fort still stood, that invading land troops had been beaten off, that through the long, blazing night, the young Republic had successfully defended its freedom.

It was then that the poem which would become the National Anthem of the United States burst practically full blown from the mind and imagination of the young lawyer-poet.

Who was he, and what was he doing offshore, in a little boat, in the midst of a bombardment on which hung the fate of the new Nation that had been born in war just over a quarter of a century previously?

LAWYER AND POET

Francis Scott Key was a native of Frederick County, Md., where he practiced law and took a deep interest in political matters. (He would later become the prosecuting attorney for the city of Washington.) For relaxation, the young lawyer wrote poetry and verse. A romantic by nature, he never took his verse-making very seriously, although one of his hymns, "Lord, with Glowing Heart I'd Praise Thee," is still to be found in hymnals. Intensely patriotic, he still did not believe that the long-standing crisis with England should have come to actual war.

In this feeling he was far from alone. The country was badly divided, sometimes almost on the brink of dissolution, over issues stemming from the prosecuting of the War of 1812.

When England became embroiled in the Napoleonic wars, she imposed a blockade of the entire European Continent. Napoleon retaliated with a blockade of his own. U.S. shipping and commercial interests were caught in the middle. England insisted on stopping U.S. merchantmen and taking off sailors that

she claimed were deserters from the Royal Navy—and when England even insisted that U.S. ships put into English ports to be taxed, relations became extremely strained.

To complicate matters, the United States tried to embargo all shipping out of U.S. ports, and forbade English and French ships from entering to carry on any sort of trade. The New England merchants were being hurt badly, and there was even talk of resisting this edict by force of arms.

Finally, the wily Napoleon announced that he was lifting his blockade, so American shipping was allowed to resume trade with France. Actually, he kept up his blockade, but the public excuse was honored by the American government. Quite naturally, Great Britain contested the whole idea, and relations were strained to the breaking point.

The clamor for war against England grew in the United States. The so-called "war-hawks" prevailed upon President Madison to send a "war message" to Congress, which reluctantly issued a declaration of war in June 1812.

New England opposed the war from the start and did very little to support it in the way of troops or finances. The frontier elements clamored for land invasion of Canada, but the attempts bogged down. The poorly trained militia of the day, largely under political leaders, often refused to march across state boundaries. In an attempt to invade across the Niagara River, some state troops stood by while other American contingents were mowed down. Not until Winfield Scott, Jacob Brown, Andrew Jackson, and a few other professionals were given commands did American troops begin to measure up to the British regulars.

WAR COMES TO AMERICA

Events dragged on with one disaster following another on land until the hot summer of 1814 when Napoleon fled to Elba, and the British could turn their full attention to punishing their erstwhile colonies. Thousands of battle-hardened troops loaded on transports and sailed for America. The British fleet came up the Chesapeake, burned the fledging capital at Washington, sent President Madison and his government fleeing, and then turned its attention on Baltimore.

While the burning of Washington was a military debacle, it wasn't as disastrous as it might have been. The town was little more than a village; many of the government buildings were only half completed; and the White House had been occupied for only a few years. Baltimore, however, was a different matter—larger, wealthier, more important militarily and strategically and commercially than Washington, the city was a hotbed of anti-British sentiment. From its harbor sailed the vastly effective blockade runners, which continually outsmarted the heavy British men-of-war. Seizure of this city would quite probably end all American resistance.

During the general confusion of battles and burning and flights and alarms and ship movements, the British had taken captive Dr. William Beanes, a physician of Upper Marlboro, Md., and had transferred him with other prisoners to a ship. The doctor was a friend of Key's, and when Key learned of his friend's capture, he enlisted the aid of Colonel John S. Skinner, government agent for arranging exchange of prisoners. The two set out in their little boat to free Dr. Beanes. They were courteously received on the British flagship, and even had dinner with the admiral who released Dr. Beanes.

However, it was pointed out, with apologies, that the true party just simply couldn't be permitted to return to Baltimore. There was the matter of an immediate attack on the city; obviously, it would be highly inconvenient to allow intelligence of the fleet, its strength, its movements, and so on to be carried to the Americans. And since the lawyer and the colonel and the doctor were not prisoners, it would not be proper for them to remain on the British flagship. So would they please take to their little truce ship and stand behind the fleet? The admiral trusts that the gentlemen understood. They did.

THE LONG VIEW

Thus it was that Francis Scott Key and his friends found themselves, bobbing in their small boat, watching and listening through the long night, exulting as the Stars and Stripes appeared through the murk and smoke and dust of battle.

Four miles out, even for a young lawyer-poet, was a long way to see, but the flag itself was no little thing. As though made especially for a show of defiance, it was 42 by 30 feet. The red and white stripes were a full 2 feet wide. There were 15 of them for, at that time, a stripe as well as a star was added for each new state admitted to the Union, and Ohio and Florida had recently been added to the original 13 states.

Writing about the episode in later years, Key said, "Through the clouds of the war the stars of that banner shone in my view, and I saw the discomfited host of its assailants driven back in ignominy to their ships.

"Then in that hour of deliverance and joyful triumph, my heart spoke; and Does not such a country and such defenders of their country deserve a song? was its question. With it came an inspiration not to be resisted."

It was in a celebrating city that Key landed with the first rough draft of his poem already scribbled on paper. He managed to find a place to stay the night, and he polished the poem, which he called "The Defense of Fort McHenry."

In those days, long before instant communications, it was customary for balladeers to write poems about current events. Many would be set to music—usually well-known tunes—and there was frequently a brisk sale for popular items. Key set his verses to an English drinking song, "To Anacreon in Heaven."

Key took the four stanzas of his poem—to which Oliver Wendell Holmes would later add another stanza—to a friend, a judge in Baltimore. The judge took it to a print shop, and shortly it was being circulated as a handbill. It was instantly popular, and soon everybody was singing it. A music publisher is said to be responsible for calling it "The Star-Spangled Banner" rather than the more prosaic "Defense of Fort McHenry."

From the start, the song was immensely popular. It appeared for years in song books, and both the Army and Navy used it on ceremonial occasions. During the Civil War, it was claimed by both sides.

For many years The Star-Spangled Banner and the other venerated tune "America" were interchangeably used in schools and at patriotic events as the National Anthem. Finally, in 1931, a Maryland member of Congress proposed that Francis Scott Key's poem be made the official National Anthem. There was some opposition, however; many felt that the high notes were too difficult for the average singer. Some even believed that the song might jeopardize relations with Britain because of a line in the third stanza which stated: "Their blood has wash't out their foul footstep's pollution." Then again, there were advocates of another popular tune, "Yankee Doodle," originally written by a British officer as a jibe against the bucolic militia of the Revolution. Still others favored "America"—which echoed another old English tune, recognized in England as "God Save the King."

At any rate, the Congress finally voted for "The Star-Spangled Banner," and in 1931 the bill was signed by the President.

Today, offshore from Fort McHenry, the flag still flies just as Key saw it. It is easy for anybody who happens to be out there in the Patapsco River to understand how Key's "inspiration not to be resisted" struck him. Today, there may be no fog of war—only the smog of an industrial city—but through the murk of a dawn, the light in which Key saw the flag remains the same. The ideal it symbolizes still prevails in a troubled world. Today, the defenders of "the home of the brave and the land of the free" may be half way around the world instead of in the old brick fort, but through Key's inspiration, they and the entire Nation have a song which speaks eloquently for freedom.

AMENDMENT TO END THE WAR: ALTERNATIVE VIETNAM WITHDRAWAL PLANS AND BUDGET DEFICITS IN FISCAL YEARS 1971–72

Mr. HATFIELD. Mr. President, I submit today the sixth in a series of articles dealing with U.S. involvement in Southeast Asia. The article entitled, "Alternative Vietnam Withdrawal Plans and Budget Deficits in Fiscal Years 1971–72," was written by Charles P. Shirkey. As a former staff member of the Office of the Assistant Secretary of Defense, Systems Analysis, Mr. Shirkey is extremely knowledgeable about the implications of our future policy in Southeast Asia, particularly its effects upon the fiscal policy of this Government.

Mr. Shirkey clearly points out in this article that an extended commitment of American troops in Vietnam will continue to produce the budget deficits which the President wishes to prevent. This paper also implies that the primary means of curbing the inflationary spiral in this country is the reduction of military spending for the war in Vietnam. In the present debate on the future course of American involvement in Southeast Asia, Mr. Shirkey's paper provides an excellent dilineation of the domestic, economic effects of various policy alternatives.

I ask unanimous consent that "Alternative Vietnam Withdrawal Plans and Budget Deficits in Fiscal Years 1971–72" be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ALTERNATIVE VIETNAM WITHDRAWAL PLANS AND BUDGET DEFICITS IN FISCAL YEAR 1971–72

(By Charles P. Shirkey)

INTRODUCTION

Currently, the Administration is facing budget deficits of at least $12 billion in fiscal year (FY) 1971 and $11 billion in FY 1972. This paper attempts to show the budget and policy implications of alternative Vietnam withdrawal plans, given the Administration's desire to reduce the deficits and to show a surplus, if possible.

Full withdrawal from Vietnam by January 1972 as proposed by the Hatfield-McGovern Amendment (Senate Amendment 609) would save (and reduce the deficits by) about $2.5 billion in FY 71 and $8 billion in FY 72 from the cost of the current Administration plan. This is the most feasible alternative for large savings in the cost of the war during the next two years.

Without the Hatfield-McGovern Amend-

ment, the Administration has some uncomfortable choices to reduce the deficits by similar amounts in FY 71 and 72. The President has left for himself one or a combination of the following options:

Request an extension of a 3% income tax surcharge in FY 71 and an 8% surcharge in FY 72—a total of $37 for every $1,000 in individual income tax over the next three years, in addition to the surcharge on corporate income;

Cancel any new and expanded civilian programs and reduce current programs—a net decrease in spending on civilian programs in constant dollars; or

Reduce the pre-Vietnam "baseline" force levels below the level which this Administration probably planned for the "1½ war" strategy (such as cutting 3⅓ divisions, 3 carriers (CVAs), and 5 tactical air wings) *and* cancel or defer R&D and procurement of new weapons systems (such as ABM, F–14, C–5, F–111, F–15, DD–963, CVAN–70, SSNs, etc.)

The political and economic cost of such measures must be weighed against the desirability of continuing the war beyond December 1971.

Of course, the Administration (together with the Federal Reserve Board) can change its economic philosophy. Various measures can be taken to hold down wage and price increases at the same time that there are large budget deficits and lower interest rates. However, such a change does not appear likely. In any event, it would not justify a continuation of the war beyond December 1971. The $2.5 billion and $8 billion saved in FY 71 and 72 respectively by adoption of the Hatfield-McGovern Amendment could be used for productive investment in the economy and for needed social programs.

BUDGET DEFICITS IN FISCAL YEAR 1971–72

In January the Administration estimated a budget surplus of $1.3 billion in FY 1971. This was revised in May by Budget Director Robert Mayo to an estimated $1.3 billion deficit. However, current estimates indicate a potential deficit of $12.3 billion in FY 71, as shown in Table I. Outlays are now estimated to increase about $12.5 billion over the President's initial request, and revenues are likely to be more than $1 billion less than the January estimate.

TABLE I.—*Potential deficit in fiscal year 1971*

[In billions of dollars]

President's budget (January 1970)—surplus in fiscal year 1971	+1.3
Plus:	
Additional revenue proposals and revisions	+2.2
Less:	
Interest on national debt	—3.0
Workload increases (current programs)	—0.5
Government pay increase	—4.7
Current proposed program increases	—0.2
Equals: Fiscal year 1971 deficit before Congressional increases	—4.9
Less:	
House and Senate passed increases	—4.0
Proposed revenue increases unlikely to get Congressional approval	—3.4
Equals: Revised fiscal year 1971 deficit	—12.3

Source: Based on Appendix A.

The prospects for FY 72 are about the same. As shown in Table II, the Administration is confronted with a potential deficit in FY 72 of about $9.5 billion, excluding any new and expanded programs and collections. If the proposed draft reform favored by the Administration is funded next year, the potential deficit in FY 72 is about $11 billion.

TABLE II.—*Potential deficit in fiscal year 1972*

[In billions of dollars]

Potential deficit in fiscal year 1971	—12.3
Less:	
Workload and price increases (current programs)	—6.0
Government pay increases	—4.5
Current proposed program increases	—6.8
Impact of Tax Reform Act of 1969	—1.5
Plus:	
Revenue increase (current tax laws)	+16.0
Withdrawals announced to date	+0.9
Current proposed revenue increases	+4.7
Equals: Fiscal year 1972 deficit before new and expanded programs	—10.4
Less: New and expanded programs (net)	—1.7
Equals: Potential deficit in fiscal year 1972	—11.2

Source: Based on Appendix A

These projections can be scaled up or down by varying the assumptions. For example, Representative Mahon estimates a deficit of about 13.5 billion in FY 71; adding on the increases voted by the House and Senate during this session runs Mr. Mahon's estimate to about $17 billion.[1] The deficit in FY 72 would be even greater. But whatever the assumptions, the deficits will be large enough to force some uncomfortable decisions.

Budget deficits are not necessarily bad. To many economists, the issue is not whether we should have deficits or not, but what size deficits are needed in FY 71–72 to stimulate the economy and reduce unemployment. However, the Nixon Administration has a conservative economic philosophy and would like to balance the budget or to show a small budget surplus for political reasons alone. The Administration clearly wants to reduce the pressure on capital markets and ease monetary restraints, and maintains that this can be accomplished only by fiscal restraint. Lower interest rates are particularly important if housing construction is to recover from the current depressed levels.

Were it not for the war in Vietnam, President Nixon could have almost balanced budgets in FY 71–72. The FY 71 budget includes about $11 billion for the incremental costs of the war. If the President makes no further withdrawals, other than those which he has already announced, the war will cost about $11 billion again in FY 72. Hence, President Nixon's current budget problems stem largely from the fact that he decided to continue the war when he came into office and plans to keep forces in Vietnam beyond December 1971.

A full withdrawal of U.S. forces from Vietnam during the next 16 months, as proposed by the Hatfield-McGovern Amendment (Senate Amendment 609), would save $2.6 billion in FY 71 and $8.2 billion in FY 72 from the current Administration plan.[2] Thus, in the current budget context, a relevant question is what options has the President left for himself to reduce the deficits by $2.6 billion in FY 71 and $8.2 billion in FY 72. (The remaining $10 billion and $3 billion needed to balance the budgets in FY 71 and 72, and the actions which the President would have to take to do so, are a separable issue of fiscal and monetary policy.)

[1] Hobart Rowen, "Vision of Red Ink Sends Panic Through White House Officials," *The Washington Post*, August 2, 1970.

[2] See Appendix B for a comparison of current estimated budget deficits and those which would result if the Hatfield-McGovern Amendment were adopted.

Unless the President decides to make further withdrawals and/or accelerate withdrawals, he can reduce the deficits by $2.6 billion and $8.2 billion in FY 71 and 72 respectively only by increasing taxes, reducing outlays, or some combination of the two.

TAX INCREASE IN FISCAL YEAR 1971–72

The Tax Reform Act of 1969 terminated the 5% income tax surcharge at the end of FY 70. Any call by the Administration for an increase in taxes in FY 71–72 would probably be a continuation of the surcharge. Given the tax base resulting from the Tax Reform Act of 1969, the Administration would need to request a continuation of a 3% surcharge through December 1970 and for the first half of 1971 to increase revenues by $2.6 billion in FY 71. To increase revenues by $8.2 billion in FY 72, the Administration would need to request an 8% income tax surcharge from July 1971 through June 1972.

As with the income tax surcharge to date, the burden would probably be spread between individuals and corporations. To the individual taxpayer, however, the cost of President Nixon's Vietnam policy would be $15 for every $1,000 in income tax paid in 1970, $55 in 1971 and $40 in 1972. An individual or family paying $4,500 annually in income tax, for example, would pay an additional $500 over the next three years. In addition, there would be a surcharge on corporate income.

The Nixon Administration would clearly like to avoid tax increases if at all possible. Conservative advisors to the President, including Federal Reserve Chairman Burns, believe the tax burden is already too high. Even if President Nixon decided to ask Congress for more taxes, which he has suggested he might do, it would jeopardize Republican prospects in the coming elections. It would be difficult to deny that the need for increased taxes, and the reason there is a deficit at all, is the Administration's policy on the Vietnam war—an issue many would like to avoid this Fall.

EXPENDITURE REDUCTIONS IN FISCAL YEAR 1971–72

If an increase in taxes is not an acceptable option to pay for the President's Vietnam policy, the only remaining alternative to decrease deficits is large expenditure cuts. However, the President's flexibility to reduce outlays is limited by the fact that a sizable portion of the budget—including such mandatory spending programs as interest on the National Debt, Social Security benefits, Medicare, etc.—is not subject to executive control. Any change in these programs, other than certain changes already provided for in the legislation, require Congressional action. The so-called "uncontrollables" account for about $114 billion or 42 percent of total outlays in FY 72. The uncontrollables are higher in FY 71 and account for about $143 billion or 67% of total outlays this fiscal year, since outlays from prior year contracts and obligations are virtually uncontrollable once a particular fiscal year has begun. Table III shows the composition of "controllable" outlays in FY 71–72 out of which the President could cut $2.6 billion and $8.2 billion respectively.

Actually, the President's flexibility is limited further in FY 71 than Table III suggests, because full savings can never be realized in the first year of a reduction. It takes time to terminate programs and get people off the payrolls. If reductions are initiated before December, the Administration would need to cut above $5.0 billion to $5.5 billion in annual spending levels to save $2.6 billion this fiscal year. Thus, the expenditure cuts made in FY 71 alone would save upwards to $6 billion in current estimated outlays in FY 72 (including pay and price increases avoided).

TABLE III.—CONTROLLABLE OUTLAYS IN FISCAL YEARS 1971–72

[In billions of current dollars]

	Fiscal year 1971	Fiscal year 1972	Percent of fiscal year 1972 total
Civilian programs:			
Existing programs [1]	38.9	43.8	35
New or expanded programs	2.5		
Subtotal, civilian programs	41.4	43.8	35
National defense:			
War in Vietnam (incremental cost).[2]	11.2	11.1	9
Pre-Vietnam "baseline" strategic forces [3]	17.4	18.9	15
Pre-Vietnam "baseline" general purpose forces [3]	42.7	47.5	38
Draft reform (volunteer Army)	.2	2.5	2
Subtotal, military	71.5	79.0	63
Other (AEC, MAP, etc.)	2.4	2.5	2
Subtotal, national defense	73.9	81.5	65
Total, controllable outlays	[4] 115.3	125.3	100

[1] The level of existing programs depends on whether some or all of the House- and Senate-passed increases are enacted.

[2] Based on fiscal year 1971 funding level and withdrawals announced to date. For the impact of alternative Vietnam withdrawal schedules in fiscal year 1971–72, see app. D.

[3] Based on end fiscal year 1965 force levels, before the buildup in Vietnam.

[4] If outlays from prior year contracts and obligations are regarded as uncontrollable in the current fiscal year, controllable outlays would be $76,400,000,000 in fiscal year 1971; see footnote (f) to app. C. This includes about $26,000,000,000 in civilian programs and about $50,000,000,000 in national defense, including about $4,000,000,000 in Vietnam war costs.

Source: Author's estimates based on Appendixes A and C. Estimates include pay and price increases, workload increases, and the average (as of July 31, 1970) of House- and Senate-passed controllable increases to the 1971 budget. Totals may not add due to rounding.

This is significant, for the cuts in FY 71 would have a far greater impact on programs than the additional cuts needed in FY 72. This is so even though the savings needed in FY 71 are considerably smaller. In terms of the FY 72 budget, the cuts needed this year would reduce the FY 72 budget plan by about $6 billion. Thus, only $2.2 billion would need to be cut next year to save $8.2 billion in FY 72.

The implications of this fact for withdrawals from Vietnam are particularly important. First, savings in Vietnam war costs this fiscal year would have a greater impact on other programs than comparable savings next year. Only plans to accelerate withdrawals in FY 71 will save money this year. If the Hatfield-McGovern Amendment is passed, non-Vietnam programs would not need to be cut $6 billion. Second, unless the Administration accelerates withdrawals and saves money in FY 71, only an additional $2.2 billion would need to be saved in FY 72. This the President could do by withdrawing as few as 73,000 men next year and retaining a residual force of about 200,000 men in Vietnam. Or he could continue the current withdrawal rate of 50,000 per quarter, saving $5.3 billion in FY 72, and apply the extra $3.1 billion saved to the balance of next year's budget deficit. Yet non-Vietnam programs would already have been cut $6 billion. Of course, the Hatfield-McGovern Amendment would not only avoid the need to cut non-Vietnam programs by $6 billion but also would save the additional $2.2 billion in FY 72.[3]

IMPACT ON CIVILIAN PROGRAMS

In order to save $2.6 billion and $8.2 billion in FY 71 and 72, the President would need (a) to sustain his veto of the increases in the education bill and other spending increases voted by the House and Senate during this session and (b) to withdraw the Administration's proposed increase in Social Security benefits or the Family Assistance Plan, or both. It is unlikely that such a course of action would succeed. Even to propose it would weaken relations with Congress in a mid-term election year and jeopardize the Administration's desire to take a lead in reordering national priorities. Moreover, it would provide no guarantee of reductions in FY 71, since the Administration proposals have a small impact on outlays this year. As was the case with the Hill-Burton Act and more recently the education bill, once the President has vetoed a measure, he has no control over its ultimate disposition. Even the final H.U.D. bill may include some (if not all) of the increases originally proposed. Still, the savings could amount to about $2.6 billion in FY 71 and $8.2 billion in FY 72. However, the President would have given up not only two politically important proposals this year, but also any flexibility for new and expanded programs in next year's budget.

The alternative would be to reduce ongoing programs. This would have money in FY 71. However, it would require reductions amounting to $6 billion to $8 billion in the FY 72 budget—a reduction of 14–19% in controllable civilian outlays. This would represent a large lay-off of government employees and have a severe impact on urban areas, since the greatest savings are in manpower and operations rather than big investment programs. Following on the heels of other cancellations, deferrals and economy measures, which the Administration might make in pursuit of balanced budgets, this could result in the first net reduction in spending on civilian programs since World War II.[4]

IMPACT ON PRE-VIETNAM "BASELINE" DEFENSE FORCES [5]

If an increase in taxes and large reductions in civilian programs are not acceptable and feasible options to pay for the President's Vietnam policy, there is but one alternative left to reduce deficits in FY 71 and 72; namely, large reductions in the pre-Vietnam "baseline" forces. How much depends on (a) the chances for a tax increase, (b) the size of reductions in civilian programs, and (c) the success of Vietnamization and the potential for withdrawals over and above the announced 150,000. From the President's current perspective, all three are uncertain, particularly in FY 71. A proposed tax increase would have to run the Congressional gauntlet—a problematic venture at best. On the other hand, the potential for sizeable reductions in civilian programs is very uncertain in FY 71, and the probability of success of the President's Indochina policy over the next two years cannot be accurately determined at this time. The President's control of pre-Vietnam "baseline" defense budgets is far more certain.

To cut expenditures and reduce the budget deficit by $2.6 billion in FY 71 and hedge against the need for an additional $2.2 billion next year, the Administration would need to plan now for a reduction in outlays of at least $9 billion in FY 72 and begin to implement the reduction in FY 71. This would translate into about $8 billion in 1971 dollars. Pay and price increases account for about $600 million. Moreover, savings have traditionally been overestimated and costs underestimated. Thus, planning for a $9 billion expenditure reduction now would assure that real savings would be about $2.6 billion in FY 71 and about $8.2 billion next year. As a minimum, the President would need to cut about $6 billion in pre-Vietnam "baseline" forces in next year's program, to save $2.6 billion in FY 71.

The impact of a $9 billion cut in pre-Vietnam "baseline" forces is shown in Table IV. It should be noted that these illustrative reductions do not necessarily represent the full amount of reductions in FY 71 and 72. The President is likely to make sizeable reductions anyway in order to reduce the budget deficits and implement the "1½ war" strategy. However, these additional cuts would not be needed *now*, if the Hatfield-McGovern Amendment were adopted, thereby permitting force planning and budget planning to proceed at a more orderly pace.

TABLE IV.—*Illustrative reductions in pre-Vietnam "baseline" defense forces in fiscal year 1971–72 in lieu of full withdrawal from Vietnam by end fiscal year 1971*

[Outlays in billions of current dollars]

	Fiscal year 1972 Savings
Army:	
Deactivate 3⅓ 48,000-man division forces and reduce pre-Vietnam "baseline" force level to 13 divisions	2.1
Cancel Safeguard	.9
Subtotal, Army	3.0
Navy:	
Deactivate 3 carrier task forces (about 30 ships) and reduce pre-Vietnam "baseline" force level to 12 carriers (CVAs)	1.1
Deactivate all 4 ASW carriers (CVS's)	0.3
Reduce amphibious ship forces by 25 percent to lift for one Marine division/wing (or MEF)	0.4
Cut shipbuilding by $1 billion in TOA—cancel/defer LHA, DD–963, CVAN–70, SSNs, etc	0.1
Cancel S–3A ASW aircraft	0.3
Cancel F–14 aircraft	0.8
Subtotal, Navy	3.0
Air Force:	
Deactivate 5 tactical air wings and reduce pre-Vietnam "baseline" force level to 16 wings	1.2
Deactivate some strategic bombers and air defense forces	1.0
Cut aircraft procurement by $1 billion in TOA—cancel/defer C–5, F–111, A–7, etc	0.5
Cancel F–15	0.3
Subtotal, Air Force	3.0
Total	[1] 9.0

[1] About two-thirds of this amount or about $6 billion (in 1972 prices) would need to be implemented this year to save $2.6 billion in FY 71.

Source: Author's estimates; *Authorization for Military Procurement, Research and Development, Fiscal Year 1971, and Reserve Strength*, Hearings before the Senate Committee on Armed Services, 91 Cong. 2 sess., Parts 2 and 3. Costs of forces are derived from total costs, which include direct operations, investment, and indirect support. However, savings in operating forces are assumed to be about 80% of total cost, excluding on-going investment and indirect support. Out-year savings would include these, thereby raising the total savings to about $10.4 billion (in 1972 prices).

[3] See Appendix D for the costs and savings of alternative withdrawal plans.

[4] Non-military spending has increased every year since World War II. See statement of Robert C. Moot in *The Military Budget and National Economic Priorities*, Hearings before the Subcommittee on Economy in Government of the Joint Economic Committee, 91 Con. 1 sess., 1969, Part 1, p. 319.

[5] Based on end-FY 65 force levels, before the buildup in Vietnam, which included 16⅓ active Army divisions, 3 active Marine division/wing teams, 15 aircraft carriers, 21 Air Force tactical air wings, and a total military manpower strength of 2.7 million.

The major impact would probably be on general purpose force levels. In FY 72, the pre-Vietnam "baseline" forces would cost about $71 billion, which includes about $45 billion for operations (including $2.5 billion for draft reform) and $26 billion for investment. Since most of the outlays for investment result from prior year contracts and obligations, most of the cuts would have to be made in operations. In short, the largest savings are realized in manpower reductions. This was equally true of the $6 billion expenditure cuts in FY 69–70, which eliminated a considerable amount of the so-called "fat" in the defense budget. Thus, a $9 billion cut would result in sizeable reductions in major force levels, particularly general purpose force levels, since they account for almost 75% of outlays for pre-Vietnam "baseline" forces.

The illustrative incremental reductions shown in Table IV actually result in a cut of at least $10 billion in pre-Vietnam "baseline" forces over the next few years, since savings in the associated investment (procurement and construction) and particularly indirect support cannot be fully realized in the first 18 months. Therefore, pre-Vietnam "baseline" forces would be reduced to about $54 billion (in 1971 prices) from the current $64 billion level.

These reductions, together with any other cuts which the President might make in pursuit of balanced budgets, would probably result in a far more drastic change in military posture than originally planned by the Administration when it adopted the "1½ war" strategy. Even though some (and perhaps even large) reductions in pre-Vietnam "baseline" forces may be desirable it would be preferable to phase such a change over several years. The Nixon Administration planned to begin reducing pre-Vietnam "baseline" forces in FY 72 after a thorough review of the force requirements. The FY 71 budget was intended to be a 'transition" budget. A rapid cut of this size now ($6 billion in programs in FY 71 alone) would be inefficient and could result in imbalanced force capabilities, which might take several years to rectify. Moreover, such a large, rapid cut could be misinterpreted both at home and abroad. The Administration is already sensitive to the political impact of the FY 69–70 expenditure cuts on certain sectors in the economy, U.S. military preparedness and relations with allies. In addition, the President cannot afford to discount totally Soviet interpretation of such reductions.

CONCLUSION

If the Hatfield-McGovern Amendment is adopted, these awesome choices would not be necessary. The savings resulting from a full withdrawal by December 1971, from the cost of the current Administration plan, would reduce the budget deficits by about $2.6 billion in FY 71 and $8.2 billion in FY 72. Unless the Hatfield-McGovern Amendment is adopted, similar savings can be achieved only by increasing taxes and/or cutting expenditures. Thus, the awesome choices needed to reduce the deficits by $2.6 billion and $8.2 billion in FY 71 and 72 are the price of the President's Vietnam policy.

So long as this Administration pursues balanced budgets, the measures needed to pay for the President's Vietnam policy are drastic. The tax burden in this country is not excessive compared to other industrialized countries, and many would accept a tax increase for productive social programs. But no one today wants to have his taxes increased by 3–8% to pay for a prolongation of the war. Nor is there great enthusiasm for large cuts in urgently needed government expenditures in the fields of air and water pollution, housing, urban transportation, medical research and education. For a public who has seen domestic programs slighted during the past five years, the prospect of the first net reduction in spending on civilian programs since World War II is totally unacceptable.

Pre-Vietnam "baseline" forces can be reduced; the Nixon Administration intended to do so anyway, but not until FY 72. However, the $10 billion in program cuts needed to pay for the President's Vietnam policy during the next few years will require larger force reductions than the Administration probably planned for the new "1½ war" strategy. Moreover, such large cuts in such a relatively short period of time jeopardize orderly defense planning and are vulnerable to the charge of irresponsibility both at home and abroad.

In the final analysis, dollars cannot measure fully the price of the President's Vietnam policy or the savings resulting from the Hatfield-McGovern Amendment. The Administration's case for prolonging the war must be weighed against the desirability of the plans and programs which must be sacrificed to do so.

APPENDIX A

Potential deficits in fiscal years 1971–72 [1]

[In billions of dollars]

Estimate of outlays in 1971:	
President's budget (January 1970)	200.8
Interest on national debt	+3.0
Workload increases (current programs)	+0.5
Government pay increase	+4.7
Current proposed program increases: Draft reform [2]	+0.2
New and expanded programs: Average of House and Senate appropriation action	+4.0
Revised estimate	213.2
Estimate of revenues in 1971:	
President's budget (January 1970)	202.1
Subsequent Administration proposals	+3.1
Subsequent Administration estimate revisions	−0.9
Unlikely Congressional approval:	
User charges	−0.3
Tax on leaded gas; estate and gift tax	−3.1
Revised estimate	200.9
Potential deficit in 1971	−12.3
Estimate of outlays in 1972:	
Revised estimate for 1971	213.2
Workload and price increases (current programs)	+6.0
Government pay increase	+4.5
Current proposed program increases:	
Social security benefits	+2.4
Family assistance plan	+4.4
New and expanded programs: Draft reform [2]	+2.5
Withdrawals announced to date	−0.9
Revised estimate	232.1
Estimate of revenues in 1972:	
Revised estimate for 1971	200.9
Revenue and price increase (under current tax laws)	+16.0
Currently proposed increases: Social security and other collections	+4.7
New revenues: Feedback from draft reform [2]	+0.8
Impact of Tax Reform Act of 1969	−1.5
Revised estimate	220.9
Potential deficit in 1972	−11.2

[1] Estimates as of August 1, 1970.

[2] The phased approach to the "Volunteer" Army favored by the Administration.

Source: Author's estimates; *The Budget of the United States Government, Fiscal Year 1971*, p. 10; Leonard S. Silk, "Nixon's Bugaboo," *The New York Times*, June 15, 1970; Hobart Rowen, "Vision of Red Ink Sends Panic Through White House Officials," *The Washington Post*, August 2, 1970.

APPENDIX B—BUDGET ESTIMATES AND FISCAL DIVIDEND FOR FISCAL YEAR 1971–72

[In billions of current dollars]

	Fiscal year 1971			Fiscal year 1972		
	President's budget (January 1970)	Current estimate	Full withdrawal from Vietnam by January 1972	Before new or expanded programs/revenues	Including new or expanded program revenues [3]	Full withdrawal from Vietnam by January 1972
Unified budget:						
Revenues	202.1	200.9	200.9	220.1	220.9	220.9
Outlays	200.8	[1] 213.2	210.6	[3] 229.6	[3] 232.1	[3] 223.9
Deficit (−)	+1.3	−12.3	−9.7	−9.5	−11.2	−3.0
High employment surplus (+) [4]	+14.0	+2.0	+4.0	+5.0	+3.0	+11.0
Less: Budget surplus at high employment levels, probably needed to permit moderate monetary policy while avoiding inflation	8.0	8.0	8.0	8.0	8.0	8.0
Equals: Fiscal dividend [5]	+6.0	−6.0	−4.0	−3.0	−5.0	+3.0

[1] Estimates as of Aug. 1, 1970.

[2] Currently includes only the expanded draft reform—the phased approach to the "volunteer" Army favored by the administration.

[3] Includes $4,000,000,000—the average as of July 31, 1970, of House and Senate appropriation action on civilian programs—which exceeds the President's request. It is unlikely the President will veto all of these increases. However, should the President sustain a veto of some of these increases, outlays would decrease and the deficit, high employment surplus and fiscal dividend would change accordingly.

[4] This represents the potential budget surplus (potential revenues less current outlays) if the economy were operating at a high employment level. Potential revenues are estimated at $215,000,000,000 in fiscal year 1971, and $235,000,000,000 in fiscal year 1972 under current tax laws, assuming a potential GNP of $1,078,000,000,000 and $1,180,000,000,000 respectively with unemployment at 3.8 percent.

[5] A positive fiscal dividend can be used in 1 or a combination of 4 ways: (1) to expand existing programs; (2) to undertake new public programs; (3) to run a budget surplus for purposes of economic stability, lower interest rates, and a relatively buoyant housing market; and (4) to cut taxes. A negative fiscal dividend implies the reverse of one or some combination of these.

APPENDIX C—CONTROLLABILITY OF POTENTIAL OUTLAYS IN FISCAL YEARS 1971–72[1]

[In billions of current dollars]

	Fiscal year 1971			Fiscal year 1972	
	President's budget (January 1970)	Net increase[2]	Current estimate	Net increase[2]	Current estimate
Uncontrollable:					
Civilian programs	96.3	+5.0	101.3	+9.7	111.0
National defense (military retired pay)	3.2	----------	3.2	+.1	3.3
Subtotal, uncontrollable	99.5	+5.0	104.5	----------	114.3
Controllable:					
Civilian programs	[3] 37.5	+3.9	41.4	+2.4	43.8
National defense:					
War in Vietnam (incremental cost)[4]	11.0	(+.2)	11.2	(−.1)	11.1
Pre-Vietnam "baseline" strategic forces[5]	16.5	(+.9)	17.4	(+2.2)	19.6
Pre-Vietnam "baseline" general purpose forces[5]	40.5	(+2.4)	42.9	(+5.4)	48.3
Subtotal, military	68.0	+3.5	71.5	7.5	79.0
Other (AEC, MAP, etc.)	2.4	----------	2.4	+.1	2.5
Subtotal, controllable	[6] 107.9	+7.4	[6] 115.3	+10.0	125.3
Undistributed intragovernmental transactions	−6.6	----------	−6.6	----------	−6.6
Total outlays	200.8	+12.4	213.2	+19.8	233.0

Source: Author's estimates; Budget of the United States Government, Fiscal Year 1971, p. 44; statement of Robert C. Moot in Department of Defense Appropriations for 1971, hearings before a subcommittee of the House Committee on Appropriations, 91 Cong. 2d sess. (1970), pt. I, p. 493; Charles L. Schultze, Setting National Priorities: The 1971 Budget, the Brookings Institution, Washington, D.C., 1970, p. 19; Leonard S. Silk, "Nixon's Bugaboo," the New York Times, June 15, 1970.

[1] Estimates as of Aug. 1, 1970.

[2] See app. A. Attribution of increases are based on author's estimates.

[3] Includes a net amount of $200,000,000 for the proposed pay raise ($1,400,000,000) less the proposed postal rate increase (—$1,200,000,000).

[4] Based on fiscal year 1971 funding level and withdrawals announced to date. For the impact of alternative Vietnam withdrawal schedules in fiscal years 1971–72, see app. D.

[5] Based on end fiscal year 1965 force levels, before the buildup in Vietnam.

[6] Not all of this amount is controllable now in the same sense that the fiscal year 1972 estimates are but have been presented in this format for comparison with the fiscal year 1972 estimates. If outlays from prior years contracts and obligations are regarded as uncontrollable in the current fiscal year, the estimates of uncontrollable and controllable outlays in fiscal year 1971 would be as follows:

[In billions]

	President's budget	Current estimate
Uncontrollable	$138.4	$143.4
Controllable	69.0	76.4
Undistributed intragovernmental transactions	−6.6	−6.6
Total outlays	200.8	213.2

Of the $76,000,000,000 controllables in fiscal year 1971, about $26,000,000,000 is in civilian programs and about $50,000,000,000 in national defense, including about $4,000,000,000 in Vietnam war costs.

APPENDIX D—COST AND SAVINGS OF ALTERNATIVE VIETNAM WITHDRAWAL PLANS[1]

[In billions of current dollars]

	Fiscal year 1971		Fiscal year 1972[2]	
	Incremental cost	Savings (−) from current administration plan	Incremental cost	Savings (−) from current administration plan
Current administration plan: Current fiscal year 1971 funding level and withdrawals announced to date (150,000 out in fiscal year 1971)[3]	11.2	----------	11.1	----------
Alternative 1: 223,000 residual force end fiscal year 1972	11.4	----------	9.2	−1.7
Alternative 2: 50,000 residual force end fiscal year 1972	11.2	----------	5.9	−5.2
Alternative 3: Continue current withdrawal rate; all out by early fiscal year 1973	11.2	----------	5.8	−5.3
Alternative 4: Total withdrawal by January 1972 (Hatfield-McGovern amendment)	8.6	−2.6	2.6	−8.2

[1] All of these calculations are based on troop level reductions below the actual figure of 538,000 men in Vietnam at end fiscal year 1969, before the first withdrawal was announced. Thus at ene end of the latest 150,000 reduction, the level will be 273,000. Recent statements by Secretary Laird are based on troop ceilings, which were 549,000 at end fiscal year 1969 and will be 284,000 when the latest 150,000 are withdrawn. The incremental costs are the additional costs, all of which could be saved if we were not in Vietnam. All cost estimates include about $1,000,000,000 for military assistance to South Vietnam.

[2] Assumes a 7 percent price deflator in fiscal year 1972 to reflect pay and price increases.

[3] Announced by President Nixon in his televised address on Apr. 20, 1970.

Source: Author's estimates; Arnold M. Kuzmack, "Casualty and Cost Projections for Different Vietnam Withdrawal Plans," monograph inserted in the Congressional Record, Aug. 24, 1970; p. S14076; Charles L. Schultze, Setting National Priorities: The 1971 Budget, The Brookings Institution, Washington, D.C., 1970, p. 19.

TELEVISION DOCUMENTARY ON MIGRANTS TO BE SHOWN IN BALTIMORE

Mr. MONDALE. Mr. President, at the time last month when the NBC television network scheduled a national viewing of their documentary, "Migrant—An NBC White Paper," several network affiliates chose not to show the film. Among the areas where it was not shown were Dallas-Fort Worth, some parts of upper New York State, and in Baltimore, Md.

I now understand that consistent with their public interest obligations, Baltimore Channel 13—WJZ–TV—has arranged to borrow the film from NBC in order that Baltimore area residents can see it. The documentary will be broadcast Saturday, August 29, at 9:30 p.m. Channel 13 will follow the film with an indepth examination on the problems of Maryland and Virginia migrant workers at 10:30 p.m.

I commend Channel 13 for showing this film, for it is consistent with the public's right to know about farmworker living and working conditions existing in this country.

I call this filming to the attention of Senators and to the residents of the surrounding Baltimore-Washington area, in the hope that all those who did not see the documentary last July 16 will have an opportunity to view this extraordinary study of the conditions of migrant and seasonal farmworkers on the east coast.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. KENNEDY). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER. Under the previous order the Chair lays before the Senate the unfinished business which will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The Senator from New York is recognized.

AMENDMENT NO. 863

Mr. GOODELL. Mr. President, I call up amendment No. 863.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as

follows: The Senator from New York (Mr. GOODELL) for himself and the Senator from Wisconsin (Mr. NELSON) proposes an amendment, No. 863, as follows:

At the end of the bill insert a new section as follows:

"SEC. . PROHIBITIONS ON CROP DESTRUCTION WARFARE.

"No part of any amount authorized or appropriated pursuant to this Act or any other law shall be expended for the purpose of—

"(1) engaging directly in the military application of antiplant chemicals for the purpose of crop destruction;

"(2) entering into or carrying out any contract or agreement to provide agents, delivery systems, dissemination equipment or instruction for the military application of antiplant chemicals for the purpose of crop destruction."

The PRESIDING OFFICER. Under the previous order, the amendment is subject to a time limitation of 40 minutes, the time to be equally divided between the Senator from New York (Mr. GOODELL) and the Senator from Mississippi (Mr. STENNIS). How much time does the Senator yield himself?

Mr. GOODELL. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from New York is recognized for 5 minutes.

CROP DESTRUCTION WARFARE

Mr. GOODELL. Mr. President, yesterday, the Senate voted on the amendment which I coauthored with the Senator from Wisconsin (Mr. NELSON) to prohibit environmental warfare.

Our amendment outlawed use by this country of antiplant chemical weapons. It banned the possibility of proxy use by preventing the transfer of our chemical herbicide capability to other countries. It also called for the dismantling of our antiplant chemical weapons arsenal.

As such, our amendment provided a basis in law for nonuse, nonproliferation, and disarmament of antiplant chemical weapons.

Our amendment aimed at putting these three principles into practice under the binding obligation of law. It was in the form of law that we sought to prohibit environmental warfare as contrasted to a "Sense of the Senate" resolution which would express opinion without the force of law.

This amendment failed to pass the Senate by a vote of 62 to 22.

Today, Senator NELSON and I are offering another amendment in an attempt to put some limitation on this country's use of chemical herbicides in war.

Crop destruction is one purpose of chemical herbicide use. The military objective is to deny an enemy food.

The amendment we are offering today prohibits the use of antiplant chemical weapons for the purpose of destroying food crops. In addition, it prohibits the transfer of a chemical herbicide capability for the purpose of crop destruction.

Mr. President, in 1962, the first year of actual defoliation operations in Vietnam, anticrop missions accounted for 5 percent of the total number of defoliation missions. In 3 years, the missions for crop destruction increased more than eightfold reaching 42 percent of total defoliation missions in 1965. Over the past 2 years, crop destruction missions have decreased to the 1962 level of 5 percent.

The fact that the Defense Department itself has reduced the number of missions for crop destruction over the last 5 years provides an additional reason to question whether destroying food crops is really contributing to military objectives.

The basic issues before us are clear and can be stated simply: Is the United States to engage or disengage from the military practice of crop destruction? Should the United States retain the option to engage in crop destruction as a tactic of war or should it relinquish this option?

If crop destruction should continue, the burden of proof is on the Defense Department to justify its continuance.

This amendment is quite different from that of yesterday. A great many arguments were raised in the debate on the environmental warfare amendment with reference to the military value of defoliation in protecting our troops.

The evidence available to us was to the effect that this is of very marginal value. As a matter of fact, it could be replaced by other methods with no difficulty at all and avoid the tremendous hazards to which we are subjecting the Vietnamese people and avoid the negative repercussions from the use of defoliation in Vietnam.

The amendment we have under consideration today aims directly at a specific aspect of our use of chemicals in Vietnam—that is the use of chemicals against crops, to destroy the crops of "the enemy." We all know that the end effect of crop destruction has had a very, very small impact percentagewise on the enemy.

The vast majority of the crops we have destroyed have not been enemy crops, but South Vietnamese crops or North Vietnamese crops that affected the civilian population.

War is uncivilized in many ways. However, certainly this country that likes to pride itself on being the most civilized country in the world should not be engaged in war against a civilian population. That is, in effect, what a crop destruction program is.

A year ago last February, I visited Biafra. I was appalled that in the Nigerian civil war there was evidence that the participants—both the Biafrans and the Nigerians—were willing to see civilians, mainly women and children, suffer the primary consequences of war. The best estimate is that 2.5 million people in Biafra starved during that horrible 2 years of civil war.

Mr. President, I look with grave concern upon our responsibilities in this matter. The United States, with reference to Biafra and Nigeria, tried very hard to get food over there. We refused to take a position, and rightly so, on the civil war. We refused to aid either party in the civil war in Nigeria.

Look at what is happening in Vietnam. We are undertaking there a program of crop destruction, the main impact of which is on the civilian population. A significant impact from the program is on the Vietnamese people and the small farmers. It is significantly counter-productive of our whole effort in Vietnamization.

I do not suppose that there are many things that turn off the Vietnamese population more than our crop destruction program. Obviously the heavy bombings in certain areas and mistakes that are made result in mass destruction, whether intentionally or unintentionally, through the weapons of war and cause a paralysis of the population.

The argument can be made that we are fighting a war.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOODELL. Mr. President, I yield myself 1 additional minute.

The PRESIDING OFFICER. The Senator from New York is recognized for 1 additional minute.

Mr. GOODELL. It is not inevitable that we destroy the crops of a civilian population that is striving to feed itself and develop its rural economy. These programs have a direct impact on people. They are counterproductive.

The amendment is a clean, precise amendment aimed only at chemical warfare against crops. It does not cover the alleged military significance of antidefoliants along highways or in other areas to meet the threat of ambushes and make it easier to deal with the enemy.

It is very difficult to make any argument of military significance in favor of crop destruction except perhaps that this country is going to hurt the crops so much it will have an impact on the North Vietnamese Government, and that is not the way we should proceed.

Mr. STENNIS. Mr. President, I yield myself 3 minutes, after which I propose to yield more time to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, the measure before us today is no different than the measure yesterday with respect to humanitarianism. No one wants to destroy life under any circumstances. This is not a war against the South Vietnamese; of course not. We had this issue before us yesterday and I commend the Senator from New York and the Senator from Wisconsin for the very fine way they handled their subject and themselves in debate. But when we got right down to the issue there were 22 votes for their broad amendment and 62 votes against it, solely on the one point, and that is, when we send our boys into battle that may cost them their lives we are not going to put restrictions on them.

"War is hell," as General Sherman said. War is war, but we are in it. We are methodically getting out, but we know we are going to be there a while, and I strongly urge now that we not put any more impediments—we are already fighting a defensive war—on the boys and decrease their chances to survive rather than to increase them.

This is not being used to extensively destroy crops and food under any circumstances. It is used merely where it is thought it will be effective in reducing the effectiveness of the enemy, the Vietcong or the North Vietnamese, if they

are in that particular area. It has been helpful to them in taking advantage of the breaks there.

Mr. President, we feed people all over the world. Our AID program illustrates that. That is not the issue here. We are trying to destroy the means of making war, and that is why we have this very limited use of these herbicides as they might affect growing crops.

Mr. President, I yield 10 minutes to the Senator from New Hampshire.

Mr. McINTYRE. Mr. President, I thank my distinguished chairman.

Today the United States is committed to a program of pacification and Vietnamization of the conflict in Vietnam with the purpose of returning our forces to our country while allowing the Vietnamese to determine their mode of government free of outside coercion. The wisdom of this policy is one question. Doing all we can to insure its success—while we are committed to it—is another. As I said yesterday, the safety of American troops in Vietnam and their speediest possible withdrawal must remain our paramount consideration.

The amendment proposed by the distinguished Senator from New York would undoubtedly lessen the chances for success of Vietnamization and lengthen its course. The amendment to desist in the program to reduce the food resources of the Vietcong and the units of the North Vietnamese Army in the Republic of South Vietnam would substantially reduce the military pressure we now place upon the enemy.

I would like to describe this program in some detail to you. First, it must be realized that it is not a large-scale attempt to starve major segments of the population or major geographical areas of the country. Each year since the beginning of the program the amount of crops destroyed has never exceeded 1 percent of the annual food production in Vietnam. The normal variation in food production in the various areas is far greater than this small amount. Despite the shrill cries of the critics, despite the warnings of impending doom, the fact is that there is no evidence of widespread starvation or malnutrition in the Vietnamese population.

Second, this program has been one of the most carefully controlled of any of our military operations in Vietnam. Each and every crop destruction request must originate with the Vietnam province chief. This request must contain a detailed justification for the operation and include a civil affairs annex to insure that any impact on the civilian population has been considered. Each request then must get the approval of the Chief of the Vietnamese Joint General Staff. When the Vietnamese request is received at Headquarters of the U.S. Military Assistance Command Vietnam—MACV—it is staffed along with supporting papers submitted through U.S. advisory channels to MACV. During staffing the request is reviewed by the Civil Operations and Revolutionary Development Support—Cords—the U.S. Agency for International Development—USAID—the U.S. Public Affairs Office, the American Embassy and MACV. The important point is that crop destruction is not a decision that is relegated to the lower levels of command, but is considered in detail by civil and military officials at high levels in both the governments of Vietnam and the United States. Finally, 24 to 48 hours before the actual mission, the province chief is given an opportunity to approve or reject the operation depending on the actual situation at that time. The procedures and the safeguards they provide are not careless, not irresponsible, not indifferent.

Third, attack on crops has been restricted to areas of small population and known to be controlled by the North Vietnamese or Vietcong. Rice fields around villages are not attacked—but rice fields around known enemy troop concentrations, fields which are miles from known habitations and known to feed enemy troops, are attacked. Of course, mistakes may have been made, and the crops of friendly people may have been damaged. The incidence of these has been small. At times it has been necessary for the Vietnamese Government to relocate hamlets and villages when it could no longer offer protection from the Vietcong. Their crops were destroyed rather than let them fall into the hands of the enemy. They could have been ploughed into the ground, perhaps they could have been burned, but they were destroyed by herbicides because that is the quickest method using the least resources. It is nothing but the scorched earth policy used by military forces since time immemorial.

Let me now turn to the central issue of the question before us—the military effectiveness of the crop destruction program. The Vietcong and North Vietnamese units are operating in a theater far removed from their base of support. The weapons, the ammunition, the supplies necessary to maintain units in the field must be trucked or carried over long trails in the jungle. One of the immediate results of denying local food products to these units is that they are forced to devote a significant part of their logistical capability to carrying food instead of weapons and ammunition. This curtails their ability to carry out combat missions against U.S. and Allied troops, and it means less casualties to our American soldiers, marines, and other forces.

Another result of denying food resources to the enemy is that it forces him to spend a considerable part of his time growing food or foraging for it. We know from captured documents that many North Vietnamese and Vietcong units have been ordered to grow their own food. The destruction of local crops and the interdiction of supply routes has made it impossible in many cases for the enemy to supply its units with both weapons and food, so it has resorted to supplying weapons and telling its forces to grow food. This process further detracts from the time the enemy units have for combat missions—many have become full-time farmers and part-time fighters.

Another result has been the location, identification and capture of many enemy troops. The necessity to clear land and plant crops leads to identification. If aerial reconnaissance suddenly shows a number of small rice plots scattered along a strip of previously uninhabited countryside, then we know several things. One thing we know is that people are working there who are not part of the known area population. We also know that an infiltration trail or an enemy base camp is defined by the location of the food plots, and we can direct military activities against these areas. I can assure you that a significant number of infiltration routes have been disclosed in just this way.

There is a great deal of evidence that the lack of food is one of the primary factors with which the enemy must contend. There are captured documents, interrogations of prisoners, and a swelling tide of defectors who rally to the government of the Republic of Vietnam.

Let me give you an example or two from the field:

> The 120th Farm Production Company, 20th Montagnard Communist Battalion, we deployed to central Quang Ngai Province in December, 1969, to set up operations in a 36,000 meter rice field. After the farm was heavily damaged by herbicides, the unit produced only enough food for its own personnel. The unit has since been relocated.

Now I think that it is very important that the enemy has been forced to establish battalions solely for the purpose of producing food—not for the purpose of attacking our troops, but simply for producing food for their forces:

> In four of the five provinces in I Corps tactical zone, helicopter crop destruction operations have been effectively employed to destroy small garden plots and rice plots in areas solidly controlled by NVA/VC. During a recent three month period in one province, 237 such garden plots were located. Many individuals have defected from these areas, and enemy units report low morale because of food shortages.

These are not isolated instances. There is report after report that the enemy units are receiving less and less food as time goes on. Many of them are at bare subsistence levels or less, and their military effectiveness is very substantially degraded.

The program to deny food to the enemy in Vietnam has been an important part of our military operations, and as the cumulative effect of all of these operations grows, the crop destruction becomes more important. Critics predict that dire things could happen as a result. They fail to say whether there is a 50–50 chance of this or that consequence, or that it is highly likely or unlikely—just that it could happen. But these things have not happened. There has been no mass starvation, there has been no massive movement away from the Saigon government as a result, but rather there has been a steady decline in the area controlled by enemy troops and their effectiveness.

Our crop destruction attacks in Vietnam are conducted primarily with agent blue, a solution of cacodylic acid. Cacodylic acid was at one time a drug given directly to humans. It has been replaced by newer, more effective drugs. There is considerable medical experience to attest that its toxicity is indeed comparable to

that of aspirin. There is no scientific basis for fearing that the arsenic in it would be changed in nature to the more toxic state. In any event the more toxic form of arsenic has been widely used in some Asian countries on rubber and coconut oil plantations. Concentrations 100 times the concentrations used in Vietnam have been applied annually for a quarter of a century or more with no ill effects to humans or to the ecology.

The PRESIDING OFFICER (Mr. BYRD of West Virginia). The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield the Senator from New Hampshire 2 minutes.

Mr. McINTYRE. Mr. President, the amendment we are considering today is unnecessary. It is unnecessary because it would stop a military operation which is an effective and important part of our total military effort in Vietnam.

If we allow the enemy to obtain food easily and with less expenditure of manpower than he is now forced to use, he will be able to carry out increased military attacks. Each enemy soldier released from growing food is a soldier who can attack our troops. An end to the crop destruction program would increase the number of security forces we would have to maintain, and it would increase the number of casualties that those American forces would sustain.

For these reasons, Mr. President, I must vote against the present amendment and urge my colleagues to do the same.

Mr. GOODELL. Mr. President, I yield 5 minutes to the Senator from Wisconsin (Mr. NELSON).

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for 5 minutes.

Mr. NELSON. Mr. President, the Senator from New Hampshire says the use of herbicides for crop destruction is not on a large scale. I suppose, considering the percentage of the agricultural land involved, that is correct. However, that really is not the point. We are using a weapon that we ought not to use, not only on a large scale or small scale, but not at all. The fact is that we have sprayed 500,000 acres with an anticrop herbicide which contains 54 percent arsenic. The fact is that we are procuring for this year 600,000 gallons which would cover 200,000 acres, which is a substantial amount of land.

The Senator says there is no starvation. I do not know that anybody would argue that there is any starvation. So far as the civilians are concerned. If they do not have any food they go to refugee camps; and many of them are in refugee camps.

With respect to the program, the one independent study I know of commissioned by the Department of Defense, made by the Rand Corp., stated that the program was counterproductive because of the morale factor involved. As a matter of fact, as the Senator said in his own speech:

> A Rand Corporation study conducted at the Department's request concluded that the program was largely counterproductive given its alienation of the civilian population.

Then, of course, the Senator states that the military disagrees with that. I do not know why it commissioned the report if the department was not going to follow what the report concluded.

Mr. GOODELL. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. GOODELL. There was a study in 1967. This practice has been going on for some time. There was a later study in 1970 which indicated that this program is an anathema to the people of North Vietnam and South Vietnam—again, a study out of the Defense Department, commissioned by the Defense Department.

Is there any wonder that it is anathema? I am appalled that this country is engaging in warfare in the sense of using food as a weapon of war. We all know that soldiers end up getting the food. When the civilian population is deprived of food, the enemy soldiers get the food. They take it away from the civilians. That is the nature of guerrilla warfare. That is exactly what happens. The more we deprive the soldiers of food, the more they are going to take it away from the civilian population.

So, instead of growing crops on their land, the civilians go to the refugee camps.

Nobody is saying we are starving them, but we are saying we are turning the land off, making it of marginal value, in a sense—in other words, counterproductive.

I thank the Senator for yielding.

Mr. NELSON. Another point made by the Senator from New Hampshire is that there is no proof of damage. I respectfully suggest that the Senator is wrong about that; 2,4,5-T, as the Senator knows, is teratogenic. It has the capacity to and does deform the fetuses of the animal creatures on which it has been tested. That ought to be alarming enough. As I mentioned the other day, thalidomide was another fetus-deforming drug which had been fairly widely used in Europe and South America and resulted in thousands of cases of children being born without arms and legs.

I do not see how the Senator can suggest that to spread 2,4,5-T and 2,4-D over Vietnam in massive doses does not——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOODELL. Mr. President, I yield 5 minutes to the Senator.

Mr. NELSON. Does not expose Vietnam to the great risk of serious, major environmental disruption.

I think we all recognize that when you start to medicate—and that is what it is—all the creatures in a large area by spewing these potent chemicals into the atmosphere, you are running a grave risk, and every time we have done it with any pesticide or any herbicide, it has had disastrous results, the most common example of which is DDT.

However, that part of the argument that it denies food to the enemy raises an important question of principle. What is the implication of this country validating, giving the status of legality to chemical environmental warfare? What are the implications of it?

The military interpretation, in their manual on the law of land warfare, states that the relevant treaty position is that it is especially forbidden to employ poisoned weapons. "The foregoing rule does not prohibit measures being taken to destroy, through chemical or bacterial agents harmless to man, crops intended solely for consumption by the armed forces, if that can be determined."

Now, if, as the military says, we can use, first, only chemicals harmless to man, there is no proof that these chemicals are harmless to man. In fact all evidence available indicated that they are harmful to man. Whatever evidence we have indicates they are harmful. So the use of these herbicides is a violation of the military's own interpretation of the rules. I think that interpretation is wrong on its face, anyway, but it is wrong based on their own interpretation.

Then, second, what is the next implication of using it as a food denial program? Well, half the people on earth get their protein from marine creatures, crustaceans of various kinds and fish. Half the people. If food denied to the enemy is a valid military tactic, and the use of chemicals to accomplish it is a valid military method, then what is to stop a country from poisoning the marine esturaries and the breeding grounds for the fish and the marine creatures on which some countries rely for a major portion of their protein? What are the implications, as we develop more and more and a greater variety of poisonous chemicals that have adverse effects on the flora and fauna? The implications are that some country is going to decide that if the food denial program, which we have validated by our usage in Vietnam, is all right for plants, it is all right for other foods, too, because fish and crustaceans are crops used by countries, just as rice is.

I just wonder what kind of a principle of warfare we are establishing by the use of this food denial program. For no matter what its size may be, it is the principle that counts.

As I mentioned earlier, several times the argument has been made here that we are reducing the program. I am glad to hear that, except that, as I look at the procurement——

The PRESIDING OFFICER. The Senator's time has expired.

Mr. NELSON. One more minute.

Mr. GOODELL. I yield the Senator 1 minute.

Mr. NELSON. As I look at the procurement, the Department of Defense is procuring 600,000 gallons of agent blue which is the anticrop agent and that will cover about 200,000 acres. If they procure it, I assume they are procuring it to use it. If they use it, they will be back up to about the level they were in 1967.

I would hope that at least today we would establish the principle that America is not going to engage in chemical warfare in a food denial program which has grave implications, in my judgment, for the future in terms of warfare, it being a weapon that is cheap and simple and can be used by any country, not only

with disastrous effects upon the edible marine creatures, but upon the whole life system within the ocean itself.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from New Hampshire.

Mr. McINTYRE. Mr. President, the distinguished Senator from New York mentions the Rand report.

It was the Rand report's finding that as of December 1967 this crop destruction program had led to occasional destruction of civilian food crops. This finding led to careful restructuring of the program. I am informed by the Defense Department that since 1968 no crops have been destroyed in any areas known to be inhabited by civilians, be it a Vietcong hamlet, a Saigon hamlet, a Montagnard hamlet, or otherwise.

This crop destruction program, moreover, is now the most closely controlled of all our activities in Vietnam. The herbicide activities we have talked about are subject to the decision of the corps commander, who can decide whether defoliation will take place. But crop destruction operations have to be approved personally by General Abrams, Ambassador Bunker and high-ranking Vietnamese counterparts.

If we allow the enemy to obtain food easily and with less expenditure of manpower than he is now forced to use, he will be able to carry out increased military attacks. Each enemy soldier released from growing food is a soldier who can attack our troops. An end to the crop destruction program would increase the number of security forces we would have to maintain, and it would increase the number of casualties that those American forces would inevitably sustain.

Fortunately, Mr. President, since 1968, there has been a substantial increase in the geographical areas that have come under the ARVN and South Vietnamese control. They are much greater than they were in 1968. That is why we have been able to greatly curtail this program. It is strictly controlled, and with all due deference to the distinguished proponents of the amendment, we went over the same ground yesterday and decided then that the safety of our troops was the paramount consideration.

Mr. GOODELL. Mr. President, will the Senator yield?

Mr. McINTYRE. I will have to yield on the Senator's time.

Mr. STENNIS. Mr. President, I yield to the Senator from New Hampshire 1 minute, if he needs it for himself.

I yield to the Senator from New York 1 minute for colloquy.

Mr. GOODELL. First of all, it seems to me that the Senator is trying to have it both ways. As the Senator from Wisconsin indicated, we are very glad to hear they are reducing this program. The Senator from New Hampshire says it is a very important program, that must be used in a major way to protect our troops, so that the enemy must carry their food in, and we deny them food on the spot.

Why are we reducing it, if it is so important? I wonder where this contradiction comes in, that we are increasing the amount of money for it? Can the Senator from New Hampshire explain why they are asking for enough to spray 200,000 acres in the coming year?

Mr. McINTYRE. I am not at all sure that they intend to use in the near future all that they are procuring at the present time. This may well be a bulk purchase for long-term needs.

The PRESIDING OFFICER. The time of the Senator from New Hampshire has expired.

Mr. McINTYRE. DOD is frank to admit that there were some mistakes prior to 1968. Those mistakes have resulted in stricter controls, which I have already gone into.

Second, many areas that were VC controlled in 1967 are now not VC controlled, so there is no need for this crop spraying. So these two elements are working together: First, the ARVN and South Vietnamese forces are controlling vastly greater areas than they were in 1967——

Mr. GOODELL. May I ask the Senator if this can be used in Cambodia?

Mr. McINTYRE. I beg the Senator's pardon?

Mr. GOODELL. Can this be used in Cambodia by South Vietnamese troops?

Mr. STENNIS. No.

Mr. McINTYRE. Not to my knowledge. Not for destruction of crops in Cambodia. There has been some accidental defoliation of rubber plantations in that country by U.S. forces, but I do not know of any crops being destroyed, either by South Vietnamese or Americans.

Mr. GOODELL. We have read of chemicals being used against rubber plantations. I just wondered if there is a prohibition against these chemicals being used by the South Vietnamese against crops or rubber, which is a crop, in Cambodia.

Mr. McINTYRE. I do not believe it has ever been used purposely on crops in Cambodia.

Mr. GOODELL. I do not believe there is any prohibition on it. I do not say that I know it has ben used.

Mr. McINTYRE. There has not been any of this activity intentionally.

Mr. STENNIS. If the Senator will yield, I know of no such use, and I do not think any such use is contemplated.

Mr. GOODELL. But there is no prohibition in the law against it.

Mr. STENNIS. Not that I know of, expressly.

Mr. President, I yield one-half minute to the Senator from South Carolina. I regret that I do not have more time to yield to him.

Mr. THURMOND. Mr. President, I rise in opposition to the pending amendment No. 863 to the 1971 military authorization bill which would prohibit the use of antiplant chemicals by our military men in Vietnam to destroy enemy crop fields.

One of the chief problems facing the North Vietnamese troops in South Vietnam is the availability of food. The enemy soldiers facing our troops and those of our allies have come a long way to fight and have therefore stretched their supply lines considerably.

The enemy has tried to overcome this disadvantage by producing their own crops in some inaccessible areas of South Vietnam and in areas where few South Vietnamese civilians are located. Furthermore, in some areas enemy soldiers have taken over crops and land belonging to South Vietnamese civilians.

To counter this means of providing food supplies to the enemy, our forces have engaged in selected crop destruction. By destroying the fields planted or controlled by the enemy, we have made it more difficult for them to provide food for their soldiers. In turn, these forces have been reduced in number and are therefore less effective in killing Americans and our allies in this war-ravaged country.

Mr. President, this program of destroying selected crops in certain areas of South Vietnam has been carefully controlled and even at the height of the war did not result in the destruction of more than 1 percent of the annual food production of Vietnam.

Thus, when one compares that statistic with the success of our crop destruction program in handicapping enemy forces, it is easy to see how unwise it would be to discontinue this effort. The interrogation of enemy prisoners reveals that food shortages are among the most critical problems facing the North Vietnamese. These same prisoners attest to the effectiveness of the crop destruction program as it applies to the overall food shortage among enemy soldiers.

Mr. President, the same two reasons I gave yesterday to the initial herbicide amendment offered by my colleagues apply to this amendment. While I recognize their good intentions in offering this latest amendment, it must be stated again that its passage would indirectly cost American lives in this war. Further, the use of antiplant herbicides on enemy crops is not causing any harmful effects to the ecology of South Vietnam according to studies we have made.

For these reasons, Mr. President, I urge the Members of the Senate to reject this amendment.

Mr. STENNIS. I thank the Senator from South Carolina.

I yield myself the remainder of my time.

Mr. President, I certainly hope that the Members of the Senate understand that this is essentially the same question we voted on yesterday, which was rejected by a vote of almost 3 to 1—that is, yesterday's vote included the item at issue now.

Second, there is no vast, extensive use of this matter; but where it has been used most effectively, it has driven them to use more of their people for the growing of food and crops, thus taking them away from other support of the military and taking them away from the actual fighting.

As I have said, we have decided this matter primarily on the ground that we are over there trying to defend this vast area of that country from the Communists, and our boys need every reasonable thing, every possible thing we can supply them to protect themselves. This is jungle warfare at its worst. I think we have enough restrictions now on them as policy. Let us not tie their hands mili-

tarily with respect to every conceivable item, small as this is.

The PRESIDING OFFICER (Mr. RIBICOFF). The time of the Senator has expired.

Mr. GOODELL. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 1 minute remaining.

Mr. GOODELL. Mr. President, with 1 minute remaining, let me simply emphasize that this amendment is quite different from the amendment of yesterday, with all due deference to the Senator from Mississippi. The amendment yesterday was a broad-based amendment that would deny the use of defoliants for any purpose, and many arguments were raised, I believe sincerely, that there was some kind of military significance to defoliating areas where the enemy might be ambushing. That is not involved in this amendment. This amendment is against the use of chemicals for the denial of food. It is the use of chemicals to deny the enemy food—the spraying of crops.

I would say to the Senator from New Hampshire that we have later evidence than 1967, a 1970 report of the Defense Department, which says that it is anathema to the people of South Vietnam.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

Mr. STENNIS. Mr. President, has all time for debate expired?

The PRESIDING OFFICER. All time for debate has expired.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MONDALE. Mr. President, the war in Vietnam has been a series of mistakes and an unquestioned tragedy. In passing this amendment, we have an opportunity to halt one of our most mistaken policies and prevent prolonged destruction among the Vietnamese people far beyond the end of the war.

The American people by nature recoil from the horrors of war. The Vietnam war especially has forced us to question ends and means. Though we have not yet been able to withdraw from bloodshed, we are increasingly questioning such techniques as massive bombing, napalm, and search and destroy missions. One can hope that public consideration of such destruction will help us exert world leadership away from the use of force and violence.

But for some time the United States has had a revulsion and a very clear policy against employment of other weapons of certain types. Since World War I and the days of poison gas in the trenches, we have had a policy against the tactical use of weapons which affect total populations, poison slowly, contaminate land, and destroy organic life chains.

Public concern for these issues has been reflected in controversies involving biological warfare research, nausea and tear gas deployment, nerve gas, and tactical nuclear weapons.

But it is clear now that we have unthinkingly employed destructive materials in Vietnam which deliver all of these catastrophic effects: Anticrop chemicals. Senator NELSON has explained the poison content of these herbicides, especially cacodylic acid. The possibilities of poison buildup in animals and man have been shown in the case of DDT in the United States.

The long-term obliteration of vegetation and botanical cycles is an obvious contamination of the land. The destruction of interdependent plant and animal chains is truly appalling, and will plague the people of Vietnam for years after the war. The research finding that the defoliant chemical 2,4,5-T causes fetal deformities in animals should arouse humanitarian protest against all herbicides, just as we have always opposed biological warfare and tactical nuclear weapons.

The destruction of food crops is a seriously mistaken policy. The Senator from Wisconsin has shown that, in guerrilla warfare, this tactic affects the civil populace primarily and has little impact on the guerrilla enemy. By 1967, the war had already caused the loss of over 600,000 acres of riceland, and created thousands of helpless refugees. The loss of another half million acres due to chemical attack is a civil disaster which cannot but hinder pacification and reduce support for the United States.

It is clear that the administration's delay in submitting the Geneva protocol against chemical and biological warfare to the Senate until August 19, after promising prompt action in November 1969, has become an international embarrassment to the United States; 9 months after the U.N. General Assembly voted 80 to 3 against us, to prohibit use of chemicals under the Geneva Treaty, we still exist under the cloud of herbicide use in Southeast Asia.

Congress has the obligation to act to stop this mistaken policy.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. RIBICOFF). Without objection, it is so ordered.

Mr. STENNIS. Mr. President, we request the yeas and nays.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, what is the question before the Senate?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from New York (Mr. GOODELL) and the Senator from Wisconsin (Mr. NELSON). The yeas and nays have been ordered.

Mr. STENNIS. As I understand, Senators who favor the amendment will vote "yea," and those who are opposed will vote "nay."

The PRESIDING OFFICER. The Senator is correct. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Minnesota (Mr. MCCARTHY), the Senator from New Mexico (Mr. MONTOYA), and the Senator from Georgia (Mr. RUSSELL) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL) and the Senator from Oklahoma (Mr. HARRIS) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Hawaii (Mr. FONG), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Oregon (Mr. PACKWOOD) is absent on official business.

The Senator from Arizona (Mr. GOLDWATER) and the Senator from Maryland (Mr. MATHIAS) are detained on official business.

If present and voting, the Senator from South Dakota (Mr. MUNDT) and the Senator from California (Mr. MURPHY) would each vote "nay."

The result was announced—yeas 33, nays 48, as follows:

[No. 274 Leg.]

YEAS—33

Bayh	Hughes	Pastore
Burdick	Javits	Percy
Byrd, W. Va.	Kennedy	Proxmire
Case	Magnuson	Randolph
Church	Mansfield	Ribicoff
Cooper	McGovern	Smith, Ill.
Cranston	Metcalf	Symington
Eagleton	Mondale	Tydings
Goodell	Moss	Williams, N.J.
Hart	Muskie	Yarborough
Hatfield	Nelson	Young, Ohio

NAYS—48

Aiken	Eastland	McIntyre
Allen	Ellender	Miller
Allott	Ervin	Pearson
Anderson	Fannin	Pell
Baker	Griffin	Prouty
Bellmon	Gurney	Schweiker
Bennett	Hansen	Scott
Bible	Holland	Smith, Maine
Boggs	Hollings	Sparkman
Brooke	Hruska	Spong
Byrd, Va.	Jackson	Stennis
Cook	Jordan, N.C.	Talmadge
Cotton	Jordan, Idaho	Thurmond
Curtis	Long	Tower
Dole	McClellan	Williams, Del.
Dominick	McGee	Young, N. Dak.

NOT VOTING—19

Cannon	Harris	Murphy
Dodd	Hartke	Packwood
Fong	Inouye	Russell
Fulbright	Mathias	Saxbe
Goldwater	McCarthy	Stevens
Gore	Montoya	
Gravel	Mundt	

So the Goodell-Nelson amendment (No. 863) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. THURMOND. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H.R. 15351) to authorize additional funds for the operation of the

Franklin Delano Roosevelt Memorial Commission, and it was signed by the Acting President pro tempore.

ORDER OF BUSINESS

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of amendment No. 860 which the clerk will state.

The LEGISLATIVE CLERK read as follows: The Senator from Illinois (Mr. PERCY) proposes an amendment as follows:

AMENDMENT NO. 860

On page 26, immediately after line 4, insert the following:

"(d) On and after the date of enactment of this Act, no chemical or biological warfare agent shall be disposed of within or outside the United States unless such agent has been detoxified or made harmless to man and his environment."

The PRESIDING OFFICER. There is a time limitation of 1 hour on the amendment, 30 minutes to the side.

Mr. PERCY. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. Who yields time on the amendment?

Mr. PERCY. Mr. President, I yield myself 10 minutes.

Mr. STENNIS. Mr. President, may we have quiet?

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Illinois is recognized.

Mr. PERCY. Mr. President, on Sunday, August 16, 1970, two private tugboats under Navy contract towed the hulk of a World War II Liberty ship, the *Lebaron Russell Briggs*, out to sea from a North Carolina port. Destination for the tugs and the old Liberty ship was a point in the Atlantic Ocean, 282 miles east of Cape Kennedy.

Mr. STENNIS. Mr. President, the Senate is not in order. This is not a parliamentary body as it is now. Will the Chair protect Senators who wish to hear?

The PRESIDING OFFICER. The Senate will be in order. Senators will be seated.

Mr. PERCY. I thank the distinguished Senator.

The PRESIDING OFFICER. The Senator from Illinois is recognized.

Mr. PERCY. Mr. President, at that point the Liberty ship was to be scuttled in order to dispose of 12,540 concrete-encased nerve gas rockets she was carrying. Some of the rockets contained the powerful and long-lasting VX nerve gas, others the more soluble GB nerve gas. The rockets had been secured in concrete in 1967 and 1968, but now the concrete cases were deteriorating and the Army decided they better be dumped at sea.

The decision had caused a national protest. The Army was unable to convince the public that there were no dangers in transporting the concrete "coffins" by rail across the South or that the gas would not be released into the sea, endangering marine life.

The mayor of Macon, Ga., had vowed that the train would not go through his city. The Environmental Defense Fund and the Governor of Florida had gone to the courts for a permanent injunction against the dumping at sea. The government of the Bahamas, only 165 miles to the southwest of the dumping site, had protested strongly.

In the end, the mayor of Macon relented, the legal action failed, and the government of the Bahamas fell silent again. The concrete "coffins" were loaded aboard trains and moved slowly through the South to an Army military ocean terminal on the appropriately named Cape Fear River at Sunny Point, N.C. There the old Liberty ship was loaded with its deadly cargo.

There has been much consternation because the dumping was allowed to take place despite widely expressed public objection. However, it seemed as though the Army had no alternative. The nerve gas rockets could not be removed from their concrete cases and detoxified. Dumping at sea was a safer solution than burying on land. Because of deterioration, no time could be lost in developing a new method to deal with them. To Secretary Laird the issue was clear. He said that it would never happen again.

The fact of the matter was this: the "live" nerve gas rockets should never have been put in concrete without being detoxified first. This is now agreed by all concerned, and the Army has abandoned that procedure. Chemical weapons are now detoxified, and biological weapons sterilized, in entirely different ways. Live chemical and biological weapons will no longer be transported for disposal.

The committee bill recognizes the problem by including disposal, for the first time, in the HEW safeguards program on chemical and biological weapons. Only transportation and testing had been covered in Public Law 91–121, which was approved on November 19, 1969.

Mr. President, I ask unanimous consent that section 409(b) be printed in the RECORD.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

SECTION 409(b) None of the funds authorized to be appropriated by this Act or any other Act may be used for the transportation of any lethal chemical or any biological warfare agent to or from any military installation in the United States, or the open air testing of any such agent within the United States until the following procedures have been implemented:

(1) the Secretary of Defense (hereafter referred to in this section as the "Secretary") has determined that the transportation or testing proposed to be made is necessary in the interests of national security;

(2) the Secretary has brought particulars of the proposed transportation or testing to the attention of the Secretary of Health, Education, and Welfare, who in turn may direct the Surgeon General of the Public Health Service and other qualified persons to review such particulars with respect to any hazards to public health and safety which such transportation or testing may pose and to recommned what precautionary measures are necessary to protect the public health and safety;

(3) the Secretary has implemented any precautionary measures recommended in accordance with paragraph (2) above (including, where practicable, the detoxification of any such agent, if such agent is to be transported to or from a military installation for disposal): *Provided, however,* That in the event the Secretary finds the recommendation submitted by the Surgeon General would have the effect of preventing the proposed transportation or testing, the President may determine that overriding considerations of national security require such transportation or testing be conducted. Any transportation or testing conducted pursuant to such a Presidential determination shall be carried out in the safest practicable manner, and the President shall report his determination and an explanation thereof to the President of the Senate and the Speaker of the House of Representatives as far in advance as practicable; and

(4) the Secretary has provided notification that the transportation or testing will take place, except where a Presidential determination has been made: (A) to the President of the Senate and the Speaker of the House of Representatives at least 10 days before any such transportation will be commenced and at least 30 days before any such testing will be commenced; (B) to the Governor of any State through which such agents will be transported, such notification to be provided appropriately in advance of any such transportation.

Mr. PERCY. Mr. President, in the pending bill, the Military Procurement Authorization Act, section 506 amends Public Law 91–121, section 409(b), by inserting in lieu of the words "transportation and testing" the words "transportation, testing, or disposal." This makes clear the committee's intention to extend existing safeguards to the disposal problem.

However, at this time when public concern is so great in regard to the disposal problem, I think it makes sense for the Senate to express itself even more explicitly on this question. Therefore, I am calling up my amendment No. 860, which specifies that—on and after the date of enactment of this act—no chemical or biological warfare agent shall be disposed of within or outside the United States unless such agent has been detoxified or made harmless to man and his environment.

In anticipation of calling up this amendment, I wrote to Secretary Laird on August 20, 1970, to inform him of my intention and to request the advice of the Department of Defense on this matter. I have now been advised that the Department of Defense has no objection to the amendment or to its wording.

Mr. President, in calling up this amendment, I do not in any way doubt the firm pledge and word given by our Secretary of Defense, Melvin Laird. He is a man who always adheres to his word and pledge. In my letter to him I pointed out that he would not always be Secretary of Defense and when we make a policy decision which would be supported overwhelmingly by the country, and I believe responded to very favorably by the rest of the world, we should embody that decision in law.

I ask support of Senators and the chairman of the committee in extending this policy into law.

Mr. GURNEY. Mr. President, will the Senator yield?

Mr. PERCY. I am happy to yield to the distinguished Senator from Florida.

Mr. GURNEY. Mr. President, I com-

mend the distinguished Senator from Illinois for offering this amendment.

I can testify to the fact that there was great consternation in my State of Florida when the news broke on the proposed dumping of this nerve gas off our shores. I inquired into it, and, of course, I discovered the same information the Senator from Illinois and others did: That the gas could not be detoxified because it was encased in concrete and had reached such an unstable condition that the only practical means of disposing of it was to dump it in the ocean. I had urged that it be detoxified, and certainly that should be the way to dispose of these sorts of chemicals and gases of warfare from now on.

The amendment is certainly a worthy measure. I think everyone around the country calls for action of this sort. I think the matter should be spelled out in law so that we will be reassured that disposals will be made in this way in the future.

When I talked to the Army people who briefed me on this matter, I got the distinct impression that what had happened in this instance was something that amounted to what I found when I served in the Army: It had been done this way in the past for a long period of time, so it was continued into the future. I think we need to change these procedures and detoxify these gases.

Mr. President, I support the amendment and I hope the Senate will agree to it.

Mr. PERCY. Mr. President, I thank my distinguished colleague who maintained vigilance with respect to this matter. The Governor of his State was one of those who was very much concerned.

It is my understanding that these gases, when they are used, cause the paralysis or continuous contraction of the muscles by which we breathe by attacking enzymes involved in the transmission of nerve impulses through the body.

It is a very interesting but tragic fact that in Johnson City, Tenn., according to the New York Times, the Kentucky train passed within sight of a veterans hospital where aging veterans of World War I, some of whom had suffered the only large-scale use of poison gas in modern history, were still being treated.

The alarm and concern expressed by the citizens of Florida, the Governor of Florida, and the junior Senator from Florida were well founded.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PERCY. Mr. President, I yield myself 2 additional minutes.

The concern evidenced by these distinguished public servants was certainly well warranted.

Because I believe so strongly that no chemical or biological warfare agents should be disposed of before being rendered harmless, and because I believe the American people demand and deserve such assurance, I ask the support of my colleagues in enacting this policy into law.

Mr. GURNEY. Mr. President, will the Senator yield further?

Mr. PERCY. I yield.

Mr. GURNEY. The Senator certainly has pointed out the very dangerous toxic effect of these gases. That is the main reason why we should detoxify them and not lug them hither and yon around the country and not dispose of them in the ocean or in any other place.

This amendment should be agreed to.

Mr. STENNIS. Mr. President, I yield myself 10 minutes on the amendment.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, in the first place, we have seen in the last few weeks what a problem is presented to the Army and the military in properly disposing of these chemicals and biological warfare agents. I think it was very unfortunate, and I imagine a very expensive proposition, to have this long train trip and all the publicity it got. But, met with the situation it was faced with, it already having been encased, this was the only thing the Department could do.

As I understand it, the Department of Defense has already met the situation by adopting as policy what this amendment spells out as proposed law.

There is a problem left here, however, that the amendment does not cover, which I imagine the Senator would want covered; that is, a proviso at the end reading as follows:

Unless immediate disposal is immediately necessary in an emergency to safeguard human life.

Those are strong words. It provides a really hard test to meet before they could get out from under the language of the Senator from Illinois. I feel that I should propose that language as an amendment to the Senator's amendment, and with that language added, would be glad to support his amendment.

Would the Senator respond to that, on my time?

Mr. PERCY. Mr. President, I am very happy to respond. I appreciate very much that the distinguished Senator from Mississippi has raised this point. My office has been in contact, in working out this amendment, with a number of people, and I would like to express my appreciation to Dr. Quimby, of the Library of Congress Science Division; Colonel Cannon, Department of Defense liaison officer; Mr. Nissel of the Department of Defense General Counsel's Office; and Mr. Haywood, of the Department of Defense R. & E., and Mr. Hy Fine of the Preparedness Subcommittee.

It is my understanding that it is the feeling of both Mr. Haywood, of the Department of Defense R. & E. and of Mr. Hy Fine, of the Preparedness Subcommittee, that the Army's request would be fully taken care of if we established in the legislative history the point that there may be some flexibility in emergency situations where immediate action may be necessary to save lives. For example, if a munitions ship caught fire, for the safety of the crew it might be necessary to jettison the cargo without detoxification if CBW agents in the cargo might be released. The Army says that such situations are improbable and, should one occur, the Department of Defense would file an immediate report to Congress. I find this understanding to be entirely satisfactory.

I feel, in view of the fact that both Mr. Haywood, of the Defense Department R. & E., and Mr. Hy Fine, of the Preparedness Subcommittee, feel it would be perfectly appropriate and adequate for this to be included in the legislative history, rather than an amendment which would be subject to further interpretation beyond the explanation I have given, and which is all the Department of Defense has asked for, I would earnestly suggest to the distinguished chairman that we establish this legislative history, with which I thoroughly agree, rather than amend the amendment.

Mr. STENNIS. Mr. President, responding to the Senator and making great allowance for his belief in the proposal he has made, I have found by experience that legislative history means almost anything that the interpreter wants it to mean. It is loose. It should not be. We know what we want, and should spell it out, and not leave a lot of things to different interpretations.

Let me comment on the words I have suggested. "Unless immediate disposal." That word "immediate" is a very strong word. "Immediate disposal" is clear. "Necessary" means the utmost. "Immediately necessary in an emergency." They could not go out and just willfully do it because they wanted to; it would have to be a real emergency to safeguard, not property, but human life.

I do not think we could have more restrictive words than these.

The amendment seems to be generally acceptable. It has gotten down to the question now of whether we put it into the law or leave it to the vagaries of interpretation of legislative history. I feel, especially in a matter like this, when we expect absolute obedience here, that we ought to spell it out and say what we mean. The 100 Members of this body are the legislators. We ought to say what we mean.

Mr. THURMOND. Mr. President, will the Senator yield

Mr. STENNIS. I yield to the Senator from South Carolina.

Mr. THURMOND. I commend the distinguished Senator from Mississippi for the point he has just made because if, for instance, a munitions ship should catch fire at sea, something would have to be done. The amendment the distinguished Senator from Mississippi has recommended seems to be a very just, fair, and necessary amendment. Otherwise, there might be hesitancy on the part of the commander of a ship to take action necessary to save human lives. There should not be. On the other hand, unless there is authority to do it, if the law says he cannot do it and there is no authority in an emergency to do it, I can see where great harm could result and human lives would be lost.

I hope the Senator from Illinois would not seriously object to this amendment, because it would seem to be a very essential and necessary amendment. I hope he will accept the amendment to the amendment.

Mr. STENNIS. Mr. President, I yield

now to the Senator from New Hampshire, who has worked on this subject matter so much and has really become an authority on it.

Mr. McINTYRE. Mr. President, in my visits to the Fort Detrick Biological Center and also to Edgewood Arsenal, I have been constantly impressed with the safety precautions in existence, and I doubt whether emergencies will ever arise. But I believe that the language the Senator from Mississippi is suggesting should be made part of the law, because an emergency cannot be ruled out.

Situations just might arise where the personnel in our research centers might be in danger of their lives if they had to go through an elaborate process of detoxification before disposing of a given agent.

So I would concur with the chairman of the committee and urge the Senator from Illinois to accept as part of his amendment the emergency escape clause we are discussing.

Mr. STENNIS. I thank the Senator very much. I now yield as much of my time as he wishes to the Senator from Illinois.

Mr. PERCY. Mr. President, I feel that the distinguished Senator has a very good point, and I am impressed by the support that he has from very knowledgeable Members of this body.

I would like to ask the Senator this question. If we add the words "unless immediate disposal is clearly necessary, in an emergency, to safeguard human life," would the Senator agree to adding the following sentence, which has already been agreed to by the Department of Defense in principle, as follows:

An immediate report should be made to Congress in the event of such disposal.

Mr. STENNIS. I think that is a very good additional safeguard.

Mr. PERCY. I would be very pleased to accept this as a part, then, of the law, as an amendment to the amendment, and I wish to express my appreciation to the distinguished chairman of the Committee on Armed Services, on the basis of his experience, feeling that this would be better as a part of the law rather than a part of our colloquy and the legislative history.

The PRESIDING OFFICER (Mr. RIBICOFF). Does the Senator from Illinois wish the Senate to act on this as a modification of his own amendment, or as an amendment to his amendment? What is the Senator's wish?

Mr. PERCY. As a modification.

The PRESIDING OFFICER. Will the Senator please send his modification to the desk?

Mr. PERCY. Yes. Mr. President, I send to the desk a modification of the amendment, as follows:

At the end of the amendment, add the following language: "unless immediate disposal is clearly necessary, in an emergency, to safeguard human life. An immediate report should be made to Congress in the event of such disposal."

The PRESIDING OFFICER. Without objection, the amendment is so modified.

Mr. PERCY's amendment (No. 860), as modified, is as follows:

On page 26, immediately after line 4, insert the following:

"(d) On and after the date of enactment of this Act, no chemical or biological warfare agent shall be disposed of within or outside the United States unless such agent has been detoxified or made harmless to man and his environment, unless immediate disposal is clearly necessary, in an emergency, to safeguard human life. An immediate report should be made to Congress in the event of such disposal."

Mr. STENNIS. Mr. President, in its present form I support the amendment.

Mr. THURMOND. Mr. President——

Mr. STENNIS. Mr. President, I yield to the Senator from South Carolina such time as he wishes.

Mr. THURMOND. Mr. President, as the ranking member on the minority side, since the amendment has been modified by the distinguished Senator from Illinois, I shall be pleased to support the amendment.

The PRESIDING OFFICER. Do Senators yield back their remaining time?

Mr. PERCY. Mr. President, I yield myself 2 additional minutes.

Mr. President, I should like to comment briefly on one aspect of this matter which we should not and would not want to overlook.

I think it was pointed out very clearly in a Christian Science Monitor editorial on August 19, 1970. That editorial stated:

We are witnessing today a remarkable sharpening of mankind's concern and conscience in matters touching upon life's livability on Earth.

The Christian Science Monitor said further:

The worry over the gas was but part and parcel of a far wider concern over many of today's challenges to a secure, pleasant, orderly life.

In view of the fact that the people of the world were deeply alarmed about the action that we were taking, in view of the fact that the citizens of the United States were deeply alarmed over it, and the Members of Congress were deeply concerned, I believe that the action taken today—and several Senators have indicated that they felt the same—is so important that even if the distinguished chairman of the Armed Services Committee accepts the amendment—and with his prestige and power in this body, whenever he accepts an amendment I would expect a unanimous vote on it—even though it might be a unanimous vote, it was the feeling of a number of Senators that nevertheless this matter was so important, in its relationship to our efforts in this body, and the efforts of all legislative bodies throughout the world, to try to preserve the environment in which we live and make this earth habitable and a pleasant, safe, and secure place in which to live, that we ought to have a record vote.

I feel the action we are taking today is most significant, and I thank my distinguished colleague, the highly respected chairman of the Armed Services Committee, for the suggestion that the modification be embodied in the law. The change, I feel, takes care of the possibility of an emergency situation which the Department of Defense pointed out.

Mr. President, I yield back the remainder of my time.

Mr. STENNIS. Mr. President, I am authorized by the Senator from New Hampshire, who is so well versed in this policy, to say that he supports the amendment in its present form.

I commend the Senator from Illinois for the timeliness and the substance of his amendment. I think it meets the situation in a friendly fashion. Frankly, it is something of which I would like to have been the author of myself, to try to meet this situation in a straightforward and effective manner.

I have no complaint at all about a rollcall—and this comment is not directed to the Senator from Illinois—but, Mr. President, I have just observed that some years ago you could not get a rollcall here unless you had something that was considered, by an appreciable number of Senators, to have a good deal of substance in it. We moved on to other things, and had standing votes. I think that is the way it ought to be done, as a matter of procedure. But I am not directing my remarks to the Senator.

It is no wonder we get along so slowly, if we have to have a rollcall vote now, and stop everyone in committees, on a matter that might well be unanimous. If the Senator insists, I want him to understand I am not directing these remarks toward him.

Mr. PERCY. Mr. President, I fully appreciate the spirit of the Senator's comments, and I do realize that this is somewhat unusual, but my colleagues who have spoken to me about it have expressed this feeling, and it was originally my intention to take it up early next week, when I would have had a little more time to prepare and send out memorandums. But I acceded to the request of the majority and minority leaders that we move this forward. I then cut the time down from 2 hours to 1 hour. So, feeling that the perhaps a quarter of an hour we would consume on a matter of this significance and importance would clearly announce to the world that the Senate of the United States supports fully the position stated by the Department of Defense and Secretary Laird on a matter that has alarmed the whole world, I think the extra 15 minutes or so would be well warranted.

Mr. STENNIS. I yield back the remainder of my time.

Mr. PERCY. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. RIBICOFF). All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Illinois (Mr. PERCY), as modified. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from New Mexico (Mr. MONTOYA), the Senator

from Georgia (Mr. RUSSELL), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL) and the Senator from New Mexico (Mr. MONTOYA) would vote "yea."

Mr. GRIFFIN. I announce that the Senator from Hawaii (Mr. FONG), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Oregon (Mr. PACKWOOD) is absent on official business.

The Senator from Maryland (Mr. MATHIAS) is detained on official business.

If present and voting, the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY), and the Senator from Oregon (Mr. PACKWOOD) would each vote "yea."

The result was announced—yeas 82, nays 1, as follows:

[No. 275 Leg.]

So Mr. PERCY's amendment, as modified, was agreed to.

The PRESIDING OFFICER (Mr. EAGLETON). The question now recurs on amendment No. 862 of the Senator from South Dakota (Mr. MCGOVERN), the so-called end-the-war amendment.

DISPOSAL OF MUNITIONS IN INTERNATIONAL WATERS

Mr. PELL. Mr. President, last year the Senate unanimously passed amendments designed to regulate the disposal of chemical and biological weapons. Included among those amendments was my own amendment which required prior determination by the Department of State that the plans of the Department of Defense to dump chemical and biological materials in the ocean do not violate international law.

Last week the Department of Defense announced that a ship loaded with obsolete munitions would be sunk in international waters off the coast of Maryland.

Mr. STENNIS. Mr. President, I think we have to insist on this conference in the Chamber coming to an end and the Senate getting back into session. The Senator from Rhode Island has an important matter to discuss.

The PRESIDING OFFICER. May we have order so that we may hear the Senator from Rhode Island.

Mr. PELL. Mr. President, newspaper reports indicated that in the same area where conventional weapons and munitions were being dumped, nerve gas had been dumped at an earlier stage in our history. Obviously it would be a mistake to have them then dumped in the same place.

The office of the legal adviser at the State Department informed my office that the munitions dumping was planned without a determination by the Department of State that there is no legal reason why it should not be dumped there.

Yet, the Secretary of State has the responsibility for interpreting international law and securing the adherence of this country to international protocols and understandings.

While there is, unfortunately, no specific law which would prohibit completely dumpings of munitions in international waters there are provisions such as article 25 of the 1958 Geneva Convention on the High Seas which require certain notification procedures to be followed when harmful agents are dumped in international waters.

Article 25 reads as follows: "Every State shall take measures to prevent pollution of the seas from the dumping of radioactive waste, taking into account any standards and regulations which may be formulated by the competent international organizations; and

"All States shall cooperate with the competent international organizations in taking measures for the prevention of pollution of the seas or air space above, resulting from any activities with radioactive materials or other harmful agents."

Moreover, the common law of the sea does require countries dumping pollutants in international waters to give due regard to other countries' interests. For example, dumpings cannot take place in international sea lanes, fishing grounds, or on top of underwater cables. Also, when dumpings do take place certain hydrographic notices and warnings have to be delivered to international organizations concerned with ocean navigation.

These tasks are the responsibility of the Secretary of State. The Secretary of State cannot fulfill his responsibilities unless the Department of Defense secures his cooperation for their proposed ocean disposals.

The amendment I offer insures that such procedures are followed.

My amendment simply requires that dumpings of munitions, as well as dumpings of chemical and biological weapons, be cleared with the Secretary of State before the Department of Defense actually dumps their obsolete weapons in international waters in order that the Secretary of State can determine the dumpings do not violate international law.

I ask unanimous consent that my amendment and section 409(c)2 of Public Law 91–121 be printed in the RECORD at this point.

The PRESIDING OFFICER. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Rhode Island (Mr. PELL) proposes the following amendment: On page 25, between lines 6 and 7, insert the following:

(3) The first sentence of section 409(c)(2) of such public law is amended by inserting ", or for the disposal of any munitions in international waters," immediately after "outside the United States".

The PRESIDING OFFICER. The Chair wishes to advise the Senator from Rhode Island that if he wishes to call up his amendment, it would take unanimous consent.

Mr. PELL. Mr. President, I ask unanimous consent that the amendment which I have described be called up.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? The Chair hears none, and it is so ordered.

Without objection, the section of the statute referred to will be printed in the RECORD.

Section 409(c)2, ordered to be printed in the RECORD, is as follows:

None of the funds authorized by this Act or any other Act shall be used for the future testing, development, transportation, storage, or disposal of any lethal chemical or biological warfare agent outside the United States if the Secretary of State, after appropriate notice by the Secretary whenever any such action is contemplated, determines that such testing, development, transportation, storage, or disposal will violate international law. The Secretary of State shall report all determinations made by him under this paragraph to the President of the Senate and the Speaker of the House of Representatives, and to all appropriate international organizations, or organs thereof, in the event such report is required by treaty or other international agreement.

Mr. PELL. Mr. President, I also ask unanimous consent that an article describing certain dumping of explosives off the coast of Maryland be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NAVY TO DUMP EXPLOSIVES OFF MARYLAND

(By Aaron Latham)

At dawn this morning, the U.S. Navy is scheduled to dump 5,000 tons of explosive off the Maryland coast of the Atlantic Ocean.

Originally, the explosives were to have been deposited off the New Jersey Coast—almost on top of two sunken ships filled with mustard gas.

The Navy said it shifted the site because of "public concern," but maintained that, even if its old bombs had exploded near the poison gas, there would have been "no danger."

The old liberty ship Davis Hughes—similar to the one used to dump 67 tons of nerve

gas off the coast of Florida on Tuesday—left Earle, N.J., yesterday noon on its way to a site 135 miles off the coast of Maryland.

Navy spokesmen said that the ship was scheduled to go down in 7,200 feet of water and that the intense pressure might trigger an explosion near the bottom.

Maryland Gov. Marvin Mandel said at Baltimore press conference yesterday that he had not been notified of the dumping, that he had first learned of it reading the newspapers, and that he was still not sure just what was being sunk off his state's coast.

"I don't know enough about it to know whether we could even object to it or not because there was no information furnished to us," the governor said. He added that he planned to make further inquiries in Washington.

Before the change of plans, the Davis Hughes—with its cargo of conventional (nonnuclear) bombs, fuses, small arms, gun and rocket ammunition—had been scheduled to go down less than a mile from two sunken ships loaded with mustard gas.

One of these ships with gas on board was scuttled 150 miles east of Barnegat Light, N.J. in May, 1967, the other in June, 1968.

The Navy admitted that an explosion could have ruptured the poison gas cannisters but said that there would have been no danger because the gas solidifies at a depth of 6,500 feet.

The new site off the coast of Maryland is 68 miles southwest of the sunken gas.

The munitions ship was towed from Earle yesterday by the Coast Guard tug Tomoroa, accompanied by the U.S.S. Cromwell, a destroyer escort.

The Navy's press desk at the Pentagon could not say yesterday how old the explosives were or exactly what kind of bombs and ammunition was being sunk. A spokesman said he did not know what type of explosive the bombs contained.

He said the munitions were "conventional" and "obsolete."

Today's dumping will be the 20th of "Operation Chase"—the Navy's code words for the continuing removal of unstable explosives to the safety of the ocean floor. Four of the ships have been laden with gas and chemical devices; the rest with "standard explosive hardware," a Navy spokesman said.

Rep. Clarence D. Long (D-Md.) yesterday wired the Secretary of the Navy to urge the suspension of the dumping. "If New Jersey was the wrong place for dumping these explosives, why is Maryland more appropriate," Long asked.

Mr. PELL. Mr. President, I hope that the distinguished Senator from Mississippi (Mr. STENNIS) might be willing to accept the amendment. It has not received any protest or objection so far as I know from any quarter.

Mr. STENNIS. Mr. President, will the Senator restate the purpose and the import and the meaning of his amendment? Frankly, I have been approached by other Senators with regard to other amendments and I did not hear all of the Senator's statement.

Mr. PELL. Mr. President, the purpose of the amendment is to insure that when conventional munitions are dumped in international waters, the Department of State is notified beforehand in order to achieve two objectives.

The first is to make sure that there has not previously been some other kind of dumping in the same place, where we would not want to dump conventional weapons.

The newspaper reports indicated that we were going to dump conventional munitions where mustard gas had previously been dumped. One obviously would not want to dump explosives on top of mustard gas.

Second, the Department of State has the responsibility of notifying foreign offices and the United Nations when dumping has occurred so that mariners, fishermen, and people laying cables will be aware of the places where there have been dumpings.

It is not only the Defense Department that might engage in dumping. Other groups also engage in this practice. When it comes to determining whether these dumpings are in compliance with international law this responsibility is centralized in the Department of State.

It is for this reason that I have offered the amendment.

Mr. HOLLAND. Mr. President, will the Senator yield for a question?

Mr. PELL. I yield.

Mr. HOLLAND. Mr. President, do I understand that the amendment applies not only to the dumping of conventional weapons that are obsolete or need to be disposed of, but also to conventional ammunition?

Mr. PELL. The amendment applies to the dumping of conventional munitions. I think the definition of munitions means explosives. It does not apply to the dumping of old rifles or cannons, which would not be dumped anyway. It refers to explosives.

Mr. HOLLAND. Mr. President, I thank the Senator.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. STENNIS. Mr. President, does the Senator have a formal statement about this matter?

Mr. PELL. Yes. I have just read it and would be glad to reread it.

Mr. STENNIS. Mr. President, what is the customary procedure now? How are these matters handled?

I know that the military does quite a bit—of course, gas is a new matter—of dumping and getting rid of items that are no longer useful.

Mr. PELL. Mr. President, as I understand it, when obsolete ammunition is surveyed—I recall just prior to World War II when we were still occasionally using World War I ammunition, perhaps that should have been surveyed a long time before—what the Defense Department does is to simply dump the ammunition or put them in an old hull and scuttle that vessel in what it considers to be appropriate international waters. That has been the procedure followed to date.

My amendment would permit the same process to be continued, but would make sure that there is State Department clearance to insure that first there had not been some other kind of dumping that would clash with this dumping, second that our country comply with the 1958 Geneva Convention on the High Seas, and third that our country comply with other requirements of international protocol.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. THURMOND. Mr. President, would the distinguished Senator agree to modifying his amendment so as to require the approval of the President, rather than the State Department? I feel it would be more desirable.

Mr. PELL. I would think that if we were to give to the President the responsibility for the notification of other nations, that would raise the level of responsibility. I do not think that it is necessary.

I think that the Secretary of State could normally handle this responsibility. I would think that this is a responsibility that the President would be reluctant to have put upon him.

Mr. THURMOND. I suppose that the distinguished Senator from Rhode Island is relying on the fact that the Secretary of State would refer the matter to the President if there were any question involved, since he is under the President, and the President could object if he saw fit.

Mr. PELL. Absolutely. The Secretary of State is merely an official, and he reports directly to the President and is subservient to him.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. MANSFIELD. The Secretary is the agent of the President, and what he does, he does in the President's name, by the President's authority, and with his consent. They are one and the same.

Mr. PELL. I thank the Senator.

Mr. THURMOND. They are both under the President. In other words, the President is Commander in Chief. He is the President of the United States, and all executive agencies are under him.

Mr. PELL. That is correct.

Mr. THURMOND. As I understand it, the Senator feels that notice given to the Department of State would be sufficient so far as the President is concerned; that the Secretary of State would confer with the President if there were any question concerning it.

Mr. PELL. That would be my understanding.

Mr. THURMOND. I thank the Senator.

Mr. STENNIS. Mr. President, I think this amendment has merit. My present intention is not to object to it. At the same time it has never been printed. It could have implications that are overlooked. I have a request from the Senator from Kentucky that he would like to go into it further.

There has been an agreement to vote, but it certainly was entered into when the Senator from Mississippi was not in the Chamber. I do not blame anyone for that except myself.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. MANSFIELD. This appears to me to be a very reasonable amendment. There are no gimmicks in it, and nothing is hidden.

It involves a question which has received a great deal of prominence recently. I noticed that the Senator from Florida raised some question because off the coast of his State, and off the Bahamas, there was a sinking of nerve gas which caused the American people and Congress a great deal of concern.

This measure is so simple I do not know what further detail there would be to go into. It is a way to face up to a problem that has confronted us for some time, and in this way other nations will know our intentions.

The Senator from Rhode Island referred to the fact, at least in passing, that the Army was going to dump munitions off the coast of New Jersey. Those in charge found they had dumped other material there previously and decided to come down and dump them off the coast of Maryland. In the case of that material being dumped, something did happen; although there was no apparent damage. But the ship broke up, or something to that effect.

This is a most serious matter, and I think this proposal will be most helpful to the administration.

Mr. PELL. The danger was in dumping munitions where there had been a dumping before. That was why the dumping had to be moved from the coast of New Jersey.

Mr. COOK. Mr. President, will the Senator yield?

Mr. STENNIS. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Rhode Island has the floor.

Mr. COOK. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. COOK. Mr. President, I wish to state to the distinguished majority leader that the only reason I had any hesitation was that I wanted to see where in section 409 of the public law the language was to be inserted. I would like to read the section in its entirety. It does make good sense.

Under section 409 of Public Law 91–121 it would state:

"(2) None of the funds authorized by this Act or any other Act shall be used for the future testing, development, transportation, storage, or disposal of any lethal chemical or any biological warfare agent outside the United States, or for the disposal of any munitions in international waters, if the Secretary of State, after appropriate notice by the Secretary whenever any such action is contemplated, determines that such testing, development, transportation, storage, or disposal will violate international law. The Secretary of State shall report all determinations made by him under this paragraph to the President of the Senate and the Speaker of the House of Representatives, and to all appropriate international organizations, or organs thereof, in the event such report is required by treaty or other international agreement.

I certainly have no objection to that.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. MANSFIELD. I know from speaking with the President that he was very much disturbed about the situation which developed in relation to the nerve gas crisis in this country, and what he did was the best he could do under the circumstances to find a solution to a most difficult and embarrassing problem.

I thank the Senator.

Mr. COOK. The only reason I asked the question—and I have no objection to the language—is that the section referred to in the present bill makes other technical changes in the subsection and I wanted to read this in context.

Mr. PELL. I thank the Senator. I think the Senator clarified the objective.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. HOLLAND. Mr. President, I have no objection to the amendment, but I call attention to the fact that not only has our Nation disposed of gases and chemicals—which seem to be pretty well covered by the Percy amendment, as amended, and munitions, as would be covered by the Senator's amendment—but it has also sunk a good many ships in international waters.

I remember that after World War I we sank the mainstay of our large fleet and I am simply suggesting that at some stage in this bill and in connection with this amendment it might be well to consider that we are probably going to be doing that same thing. I suggest that the amendment might be made broader and that it might be a helpful addition to the Senator's amendment. I have no objection to it at all as it is worded.

Mr. PELL. I thank the Senator from Florida. His thought has great merit.

Off the coast of New York now, barges dump conventional garbage in huge amounts and pollute the water there. On the other hand, this bill deals with the Department of Defense, and I do not think a more broad amendment, as much as I would like to see it, would be appropriate. I believe that would come in connection with another bill.

Mr. HOLLAND. I was thinking particularly about naval ships, either obsolete ships or those to be disposed of under some international agreement; and this might be the appropriate place to add them.

I am not going to object to the amendment. It seems to me that while we are considering the subject of dumping we must remember that we sank—and I cannot give the exact number—a large number of naval ships after World War I; and we have sunk some obsolete ships since that time. It might be that this is the appropriate place to add that.

I do not object to the amendment.

Mr. PELL. Mr. President, in reply to the excellent suggestion of the Senator from Florida, there is also a positive value here in that as we develop in the exploitation of the oceans, it is becoming increasingly apparent that ships or automobiles when dumped in the seabed can have a positive good in the right place because they encourage the breeding of fish. So this has not only a negative effect but a positive value.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. HOLLAND. My State has been using that method of encouraging production of fish in connection with the disposal of old automobiles for some years.

Mr. PELL. Exactly.

Mr. HOLLAND. But my understanding is that we are talking about the disposal in deep water of things having to do with the defense of our country.

Mr. PELL. The Senator is correct.

Mr. HOLLAND. It occurred to me that the Senator might accept the idea of including ships, but I am not pressing that matter.

I thank the Senator for yielding.

Mr. STENNIS. Mr. President, if I may have the floor in my own right, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 5 minutes.

Mr. STENNIS. Mr. President, this is my impression of this matter and I shall have a proposal to make at the end of my remarks. I think this is a subject matter that is highly urgent, and that we should have more information, and more study, and that something be done about it.

I am constitutionally opposed to any amendment that has possible implications, as this measure could have, being taken up, considered, and agreed to without even being in writing; and especially on a bill like this one. In addition, this matter involves international law.

Nevertheless, I think the subject matter is urgent and I would like to see some progress made. I would like to have the Senator's amendment adopted in its present form, with the understanding that before we complete the conference on this bill, he and others—I will request some departments to participate—will analyze it and make a study of the subject matter and the problem. The conferees will be vested with discretion. They already have discretion, of course, but I am suggesting with a special discretion with reference to this subject matter.

We will do the best we can to bring out something of value but we will not feel bound necessarily just to be unyielding.

What is the Senator's response to that suggestion? I yield to the Senator from Rhode Island.

Mr. PELL. I am glad the Senator is going to accept the amendment. I have, as a general rule, had very bad experiences in the past with amendments that have been qualifiedly accepted. I would hope that this will be the great exception.

Mr. STENNIS. I have not accepted very many. I do not know of more than one or two that I have accepted. I have explained my position. I think the problem is broader than the Senator's amendment. I would propose that more is being done than the Senator's amendment does.

Mr. PELL. As the Senator from Florida suggested.

Mr. STENNIS. Yes; but we want to get into a further study of it and then make a determination and final decision. But it is necessary to get started, and I favor the Senator's amendment.

Mr. President, I yield back my time.

Mr. PELL. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

REFORM OF OUR WELFARE SYSTEM

Mr. MUSKIE. Mr. President, the reform of our welfare system must be one of our highest national priorities. And

we should begin that reform in this session of Congress.

Not only must we alleviate the desperate living conditions of millions of Americans, although that would be reason enough for welfare reform. But we must also relieve State governments from the excessive financial pressures which the present welfare system exerts upon them—and we must stop spending billions of tax dollars on programs which encourage families to break apart.

That is why I support the Nixon administration's initiative in offering a major welfare reform proposal—why I hope that the Finance Committee will soon report out a welfare reform bill we can act upon—and why I urge a full and searching debate by the Senate on this issue which has been neglected far too long.

Of the more than 9 million Americans who now receive some form of welfare assistance from the Federal Government almost 3 million are elderly, blind, or disabled; another 4½ million are children who are poor; and the remaining 1½ million are their parents who live with them, who are out of work, and 94 percent of whom are mothers.

The defects of the present welfare system have become increasingly obvious in recent years—to rich as well as poor, white as well as black, conservative as well as liberal.

It is an undignified system. Destitute people are subjected to erratic and demeaning bureaucratic procedures.

It is an inadequate system. Many of those who depend on welfare exist on pitifully small incomes, and millions of equally poor people receive no help at all.

It is an unsound system. Heads of families are discouraged from seeking jobs, and many wives and children are better off financially if their husbands and fathers leave them.

Welfare reform is long overdue, even though it has its own limitations.

Welfare reform will never be an ultimate solution to the problems of old age or physical handicap. But it can help support our needy senior citizens and disabled citizens in a manner which respects their dignity as individual human beings.

Welfare reform will not absolve the States of their fundamental responsibility to provide social services for the poor. But it can help State governments free the money they need to provide better services for all their citizens.

Welfare reform will not even be the final answer to the question of how to end poverty. But it can help us marshal our resources to start breaking the cycle of despair between one generation and the next.

And so I regard the passage of a welfare reform bill by the House of Representatives as the first major congressional step toward welfare realism in years.

That bill would provide:

A minimum level of Federal support for all needy families with children, including the working poor;

A basic income for the aged, blind, and disabled of $110 a month;

An incentive for present welfare recipients to work, by permitting them to keep more of their earnings than would be deducted from their welfare allotments;

An increase in job training opportunities and the establishment of day care centers.

Certainly we can question whether the proposed level of income support is sufficient. But we can no longer quarrel with the concept of a basic minimum standard.

We can ask whether the family assistance program should not also include poor couples without children. But we can no longer quarrel with the concept of covering all poor families with children.

We can inquire whether mothers who are poor should not be free to choose between working and taking care of their children during the day. But we can no longer quarrel with the concept of making job opportunities and day care centers available to them.

I believe that the House-passed bill is a beginning—that work opportunities and work incentives can be strengthened even further—and that future legislation may indeed be necessary to improve upon the reforms we are able to enact this year.

But we should not disregard the constructive nature of the administration's proposal. And we cannot ignore the need to start reforming our welfare system now, so that it ultimately—assures minimum standards of decent living for all those in need; promotes job opportunities as well as the desire to work; treats poor people fairly in all parts of the country; and removes the burden of welfare cost from State taxing authorities.

We must design a system which aspires to two principal objectives—objectives which the present system does not advance—first, providing adequately for those who cannot do more to help themselves; and second, providing reasonable incentives to self-reliance for those who can help themselves.

And we must of course recognize a third and even more significant objective—that of eliminating, to the greatest extent possible, the need for any welfare assistance at all.

That means improving our schools, developing children's skills and abilities early, and building their motivation and self-respect.

It means developing a comprehensive health care system, making adequate health services available to all Americans, and working to prevent the hardships of illness and the damage of malnutrition.

It means sustaining a satisfactory rate of economic growth to keep employment at a maximum, creating new kinds of rewarding and socially useful jobs, training men and women to fill them, and offering them the opportunity to accept those jobs wherever they are available.

And it means a common and unqualified commitment to shape a whole society in this land which has a place in it for every American, whoever he or she may be.

These are objectives which belong at the top of the national agenda. And the time to start working on that agenda is now.

APPOINTMENTS BY THE VICE PRESIDENT

The PRESIDING OFFICER (Mr. EAGLETON). The Chair, on behalf of the Vice President, appoints the Senator from Connecticut (Mr. RIBICOFF) and the Senator from Kansas (Mr. DOLE) to the 16th General Conference of the United Nations Educational, Scientific, and Cultural Organization, to be held in Paris, October 12 to November 14, 1970.

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. McGOVERN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BYRD of Virginia). Without objection, it is so ordered.

THE "END THE WAR" AMENDMENT

Mr. PELL. Mr. President, I congratulate the Senator from South Dakota and the Senator from Oregon on the leadership they have shown in the amendment that is under discussion.

I have reluctantly come to the conclusion that the approach of providing a specific timetable with a certain escape clause, as contained in the amendment as presently written, if there are untoward military events, is necessary. I have been willing to cosponsor it and support it for some time. However, many of us in the Foreign Relations Committee feel very much the same way, and there has been a good deal of consultation back and forth between the members of the Foreign Relations Committee and the sponsors of this amendment.

The sponsors of this amendment have carried this fight to the people. They have made a tremendous effort, we believe, and deserve the full credit for the impact that this amendment has caused and, I hope, for securing its adoption.

After consultation between the two groups, it was decided that the language might be broadened a little, and by doing so, we hoped it might secure the support of a majority of the members of the Foreign Relations Committee and secure more votes within the Senate.

The interesting thing in my mind is that the Committee on Foreign Relations, which started out, to the best of my recollection—at least, when I became a member of it in 1964—as being without any particular view with regard to Indochina, had no real opinion on this subject one way or the other. But this group of Senators who have had more responsibility with regard to the conduct of the Foreign Relations Committee and the setting up of policies abroad than any other group of men, as they gradually studied the problem, as they gradually bore into the problem, became increasingly of the view that our policies in Vietnam and Indochina were a disaster, that the war was a disaster, and that

the sooner it was terminated, the better off we all would be.

This is very much the same process, to my mind, that Secretary of Defense Clark Clifford went through. He came to his job as an intelligent, convinced hawk, a believer in the merit and correctness of our policies in Indochina, but one who had not studied the problem in any great detail. Then he did what is rarely done, I regret to say, in government: He asked questions, and applied the cold light of commonsense and of reason to the policies we were following. The more questions he asked, the more answers he got that were unsatisfactory. As we all know, he went through a complete 180-degree turn in his views in this matter.

Generally speaking, one has found that those with responsibility for policy, who study it analytically, very often come out with this change of view. In the beginning, in the Foreign Relations Committee had no view. There are other groups of men, with perhaps not as much responsibility for foreign policy but more responsibility for defense requirements or more responsibility for a variety of other factors in our government life, who started out with a different view or different premises.

But one point that I think the public press and Nation as a whole have not perceived enough is the process that caused a group of 15 or 17 men, with no preconceived views, to come out as they have in general opposition to the war. The process that was responsible was careful study and evaluation.

Because of this, I felt it was a good idea that there should be as much cooperation as possible between Foreign Relations Committee and the sponsors of this amendment. We have had these conversations together; and, as a member of the Foreign Relations Committee, I wanted to express at this time my support for this amendment and to urge very much its adoption.

Mr. McGOVERN. Mr. President, I want to express my appreciation to the Senator from Rhode Island not only for what he has just said on the floor about the amendment but also for the role he personally has played as a member of the Foreign Relations Committee in helping us to devise language that would win the concurrence of a number of members of the Foreign Relations Committee in support of our amendment.

As I said yesterday, we are very hopeful when the chairman of the Committee on Foreign Relations, the Senator from Arkansas (Mr. FULBRIGHT), returns—he is attending the funeral of a member of his family—the committee can be convened, and that a majority of them will come out in support of the revised language.

The Senator from Rhode Island (Mr. PELL) has been the leader on the majority side of the Foreign Relations Committee in working out the revised language that was submitted yesterday, which is the pending amendment, supported on the minority side by the Senator from New York (Mr. JAVITS). We are most grateful for the efforts they have made, and we believe that their support strengthens the foundations of the amendment.

So I thank the Senator both for his supporting words on the floor this afternoon and for the very substantial work he has done in helping us with the language of the various provisions of the amendment.

I might ask the Senator if he could take just a moment to explain the thinking of various members of the Foreign Relations Committee with reference to the provision for the 60-day leeway we have given the President beyond the time certain deadline which is set in other sections of the bill for the withdrawal of American forces.

Mr. PELL. I would add that we realized that this leeway was accepted with considerable reluctance by the sponsors of the original amendment. But we are very grateful that they bear with this thought—the thought that some untoward military escalation on the part of the North Vietnamese could take place as we were withdrawing which might necessitate, from a military viewpoint, a slowdown or some reversal of course on the part of the President.

The 60-day clause means that the President has this opportunity of delay, provided he is in communication with Congress. It seems to me an eminently sensible provision.

If the policy of our Government is the liquidation of our armed manpower on the mainland of Asia, with the exception of Korea—and I have read in today's newspaper that we hope to liquidate that, too—it would seem to me that this is absolutely in line with that policy. This might well be the objective of our President. Perhaps the liquidation of our commitment there is in the back of the minds of the administration. But some pressure, some direction, some timetable is necessary in order to keep us moving along this course.

As the Senator and I are well aware, many forces in the country have a diametrically opposite view and will press the President not to carry out this liquidation. I know I was critized by my State VFW. I think the Senator from South Dakota was the object of some barbs from the National VFW. There are other groups around the country who would equate patriotism and a love of the American flag with gung ho-ism in Indochina.

No Senator here fought a more gallant war than did the Senator from South Dakota. I came back in a hospital ship—sick, not wounded—in World War II. Yet, none of us here feel that any group has a monopoly on patriotism. When I see the American flag flying, it fills my soul with as much joy and my eyes well up when I think of what it means just as much or more than anyone else. So we have drawn up this amendment to appeal to a broad variety of people.

Mr. McGOVERN. On tomorrow, I hope to discuss the constitutional issues raised by the amendment and make what I believe will be one of the strongest arguments for the amendment; namely, that it provides a formula whereby the Senate can discharge its obligations under the Constitution and share in the decisions of war and peace.

One of the most tragic aspects of the entire involvement in Vietnam and Indochina is that so much of it has been carried on without a clear declaration of congressional intent. Certainly the Constitution makes it clear that Congress has some obligation to share in the decisions about whether American forces should be committed and, once committed, how long they should stay there.

The amendment will give every Senator an opportunity to exercise his constitutional authority and register his best judgment as to whether we should set a timetable beyond which American forces could not stay in Indochina.

Mr. PELL. In his argument, would the Senator enlarge on the thought that the executive branch means exactly that, that the executive executes policy, guidelines, and the laws set forth by Congress?

I believe that I am correct in saying that Senators like the Senator from South Dakota and me are among the minority in the Senate, in that we are not lawyers, but this is a clear point which has all too rarely been brought out; namely, when we talk about the different branches of the Government and their responsibilities, we know what the judiciary does. It judges. We know what the legislative does. It legislates or writes the laws. I think we know what the executive branch is to do, which is to execute, to execute the laws written by the legislature and the decisions of the judiciary. Yet, in fact, we find increasingly that the executive, while not taking over the prerogatives of the judiciary, is really exercising many of the functions that the founders of the Constitution thought belonged to the legislative branch.

The legislation should be the board of directors and the executive the manager of the plant.

I hope that this is an argument that the Senator would see fit to develop, because I think it is a simple argument that any newspaper reader, television viewer, or 6th grade child knows, that the responsibility of the executive is to execute policy or instructions. When we think of the executive branch, that is exactly what we think of, that it executes what we in the legislative body have set forth as policy.

Mr. McGOVERN. The Senator is right. He has put his finger on the fundamental distinction between the war powers of the Congress as against the powers of the executive. The Constitution and especially the history of the constitutional debates—the Madison papers and those of others who kept records of the constitutional debates—make clear that what the framers intended to do was to give Congress the power to declare war and to decide whether the country would commit American forces to a foreign conflict, and for how long; and the Commander in Chief, the President, was given the power to direct those forces, once committed to battle. But the time limit and decisions as to what forces should be committed were vested in Congress. So there is no possible way anyone can make a compelling case that Congress is stepping beyond its constitutional authority when it sets a time limit

on the commitment of American forces to a particular war.

Mr. PELL. My recollection may be faulty, but I think I recall that in one of the original drafts of the Constitution, it was proposed that Congress should have the power "to make war," and then it was realized that Congress could not make war or conduct a war because we could not have a group of argumentative men conducting a war by committee. It would be too difficult. But the decision, as the Senator said to engage in or "to declare war"—which is the phrase finally adopted—was agreed on at that time, underlining exactly the very valid point the Senator is making.

Mr. McGOVERN. The Senator is correct. In that connection, the faculty and students of the Boston University Law School published a special issue of the Law Review in the spring of 1970 on the subject of U.S. intervention in Cambodia, legal analyses of the event, and its domestic repercussions. This special issue contains an article on the point the Senator from Rhode Island has just raised, authored by two constitutional lawyers, Francis L. Coolidge, Jr., and Joel David Sharrow. I ask unanimous consent that the article entitled "Warmaking Powers, The Intentions of Our Framers in the Light of Parliamentary History" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WAR-MAKING POWERS: THE INTENTIONS OF THE FRAMERS IN THE LIGHT OF PARLIAMENTARY HISTORY

I. INTRODUCTION AND SCOPE

Of the many unique aspects of the Constitution, one of the most often commented upon is its ability to endure and adapt to the changing times. This concept of the living Constitution,[1] however, has been subject to diverse interpretation. There are those who would virtually ignore the written document and relying on its "spirit," adopt a more or less behavioralist approach. Professor Charles Merriam has stated that,

"[t]he Constitution is not an idol but a spirit; not a form of words but a set of political attitudes and habits of behavior. Those who worship the text, worship in reality their own attitudes which they fondly hope the interpretation of the text may produce.[2]

This broad view of the Constitution ignores the fact that the document is constructed of both general phrases, *e.g.*, "due process," and more precise terms, *e.g.*, "bill of attainder." Cardozo recognized this difference in *The Nature of the Judicial Process*, where he wrote that what varies from age to age in the Constitution are the "great generalities." [3] Even these more general phrases, however, may not be interpreted with judicial abandon. Justice Holmes has written that in interpreting the Constitution, it is important to remember that it is a frame of government within whose bounds the coequal branches must operate.[4] When a more precise meaning of words of art as defined by the Founding Fathers can be discerned, the tendency has been to resist reinterpretation and to apply the original definitions so that the purpose of having a *written* Constitution is not subverted.

It is the dual purpose of this Note to explain why the Founding Fathers segregated the different aspects of military power into coequal branches of the national government, and to discern the meanings given to the phrases "to declare war" and "commander-in-chief."

II. RELEVANT PARLIAMENTARY HISTORY

Before any discussion of the Constitutional Convention can be undertaken though, the parliamentary antecedents must be examined, along with the relevant aspects of English political history, since the Framers relied on these to a great extent in drafting the Constitution.[5] For the purpose of this Note, these precedents can be broken into the following three headings: Parliament's exclusive power to tax and make appropriations, Parliament's power to oversee the military, and the royal prerogative as commander in chief.

A. Parliament's power of the purse

Of all the great powers of Parliament, perhaps the oldest and most significant, in terms of its development, is the power of the purse,[6] which includes both the right to tax and to make appropriations. Before Parliament had any authority in the running of the military, its taxing powers were at least theoretically established. In 1297, Edward I, in the Confirmation of the Charters, affirmed the exclusive right of Parliament to authorize or refuse taxes.

And for so much as divers people of our realm are in fear, that the aids and tasks which they have given to us beforetime towards our wars and other business, of their own grant and good will, howsoever they were made, might turn to a bondage to them and their heirs, because they might be at another time found in the rolls, and [likewise for] the praises taken throughout the realm by our ministers; we have granted for us and our heirs, that we shall not draw such aids, tasks, nor prises into a custom, for any thing that hath been done heretofore, [be it by roll or any other precedent that may be founden].

Moreover we have granted for us and our heirs as well to archbishops, bishops, abbots, priors, and other folk of holy church, as also to earls, barons, and to all the communality of the land, that for no business from henceforth we shall take such manner of aids, tasks, nor prises, but by the common assent of the realm, and for the common profit thereof, saving the ancient aids and prises due and accustomed.[7]

But the parliamentary appropriations power was far from secure in practice, and not until 1353 did Parliament authorize its first specific appropriation, empowering the King to levy and collect a tax on wool to be used for the King's war.[8] At the same time, Parliament began examining the collector's books,[9] presumably to insure that they knew how much revenue they were granting to the King. This would incidentally ensure that the King was not levying taxes beyond the parliamentary authorization. Although the subsequent Plantaganets did not fully observe the parliamentary right,[10] there was continued theoretical acquiescence in the rule that all taxes had to be confirmed by Parliament.[11] Under succeeding Kings this rule was further consolidated, and in 1407 Commons lay claim to the right of first considering all money bills before Lord.[12] Not until the time of the Stuarts did Parliament secure in practice, the power that it theoretically possessed for over three hundred years.

Parliament's exclusive appropriations power continued unchallenged until the reign of James I, when Parliament's great struggle with the Monarchy began over the power of the purse. As early as 1606, the King had attempted to levy money by raising duties,[13] and thereby entered into a protracted dispute with Commons. During his reign, and that of his son Charles I, this controversy increased, leading to the great Petition of Rights in which it was stated:

. . . it is declared and enacted, that from thenceforth no person shall be compelled to make any loans to the king against his will, . . . your subjects have inherited this freedom that they should not be compelled to contribute to any tax, tallage, aid, or other like charge, not set by common consent in Parliament.[14]

With the arrival of the Civil War [15] and the Protectorate,[16] Parliament's control of taxation was assured, and despite the efforts of the later Stuarts it was not seriously challenged again. In 1665, Parliament specified how tax money was to be spent,[17] and this custom continued from then on. At the same time, military money bills were made annual so the Parliament could keep tight control over any standing army.[18] A further important step was made in 1678, when Parliament so reduced the military appropriation that the King was forced to disband a portion of the army.[19] The next year Parliament voted a special appropriation for the sole purpose of disbanding the army,[20] and thereby imposed a veto on the King's prerogative as commander in chief. In 1688, William and Mary reconfirmed Parliament's power of the purse in the Bill of Rights: [21]

. . . levying money for or to the use of the Crowne by pretence of prerogative without grant of Parlyament for longer time or in other manner then the same is or shall be granted is illegal.

Finally, in 1706 Parliament ruled that only military money bills requested by the Crown would be considered.[22] This is the reverse of the rule in the United States, where any member of the House can initiate an appropriation bill.[23] The change was prompted by the many pay bills petitioned for by military officers, but also served as a royal veto on appropriations.[24] The Framers of the Constitution were therefore accustomed to a system whereby the legislature, through the power of the purse, could check the executive's use of the military by refusing to appropriate the funds needed to carry on a campaign.

B. Parliament's power to control the military

Unlike the power of the purse, Parliament's power to oversee the military was a late development, and was not marked by any clear evolutionary process. As early as 1311, Parliament asserted:

Whereas the king, on account of the many perils that he and his kingdom may incur, ought not to undertake an act of war against any one, or to go out of the kingdom, without the common assent of his baronage, we ordain that henceforth the king shall neither go out of the kingdom nor undertake an act of war against any one without the common assent of his baronage, and that in parliament.[25]

But this seems to have been an unwarranted assumption of the power to declare war by Parliament. Under Edward III, Parliament, either on its own initiative or at the request of the Monarch, advised the King on war and peace,[26] although it does not appear that it claimed any right in this area. Such consultations were continued under the Lancasters, and Parliament was assured, by reason of the Treaty of Troyes, that no negotiations with France would be carried on without its consent.[27] The right to declare war and make peace was never formally vested in Parliament, however, and until the seventeenth century, there seems to have been a general accceptance of the theory that the power to both declare and make war was the King's prerogative.[28]

In 1641, Parliament tried to secure the war-making power by giving control of the standing army to the Earl of Essex, who was under its authority,[29] and when in the next year Charles I refused to give up control of the militia, the Civil War resulted.[30] With the restoration though, the command of the

Footnotes at end of article.

military was returned to the Monarch. 13 Car. II, c. 6 (1664) stated:

[T]he sole supreme government, command and disposition of the militia and of all forces by sea and land and of all forts and places of strength is and by the laws of England ever was the undoubted right of his Majesty and his royal predecessors, Kings and Queens of England, and that both or either of the Houses of Parliament cannot nor ought to pretend to the same.

Thereafter, Parliament's control of the military took the form not of any right to declare or make war or peace, but rather of the authority to levy and maintain a standing army. This was of course different from the de facto control Parliament could exercise through the power of the purse. In the Bill of Rights, this power to authorize an army was accepted in the statement:

. . . the raising or keeping a standing army within the kingdome in time of peace unlesse it be with consent of parlyament is against law.[31]

Later, Parliament's war-making powers were further consolidated when it secured the exclusive right to grant military commissions.[32]

Thus, through the power to make annual appropriations, the power to authorize armies, and the power to grant and remove commissions,[33] Parliament was able to control the military. Also, the rise of the Cabinet Council between 1689 and 1714 [34] and the inclusion therein of the Secretaries of State and War [35] meant that by the time of the American Revolution, Parliament had assumed almost complete practical control over the military, while the King merely retained the theoretical power to declare and make war.

C. The Sovereign's prerogative as Commander in Chief

Of all the royal powers, one of the last significant ones to be lost was the right of the Monarch to be commander in chief of the armed forces. Although the King could not raise armies without Parliament's consent, up to the eighteenth century, once the forces were mustered they were under his sole authority. Both Charles II and William III were careful to retain this power, and, although the former made Monks, and later Monmouth, Captain-Generals, Charles still kept supreme command.[36] This can be ascribed to two main causes: first, a single individual is always better able to control military operations than a large group. This was well demonstrated during the Civil War, and even when the Monarch lost command around 1700, it fell not to Parliament, *per se*, but rather to Marlborough and the Cabinet Councils.[37] Secondly, the Crown had developed a more efficient means of running the military during the Civil War, through the use of Secretaries of State and War who were solely responsible to the King; [38] indeed, the Crown might well have retained its prerogative as commander in chief but for the accident that Anne came to the throne just as the War of the Spanish Succession was beginning.[39] Since neither she nor her husband were competent to lead troops, the command fell to Marlborough, who raised the office of Captain-General to great heights by reason of his military genius.[40] At the same time, the Cabinet was evolving as the central organ of executive power, and Marlborough was a member of it.[41] Likewise, the Secretaries of State became responsible to the Cabinet more and more [42] so that it, rather than the Monarch, exercised the real command. It is interesting to note that Parliament, *per se*, never really commanded the army; instead it was the Cabinet. At the time of the American Revolution, therefore, although the King no longer commanded, control was still vested not in the legislative branch, but rather in the newly formed executive.

Given this background one can easily see why, in the United States, the various military powers were given to different branches of the Government, Congress being vested with the power to make military appropriations and declare war, while the President was vested with the authority to wage the war. It remains to be seen how closely the Framers followed the pattern that had evolved in England during the preceding century.

III. THE CONVENTION

A. Separating the powers of declaring and conducting war

When the Philadelphia Convention convened on Monday, May 14, 1787, the delegates had ostensibly gathered for the purpose of amending the Articles of Confederation,[43] which was deemed to be defective because the States were able to act as autonomous bodies, and the national government was unable to enforce its regulations.[44] Therefore, it was essential that the powers of the national government be altered and enlarged.[45] However, even before the Convention commenced work, the idea of drafting a constitution for a new system of government was being discussed.[46] Under the Articles of Confederation, the only existent organ of national government was the Confederation Congress. [47] Since the Congress exercised all the powers of the national government, there was no need for the Articles of Confederation to distinguish between executive and legislative powers.[48] But because this was the major failing of the Articles, the first task undertaken by the Convention was to segregate the different powers of government into three coequal branches [49] and change the form of government at its very roots. With the existence of coequal branches, the Convention separated the power to declare war from the power to conduct war, [50] delegating the former to the legislation branch and the latter to the executive branch.[51]

On May 29, 1787, William Randolph of the Virginia delegation put forward fifteen resolutions as a basis on which the Convention could frame a new system of government. These resolutions, presented to the Convention during the first meeting held to discuss substantive matters, attempted to separate legislative from executive functions.[52] Randolph's sixth resolution gave the National Legislature the authority "to enjoy the legislative rights vested in Congress by the Confederation," [53] while the seventh resolution gave the National Executive the "general authority to execute the national laws," as well as "the executive rights vested in Congress by the Confederation." [54] All fifteen of Randolph's resolutions were referred to the Committee of the Whole.[55]

On June 1, the Convention, sitting as the Committee of the Whole, began deliberations on Randolph's seventh proposition, which delegated to the National Executive the authority to execute the national laws. During the debate as to whether the National Executive should be composed of a single or a multiple magistrate, it was suggested that if the National Executive was composed of a single magistrate, it would not be wise to give him the powers of war and peace, which powers in England were vested in the King.[56] If a single magistrate, being a vigorous executive, had the powers of war and peace, it was feared that he would be an elective monarch.[57] However, Mr. Wilson, in rebuttal to this view, agreed with Mr. Sherman that the only function of the Executive was to execute the laws passed by the Legislature.[58] Thus, even at this early date during the Convention's deliberations, it can be seen that the Founding Fathers were afraid of allowing a vigorous Executive the powers of war and peace, which, in England, meant the power to declare war.[59]

On June 15, William Patterson from New Jersey proposed a plan designed to amend the Articles of Confederation,[60] as an alternative to Randolph's plan, which required the Convention to discard the Articles and formulate a new system of government. The authority of the Executive under Patterson's plan was limited to directing military activities,[61] implying that the Congress would retain the authority to declare war.[62] Three days later, Alexander Hamilton submitted and read, but did not move to adopt, eleven propositions to be substituted for those of Randolph. While Hamilton's fourth article authorized the Executive to direct "war when authorized or begun," his sixth article gave the Senate "the sole power of declaring war." [63] Although the Convention returned to Randolph's propositions as a basis for deliberations when next sitting as the Committee of the Whole [64] and ignored both the Patterson and Hamilton plans, it is important to recognize that both these plans gave only limited military power to the Executive.

On Monday, August 6, John Rutledge of South Carolina delivered the report of the Committee of Detail,[65] a subcommittee of the Committee of the Whole. The report was the first draft of a Constitution that the Convention actually deliberated upon; previously, the only plan that the Convention worked with was Randolph's propositions, the proposals of Pinckney and Hamilton not having been dealt with. This first draft explicitly differentiated between the Executive's military power and the military power of the Legislature,[66] authorizing the Executive to be commander in chief, while authorizing the Legislature to "make" war.[67] On August 17, the Convention amended the seventh article, substituting the word "declare" for "make" in the clause delegating the power to the Legislature "to make war." This substitution was made for definitional purposes.

Mr. Pinckney opposed the vesting this power in the Legislature. Its proceedings were too slow. It would meet but once a year. The House of Representatives would be too numerous for such deliberations. The Senate would be the best depository, being more acquainted with foreign affairs, and most capable of proper resolutions. If the States are equally represented in the Senate, so as to give no advantage to the large States, the power will, notwithstanding, be safe, as the small have their all at stake in such cases as well as the large States. It would be singular for one authority to make war, and another peace.

Mr. Butler. The objections against the Legislature lie in a great degree against the Senate. He was for vesting the power in the President, who will have all the requisite qualities, and will not make war *but when the nation will support it* [emphasis added].

Mr. Madison and Mr. Gerry moved to insert "declare," striking out "make," war [emphasis in original]; leaving to the Executive the power to repel sudden attacks.

Mr. Sherman thought it stood very well. The Executive should be able to repel, and not to commence, war. "Make" is better than declare, the latter narrowing the power too much.

Mr. Gerry never expected to hear, in a republic, a motion to empower the Executive alone to declare war.

Mr. Ellsworth. There is a material difference between the cases of making *war* and making *peace* [emphasis in original]. It should be more easy to get out of war, than into it. War also is a simple and overt declaration, peace attended with intricate and secret negociaations [sic].

Mr. Mason was against giving the power of war to the Executive, because not safely to be

Footnotes at end of article.

trusted with it; or to the Senate, because not so constructed as to be entitled to it. He was for clogging, rather than facilitating *war; but for facilitating peace* [emphasis added]. He preferred *"declare"* to *"make"* [emphasis on original].

On the motion to insert *"declare"* in place of *"make"* it was agreed to . . . [emphasis in original].[68]

This debate makes the point that only the Legislature was intended to commence or declare war.[69] The Executive, as the commander in chief, was given the authority only to "repel sudden attacks," which, by reading Madison's and Gerry's motion together with Sherman's and Gerry's comments, was defined as "making" war. Butler's idea that the Executive would make war only when the nation will support it, and therefore should have the authority to commence a war, was rejected. The Congress as a whole, the branch that Mason recognized to be the truly representative branch of Government,[70] was the only organ of the new national government that would have the authority to involve the nation in a foreign war.

The Executive, however, was not stripped of all military authority.[71] Aside from having the power to repel sudden attacks, the Executive, as commander in chief, was empowered to direct the conduct and execution of war, much as a general or an admiral would do.[72] When the Constitution was finally submitted to the States for ratification,[73] the sections relating to the congressional power to declare war [74] and the executive power as commander in chief [75] appeared as they had been reported by the Committee of Detail on August 6, except for the substitution of "declare" for "make" in what eventually became article I, section 8, clause 11 of the Constitution.

Thus, the constitutional language, when seen in the light of the relevant Convention history, makes clear the nature of the separation of military powers intended by the Framers.

B. The power of the purse

In order to curb the possible expansion of executive military power, and to preserve in Congress the legal authority to commence war, Congress was given the exclusive power to make military appropriations. Although it is true that the general appropriations power was awarded Congress in article I, section 8, clause 1, only the military appropriations power was separated from the general grant and circumscribed by an extremely revealing limitation; article I, section 8, clause 12 places a two-year limitation on the period for which appropriations to raise and support an army may be made.[76]

The existence of a standing army was seen to be such a serious threat to liberty [77] that there were even objections expressed to making the period of review biennially instead of annually, as was the English custom.

To the second clause [allowing military appropriations for a two-year term] Mr. Gerry objected, that it admitted of appropriations to an army for two years, instead of one; for which he could not conceive a reason; that it implied there was to be a standing army, which he inveighed against, as dangerous to liberty—as unnecessary even for so great an extent of country as this—and if necessary, some restriction on the number and duration ought to be provided. Nor was this a proper time for such an innovation. The people would not bear it.

Mr. Sherman remarked, that the appropriations were permitted only, not required to be for two years. As the Legislature is to be biennially elected, it would be inconvenient to require appropriations to be for one year, as there might be no session within the time necessary to renew them. He should himself, he said, like a reasonable restriction on the number and continuance of an army in time of peace.

The second clause was then agreed to . . .[78]

It is important to note that the two-year limitation on military appropriations was not meant to require the Congress to replenish the military fund.[79] Congress is empowered to permit military appropriations to expire at the end of a given period, and their judgment is not subject to executive review.[80] Thus, by exercising the power of the purse, which the Framers intended to be an effective check on a vigorous Executive,[81] the Congress can diminish or deny military appropriations and constitutionally do away with the Executive's power of the sword.

IV. CONCLUSION

With the English parliamentary experience in focus, the nature of the separation of the war-making powers between the President and Congress becomes more understandable. The Congress was vested with the authority to commence war,[82] as well as the power to continue the war or make the peace. With the exception of a situation permitting the Executive to repel a sudden attack,[83] the President was given authority only to prosecute conflicts initiated by Congress.[84]

Because of the importance of a decision to enter into a war, the Framers felt it critical to have the people unified behind that purpose. The best way to ensure the presence of that consensus was to vest the power to declare war in the most representative branch, the Congress.[85] On the other hand, a vigorous Executive with broad military powers was seen to pose a threat to individual liberty,[86] and to vest that Executive with the power to initiate war would reduce the likelihood that his judgment would represent the unified purpose of the people.

To ensure the separation of military power as envisioned,[87] Congress was vested with the power of the purse.[88] Further, to require close scrutiny of executive military power and to reduce the threat that a standing army posed to individual liberty, Congress was empowered to make military appropriations only for two-year periods.[89] Thus, the precise nature of the separation of powers was effected largely in response to the fears of the Framers, fears that have materialized in the minds of many today.

[5] No one familiar with the common law of England can read the Constitution of the United States without observing the great desire of the Convention which framed that instrument to make it conform as far as possible with that law. One would suppose that the leaders of a revolutionary movement of eight years' duration or more, the purpose of which was to emancipate the newly formed States from the dominion of Great Britain, would have come out of that struggle with resentments arising from a sense of injury at the hands of that government which would have created a prejudice against its laws and their system of administration. On the contrary, it seems obvious from the instrument, which they produced as the fundamental and organic law of a new government for a new country, that their attachment for the old laws and even for the old general form of political government remained almost unaffected.

[43] "[Y]our Commissioners, with the most respectful deference, beg leave to suggest their unanimous conviction, that it may essentially tend to advance the interests of the Union, if the States by whom they have been respectively delegated would themselves concur, and use their endeavors to procure the concurrence of the other States, . . . to devise such further provisions as shall appear to them necessary to render the constitution of the Federal Government adequate to the exigencies of the Union. . . ." Hamilton's recommendation drafted at the close of the Annapolis Convention in 1786, quoted in 2 The Madison Papers 702–03 (1840). On May

30, 1787, the day after William Randolph of Virginia had put forth fifteen Resolutions for a new government, "General Pinckney expressed a doubt whether the act of Congress recommending the Convention, or the commissions of the Deputies to it, would authorize a discussion of a system founded on different principles from the Federal Constitution." 2 The Madison Papers 748 (1840).

[44] "[T]he radical infirmity of the 'Articles of Confederation' was the dependence of Congress on the voluntary and simultaneous compliance with its requisitions by so many independent communities, each consulting more or less its particular interests and convenience, and distrusting the compliance of the others." 2 The Madison Papers 692 (1840).

[45] Virginia was the first state to respond to Hamilton's recommendation, and passed a statute delegating authority to her deputies to join with the deputies of the other states to devise and discuss " 'all such alterations and farther provisions, as may be necessary to render the Federal Constitution adequate to the exigencies of the Union . . . .' " Id. at 706. See also id. at 703–07.

[46] "In the winter of 1784–5, Noah Webster, whose political and other valuable writings had made him known to the public, proposed, in one of his publications [Sketches of American Policy], 'a new system of government which should act, not on the States, but directly on individuals, and vest in Congress full power to carry its laws into effect.' " 2 The Madison Papers 708 (1840) (footnote omitted). In a letter to Edmund Randolph, James Madison briefly sketched out a plan for a new system of government. Id. at 630–34.

[47] "The one central organ of the newly established government was a congress, which might well have been termed a congress of states . . . . Executive there was none, beyond the committees which the congress might establish to work under its own direction . . . ." M. Farrand, The Framing of the Constitution 3–4 (1913) [hereinafter cited as M. Farrand]. See also The Articles of Confederation, in id. at 211–24.

[48] See, e.g., Articles of Confederation art. IX, para. 4, in M. Farrand 219, which gave the "united states in congress assembled" the authority to make "rules for the government and regulation of the . . . land and naval forces [a legislative function], and directing their operations [an executive function]."

[49] "Some of the more superficial observers were inclined to ascribe the difficulties of the confederation to the defective organization of the government. Montesquieu, whose writings were taken as political gospel, had shown the absolute necessity of separating the legislative, executive, and judicial powers. There ought, therefore, to be a separate executive which should be able to take the initiative when occasion demanded, which should be capable of action in foreign relations. . . ." M. Farrand 49–50. Hamilton, writing in The Federalist No. 71, espoused as one of the advantages of the new Constitution the fact that the partition of the Government was proper, and that the different branches should be independent of each other. The Federalist and Other Constitutional Papers 393–94 (E. Scott ed. 1898) [hereinafter cited as Scott].

[50] See 3 The Madison Papers 1351–52 (1840).

[51] President John Q. Adams believed that the two powers are inherently different in nature. "The respective powers of the President and Congress of the United States, in the case of war with foreign powers, are yet undetermined. Perhaps they can never be defined. The Constitution expressly gives to Congress the power of *declaring* war, and that act can of course never be performed by the President alone. But war is often made without being declared. War is a state in which nations are placed not alone by their own acts, but by the acts of other nations. The *declaration* of war is in its nature a legislative act, but the conduct of war is and must be executive." J. Q. Adams, The Lives of Madison and Monroe 58–59 (1850) (emphasis in original). Compare with the Articles of Confederation, which placed both powers under the auspices of the Confederation Congress. "No state shall engage in any war without the consent of the united states in congress assembled, unless such state be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such state . . . till the united states in congress assembled can be consulted: nor shall any state grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the united states in congress assembled, and then only against the kingdom or state and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the united states in congress assembled . . . ." Articles of Confederation art. VI, para. 5, quoted in M. Farrand 215. "The united states in congress assembled, shall have the sole and exclusive right and power of determining on peace and war . . . ." Articles of Confederation art. IX, para. 1, quoted in id. at 216.

[52] 2 The Madison Papers 732, 733 (1840).

[53] Id. at 732.

[54] Id. at 733. It should be pointed out that executive functions are concerned with carrying out a rule or regulation to its full extent, as opposed to promulgating that rule or regulation, which is essentially a legislative function.

[55] A Committee of the Whole is a committee composed of all the members of an organization, usually a legislative body, which operates under flexible and informal rules, addressing itself to certain specific questions.

Shortly after Randolph submitted his resolution, Charles Pinckney of South Carolina put before the Convention a draft of a constitution that he had prepared, but he did not refer it to the Committee of the Whole. Although this draft was not referred to again, there is similarity between it and the Constitution as finally drafted by the Convention. Compare Pinckney's draft, 2 The Madison Papers 735–46 (1840), with the Constitution as submitted by the Convention to the States for ratification, 3 The Madison Papers 1605–22 (1840).

The sixth article of Pinckney's Constitution gave power to the National Legislature to raise armies and a fleet; the seventh article gave the Senate the "sole and exclusive power to declare war"; the eighth article set out the authority and powers of a National Executive. The National Executive was given the duty to "take care that the laws of the United States be duly executed. . . . He shall be Commander-in-Chief of the army and navy of the United States, and of the militia of the several States. . . ." 2 The Madison Papers 740, 742–43 (1840).

[56] See p. 8 supra. See also Wilson's remarks, 2 The Madison Papers 763 (1840).

[57] See 2 Madison Papers 762–63 (1840): "Mr. Pinckney was for a vigorous Executive, but was afraid the executive powers of the existing Congress might extend to peace and war, &c.; which would render the Executive a monarchy of the worst kind, to wit, an elective one.

"Mr. Wilson moved that the Executive consist of a single person. Mr. C. Pinckney seconded the motion . . . .

" . . . .

"Mr. Rutledge . . . was for vesting the executive power in a single person, though he was not for giving him the power of war and peace. A single man would feel the greatest responsibility, and administer the public affairs best.

"Mr. Sherman said, he considered the executive magistracy as nothing more than an institution for carrying the will of the legislature into effect . . . .

"Mr. Wilson preferred a single magistrate, as giving most energy, dispatch and responsibility to the office. He did not consider the prerogatives of the British monarch as a proper guide in defining the executive powers. Some of these prerogatives were of a legislative nature; among others, that of war and peace, &c. The only powers he considered strictly executive were those of executing the laws . . . ."

[58] Id.

[59] See note 56 supra; The Federalist No. 69 (A. Hamilton), in Scott 379.

[60] See 2 The Madison Papers 863 (1840).

[61] Resolution No. 4 stated, inter alia, that the Executive was "to direct all military operations; provided, that none of the persons composing the Federal Executive shall, on any occasion, take command of any troops, so as personally to conduct any military enterprise, as General, or in any other capacity." Id. at 865.

[62] Article IX of the Articles of Confederation gave the Confederation Congress "the sole and exclusive right and power of determining on peace and war . . . ." M. Farrand 216.

[64] Id. at 904.

[65] Id. at 1226.

[66] Compare the tenth article of this Constitution, which made the Executive the "Commander-in-chief of the army and navy of the United States, and of the militia of the several States," with the seventh article, which authorized the legislature to make war; to raise armies; to build and equip fleets; and to call the forth the aid of the militia. Id. at 1237, 1233.

[67] Id.

[68] 3 The Madison Papers 1351–52 (1840).

[69] "[T]hat it is the peculiar and exclusive province of Congress, *when the nation is at peace* to change that state into a state of war; whether from calculations of policy or from provocations, or injuries received; in other words, it belongs to Congress only, *to go to war*. But when a foreign nation declares, or openly and avowedly makes war upon the United States, they are then by the very fact *already at war*, and any declaration on the part of Congress is nugatory; it is at least unnecessary." Works (A. Hamilton ed.), VII, 745–48 (1801), quoted in E. Corwin, The President: Office and Powers, 1787–1957, at 199 (4th rev. ed. 1957) (emphasis in original) (footnote omitted).

[70] See Mason's reasons for refusing to give the power of commencing war to either the Executive or to the Senate. However, the Virginia delegation with Mason a member thereof voted in favor of authorizing the legislature as a whole to declare war. 3 The Madison Papers 1352–53 (1840).

[71] "Additional testimony as to the purely military significance originally attached to the clause is afforded by Story's statement in his *Commentaries*, written nearly half a century later, that the only objection leveled against it in the states' ratifying conventions was that 'it would be dangerous to let him [the President] [sic] command in person.' 'The propriety,' Story adds, 'of admitting the President to be Commander-in-Chief, so far as to give orders and have a general superintendency, was admitted.' " E. Corwin, supra note 69, at 228 (footnote omitted). The President's "duty and . . . power are purely military. As commander-in-chief, he is authorized to direct the movements of the naval and military forces placed by law at his command, and to employ them in the manner he may deem most effectual to harass and conquer and subdue the enemy." Fleming v. Page, 50 U.S. (9 How.) 603, 615 (1850).

[72] "The President is to be Commander-in-chief of the army and navy of the United States. In this respect his authority would be nominally the same with that of the King of Great Britain, but in substance much in-

ferior to it. It would amount to nothing more than the supreme command and direction of the military and naval forces, as first general and admiral of the Confederacy; while that of the British king extends to the *declaring* of war, and to the *raising* and *regulating* of fleets and armies; all which, by the Constitution under consideration, would appertain to the Legislature." The Federalist No. 49 (A. Hamilton), quoted in Scott 379 (emphasis in original) (footnote omitted). "Of all the cares or concerns of government, the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand. The direction of war, implies the direction of the common strength; and the power of directing and employing the common strength, forms an usual and essential part in the definition of the Executive authority." The Federalist No. 74 (A. Hamilton), in id. at 407.

[73] The Convention submitted its final draft and adjourned on September 17, 1787. 3 The Madison Papers 1624 (1840).

[74] U.S. Const. art. I, § 8, cl. 11.

[75] U.S. Const. art. II, § 2, cl. 1.

[76] "The Congress shall have power . . . to raise and support armies, but no appropriation of money to that use shall be for a longer term than two years . . . ." U.S. Const. art. I, § 8, cl. 12.

[77] "The military should, however, be regarded with a watchful eye; for it is a profession that is liable to dangerous pervision. But the powers vested in the federal government do not go the length which has been said. A standing army is not granted or intended, for there can be no provision for its continuing three years, much less for its permanent establishment. Two years are the utmost time for which money can be given. It will be under all the restrictions which wisdom and jealously can suggest, and the original grant of the supplies must be made by the House of representatives, the immediate delegates of the people." T. Coxe, An Examination (1788), in Scott 769.

[78] 3 The Madison Papers 1495 (1840).

[79] "The Legislature of the United States will be *obliged*, by this provision, once at least in every two years, to deliberate upon the propriety of keeping a military force on foot; to come to a new resolution on the point; and to declare their sense of the matter by a formal vote in the face of their constituents." The Federalist No. 26 (A. Hamilton), quoted in Scott 143 (emphasis in original). Cf. id.: "They [the Congress] are not *at liberty* to vest in the Executive department, permanent funds for the support of an army; if they were even incautious enough to be willing to repose in it so improper a confidence." (emphasis in original).

[80] Mr. Dawes, speaking in the Massachusetts Legislature, espousing ratification of the Constitution stated: "The army must expire of itself in two years after it shall be raised, unless renewed by representatives, who at that time will have just come fresh from the body of the people. It will share the same fate as that of a temporary law, which dies at the time mentioned in the act itself, unless revived by some future legislature." 1 The Debates, Resolutions, and other Proceedings, in Convention, on the Adoption of the Federal Constitution 109 (J. Elliot ed. 1827).

[81] The delegates to the Convention recognized that Congress had the power of the purse, especially as related to war. See, e.g., Wilson's views, 3 The Madison Papers 1309 (1840).

[82] "The grant of the war making power to the Legislature constituted an innovation in Government. In all other countries that power had been vested in the Executive." C. Warren, The Making of the Constitution 480–81 (1928) [hereinafter cited as Warren].

[83] See Madison's and Gerry's view of what is meant by allowing the commander in chief to "make" war, in 3 The Madison Papers 1352 (1840).

[84] See C. Stevens, supra note 5, at 162–64: "In time of war, he [the President] has all the powers recognized by the laws and usages of war. The right to declare war being confined to Congress, he can only proclaim it when Congress has acted."

[85] See Senator Sumner's remarks, Cong. Globe, 37th Cong., 2d Sess. 2188–93 (June 27, 1862), quoted in E. Corwin, supra note 69, at 232–33: "The government of the United States appears most completely in an Act of Congress. Therefore war is declared, armies are raised, rules concerning captures are made, and all articles of war regulating the conduct of war are established by Act of Congress. It is by Act of Congress that the War Powers are all put in motion. When once in motion, the President must execute them. But he is only the instrument of Congress, under the Constitution."

[86] "Jefferson wrote to Madison, Sept. 6, 1789: 'We have already given, in example, one effectual check to the dog of war, by transferring the power of letting him loose from the Executive to the Legislative body, from those who are to spend to those who are to pay." Warren 481 B 1.

[87] See 2 The Madison Papers 763 (1840), where James Wilson refers to the British King's prerogative of war and peace as being "of a legislative nature." See also J.Q. Adams, supra note 51, at 58–5 (1850) ("[t]he *declaration* of war is in its nature a legislative act, but the conduct of war is and must be executive"); Col. Mason's comment, June 6, 1787, in 2 The Madison Papers 811 (1840) ("[t]he purse and the sword ought never to get into the same hands whether legislative or executive").

[88] U.S. Const. art. I, § 8, cl. 1.

[89] U.S. Const. art. I, § 8, cl. 12.

Mr. McGOVERN. Mr. President, there is a second article written by Henry Monaghan, which deals with the President's warmaking powers under the Constitution, and I ask unanimous consent to have that article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL WAR-MAKING

(By Henry P. Monaghan*)

The Vietnam "war" has convinced many persons that the president of the United States claims apparently unlimited power to commit this country to war. Not surprisingly, therefore, considerable interest has focused on the powers that inhere in the presidency. And many critics of the war—those who in other times and in other contexts might have been sympathetic to a spacious conception of presidential power—have concluded that the Vietnam conflict is not only a tragic error, but is the direct result of unconstitutional conduct by the president. I cannot accept this view; at bottom, it seems to me yet another example of the American propensity to substitute "for the question of the beneficial *use* of the powers of government . . . the question of their *existence*."[1] In view of what has already been written,[2] I shall confine myself to the considerations that impress me as controlling. Since my concern is with the constitutional relationship between the president and congress, I shall give no consideration to the consistency of the president's action with American treaty obligations or with international law generally.[3]

I

If one examines the text of the constitution, he is at once struck by the differences between the powers conferred upon congress by article I and those given to the president by article II. The great powers that one identifies with the national government are conferred upon congress: the powers to tax and to spend, to regulate commerce, to raise armies and navies, and to declare war.[4] By contrast, the textual powers conferred upon the president are both few and of uncertain dimension. Some are plainly of a trivial character.[5] The few more open-ended clauses upon which "strong" presidents have based their authority are as follows:

Section 1. The executive Power shall be vested in a President of the United States of America. . . .

Section 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of a Militia of the several States, when called into the actual Service of the United States; . . .

He shall have power, by and with the Advice and Consent of the Senate, to make Treaties, providing two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls. . . .

Section 3. [H]e shall take Care that the Laws be faithfully executed . . .[6]

But, textually, none of these powers need be read as a significantly independent, substantive power. For example, the grant of the "executive power" in section 1 can be understood simply as creating a unitary executive department that, in turn, will possess the powers subsequently enumerated in sections 2 and 3.[7] The power to receive ambassadors might mean no more than that, as the nation's symbolic head, the president has a ministerial, non-discretionary duty to receive foreign representatives. The president's power as commander in chief, so heavily relied upon by modern presidents, could be read only as constituting the president, in Hamilton's phrase, "the first general and admiral of the confederacy,"[8] and not as an independent authority for making decisions that, in turn, require use of the armed forces to back them up.[9] Finally, the "take care" clause could be taken as simply declaratory of a presidential obligation to enforce existing congressional policy. Not surprisingly, therefore, the presidency was not originally viewed as a great office. The dominant mood was that of legislative prerogative.

But the measure of presidential power cannot be gleaned simply from the words of article II alone, nor from references by eighteenth century statesmen as to the appropriate distribution of legislative and executive power. For reasons that are beyond the scope of this paper to examine, there has been a vast accretion of power in the presidency, particularly in this century.[10] Moreover, there has been a sharp decline in congressional power. The amount of political power in any society is not a fixed, determinate sum; it can expand or contract as a society changes. Accordingly, congressional as well as presidential power could have significantly increased as American society and the entire world became more complicated and interdependent. It did not do so largely because of congress' increasing inability to deal with national and international problems.[11] "Presidential government" has, therefore, emerged as the dominant aspect of modern American political life;[12] it is to the presidency, not congress, that we look for realization of the aspirations of a "great society."

I doubt whether the emergence of presidential government is a process capable of significant reversal; an apparently universal characteristic of twentieth century government has been the growth of "executive" power and the relative decline of the legislative process. Whether this result is desirable is, of course, an issue of major contemporary importance.[13] Whether it "defeats" the framers' intention is, however, a profitless speculation.[14] We do not and cannot know,

Footnotes at end of article.

what, specifically, they would have thought about a world so different from their own. Nor would we really care.[15] The central fact is that the framers left us with a structure of government sufficiently fluid to accommodate a good deal of shifting power between congress and the president. The relative balance of power between the branches has varied over the course of our history. But the long era of "congressional government,"[16] which extended from the civil war to the end of the nineteenth century, has now given way to an era of presidential dominance.

By and large the broad expansion of presidential power has occurred as a result of large, open-ended legislative grants from congress itself. At least with respect to internal matters, presidents have seldom been forced to rely upon any claim of "inherent" presidential powers.[17] However, appeals to this source have not been lacking. Pointing to the grant of the executive power, as well as the "commander-in-chief" and the "take care" clauses, "strong" presidents have always asserted the power to act in the absence of statute where there was an emergency. And despite the loose manner in which the case is sometimes read, the *Steel Seizure* case[18] fully supports their claim. There, the secretary of commerce, acting under the direction of the president, seized the steel mills during the height of the Korean conflict in order to prevent interruption of vital supports for the war effort. A lower court injunction against the seizure was affirmed in the supreme court by a six-to-three vote. To be sure, in his brief "opinion for the court" Mr. Justice Black rejected the proposition that the president could act without congressional authorization;[19] in so doing, he ignored innumerable instances to the contrary, as the dissenting opinion convincingly demonstrated.[20] More importantly Mr. Justice Black spoke only for himself and Mr. Justice Douglas. Four concurring and three dissenting justices—seven of the nine members of the court—either reserved judgment on the issue or expressly recognized that the president had inherent power to act in an emergency so long as he did not contravene a specific congressional mandate. Analysis of the opinions shows that the real division within the court was over the far narrower issue of whether the president's act did in fact contravene existing federal statutes.[21]

I seems to me indefensible to assert that even on internal matters the president must invaribly point to a statute to justify his conduct. Should an emergency arise, the president must and will act so as to protect the nations interest as he conceives it. To require the existance of a statute would leave an enormous gap in the nation's power to meet an emergency, a doctrine not likely to commend itself to men of affairs. And I would add that the existance of an emergency is larely a political not a judicial question. If the president abuses that power, the only recourse is subsequent congressional action and, ultimately, the displeasure of the electorate.

As it does with respect to internal matters, the constitutional text assigns broad powers to congress in the area of foreign affairs: congress is given power to regulate commerce with foreign nations; to define and punish offenses against the law of nations; to declare war, to advise and consent to treaties (the senate); to raise and support the army and navy; and finally, it has control over the purse strings.[23] The president is also expressly vested with some powers bearing on foreign relations, principally the power to make treaties (with the advice and consent of the senate) and the power to receive foreign envoys.[24] More importantly, from the beginning the Hamiltonian contention[25] that the president possessed broad "inherent" powers in representing the nation in our foreign relations gained considerable currency. Thus Marshall could refer to the president as "the sole organ of the nation in its external relations, and its sole representative with foreign nations.[26] By 1935 the supreme court, undoubtedly influenced by the long and steady growth of presidential activity, characterized the presidential prerogative to conduct foreign affairs as "delicate, plenary and exclusive."[27]

Not surprisingly, therefore, most writers recognize that the respective ambits of congressional and executive powers in controlling the direction of American policy cannot be resolved simply by an appeal to the constitutional text. That document "is remarkably inexact concerning the distribution of responsibilities . . . for the making of foreign policy";[28] it seems to permit the exercise of considerable power over this subject matter in both branches.[29] Writing in 1957, Professor Corwin accurately summarized the situation:

"[C]onsidered only for its affirmative grants of powers capable of affecting the issue, [the constitution] is an invitation to struggle for the privilege of directing American foreign policy. In such a struggle the President has, it is true, certain great advantages, which are pointed out by Jay in *The Federalist:* the *unity* of the office, its capacity for *secrecy* and *dispatch*, and its superior sources of *information;* to which should be added the fact that it is always on hand and ready for action, whereas the houses of Congress are in adjournment much of the time. But despite all this, actual *practice* under the Constitution has shown that, while the President is usually in a position to *propose*, the Senate and Congress are often in a technical position at least to *dispose*. The verdict of history, in short, is that the power to determine the substantive content of American foreign policy is a *divided* power, with the lion's share falling usually, though by no means always, to the President."[30]

Accordingly, even if one were inclined to accept Mr. Justice Black's view that presidential action within the United States must be grounded in a statute, there is no basis for applying such a rigid concept of separation of powers past our shorelines.

The general view for which I have been contending is that analysis of the doctrine of separation of powers should focus more on a recognition that often what is being separated are institutions and not necessarily "powers."[31] To some degree these institutions have unique powers; one would not expect the president to promulgate an income tax code merely because in his judgment congress should have done so. But there are gray areas where joint power exists—where both branches have tremendous and overlapping power and where any "conflict" must be resolved on the political not the legal level.[32] This seems to me indisputably true in the area of foreign affairs. And the consequences of this view are of course evident: the existence of the congressional power over the subject of foreign affairs will not support a narrow definition of presidential power. Absent congressional action, the president has (to use a conclusory term) "inherent" constitutional power in the conduct of our foreign affairs. *It is, therefore, an error of considerable significance to adopt uncritically an "either-or" logic—to assume that the doctrine of separation of powers requires that power must be either in, and only in, congress or in the president.* Such a rigid, mechanical view has never accurately described the relationship between congress and the presidency even with respect to internal affairs; it is wholly insupportable in the area of foreign affairs. The fact is that power may inhere in both branches.

Necessity, of course, requires that the president have the major responsibility for day-to-day conduct of foreign affairs. Coupled with the institutional weakness of congress[33] this fact gives modern presidents tremendous leverage in any struggle with congress for control over the direction of American foreign policy. A determined president can confront congress with a *fait accompli;* nonetheless, congress is under no constitutional compulsion to back it up.[34] Thus, while it lacks the institutional capacity to play a sustained affirmative role in shaping American foreign policy, a sufficiently determined congress[35] can exercise considerable direction over at least specific aspects of that policy.

It is, I submit, with the foregoing general considerations in mind that one should commence any assessment of presidential power to commit the armed forces to hostilities without prior congressional authorization.

II

The occasions on which presidents have refused to take military action abroad because of a lack of prior congressional authorization are few in number and increasingly rare.[36] From the beginning of our constitutional history, presidents have both deployed the armed forces abroad and committed them to actual hostilities without explicit congressional authorization. In excess of one hundred and twenty instances of such action exist.[37] The precedents extend back to Washington and include that great "strict constructionist" Jefferson; they run through the nineteenth century;[38] and with the emergence of the United States as a global power in this century, they become sharper and more spectacular. The presidencies of the two Roosevelts provide classic examples.[39] Moreover, no recent president has refused to commit the armed forces to actual hostilities because of a lack of congressional approval, as the conduct of Truman in Korea, Johnson in the Dominican Republic, and Kennedy, Johnson and Nixon in Southeast Asia demonstrate.[40] Thus, argues the state department, "practice and precedent have confirmed the constitutional authority of the president to commit the armed forces to battle without a declaration of war."[41]

The strength of the "practice and precedent" has, however, not gone unchallenged. Most writers who seek constitutionally based restrictions on the president's war-making power argue that the precedents are not compelling.[42] Indeed, it has been suggested that there is only one prior illustration of presidential commitment of armed forces to war without congressional authorization, namely, Korea.[43] The other instances cited, it is argued, were simply presidential responses to reprisals, or "relatively minor and short-lived occurrences [that] do not establish precedent for the massive and long-lasting [Vietnam] war . . .":[44] "minor" and "short-lived" from whose point of view? Certainly not from the perspective of those against whom the armed forces were employed; and certainly not from the presidents' view, since they generally brought about the results intended. To dismiss American interventions in Latin America as "minor" amounts to recognition of presidential power to wage war against weak opponents for limited purposes.

The validity of each of the precedents relied upon by the state department need not be separately defended. Taken as a whole, they seem to me to add up to the following: with ever-increasing frequency, presidents have employed that amount of force that they deemed necessary to accomplish their foreign policy objectives. When little force was needed (*e.g.,* in our incursions in Latin America), little was used; when larger commitments were necesary, they too were forthcoming. Whatever the intention of the framers, the military machine has become simply an instrument for the achievement of foreign policy goals,[45] which, in turn, have become

Footnotes at end of article.

a central responsibility of the presidency. Congress has seldom objected on legal grounds,[46] and so the only limitation upon presidential power has been that imposed by political considerations. That is the teaching of our history.

To be sure, various legal theories have been advanced in defense of presidential power. In good lawyer-like fashion these theories have been framed in terms no broader than necessary to justify the particular presidential action at issue.[47] For example, in the late nineteenth century, American troop interventions in Latin America were rationalized in terms of "inherent" presidential power "neutrality" to protect the rights of American citizens abroad during foreign disorders—a fiction that did not survive the turn of the century.[48] Since presidential use of armed forces abroad has assumed considerably enlarged dimension in this century, it is hardly surprisng that the supporting rationales have been constantly broadened and adjusted.[49] The rationales have, in a word, followed the practice.

Despite the foregoing history, most contemporary writers, deeply distressed by the Vietnam war, have insisted that presidential power over foreign affairs does not embrace the power to "make" war. And, they argue, committing the armed forces to hostilities on the scale that has occurred in Vietnam is "making" war. These writers argue that the decision to make war has such obviously far-reaching consequences that the framers wisely required that it must be made by a broadly representative body, namely, congress.[50] So stated, the argument has considerable appeal; nonetheless, I do not believe that it can provide an acceptable basis for developing constitutionally based restrictions upon use of military force as an instrument of presidential foreign policy.

All the commentators agree that the president has some "inherent" power to commit the armed forces to hostilities where necessary to repel "sudden attacks." And few, if any, would restrict that power to one of repelling attacks on American soil—thereby ignoring attacks on Canada and (in a highly interdependent world) attacks on NATO countries. Generally speaking, the commentators recognize that a president can take action with respect to any "sudden attack" where American interests are at stake.[51]

In its most rudimentary form, the "sudden attack" theory suggests a line between defensive and aggressive action. The president may take only that action necessary to defend American interests; he cannot go further and engage in the "aggressive" use of military force.[52] So conceived, the sudden attack theory has little to recommend it. A line between defensive and aggressive action might have been workable in the era of Jefferson and Madison; the vast expanse of two oceans and generally poor communications permitted some content to such a distinction. But that distinction can have little meaning for the president of a great global power in a highly complex and interdependent world. Modern presidents are faced with endless "emergencies" of varying duration and intensity, and the military apparatus has become an important instrument of their foreign policy. Given the evolution of the presidency, it is hardly surprising that in the twentieth century the presidential power to repel sudden attacks has "developed into an undefined power . . . to employ without Congressional authorization the armed forces in the protection of American rights and interest broad whenever necessary." [53]

Rejecting a narrow version of the "sudden attack" theory, several writers seek to articulate constitutional limitations on presidential war-making in terms of the president's opportunity to consult with congress.[54] Where an "emergency" precludes an opportunity to consult with congress the president may commit the armed forces to hostilities to the extent he deems necessary. A narrow definition of "emergency" could make this theory substantially equivalent to the sudden attack theory; but emergency can be conceived more generously so as to include any situation in which the president could conclude that quick, decisive use of force is necessary.[55] The important point of the theory is that the president must seek congressional authorization at the first available opportunity.

There are, however, differences among these writers who hold to this "congressional approval" theory. Some commentators apparently assume that any "major" foreign deployment of the armed services under circumstances that might constitute an act of war under international law should have congressional approval.[56] Others assert that only the actual commitment of the armed forces to hostilities requires congressional approval.[57] In turn, some writers believe that any commitment of the armed forces to battle requires approval; [58] others apparently assume that only "massive," "major" or "prolonged" use of the military requires congressional action.[59] The former position is at least clear; as previously indicated, the latter position amounts to a concession that the president is authorized to wage "quick" wars against weak opponents for limited objectives.

To ask, if possible, that the president obtain authorization from Congress before making any (major?) commitment of the armed forces to hostilities may represent desirable policy. That judgment depends largely on one's assessment of the respective institutional competence of Congress and the president.[60] But the central issue is whether such authorization is constitutionally required. To my mind, there are several objections to asserting that the proposed rule is of constitutional magnitude: (1) it is too uncertain in what it demands; (2) history has legitimated the practice of presidential war-making; and (3) the proposed rule stems from an unrealistic model of separation of powers.

First. It is unclear precisely what the ambit of any supposed congressional prerogative is. Can the president continue to act if Congress is too divided to act clearly either in support of or in opposiiton to the president's action? And what precisely is the president to ask of Congress? One commentator would apparently require a declaration of war or of "limited war." [61] These are drastic steps, which could have serious and damaging consequences both in our foreign relations [62] and internally.[63] But if Congress can authorize presidential action without such a declaration,[64] what is the textual basis of that power? And at what frequency or under what conditions must congressional approval be re-obtained?

Moreover, has Congress approved presidential action in Vietnam, either in the sweeping Gulf of Tonkin resolution or by implication in its monetary authorization bills? [65] If not, what further kind of congressional action is needed? [66] In any event, can it fairly be denied that, at least until recently, Congress has in fact overwhelmingly supported presidential policy in Vietnam? If such an informal consensus existed, is that sufficient "authorization"? In this regard it will not do to say that Congress has not approved presidential policy in Vietnam because its "choice" has been restricted by a presidential *fait accompli*. In view of the president's operational responsibility for foreign affairs and its own lack of institutional competence to play a sustained affirmative role, Congress necessarily must always act after the fact. Accordingly, Congress' function is essentially to check and disapprove presidential policy.[67] In Vietnam, United States involvement has been by way of slow, steady escalation in commitment; any *fait accompli* has occurred only over a considerable period of time. Congress has had considerable time to reverse the direction of presidential policy; until the Cambodian incident, it has made no serious effort to do so.

Second. In varying degrees the commentators present us with visibly strained efforts to minimize the long and ever-accumulating practice of presidential "war-making," if one prefers that term. For better or worse that practice seems to me clearly established, as I have indicated. To my mind, this historical development of our institutions has settled the legitimacy of "inherent" presidential power to commit the armed forces to hostilities. A practice so deeply embedded in our governmental structure should be treated as decisive of the constitutional issue. History and practice are not here being appealed to in order to freeze forever the scope of a constitutional guarantee framed in terms of individual liberty; [68] rather, this issue deals with the distribution of political power between the legislative and executive branches. Matters of this character are, in the words of Chief Justice Marshall, best left "to the practice of government." [69]

Third. The writers who advocate constitutionally based restraints on presidential war-making expend little effort on developing any comprehensive, realistic theory of the contemporary meaning of separation of powers. Much of their discussion seems to me premised on an eighteenth century model of the relationship between the legislative and executive branches. Not surprisingly, therefore, they do not come to grips with the evolution of our governmental practice, particularly the essentially fluid nature of the division between legislative and executive power in the area of foreign affairs, and the fact that, over time, the military machine has simply become an instrument for achieving presidential foreign policy objectives. Moreover, the danger of any all-out conflict between the executive and legislative branches is measurably reduced by the fact that the political parties cut across both institutions. Accordingly, as head of his party, the president can generally find strong support for his prerogatives inside congress itself.[70] In sum, therefore, these commentators' conception of separation of powers does not and cannot describe existing political reality.

Like federalism,[71] the doctrine of separation of powers should, at least in the area of foreign affairs, be viewed as essentially a political, not a legal, contract. The precise balance of power between congress and the president will reflect the dominant political realities of the times. So understanding the doctrine of separation of powers, I am not persuaded that recognition of presidential power to commit the armed forces to hostilities in order to achieve foreign policy objectives is constitutionally inconsistent with the existence of congressional power to declare war, or with any of the other congressional grants over foreign affairs.[72] Such tensions as may exist between the two branches of government occur because of overlapping power, and they must be resolved on the political, not the legal, level.

To my mind, therefore, any attempt to circumscribe on constitutional grounds the president's power to use the armed forces abroad confuses political with constitutional issues.[73] This seems to me all the more apparent when it is recognized that any president can engage in a wide range of conduct (such as severance of diplomatic relations, expulsion of ambassadors, treaty denunciation, etc.), which might easily force this country into war. Those who seek constitutional checks on the president place their trust in false gods. As Professor Burns has observed, the checks inherent in separation of powers do not operate in the making of war or even in the making of foreign policies that could precipitate war—for example, Franklin Roosevelt's instructions to the Navy

Footnotes at end of article.

Department in the months before Pearl Harbor. Yet these are almost irreversible decisions; if the President makes a collossal mistake, there is no institutional safeguard against its consequences. The President is actually checked by Congress only in making those decisions that could indeed be reversed if they turned out badly—for example, in social or economic policy. Thus the President might make a decision on taxes as irresponsible or daft as a decision for a showdown with a foreign power—but on the former matter there would always be a majority of the voters at the next election to repudiate his actions. A presidential course set for war cannot be reversed.

A nuclear holocaust would wipe out all the checks and balances—including the voters. In short, the whole concept of restraints in this area is topsy-turvey—a fact I sometimes reflect on dourly as I sit each fall teaching freshmen about the traditional checks and balances.

Still, the power of the President to make a catastrophic blunder while fatigued or under great stress is not the price we pay for the Presidency. It is the price we pay for living in the kind of world that we do. The only protection possible is the one the White House already affords: a group of men closely related to the President who can restrain him if need be. If power and decision making in the White House are collective, prudence is collective too.[74]

Absent a fundamental re-structuring of our governmental institutions, it seems to me impossible to characterize the president's conduct in Vietnam as unconstitutional, however unwise it may be. The Vietnam war is an instrument of presidential foreign policy. Those opposed to that policy can call upon congress to repudiate it, and congress has ample power to do so. There may be disagreement over the precise action that congress could take. But it seems difficult to deny that congress has the power to refuse to appropriate funds for carrying on the conflict.[75] Whether in that event the president could "requisition" other funds to continue the war need not be considered. No president could survive politically if he is seen acting in lawless defiance of a congressional command to end the war, even if he could escape impeachment. Accordingly, so far as Vietnam is concerned, if congress repudiates the war, it will come to an end.

I should perhaps conclude this summary discussion with a word about the role of the courts. Since the precise relationship between the executive and the legislative branches is a matter for the political process, I can of course see no role for the courts to play. A contention that the president of the United States must defend his decision to commit troops to combat before a federal district judge in Boston, Milwaukee or Seattle strikes me as wholly untenable.[76] I find it impossible to believe that the article III grant of "judicial power" to decide "cases or controversies" includes the power to resolve issues of this magnitude.[77]

HENRY P. MONAGHAN.

FOOTNOTES

*Professor of Law, Boston University; B.A., University of Massachusetts, 1955; L.L.B., Yale, 1958; L.L.M., Harvard, 1960.

[1] Corwin, The Constitution as Instrument and as Symbol, 30 Am. Pol. Sci. Rev. 1071, 1077 (1936) (emphasis in original).

[2] Particularly helpful discussions are found in Note, Congress, The President, and The Power to Commit Forces to Combat, 81 Harv. L., Rev. 1771 (1968) and an earlier symposium, Legality of United States Participation in the Viet Nam Conflict: A Symposium, 75 Yale L.J. 1084 (1966). See also M. Pusey, The Way We Go To War (1969) for a lucid, nontechnical discussion of the relevant historical materials and of the events surrounding our involvement in Vietnam.

Of a more palemical character are F. Wormuth, The Vietnam War: The President versus the Constitution (April 1968) (Occasional Paper: Center for the Study of Democratic Institutions); Malawer, The Vietnam War Under the Constitution: Legal Issues Involved in the United States Military Involvement in Vietnam, 31 U. Pitt. L. Rev. 205 (1969); and Velvel, The War in Viet Nam: Unconstitutional, Justiciable, and Juridictionally Attackable, 16 Kan. L. Rev. 449 (1968).

There has been considerable debate in the senate on the constitutionality of the presidential action. See in particular: (1) Hearings on S. Res. 151 Before the Senate Comm. on Foreign Relations, 90th Cong., 1st Sess. (1967); (2) Senate Comm. on Foreign Relations, National Commitments, S. Rep. No. 797, 90th Cong., 1st Sess. (1967); (3) Senate Comm. on Foreign Relations, National Commitments, S. Rep. No. 129, 91st Cong., 1st Sess. (1969). More recently, the president's action in Cambodia has triggered another round of intense debate, largely in the context of two sets of proposals: Hatfield-McGovern Amendment, S. Amend. 609, 91st Cong., 2d Sess. (1970); Cooper-Church Amendments, S. Amend. 620, 91st Cong., 2d Sess. (1970).

[3] For a general collection of articles on this aspect of the Vietnam conflict see The Vietnam War and International Law (R. Falk. ed. 1968) and see R. Hull & J. Novogrod, Law and Vietnam (1968), most of which is devoted to the nonconstitutional law aspects of Vietnam. While I do not purport to have made a careful analysis of this aspect of the Vietnam conflict, I must say that the efforts to show that United States action in Vietnam violates accepted norms of international law seem quite insubstantial. Accordingly, I have not included any separate consideration on the restraint that accepted rules of international law imposed upon presidential war-making. That, however, is an issue that merits careful consideration.

[4] See U.S. Const. art. I, § 8, cls. 1–18. See also U.S. Const. amend. XIV, § 5.

[5] For example, the president "may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offenses against the United States, except in Cases of Impeachment." U.S. Const. art. II, § 2.

[6] U.S. Const. art. II, §§ 1–3.

[7] See C. Black, Perspectives in Constitutional Law 58 (1963).

[8] The Federalist No. 69 (A. Hamilton). See also Fleming v. Page, 50 U.S. (9 How.) 603, 615 (1850).

[9] Note, supra note 2, at 1775.

[10] This development stems from such diverse factors as the rise of political parties, the advent of mass communications, and the complexity and highly interdependent character of modern life. For particularly helpful discussions of the growth of and the present dimensions of the presidency see J. Burns, Presidential Government (1965); R. Neustadt, Presidential Power: The Politics of Leadership (1960).

[11] Kurland, The Impotence of Reticence, 1968 Duke L.J. 619, 634–36.

[12] Id. at 627–28. Professor Kurland, it should be noted, deeply laments this result.

[13] Increasing concern has been expressed whether, institutionally, the presidency has inadequate information on which grave decisions must be based. G. Reedy, The Twilight of the Presidency 24–29 (1970). Like many writers who are deeply disturbed by the concentration of power in the president, Mr. Reedy shows a preference for a strong senate.

[14] For a brief discussion of the view of the framers see E. Corwin, The President: Office and Powers 1787–1957, at 10–19 (4th rev. ed. 1957). It should be recalled that this discussion took place against a backdrop of the United States and of the world that bears little semblance to our times. Even so, Hamilton vigorously advanced the conception of a strong president.

[15] Missouri V. Holland, 252 U.S. 416, 433 (1920) (Holmes, J.):

[W]hen we are dealing with words that also are a constituent act, like the Constitution of the United States, we must realize that the framers have called into life a being the development of which could not have been foreseen completely by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in the light of our whole experience and not merely in that of what was said a hundred years ago.

[16] J. Burns, supra note 10, at 70–71:

In the deepest sense congressional government was not really government. It was rather brokerage—a place for the adjustment of competing economic interests. The main interest in Congress, Bryce noted, related to the raising and spending of money. And the more the Presidency was drawn into the congressional orbit, the less the Presidency could be a place for the expression and realization of great dreams, programs, and conflicts.

[17] C. Black, supra note 7, at 57:

[W]ithout straining a single provision in the text, Congress might have made the President into a symbolic chef d'état. . . .

[C]ongress, instead of reducing the Executive to a formal status, has by its own laws steadily added to his power; most of the legally warrantable powers of the Presidency today come from statutes.

[18] Youngstown Sheet & Tube Co. v. Sawyer, 343 U.S. 579 (1952).

[19] Id. at 587–88. See also J. Smith & C. Cotter, Powers of the President During Crisis (1960).

[20] Youngstown Sheet & Tube Co. v. Sawyer, 343 U.S. 579, 683–700 (1952).

[21] E.g., Kauper, The Steel Seizure Case: Congress, The President and The Supreme Court, 51 Mich. L. Rev. 141, 178 (1952). I do not mean to suggest that the division on this issue is unimportant. Congress had, after all, not *expressly* forbidden the president to seize the steel mills. See, e.g., C. Black, supra note 7, at 64.

[22] Mr. Justice Black's opinion has been widely criticized. Professor Black characterizes it as "unhistoric and unworkable." C. Black, supra note 7, at 63. "[T]he opinion," says Professor Corwin, "bears all the earmarks of hasty improvisation as well as of strong prepossession, being unquestionably contradicted by a long record of presidential pioneering in territory eventually occupied by Congress." E. Corwin, supra note 14, at 155. See also Corwin, The Steal Seizure Case: A Judicial Brick Without Straw, 53 Colum. L. Rev. 53 (1953); Kauper, supra note 21; Lea, The Steel Case: Presidential Seizure of Private Industry, 47 Nw. U.L. Rev. 289 (1952).

It has, of course, sometimes been suggested that, given a grave enough situation, the president can act *in disregard of a legislative command*. Lincoln put the matter sharply: "Are all the laws but *one* to go unexecuted, and the Government itself to pieces lest that one be violated?" Message to Congress, July 4, 1861 (emphasis in original), quoted in E. Corwin, supra note 14, at 252. See generally E. Corwin, supra note 14, at 228–30, 250–52. Despite the evident appeal in Lincoln's position it is difficult to frame any theory of separation of powers that would permit the president to claim inherent power to disregard congressional commands because he deemed an emergency to exist. Of course, there are techniques by which this issue can be avoided. It seems likely, for example, that existing statutes could generally

be construed in a manner so as not to present any conflict.

[23] U.S. Const. art. I, § 8, cls. 3, 10–14; U.S. Const. art. II, § 2.

[24] U.S. Const. art. II, §§ 2–3.

[25] The respective prerogatives of congress and the president were vigorously debated by Hamilton and Madison. See E. Corwin, supra note 14, at 177–84. Hamilton pressed for a particularly broad construction of presidential power to conduct foreign affairs. See id.

[26] Annals of Cong. 613 (1800).

[27] United States v. Curtis-Wright Export Corp., 299 U.S. 304, 320 (1936). Here, the court accepted the doctrine of "inherent" presidential power over foreign affairs. Id. at 319–20. See generally E. Corwin, supra note 14, at 170–226; G. Schubert. The Presidency in the Courts 101–36 (1957).

[28] L. Koenig, The Presidency and The Crisis 18 (1944).

[29] Professor Black argues, however, that the textual powers of the president to conduct foreign affairs are in fact minimal. Accordingly, he is of the opinion that the constitutional text presupposed congressional supremacy in the area of foreign affairs corresponding to a similar supremacy in internal affairs. C. Black, supra note 7, at 57–59. Professor Kurland is of the same view. Kurland, supra note 11, at 621–23. I tend to agree with this view. Historical necessity has, however, expanded the content of such terms as "executive power" and "commander in chief" and it has given sanction to the Hamiltonian view of "inherent" powers—i.e., to powers not in the constitutional text. See generally authorities cited in note 27 supra.

[30] E. Corwin, supra note 14, at 171 (emphasis in original) (footnote omitted).

[31] R. Neustadt, supra note 10, at 33: "The constitutional convention of 1787 is supposed to have created a government of 'separated powers.' It did nothing of the sort. Rather, it created a government of separated institutions *sharing* powers." (emphasis in original). See also S. Huntington, Political Order in Changing Societies 109–12, 115–21 (1968).

[32] There are numerous areas where clashes between the president and congress are not easily resolvable apart from the play of the political process. For example, there are no clear rules governing the power of the executive to withhold information from congress. Younger, Congressional Investigations and Executive Secrecy: A Study in the Separation of Powers, 20 U. Pitt. L. Rev. 755 (1959). See also the questions arising from the presidents asserted power to "impound" funds voted by congress for expenditures.

[33] The "conclusion is unavoidable that the national legislature, as it now plays its exacting role on the political stage, is remarkably ill-suited to exercise a wise control over the nation's foreign policy." R. Dahl, Congress and Foreign Policy 3 (1950). However, Professor Finer has voiced grave concern about the capacity of one man to respond in a rational manner to constant world crises and has suggested institutional restraints on the presidency. H. Finer, The Presidency: Crisis and Regeneration 198 (1960).

[34] E. Corwin, supra note 14, at 184–93.

[35] "Senate" should in all probability be substituted for "congress." But see J. Clark, The Senate Establishment 15 (1963) ("the Senate has become archaic, outmoded, obsolete as a meaningful democratic institution"). It is, I think, exceedingly difficult to imagine any real role in foreign affairs for the house of representatives.

[36] In recent times President Wilson alone seems to have been troubled by lack of congressional authorization. See Comment. The President, The Congress, and The Power to Declare War, 16 Kan. L. Rev. 82, 85 (1967). Nonetheless, he ordered the bombing of Vera Cruz without congressional authority. Id. at 84. Moreover, with respect to World War I, he took action that, he conceded, was quite likely to draw us into war.

[37] For a valuable collection of instances of such presidential action extending through 1941 see J. Rogers, World Policing and The Constitution 92–123 (1945). See also F. Wormuth, supra note 2, at 6-43; M. Pusey, supra note 2, at 41-114.

[38] Professor Commanger describes the post civil war instances as "so numerous as to be tedious." Commanger, Presidential Power: The Issue Analyzed, N.Y. Times, Jan. 14, 1951 § 6 (Magazine), at 23.

[39] For a detailed discussion of the conduct of Franklin Roosevelt see L. Koenig, supra note 28, 18-66.

[40] It should also be noted that President Eisenhower deployed 14,000 troops in Lebanon without statutory authority, and on the basis of his "inherent" constitutional power. See 104 Cong. Rec. 13, 903-04 (1958) (statement by President Eisenhower). Mention should also be made of President Kennedy's use of the navy in Cuba. See M. Pusey, supra note 2, at 9-10. Fortunately, in neither instance did actual hostilities occur. However, in each case the deployment of the armed forces may actually have constituted an act of war.

[41] U.S. Dept. of State, The Legality of United States Participation in the Defense of Viet Nam, 54 Dep't State Bull. 474, 488 (1966), reprinted in Legality of United States Participation in the Viet Nam Conflict: A Symposium, 75 Yale L.J. 1084, 1085 (1966).

[42] See, e.g., F. Wormuth, supra note 2. Not all the critics agree with this view. For example, Pusey writes that "[i]n recent years, however, the President has been exercising the power to make war with alarming consistency." M. Pusey, supra note 2, at 1.

[43] Malawer, supra note 2, at 224. See also Standard, United States Intervention in Vietnam Is Not Legal, 52 A.B.A.J. 627, 632 (1966). If a full-blown declaration of war is a necessary condition for presidential action, Korea cannot be distinguished by a reference to alleged United States obligations under the United Nations Charter, which is merely a treaty. Only congress, not the senate, can declare war.

[44] Malawer, supra note 2, at 213-14.

[45] Professor Wormuth argues that this radically distorts the intention of the framers. F. Wormuth, supra note 2, at 46. See also id. at 35. In the words of President Buchanan: " 'The executive government of this country in its intercourse with foreign nations is limited to the employment of diplomacy alone. When that fails it can proceed no further. It cannot legitimately resort to force without the direct authority of Congress, except in resisting and repelling hostile attacks.' " Id. at 17, quoting from 5 Messages and Papers of the Presidents, 1789–1908, at 516 (J. Richardson ed. 1908).

[46] L. Koenig, supra note 28, at 46: "Congress seldom has objected to the action of the President, as commander-in-chief, in sending abroad and maintaining the armed forces without its prior concurrence. The instances of objection are important, but the otherwise general consent has tacitly established the rule of practice. . . ."

[47] See Note, supra note 2, at 1776-85 for a discussion of the various theories advanced in support of presidential action.

[48] Id. at 1788-90.

[49] Id. at 1793.

[50] For an exposition of the view of the framers see M. Pusey, supra note 2, at 41–57.

[51] E.g., Velvel, supra note 2, at 453–55.

[52] Professor Malawer seems to assume this view, Malawer, supra note 2, at 223. See also Comment, The President, The Congress and The Power to Declare War, 16 Kan. L. Rev. 82, 94–95 (1967).

[53] Corwin, Who has the Power to Make War, N.Y. Times, July 31, 1949, § 6 (Magaine), at 14. See also R. Hull & J. Novogrod, supra note 3, at 171–72.

[54] E.g., Velvel, supra note 2 ,at 454–55, 499 n. 216; Note, supra note 2, at 1974–98.

[55] Velvel, supra note 2, at 545–55, 499 n. 216; Note, supra note 2, at 1794–98.

[56] Note, supra note 2, at 1798:

[I]nstead of assuming that the President may deploy American forces as he sees fit and only in the exceptional case need he seek congressional approval, the presumption should be that congressional collaboration is the general rule wherever the use of the military is involved, with presidential initiative being reserved for the exceptional case.

[57] Professor Velvel apparently assumes that the President has unlimited constitutional power to deploy the armed forces abroad. Velvel, supra note 2, at 471–72.

[58] Note, supra note 2, at 1797.

[59] M. Pusey, note 2, at 174. Professor Velvel seems concerned only with massive involvements. E.g., Velvel, supra note 2, at 468.

[60] For various views on the degree of institutional competence held by these two branches see notes 33 & 35 supra and authorities cited therein.

[61] Velvel, supra note 2, at 461–62.

[62] Since the end of World War II there have been no formal declarations of war by a nation. See Indochina: The Constitutional Crisis, 116 Cong. Rec. 7117, 7121 n.55 (daily ed. May 13, 1970). This memorandum was prepared by Yale Law School students and signed by Professor Bickel and others.

[63] A formal declaration of war would of course increase the reservoir of internal regulatory power possessed by the national government (if it can be increased over what is already possessed). For a list of legislation that becomes effective on the basis of a formal declaration of war see 116 Cong. Rec. 5122–23 (daily ed. June 3, 1970).

[64] See Note, supra note 2, at 1798: "An excessively wooden concept of what constitutes congressional exercise of its power to declare war would have the effect, not of preserving congressional authority, but of transferring more and more decisions to the more flexible executive branch."

[65] Not surprisingly, those opposed to the war find these actions insufficient. E.g., Malawer, supra note 2, at 227–31; Velvel, supra note 2, at 465–66, 472–79. Indeed, Professor Wormuth finds the Gulf of Tonkin resolution "unconstitutional." F. Wormuth, supra note 2, at 43–53.

[66] Note, supra note 2, at 1798–803 carefully considers this problem.

[67] This seems to me to dispose of arguments of the following character:

It has been argued that congressional inaction and failure to repeal the Tonkin Gulf Resolution give implicit authorization to the Indochinese War. The logical outcome of such an argument is that the President can do whatever he wishes and the Congress has the affirmative duty to try to stop him. This shifts the presumption of the Framers in favor of congressional control over war-making and gives the initial and continued upper hand to the executive.

Indochina: The Constitutional Crisis, supra note 62, at 7119 (footnote omitted). The "presumption" of which these writers talk, if it ever existed, has no modern basis. Significantly, these writers make no effort to relate the alleged presumption to the present allocation of responsibility between Congress and the President in the conduct of foreign affairs.

[68] Compare Harper v. Virginia Bd. of Elections, 383 U.S. 663, 669–70 (1966).

[69] In McCulloch v. Maryland, 17 U.S. (4 Wheat.) 316 (1819), Chief Justice Marshall expressly recognized the importance of the historical practice of the political organs of the government in assessing the meaning of constitutional guarantees not involving guarantees of personal freedom. In sustaining congressional legislation creating a national bank, he wrote:

It will not be denied, that a bold and daring usurpation might be resisted, after an acquiescence still longer and more complete

than this. But it is conceived, that a doubtful question, one on which human reason may pause, and the human judgment be suspended, in the decision of which the great principles of liberty are not concerned, but the respective powers of those who are equally the representatives of the people, are to be adjusted; if not put at rest by the practice of the government, ought to receive a considerable impression from that practice. An exposition of the constitution, deliberately established by legislative acts, on the faith of which an immense property has been advanced, ought not to be lightly disregarded. Id. at 401.

[70] I do not think the views expressed by Professor Burns in his book Presidential Government (1965) are inconsistent with this statement.

[71] Recent decisions of the supreme court indicate to me that there are no federalism-derived constitutional limits on congressional legislative power. See, e.g., Katzenbach v. Morgan, 384 U.S. 641 (1966); Katzenbach v. McClung, 379 U.S. 294 (1964); and Heart of Atlanta Motel, Inc. v. United States, 379 U.S. 241 (1964), which demonstrates that the court will sustain an exercise of congressional power that is "rationally" related to any of the enumerated congressional grants. Professor Wechsler long ago reminded us that the actual structure of federalism is and should be governed by the dictates of political process, not by artificial legal doctrines. Wechsler, The Political Safeguards of Federalism: The Role of the States in the Composition and Selection of the National Government, 54 Colum. L. Rev. 543 (1954).

[72] It is worth observing that "Congressional power to declare war' . . . does not, even semantically, exclude armed hostilities without such a formal declaration." 116 Cong. Rec. 8405 (daily ed. June 4, 1970) (letter of Professors Rostow, Winter and Bock to Senator Allott).

[73] The writers who seek constitutionally based restrictions are, of course, committed to the familiar—and psychologically comfortable—lawyer's task of "drawing lines." That mentality makes difficult the recognition of areas not governed (at least in form) by legal rules. Thus while one writer accurately frames "the real issues," how is the President's authority as Chief Executive and Commander in Chief to be reconciled with Congress' power to declare war?, his approach is an attempt to draw a line so as to create an exclusive congressional preserve, which the President may not trespass with permissiveness. Note, supra note 2, at 1771.

[74] J. Burns, supra note 10, at 298.

[75] See Indochina: The Constitutional Crisis, supra note 62, at 7119. Even Professor Rostow, et al., supra note 72, fall short of challenging this power.

[76] See C. Rossiter, The Supreme Court and the Commander in Chief 131 (1951): "As in the past, so in the future, President and Congress will fight our wars with little or no thought about a reckoning with the Supreme Court."

[77] See Mora v. McNamara, 389 U.S. 934 (1967). The sole limit of the courts' powers is, in my judgment, to announce that the matter must be resolved by the political branches of government. Contra, Schwartz & McCormack, The Justiciability of Legal Objections to the American Military Effort in Vietnam, 46 Tex. L. Rev. 1033, 1053 (1968); Velvel, supra note 2, at 479–503. Professor Velvel has had no success in convincing the courts. Velvel v. Nixon, 415 F.2d 236 (10th Cir. 1969), cert. denied, 396 U.S. 1042 (1970).

I recognize, of course, that not all presidential action is beyond judicial scrutiny. For a list of instances in which the supreme court has invalidated presidential action on constitutional ground see G. Schubert, supra note 27, at 361–65 (1957).

Mr. McGOVERN. Mr. President, I strongly recommend these articles to all Senators who want to refresh their minds at the beginning of this debate as to the constitutional obligations of Senators and the powers of the Commander in Chief under the same Constitution. They are scholarly, well done, carefully thought out pieces.

Again I want to thank the Senator from Rhode Island for his thoughts.

Mr. PELL. There is another thought or question I should like to raise with the Senator from South Dakota, and that is, I recognize, and I am sure he recognizes, too, that this is pretty strong medicine we recommend here by cutting the power of the purse. But those of us who have opposed the war for a period of time, have sought other routes and methods to achieve the result we are after from the viewpoint of general policy. We have had amendments that have been accepted, and there is, generally speaking, I think, an agreement, or the desire at least, to contract the war, as seen by the acceptance of the Cooper-Church amendment some time ago.

I think we should also recognize the fact that—when the majority of our legislative body, both House and Senate, come to the same conclusion that the Senator from South Dakota and I have, then the war is ended. It is that simple. But, as long as we represent the minority view, it would seem that the war would go on.

That very simple fact should be brought to the attention of the American people, that when the majority of their elected representatives want to terminate the war by the course of withholding funds, they can do so. And, until the majority of their elected representatives want to do it, I do not believe it will be terminated.

Mr. McGOVERN. In connection with the use of the authorization power to limit American military operations, the authors of the law review article, to which I have just referred, have very properly singled that out as one final, indisputable control Congress has over military operations.

The constitutional debate raged long and loud and clear on this particular point. There is no question at all that the Founding Fathers wrote in the power of the purse as the principal device by which Members of the Congress of the United States control the executive branch on matters relating to war and peace.

Let me read to the Senator one paragraph from this article by Mr. Cooley and Mr. Sherrill in which they say:

In order to curb the possible expansion of executive military power, and to preserve in Congress the legal authority to commence war, Congress was given the exclusive power to make military appropriations. Although it is true that the general appropriations power was awarded Congress in article I, section 8, clause 1, only the military appropriations power was separated from the general grant and circumscribed by an extremely revealing limitation; article I, section 8, clause 12 places a two-year limitation on the period for which appropriations to raise and support an army may be made.

As the Senator knows, no appropriations power for any purpose is limited to 2 years except for military appropriations. The reason for that, as it becomes clear to anyone reading the debate in the Constitutional Convention, is that the Founding Fathers wanted to make very sure that the power of the purse over the military operations was not extended out to the point where the Chief Executive could conduct war without reference to the Congress.

We are not engaged in a luxury when we look critically at military operations every 2 years. To avoid that would be to avoid the clear obligation we have under article 1, section 8, clause 2 of the Constitution which requires us to permit no military appropriations for more than 2 years without a critical review by Congress.

Mr. PELL. Mr. President, I would agree with the Senator. I would add a final point, if I may, and that is that many people in the present administration, including, I believe, our President, would like to see this war ended.

The problem is that a war acquires momentum, and vitality, and a force, and a constituency all of its own. In order to stop a war and the course of policy that has acquired roots and become dug in at this point, it is going to require many shoulders to the wheel and the efforts of many. The President needs help in this regard.

I have heard bandied about the phrase "eventual liquidation of our military manpower commitments in the southeastern part of Asia."

That may be the objective some in the administration would like to see and hope to see, but unless legislation along the lines of the legislation we support is passed, this policy will not be effectuated because the counter forces are in such strong opposition.

We should recognize that what we are doing here in a sense is helping to achieve this objective that I am sure many people in the administration want to achieve.

As one member of the Committee on Foreign Relations, I can assure the Senator that when we meet, we will do our best to get majority support for the amendment. If we succeed, I will be delighted, and I hope that we can induce a majority of the Senate to support it. If we do not succeed, I would be disappointed. However, I would still hope that the good sense of this amendment would prevail when it comes to a vote in the Senate.

Mr. McGOVERN. Mr. President, I thank the Senator.

Earlier today, the Senator from Massachusetts (Mr. BROOKE) made a statement on the floor of the Senate endorsing the amendment that is now pending, the amendment to end the war that is sponsored by the Senator from Oregon (Mr. HATFIELD), me, and other Senators. He made one statement that I would like to underscore at this time. He said:

The amendment provides a reasonable and flexible means for harmonizing legislative and executive policy on this perplexing issue. I support it and I hope the Senate will adopt it.

The Senator from Massachusetts then went on to say:

> The conclusion that we have satisfied our commitment to the Vietnamese, coupled with an extended timetable for troop withdrawal, could invigorate the efforts of the South Vietnamese to stand on their own. Hopefully it will heighten the willingness of all parties to negotiate an early political settlement.

The Senator from Massachusetts then said:

> The establishment of a firm timetable for U.S. disengagement would remove Hanoi's principal stated objection to serious diplomacy. It should also reduce Saigon's unstated reliance on the prospect of an indefinite American stay to avoid coming to grips with the hard political realities which must shape any final settlement.

I think that the Senator from Massachusetts, as well as the Senator from Rhode Island who has just left the floor, have both alluded to two very important aspects of the pending amendment. That is the impact that this amendment will have on both Hanoi and Saigon.

In the case of Hanoi, it meets the principal demands they have made all along, a demand which we think stands at the very heart of the stalemate that has kept us from making any progress in Paris. That concerns their insistence that we must agree not on the withdrawal of 150,000 or 180,000 troops, but must agree on the withdrawal of all American forces from Vietnamese soil.

This amendment does propose such an agreement, not because we think it is in the interest of Hanoi, but because we think it is in the interest of the United States. After 10 years of combat activities in Vietnam, and after 10 years prior to that of assisting the French and the South Vietnamese with military support, I think the time has come in our own interest to terminate this war.

The first possible impact of this amendment would be to help break the stalemate that has frozen the negotiating effort in Paris for the past 2 years. Nothing has been accomplished in those negotiations so far other than an agreement on the shape of the table, and that took many weeks of hard negotiations.

One of the principal stumbling blocks to the progress of the negotiations has been the insistence on the part of the other side that they are not interested in talking seriously about a final end of the war or the prisoner exchange issue or asylum or anything of that kind until the United States agrees to a definite time for the withdrawal of our forces.

If our amendment is agreed to, we think that great pressure will be brought on the North Vietnamese to sit down and work out arrangements about the other pending matters and especially the matters of prisoner exchange and some kind of arrangements for insuring the safety of the withdrawal process.

The other side of the amendment concerns the impact on Saigon. There is no question that the administration's most urgent hope is that the people of South Vietnam will somehow assume more responsibility for directing their own affairs and standing on their own feet.

For 16 years, ever since we made our first written commitment to South Vietnam, in October 1954, we have been hoping the same thing—that the South Vietnamese would assume a greater burden of the conflict themselves and that we would not have to carry the enormous load we have carried in blood and treasure in that conflict.

It seems to me the best way to make clear to the regime in Saigon that they must carry this responsibility on their own is to set a timetable for our withdrawal; not to say, as the President said, that we are going to stay there until they are ready to take over, which is just an invitation to the generals in Saigon not to be ready.

To the contrary, we should say that after December 31, 1971, they are on their own unless the President and Congress jointly decide that an extension of the withdrawal deadline is in order.

The third factor that seems to me of great importance in this amendment is the opportunity it provides to the President to share with the elected representatives of the people this decision for bringing the war to an end.
